### Barley as Compared With Corn.

Many farmers who have come to California from the great corn States east of the Rocky mountains have probably drawn conclusions from their own experience as to the value of the barley which they feed in California, as compared with corn, the great feed grain of their own State. They will be interested in a statement of the results obtained by experiments by Prof. W. A. Henry of the Wisconsin Experiment Station.

The purpose of the first experiment was to determine the value of barley in comparison with corn for hog-feeding. In the first trial 10 hogs, 14 months old, were divided into two lots of five each. To the first lot was fed barley meal, while the second received cornmeal. The experiment continued eight weeks, during which time the first lot of hogs consumed 2832 lbs. of barley meal and gained 601 lbs. In the same time the second lot of hogs consumed 3100 lbs. of cornmeal and gained 713 lbs. From this we find that:

Lot I required 471 lbs. of barley meal for 100 lbs. gain.

Lot 2 required 435 pounds of cornmeal for 100 lbs. gain.

This shows that it required 36 lbs., or 8 per cent more barley meal than cornmeal to produce 100 lbs. of gain. In this experiment both feeds were soaked with water. It was found that it required about 3 lbs. of water to properly soak a pound of barley meal, while a pound of cornmeal required but 2 lbs. of water. The hogs fed on barley meal consumed 30 lbs. of water daily with the feed, while the hogs on cornmeal consumed 22 lbs. daily. Even with this large amount of water in the feed the barley hogs drank 2 lbs. extra, daily, from a separate trough, while the cornmeal hogs drank but three-fourths of a pound.

Another experiment was to compare barley-meal and sweet skim milk versus cornmeal and sweet skim milk as food for pigs. The pigs were about five months old at the beginning of the trial. There were six pigs in each lot. The experiment lasted nine weeks, during which time Lot I consumed 1993 pounds of barley-meal, 2404 pounds of sweet skim milk, and gained 604 pounds. In the same time, Lot II consumed 1807 pounds of cornmeal, 2192 pounds of sweet skim milk, and gained 591 pounds.

Lot I consumed 330 pounds of barley-meal and 398 pounds of sweet skim milk for 100 pounds of gain.

Lot II consumed 306 pounds of cornmeal and 371 pounds of sweet skim milk for 100 pounds of gain.

Again, there is a difference of about 8 per cent in favor of the corn. These experiments showed that when feeding barley care should be taken to prepare the food so as to render it palatable. Hogs will eat cornmeal in almost any shape, dry, wet and even sour; when fed barley-meal, their preference calls for considerable soaking in a comparatively large amount of water.

In commenting upon the experiments Prof. Henry adds:

Our results show that barley is not quite so valuable as corn, pound for pound or laying on fat, but we must remember that corn has a very high feeding value in such cases as this. One prime use for barley is in giving the farmer an additional variety of feed. As a rule we have too few kinds of feed upon our farms, and we rely too much on corn. In barley we have a

feed capable of building up bone and muscle, and serving a generally useful purpose on the farm. In California it is the almost universal horse feed, and no animals have more endurance than horses raised and fed on rolled barley. Barley is the common grain feed of England and North Europe.

And from this we infer that when Prof. Henry comes to live upon his San Diego county

PLANTS AS REAGENTS.—From the results given it appears that by means of beer yeast it is possible to recognize the presence of 0.0005 gm. of phosphate in one liter of water, which corresponds to 5-10,000,000ths of the weight of the liquid. But agricultural plants are also reagents of an extreme delicacy and accuracy.

OUR STATE FLOWER, THE CALIFORNIA POPPY — *Echscholtzia Californica*.

ranch he will count that the ollmate will more than make up the 8 per cent deficiency in the barley, and that California without corn is better than the central west with it. But we anticipate.

THE WONDERS OF NATURE.—Certain worms similar to the tablix multiply by producing new parts. There is one form, known by the quaint name of Nais, which will develop in the midst of its own body a second head, and just in front of the new head a second tail. Thus there come to be, as it were, two worms joined together; the front one has the old head and a new tail, the hind one a new head and the old tail. By and by the companions separate, and the parent body is thus transformed into two complete animals.

The author gives as an example the sugar cane, the dominant food of which is calcium phosphate. With the complete manure the cane gives a harvest of 57,000 kilos. per hectare. If we omit the phosphate, the yield is only 15,000 kilos. Hence 600 kilos. superphosphate, containing 90 kilos. phosphoric acid, determine an excess of crop of 42,000 kilos. per hectare, which represents 70 times the weight of the phosphate and 466 times the weight of the phosphoric acid. If referred to the 4,000,000 kilos of vegetable soil covering the surface of a hectare, the phosphate represents less than 1/6,000 part of the weight of the soil and the phosphoric acid less than one forty thousandth. The author, George Ville, hopes to fix the limits of this method.

### Our State Flower.

We place upon the first page of our new volume a portrait of our new State Flower as adopted at the last meeting of the State Floral Society. The announcement of this action has been followed by approving comment in the public press, and in such conversation as has come to our ears. This flower of the whole year and the whole State, and in its typical species, only of the State, is by common consent crowned as the queen flower of California.

Our engraving has a botanical rather than an artistic cast. Perhaps at another time we may present a prettier picture, but just now it seems desirable that our distant readers should know just what sort of a flower has been given the scepter in California, and this can be best shown by the botanist's heartless method of analysis. Fig. 1 shows the full bloom, the style of the leaf and stem, also the pointed seed-pod, which Fig. 2 shows as opened when still green, and Fig. 3 presents the pod as it naturally opens when dry and mature. Fig. 4 is the upper part of the seed-pod before opening. Fig. 5 is a seed magnified and Fig. 6 is a section of the same, showing the germ, while Fig. 7 shows the germ more highly magnified. Fig. 8 shows how the stamens are attached to the petals of the corolla, and Fig. 9 is a cross-section of the unripe seed-pod.

In connection with the engraving which will introduce our State flower to those who do not know it, we cannot do better than reproduce the closing paragraphs of Miss Pratt's essay, read at the November meeting of the Floral Society, which well portrays some of the characteristics of the flower that entitle it to the distinction it has received:

In choosing a floral emblem for a State, it is desirable that the flower should be a native, and not only widely distributed but striking, so that everybody may thoroughly know it, and that it will be among the first to attract the attention of the children and so connected with their earliest memories, but that it should be beautiful, easily represented in paintings, carvings or architectural designs; and for this State it seems specially desirable that the flower should be golden in color. All these requirements this little blossom fully satisfies. The typical flower is found only within our borders, though varieties occur as far north as Washington and southeast to Texas—about 10 in all, varying in manner of growth, color or both; but the *Echscholtzia*, as we know it, is never found outside of our State. One has only to watch the children coming home from a trip to the country to see which flower they love best. It is one of their greatest delights to pick a whole armful, and the quantities the florists gather and bring to the city show that the older people fully appreciate their choice. No other California wild flower is so widely known or so highly prized as this, and surely no other has been painted so many times.

Both flower and foliage are well adapted for carving or decorating our buildings or banners, and who can describe its color? All the golden emblems of the State combined seem to be needed to give this wonderfully glistening, brilliant, intense coloring, which after all can never be represented, and, like so many other wonders, people must come here and see to fully appreciate.

## FLORIST AND GARDENER

### Wild Flowers.

[An essay by Miss LILIAN HOWARD, of Santa Cruz, read at the Santa Cruz Horticultural Convention.]

The great mass of wild flowers form the unconsidered trifles of our fields and plains. They owe no thanks to man, for he does not care to perpetuate them, neither have they fear of him, for they do not, as a class, infringe upon his domain. A few may please him by their brilliancy of coloring, as they grow in meadows and blend harmoniously with some pleasing landscape; their patches and hands of blue and white and their long stretches of gold and orange may compel attention and even admiration. A few may please the casual observer by the beauty or peculiarity of their forms, as in the case of the rose, the lily, the dicentra, and the lady slipper.

A few have become general favorites on account of their extreme delicacy of form and color, as the baby blue eyes and the lily bell. But it remains a melancholy fact that the popular expression is a cynical smile and a suppressed murmur of *weeds*, when the subject is broached.

Well, there are weeds and weeds. A few of our flowers have become social outcasts, and lift their dainty cups rather saucily, without receiving an admiring glance, except from some misguided hotanist, or maybe a sentimental but unsophisticated young lady, who is informed with a covert smile that she may have a whole county full, and welcome, if she will only pick them out. The bind weed, red sorrel, and the so-called yellow heliotrope may serve to point a moral and arouse a smile at the expense of an enthusiast.

Weeds? And how different they really are from weeds. The real weed is as much of an aristocrat as wheat or corn, and usually gets the same amount of cultivation. He lives by his wits, but gets the best the land affords. Of course we do not mean the timid one that peeps up along the wayside, or in neglected fence corners, or takes unto itself a bit of waste land, to be cast out the first time the soil is turned by the plow. We mean the kind that tries to take the whole farm, wants to grow in the mellowest soil, overshadows the young crop above ground, and sends out millions of little roots to choke it off underground. The flowers are inconspicuous, that it may not waste its substance in show. Its seeds are produced in countless numbers, and of course they are ripened and scattered before the crop is ready to be gathered. These seeds are furnished with quaint devices for preservation and dissemination, as hurls to catch the coats of passing animals; little hooks to anchor themselves to the ground or other weeds; twisted awns with bristles, to cling to the ground; down, that will float them far and wide on the breeze; and lastly a bitter or nauseous taste, or a gummy coat, to discourage the browsing propensity of animals. Whatever plan man or beast contrives against them, they try to meet it in time with a cunning device for defense, so after a long and relentless war, our most troublesome weeds are developed.

Their vitality has furnished subject for epigram and moral in all ages, and the longer they have contended against man, the more exasperating they are. For it is a well-known fact that the strong, aggressive weeds of older settled countries overtop and thin out the weeds of new countries which have not been compelled to fight for their lives. So weeds are as much the result of selection as the giant pansies, rainbows roses and Japanese chrysanthemums of the horticulturist. Then our flowers being the results of modifying circumstances and conditions through a long course of years, whatever serves as a distinguishing mark in our cultivated as well as our wild species is the sign to tell the story of their lives to him who reads.

But there are always two sides to a story, and if the thistle and the cactus could tell of their wrongs, no doubt the story would reconcile us to their prickly skins. If, as I said, imitation is the sincerest flattery, what intelligence we must grant some of the wild flowers of our hot, dusty plains and hillsides. There grows the Mexican poppy, with spines and needles that would outstick a Canada thistle, and with the same dusty, white downed leaves as its thistle neighbor. A casual observer would readily mistake it, and it is only when the glory of its delicate white blossoms are unfolded that the cheat is discovered. Who and what was the enemy against which the cunning flower fairly first armed itself? That its defense is secure, the rash investigator can mournfully testify.

There must have been a wonderfully omnivorous beast of the field prowling these plains in those old days, or it must have been a much starved one, for this poppy is not the only plant which has here thrice armed itself. A species of wild sage has adopted the same livery, and pushes out its curious long blue corollas with its salmon pink anthers, from a bristling circle of prickles that would do honor to any thistle. Blue is the bee-color fortunately, and I am sure no other creature would willingly face the out-post for the sake of the treasured honey.

The mentzelia is a co-resident of these advanced thinkers, and is almost converted to their ways; it is not quite so dusty, not so prickly and much more showy than its neighbors. Protection is their motto, for on those wide stretches of dry country, the race is to the one who will not be eaten, and to the one

who will not be killed by thirst; so the object of their little lives is to store up their moisture, to hide themselves and to be unpalatable when found.

But our most beautiful wild flowers are found in our fields and in the borders of our forests, as the popularity of our creamcups, nemophilas, gillias and lupines shows. Our lilyhells, too, are a revelation in themselves, and an open hillside with yellow calochortas, Johnny-jump-ups and pink mallows is a feast for all eyes.

But the snowy lilyhell is our poem; in color, in form and in manner of growth it appeals to us, and though usually called by an unepithetous name (harebell), it is still the one treasure of our fields most valued. It varies in color from a deep, dull crimson to a clear white, tinged with pink and green, and the pretty hells hang in clusters of from three to ten on their slender stems. Then its cousins of all colors, the golden lilyhell or *Dicentra*'s Lantern, the many-colored *Mariposa* lily, the white clustered variety with its long leaves, and the pale-lavender variety, are almost as interesting as itself, and furnish many a suggestive page for the paragrapher, the sketcher and the poet.

In fact, the lily family is well represented in our State, and our fields can vie with our gardens in presenting this most graceful flower. The tiger-lily, the white Washington lily and some smaller varieties remind us in a dignified way that Dame Nature is still in the race with man for horticultural honors. The eagerness with which picnic-goers storn the preserves of the tiger-lily is a lasting tribute to its beauty and grace. But—alas! the cows are just as fond of it, and only what they cannot reach is left for the human flower-lover. We respect the craft of the thistle now, and wish for armor for the lily.

In our hasty survey, we can pay only a passing tribute to the beautiful members of the pea tribe which flourish among us. In richness of color and in variety they are surpassed by few other flowers, and as it is always a pleasure to see a well-known face in a crowd, so we are glad to come across the familiar butterfly petals in a wilderness of new plants. The lupines, yellow, white and all shades of blue and purple, with occasionally a pink stranger, the clovers, the vetches, thermopsis and a host of kindred with most unsocial names, are among the gems which brighten our fertile land.

On the subject of names let me present a brief plea. One is debarred, of course, from speaking of the scientific names; they are settled, and as far as one can judge, well settled. But the local names, the home names, are insufficient and so loosely applied that it is simply exasperating to try to verify many of them. There are a number of pretty names float which are applied to many flowers, as blue bells, wild pansy and wild forget-me-not, and there seems to be no particular flower that can prove its claims to the name. For instance, the name wild heliotrope is given to several widely varying plants, and there is a true heliotrope, rather insignificant in size, but even the least has a right to its name.

In one case I saw in a widely advertised collection of wild flowers, a flower-cluster nearly three inches long, bright scarlet in color, labeled with the name burr-clover. Of course one does not wish to be too particular, but the line must be drawn somewhere, and a reasonable amount of accuracy is not to be despised.

Many of our beautiful and effective plants have no common English names, and it is so easy to prefix *wild* to some familiar name and so hand it down—a delusion and a snare to all botanically inclined students. Most of our native flowers probably have Spanish names and musical ones, too, given by the people who have lived with them, have seen, with a poetic eye, their many charms, and have had many tender associations connected with them. These names we should preserve as far as possible, for they are usually pointed, picturesque, and perpetuate the traditions of the soil. Our madrono and manzanita are good examples of this class of names, and they seem to be popular; others, as chicolote, yerba buena, and yerba santa, are fully as pleasant to the ear.

Leaving aside these flowers as denizens of the field and of the wood, and viewing them in the sacrilegious light of transplanting, our query is: "Which of these are suitable for cultivation?" This question has been answered for us in a great measure, for in many catalogues of Eastern growers our flowers are well represented. Among them are the California poppy in its yellow and gold and its developed cardinal cousin, the nemophila, in all shades and sizes, the limnanthes and the Mexican poppy, which has recently become a favorite, while the Romneya Coulteri, with its great oreop-like white blossoms, has won a lasting reputation for itself.

The tiger lily, the azalea, the rhododendron, where it will bear transplanting, the spirea, the clematis and the scarlet gooseberry, under the ambiguous name of coral plant, have already enriched our gardens, and where one can withdraw himself from the worship of varying forms of our common garden flowers, he will find these most charming companions. They give a wild, sappy air to a garden, but it must be acknowledged that they look as if they felt degraded and longed to escape.

The salmon herry, with its red flowers and luscious-looking fruit, seems to be challenging one to a feast worthy of the gods; maybe the gods could eat them, but at present they are rather sour for the human palate. Culture ought to do something for them.

In our forests grow trees and shrubs that

would lend themselves favorably to artistic gardening, as the chinquapin, with its gold-lined leaves, the California nutmeg or yew, and even our common hockeye with heavy blue-green foliage, would prove invaluable if properly managed. The madrono, the tree-like manzanita and the laurel have already been tried and have been heartily approved. They belong to our climate and can be disposed of in landscape gardening with as much grace and relief as the foreign trees.

For a long time it was the style to adore wild flowers, but a careful observer could see that all who adored them chose the largest and brightest or those most easily obtained; the true flower lover then as now garded his treasures with a somewhat jealous eye.

The popularity of our flowers enjoy in other places may be only another proof of the old proverb, "A prophet is not without honor," but the interest shown in the recent field flower contest among the pupils of our county proves that we do not need to hear from abroad before learning to value our home treasures.

## THE STOCK YARD.

### Packing-House Projects.

The return yesterday from Chicago of Peter E. Her, who has been one of the chief projectors of the big stock-yard at Biden, revives interest in that and similar enterprises about this city. While he has been away, little has been done on the Biden scheme, but another similar project on the bay shore near Pinole has been pushed on very rapidly. The completion of these stock-yards and packing-houses is of much local interest, for the industry promises to be of great value to San Francisco. Mr. Her says of the Biden project that before actual operations of large importance are begun, four companies will be organized and incorporated here. These will be an abattoir company, a stock-yards company, a land company and a banking company. These will be organized about the 1st of January on the arrival of R. J. Martin, the legal representative of Armour & Co., and of Albert Veeder, who is with Nelson Morris. As soon as these companies are organized and directors elected they will go ahead rapidly with the improvements decided upon. By early spring they will have large forces of men at work and many buildings will be going up.

Travelers on the trains between here and Port Costa cannot but have noticed the many changes wrought recently in the appearance of things near Pinole at a little station known as Tormey. It is on the bay shore about 25 miles from this city. Up to within a few months nothing marked the locality in any distinguishing manner except when a venturesome cow from the many grazing herds became mired in the swamps that extend from the low hills to the beach. The land near was used only for grazing or for raising bay. Now there is a fine three-story hotel of artistic design, some 15 acres of land have been graded, several acres of sheds, floored and shingled, have been put up, and a long side-track extends from the main-line road up to the yards. A sign announces that all this work has been done by the Union Stock-Yards Company of San Francisco. Several Eastern men are interested with local capitalists in the project, among them R. A. Harris and Silberhorn & Co. of Chicago.

The hotel and sheds are not yet completed, but over 200 men are busily employed, and are making time tell on the necessary labor. The hotel is 170 feet long, 60 feet wide, with an L 45x136 feet. It is to be lighted by electricity, as are all the yards and buildings. In the stockyards, covering over eight acres, are 45 cattle-pens, each holding from 30 to 50 animals. Stout partitions of planking divide each pen, and all are floored with 2-inch planks. All are well drained, with convenient arrangement for watering and feeding. Around, between and above the pens are railed passageways, so that the cattle can be conveniently inspected. In among the cattle-pens a weighing machine, capacity 100,000 pounds, is to be set up. Near the cattle-pens are corrals for sheep and hogs. The two packing-houses that will soon be completed will be the pride of the company. If the two can be built inside of \$700,000, the managers will be glad, but the estimates call for more than that amount for these two buildings alone. The latest devices of labor-saving machinery will be included in the equipment. Each house will cover an area of about 300x500 feet. Ice machines, lard-tanks, can machines, beef-chilling apparatus, offal driers, fertilizer converters and various other devices, designed to be both dexterous and economical, will be set up in the various departments.

The cattle that ever since the days of the Spanish ranchos have grazed over these hills, have seen these improvements being pushed along with very little interest. That these new packing-houses are going to be fitted to pack and can, and stow away for future use each day, at least 1000 cattle, 2000 sheep and as many hogs, is a fact not calculated to arouse much enthusiasm among the quadrupeds whose pasturage has been invaded. From the buildings a track connecting also with the siding will be run to the bay and out upon a wharf about 2600 feet long, to deep water. It is calculated that at this wharf ships that sail about the world may take aboard the products here to be packed and prepared for the demands of far-away communities.—*Evening Bulletin*.

## THE FIELD.

### Hops in Washington.

The *Washington Farmer* says the crop year of 1890 has been one of surprise as well as of disappointments. Promising at first to be the heaviest on record, the yield was finally cut down to the usual average by the prolonged drouth and attack of vermin combined. Starting out at extremely low prices, the value moved steadily up from 12½ cents per pound for the earlier contracts to 40 cents paid for a few in the bale. Unfortunately for the growers, large blocks of the crop were contracted at comparatively low prices, the bulk of which has gone forward to dealers and consumers and now depresses the open market for the remaining portion of the crop unsold. We estimate the Washington crop yield at 38,000 bales, and which may possibly reach 40,000, of which there are now left about 8000 bales. The Oregon crop yield estimate is now placed at 20,000 bales, of which no more than 3000 bales are left in the State, making a total stock in the two States of 11,000 bales.

### A Large Hop Farm.

The *Washington Farmer* also gives the following description of the famous hop ranch of the Snoqualmie Co. This is the largest hop ranch in the world. It is owned by a company, incorporated, with a capital stock of \$120,000. Over \$200,000 has been expended in improvements. The principal stockholders are: Richard Jeffs of White River, Pres.; Geo. W. Gove, V. Pres. and Manager; H. Dutard of San Francisco, Treas.; G. K. Baxter of Seattle, H. E. Levy of Victoria, B. C. The company began operations here in the spring of 1885. That year they planted 200 acres to hops, and they now have 310 acres of the finest looking hops that mortal eyes ever rested on.

From appearances now, this ranch will harvest this year 3000 bales of hops of 200 pounds each. Buyers generally come to the ranch and contract for the crop. Last year the product sold at eight to nine and a half cents. Hops are now worth 40 cents; and the 600,000 pounds that the ranch will turn out will command at present prices the neat little sum of \$240,000. Capt. Geo. W. Gove, the manager of this immense plantation, says that from his experience, and in fact from the most authentic statistics, the best time to sell hops is at the time of picking, when a great many buyers from different directions are vying with each other. Capt. Gove says that on old and new contracts over 20,000 bales of this year's crop in this State have been contracted, at an average of 14 cents. By "old" contracts is meant those contracts made previous to this year. Some growers contract several years ahead. The Snoqualmie hop ranch is situated in a natural prairie surrounded by a dense forest.

The soil is a deep loam. The Snoqualmie river flows through the hopfields, and in bygone ages, before the barrier of rock over which leaps the great falls was reduced to its present level, the site of this ranch was evidently a lake. The day after our arrival, Capt. Gove hitched up a double buggy team and drove us three miles through the plantation, which extends almost to the new town of South Bend on the east. We viewed the splendid fields and the improvements with delight. We found 15 hophouses, two of which are double and five are triple, making on the whole 27 kilns, each 24 feet square. Twenty sheds are distributed at convenient points on the plantation for shelter of Indian pickers. A dozen houses are occupied all the year by Indian families employed on the premises. On the railroad is a warehouse 60x80 feet, in which the baled hops are stored for shipment. Leading from this warehouse is a nicely turnpiked driveway to the hotel standing on the ranch. This hotel is a three-story building, situated in the midst of the orchard, and surrounded by a charming lawn, handsomely landscaped and adorned with beds of lovely flowers.

### What About Esparcet?

EDITORS PRESS:—Although the PACIFIC RURAL PRESS is brim full of useful information of the kind its patrons are likely to require, yet we are always wanting something more; so I would like to inquire through its columns about "esparcet"—a kind of forage like clover. I have heard that it will grow well on very dry land, needing but little moisture, like cactus and sagebrush, and that it produces an abundance of good feed for stock.

I have a few acres of very fine soil but it lays so it is difficult to irrigate, therefore want to grow something of value on it needing but little moisture. If among your army of readers there are any who can tell me the best thing to grow there I shall be greatly obliged.—C. P. WILCOX, North Yakima, Wash.

Esparcet (*Onobrychis sativa*) has been proclaimed as a dry-land forage plant quite widely and hundreds have planted the seed. It is time now to gather the results of these trials, and we hope every reader who has grown the plant will write us briefly his results and conclusions. Our own observation is that the plant has not proved as valuable as was expected and that we are still in search of an all-around arid-land plant. Let us then hear from all interested readers in answer to our correspondent's points.

THE Mexican Government will grant no more subsidies to roads and is buying up those already granted.

## HORTICULTURE.

## Walnut Soil and Climate.

There is a great diversity of opinion as to soil and water suitable for the profitable culture of the walnut, and almost everywhere that the walnut does well is considered by the growers of that particular locality to be the only section of country where walnut culture is a complete success. The fact is we have a large area from Santa Barbara to San Diego suitable for its cultivation, where the soil and water supply differ greatly in many respects.

In Santa Barbara and Ventura counties are many fine old walnut orchards paying large dividends, where irrigation and the surface stream of water is from 50 to 100 feet from the surface of the ground. I am also credibly informed that there is a very fine and profitable walnut orchard in Ventura county over 26 years old, where it is only four feet to surface water, and none of the trees have ever drowned out from sonr sap or too much water, while Col. Heath of Carpinteria, this last spring, lost some exceedingly fine trees from sonr sap, where the surface water is 30 feet below the top of the ground. This was undoubtedly caused by overflow from the higher lands which lie on the side of his place. I think, by proper drainage facilities, this could be avoided.

The soil of these two counties, where the walnuts are grown, is mostly of a made character from the mountains and very rich in all the qualities which go to make up a desirable spot for the walnut.

The next place where the walnut is successfully grown is in the San Gabriel and Los Nietos valleys in Los Angeles county. There we find splendid orchards growing on a sandy soil where the surface water is from six to twenty feet from the top and irrigation is freely practiced by many, while others have good success in growing the walnut without employing water at all.

The Santa Ana valley, in Orange county, is rapidly coming to the front as a walnut-producing country. Here we have the walnut growing on adobe, heavy clay sediment, light sandy and sandy mixture soil where the water is from four to one hundred feet below the surface. Irrigation is practiced on the dry soils and the amount of water used depends greatly on the character and water-holding qualities of the soil. We had a few trees which were drowned out last winter (an unusually wet season) on lands ten to fifteen feet above surface water. Where they died the land was overflowed from a creek, the water standing there for a month or more.

The famous walnut orchards of Capistrano, in the southern part of this county, are on adobe soils with enough sand washed in to cultivate well. Here the surface water is from six to twenty feet, and irrigation is a decided success, though it is reported that several of the trees were drowned out last winter through overflow.

San Diego county has as yet done little toward the planting of the walnut, although there is plenty of good land there for its successful cultivation.

Trees planted out three years ago near San Luis Rey are now bearing well without irrigation.

The theory that the surface water is too close to the surface or not close enough for successful cultivation is not borne out by the facts. If you have good, rich soil, with surface water situated at any distance from four to one hundred feet, and can keep off the overflow so the water will not stand for weeks around your trees in the spring, or your soil can retain sufficient moisture either by thorough cultivation or irrigation, you can grow the walnut with profit and the best of success.

The walnut is one of the easiest trees to transplant, and can be reset at most any age; indeed, trees have been successfully transplanted at the advanced age of ten years.

Most growers prefer a three-year-old tree to set in orchard, and of the improved soft shell variety. Three years after transplanting, if proper care is taken of the trees, the orchard will be paying from \$100 to \$150 per acre, and will increase at the rate of 50 per cent for a good many years to come.

My orchard is planted 40 feet apart, though 50 feet is preferable by putting an additional tree in the center of every four; this plan will give 32 trees to the acre, and when the center tree gets to crowding its neighbors it can be readily removed. The additional tree will pay for itself many times over in stovewood, besides the hundreds of pounds of nuts it will yield.

The demand for walnuts is the same as that for California oranges—it is getting better every year. There are millions of people in the East who have never eaten a California walnut, and who would rather give five or ten cents more on the pound for the production of California than the best quality of walnut which can be raised in Southern Europe. The improved soft-shell variety, which is now attracting so much attention in the Eastern markets, is the favorite with the Chicago trade, where the bulk of our crop is marketed. The improved soft shell comes into bearing at four years from the seed, and at six years yields a good-paying crop, while the old hard shell or

Madeira nut takes eight or ten years, and at fourteen years does not bear any more than a six-year-old soft shell.—George W. Ford, in *Santa Ana Blade*.

## THE VINEYARD.

## Condition of Southern California Vineyards.

In Expert Dowlen's report for November, he reviews the condition of the vines in all the counties of the Los Angeles district, and finds the outlook quite encouraging, so much so that many of the vineyardists in the worst infected sections are proposing to replant their devastated vineyards. Following is the full text of the report:

Since the last report a number of journeys have been made to the vineyards in the neighboring counties of San Luis Obispo, Santa Barbara, Ventura and Orange, all of which are included in the Los Angeles district.

In San Luis Obispo county viticulture can only be reckoned as one of the smaller industries, though it is very probable that this proportion will be altered considerably in the course of the next two or three years. The greater number of vineyards are small, and vineyardists have hitherto been discouraged by the low prices obtainable for both fruit and wine. In addition to this, the means of transit by rail are limited, but it is probable that this will be remedied in the near future. The varieties generally grown are the Mission, Zinfandel and Muscat. Everywhere the vines seemed to be particularly healthy, there being abundance of wood and foliage, and, where the fruit had not been picked, a full crop of grapes of good quality. The vines are almost entirely free from disease of any kind. Mildew was reported as not giving much trouble. With respect to the Anaheim disease, a few vines were noticed which showed some of the peculiarly marked foliage. Except for this, the vines were apparently in perfect health; but owners reported that similar features had always been noticed upon the vines, in some years hardly showing at all, in others appearing to a greater extent, but never doing any damage. In this county the vines had not suffered from heat as they had farther south. In view of the approaching increased facilities for transport, many people were preparing to set out vines in the coming year, and in all probability there will be within the next two years a great increase in the acreage devoted to viticulture, for the practice of which large areas are apparently well adapted.

In Santa Barbara county, a comparatively small amount of attention appears to be given to viticulture. Here also, low prices and limited means of transport have operated to check the industry; moreover, where the vineyards are within reach of the sea air, as is the case with many of the older vineyards, the fruit produced cannot compete in quality with that raised in more inland districts. The vines, even where they have been quite neglected, had made a vigorous growth and had borne a good crop. No signs of the Anaheim disease were seen; mildew was reported, and in the vineyards near the coast, the foliage was much spotted with the ordinary grape-leaf blight. Farther inland the vines were in better condition, both foliage and canes being much cleaner and brighter.

In Ventura county viticulture takes a more prominent position, though it has by no means received the same amount of attention as other industries. In the Ojai valley the larger and older vineyards are found in the upper valley. The vines were in excellent health and had borne a large crop of fruit. The varieties mostly planted are the Mission, Zinfandel, Black Prince, with smaller lots of Mataro and Trousseau. In one vineyard a number of other varieties of wine grapes are being experimented with. There are also a number of smaller lots of table grapes, Black Morocco, Black Prince and Telame Tokay. In the lower part of the Ojai valley the vines are mostly young, the Muscat being the variety chiefly planted.

At Sespe and the neighborhood, the vines are chiefly of the Muscat variety, the fruit being of very fine quality. At present it is sold both for table use and as raisins. The vines throughout the county were in excellent condition, and in all places a good crop had been produced. Mildew was the only disease reported; no signs of the Anaheim disease were found.

In each of the above three counties the intention was generally expressed of making considerable plantings of vines during the coming year, raisin grapes receiving more attention than wine grapes.

In Orange county the districts around Santa Ana, Anaheim and Orange have been visited. Here, too, there is an improvement in the condition of the vines. Here and there may be found vines which have lived through all the attacks of the Anaheim disease. In one vineyard some seventy acres of vines have been saved. These do not show so much disease as they did last year, and in addition, they yielded this year a large crop of fruit of good quality, both of raisin and wine grapes. Another instance of survival is where a number of vines of eastern varieties had been trained to form an arbor. These vines became diseased, and by the end of the summer of last year they seemed to be almost dead, having produced but a small amount of growth and no fruit. The owner,

however, did not like to cut them down, and was rewarded this year by seeing his vines again putting out good growth and producing fruit, the vines now showing little if any disease.

In some places new vineyards have been set out. Most of these are of small area, though on one property 56 acres have been set out. The oldest of these new vines are three years of age; the youngest were set out this year. Nearly all of these new vines are Muscat. Besides these a few Mission vines have been planted. The older vines show, in places, a little disease, but by far the greater proportion of those set out this year show no disease. Some plots are entirely free; they are apparently in good health, having made a fair amount of growth and the canes have ripened properly. In common with all the vines of this section, they show the effects of the extra heat and dryness of the past season, and they had also suffered from the effects of a hot wind storm which visited the locality a few weeks since.

From the above statements it will be seen that in Orange county the Anaheim disease is evidently not so virulent as in past years, and that, though the trouble has by no means passed away, the outlook for viticulture is much more hopeful than it was 12 months ago, and also that there is as yet no reason for altering the opinion expressed in the earlier reports of this year that there has been an improvement in the condition of the vines throughout the infected areas. The improvement is such that in Orange county, where the Anaheim disease has done most damage, and where, in consequence, the greatest precaution would be exercised, many people are looking forward to again setting out vines during the coming season.

ETHELBERT DOWLEN.

Dec. 1 1890.

## Grafting the Grape.

Having practiced grafting the vine since 1852, and always with an eye to the easiest and most successful methods, I have naturally picked up some experience, and will sum up the gist of it for the benefit of those readers who may want to practice it, either for regrafting better varieties or grafting on resistant stocks.

Grafting in the house or shop, which is successfully done with the apple and other fruits, and then planting in nursery rows in spring, I have not found successful, as but few of them grew, and even those few did not make a satisfactory growth. I know that it is still upheld and followed by some, but I cannot recommend it. I have always had the best and most uniform success in the vineyard on vines strong enough to hold the graft firmly, and when the sap was in rapid motion, say in our climate in April and May. Of course the scions should be kept dormant, in a cool, shady place, buried in sand or light soil to their full length, with the cuttings reversed, that is, the upper buds downward and the lower buds up. The object in this is to prevent the upper buds from starting too early, as it is from these we expect the new growth on the graft. It makes no difference, in my experience, how much the young growth on the stock has started already, although after May the season for the growth of the graft will be so much shorter and it would be difficult to keep the scion in a dormant state.

## The Best Stocks.

Of course I refer to resistants only, in discussing this question, although where the phylloxera has not appeared yet it may be advisable to graft inferior varieties of the vinifera with choicer ones. I will return to the subject later on, when discussing varieties.

The best resistant stock, all things considered, I believe for all moderately deep, rich soils, to be the Riparia, or sand or river grape, a native of nearly all the Middle States—Missouri, Illinois, Kansas, Nebraska, etc.—where it is found on all the larger streams. It propagates readily from cuttings, is a strong but rather thin, straggling grower, unites readily with the graft and is entirely resistant, as shown by an experience of over ten years in Sonoma county, where the vineyards of Messrs. Dressel and Gundlach had been entirely devastated by phylloxera and were replanted with Riparia. They are now in a flourishing condition again, and produce fine crops of superior grapes which were grafted on them. For dry, calcareous soils, I should prefer some varieties of the Aestivalis, or Summer grape of the East. The Lenoir has given good satisfaction generally, but is somewhat more difficult to propagate from cuttings than Riparia.

In my location (Chiles Valley) I prefer the Ruellander and Louisiana, which grow from cuttings very easily, make a strong, stocky vine, and take the graft readily. I believe, however, that all of the Aestivalis are more particular about the soil, and will only flourish in perfection where they find certain ingredients. On this point we have yet a great deal to learn.

The Riparias are more apt to root at the surface, as they make roots at every joint or node, which grow horizontally, while the Aestivalis make but few, but very strong roots from the lower buds which grow downward, and will find moisture at a greater depth. The Herbemont is also a good stock in certain localities, while in others it has proved unsuccessful. All of the Aestivalis varieties make a ready junction with the graft, and do not snicker so much as the Riparia, making also stronger and more stocky vines.

The Rupestris, or bush grape of Texas, Arkansas and S. W. Missouri was supposed at one

time to make the best stock for dry hillsides. It has proved a disappointment, as it suckers terribly, and also does not unite readily with the scions of the vinifera. The Californica, our native wild vine, is not fully resistant, although highly lauded a few years ago. Its roots are too soft, and it will hardly grow on dry soils.

Having thus discussed the question of stocks, I will defer the description of the *modus operandi* and of the best varieties to be used for scions, for another issue.—George Husmann, in *Napa Register*.

## The Future of the Grape Interest.

EDITORS PRESS:—I have read with interest the article in your issue of Dec. 6th, by Nelson Ward, also Mr. Wehner's article referred to by Mr. Ward. In this valley—San Bernardino—the planting of the grape for wine-making has about all been discontinued, with the exception of those who are directly interested in the manufacture of wine, and even they are extending their planting but moderately. Those who had the Mission here with few exceptions dried them the past season, as the winery only offered \$11 per ton delivered. Second crop Muscat found their way in part to the winery at \$10 per ton, prices which scarcely more than paid for the picking. To predict what will be the future of the wine industry, of course, is out of the question, but to take present prices as a criterion, when we consider the extreme youth of the wine industry and the wine-grape production, surely it does not look very encouraging, and as Mr. Ward aptly says, when we take into consideration the amount of temperance education going on in the county among the youth, the increasing numbers of clenched fists and earnest, stern faces that are being set against the drink traffic—to say these movements will not have any perceptible effect on the use of wines seems to me very short-sighted. I have watched the temperance movement throughout the county with a good deal of interest for the past 30 years. We have all seen first the one and then the other prop give way before the cold logic of facts produced by the advocates of temperance. We have watched first with curiosity then with admiration, mingled with pride, the solid onward march of the continually increasing columns of the W. C. T. U., hurrying and trampling under foot obstacles that seemed but yesterday unsmountable, besieging State and National legislation from prohibitory laws, aiming always a deadly volley hundreds of thousands strong, in one direction, at the overthrow of the drink evil. We have watched the rise and fall of the Prohibition vote, steering its course seemingly through the unsmountable breakers, with eyes all looking in one direction—the overthrow of the saloon. We watch the declaration of principles which find their way into the platforms of the different political organizations as workingmen's and Farmers' Alliance, condemning the traffic in liquors and laying at its door in part the cause of their depression. The pulpit, which has until lately been so silent on the question from a political standpoint, begins to thunder its destruction. The old political parties are so nearly cornered on the subject that to lose the saloon influence means death. With all of these signs so plainly passing before our eyes each hour, and increasing in magnitude like a mammoth snowslide, and then not take warning, means we are not good observers of the signs of the times.

I, like Mr. Ward, can't help but say it seems to me the wisest thing to do is to plant a grape that can be dried, canned or put to some other use. There probably is no question but the markets of this county can be so filled with raisins as to materially reduce the profits; still, as a rule, that has not in the past been the result with a commodity that the people demand. What we seem to need now for a raisin grape is one that will combine the good qualities of the Muscat and Seedless Sultana, of the size of the Muscat and seedless like the Sultana. I think if some of our intelligent horticulturists will cross the one with the other, say the Muscat with the Sultana, carefully protecting the bunches so fertilized so as to exclude the bees, the seedling from these fertilized grapes would bring about most happy results. The party that can produce a grape filling the above requisites, and as early as the Sultana and having all the good qualities of that variety, would deserve a bonanza and I believe would find one. Could the craze in intoxicants be wiped out and the rivers of wealth turned toward the purchase of the necessities of life, this and the preceding generation would find it a difficult matter to overstock the markets with the raisin or any other fruit products, which would mean paying rates for healthy necessities and luxuries that are not harmful. I. C. WOOD.

Ontario, Cal.

RAILROAD BUILDING OF THE YEAR.—Statistics compiled by the *Railway Age* show the construction during 1890 to be about 6050 miles, as against 5200 miles last year. Over 2000 miles of road under construction are in the Southern States and over 1000 in the Northwestern States. The Northwestern shows 1057 miles, due largely to active building operations of the Northern Pacific and great Northern roads.

THE number of winter passengers for Europe is something unprecedented. A few years ago the steamers crossed with barely a handful of first-class passengers, but this winter they have been running with nearly full lists.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## Begin the Year Well.

Patrons, be sure to turn out to the initial meeting of the new year. Encourage your new officers-elect with your presence, kindly greeting and assurances of your support. Try and start some new methods for making your meetings more interesting, agreeable and profitable and to all—old and young. At each meeting arrange some exercises to make the next attractive and worth coming to.

If storms or other hindrances have prevented election of officers at the proper date, let it discourage none. In such cases, each member should feel the necessity of greater individual responsibility and effort until a meeting is secured and your Grange brought into line for the best year's service for a long time.

There is time yet for the seed sown years ago to fruit. In many parts of the Union it is a well-acknowledged fact that "hayseed is risin'." Shall California be behind in the race?

Surely there is much to encourage the brothers and sisters of California to stick closer and strike harder for their cause than ever before.

For farmers outside the gates the new year is a good time to hand in their petitions to join the Grange army of workers for the advancement of the rights and social, educational and material interests of agriculturists and their families. No safer associations can be formed for the children of Matrons and Husbandmen of our rural districts. Try it!

## Farmers' Institute Held at Corvallis, Oregon.

EDITORS PRESS:—The Institute, held under the auspices of Corvallis Grange, at Corvallis, Benton Co., Oregon, was a marked success from first to last.

The Institute opened with an evening session on the 15th of December, and closed on the evening of the 19th.

At the first session fully two hundred and fifty people were present, and a larger number on the following evening. The day sessions were not so largely attended, yet there were more farmers present, and a lively interest manifested in the discussions. There was not time enough for as much discussion as would have been profitable. The papers were quite lengthy but not tiresome in the least, as shown by the interest manifested in the audience. One or two papers at most, upon topics of practical interest to the farmers, are enough for each session; this gives more time for discussion, which brings out the most important features of the subject.

The question-box was the means of bringing several very interesting and important subjects up for discussion. Among other questions asked were the following: Can tile be used for irrigating purposes? Will it pay to build sheds for manure? The balance of argument was in favor of some protection for the manure-pile. Another question which was discussed with much interest was one asking if it would be wise legislation to appropriate \$250,000 to defray expenses of an Oregon exhibit at the Columbian Exposition. Every one who spoke upon this subject thought this too much; and some went so far as to say \$10,000 sufficient. These are only a few of the most important questions discussed, but they are enough to show that the question-box becomes one of the most interesting features of an Institute. The same feature will work first rate in a Grange.

Everything put on the program was carried out, except the subject of "Breeding Cattle." The essayist was not present.

Aside from those who came a distance of 10 or 12 miles to attend the Institute, were Bros. Boise and Voorhees of Marion county; also Hon. T. T. Geer, who addressed the Institute on Friday evening.

The addresses and papers were full of instruction and interest throughout, hence I would not undertake to give a synopsis of them had I the power to do them justice. It would fill several columns if only the most important points were mentioned.

The exhibit of vegetables, dried and canned fruits, fresh fruits, grains and flowers attracted much attention. One of the most interesting features of the exhibit was a display of the practice sewing done by the girls in the domestic economy course at the college.

A large number participated in the picnic dinner on Friday at the Grange hall, evincing that this feature of the Institute was not an entire failure, as some of our less enthusiastic brothers predicted.

The Institute closed with a feeling that all had enjoyed the meetings, and that much had been gained both socially and intellectually. It is safe to say, I think, that in attendance at least, this Institute has been as successful as any held in the State. H. T. FRENCH.

Corvallis, Dec. 22, 1890.

THE meetings of the Executive and other committees called for December 31st, we hope will be well attended, good plans devised and the Patrons of the State led on to important and successful work.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

## Why not Join

An Order that in politics is always non-partisan, in religion non-sectarian; in education always progressive; in morals unsurpassed; in sickness a constant friend; in all things progressive and in nothing sectional?

The Grange believes in equality before the law; believes in restraining the strong and in defending the weak. It believes in distributing the burdens of Government justly, and that none but capable and honest men should hold public office. The Grange is the oldest *Agricultural Secret Order*, and as such, is entitled to respect and veneration. We are all taught to respect age. The Grange asks farmers to come and affiliate with those who are ready and willing to help them. Come to the Order that will assist you mentally, morally, politically, financially, socially, and in a thousand ways make your life and your home more cheerful than they would otherwise be. The year 1891 is sure to mark an epoch in the history of soil-tillers. Every farmer and his family ought to come to the front and join in the financial, legislative, political and mental contests that are soon to be fought. Every one to his arms now. Farmers, help yourselves, if you would have others help you!

How many subordinate Granges have a Seal? Evidently a great many Secretaries forget to use the seal. With the new year, begin the use of the seal on every communication that comes from your Grange. Don't send any petition or resolution to your member of the State Legislature, or to your Representative in Congress without first affixing the Seal. Remember the Seal and seal the sealed communication before you stamp the foot or the envelope.

With the new year comes the new word. Pay dues and then you will get your due—the annual word for 1891.

Are you good at guessing? Then guess the A. W.

No motion should be considered, or stated by the Worthy Master, unless the mover rises and addresses the Chair. This law ought to be strictly enforced.

The courtesy of the Chair may at any and all times be extended to a Past Master or visiting Master. Do you do so in your Grange? If not, why not?

The Grange believes that political parties are for the people and the people are not, necessarily, for the party. The people may own parties, but political parties do not yet own the people.

By the time these lines are read, the new officers of State and county will have been installed. Let us watch, with eagle eye, to see how many farmers are appointed to positions. California politicians cannot afford to ignore the farmer vote. If they do, the day will come when something may be heard to—come from above—"drap."

Watch, by day and night, the vote of your Senator and your Assemblyman. The Legislature soon convenes. Every man will have a chance to do something—at least to vote—for the farmers. If your representative fails, note that fact and let him have a lasting vacation as soon as the session closes. Do it sure!

If you will reorganize a dormant Grange the National Grange will pay you \$2.50 and the California State Grange will add materially to the sum. For further particulars, "ask and ye shall receive, seek and ye shall find."

"No Grange, if true to its obligations, can discuss partisan or sectarian questions, nor call political conventions, nor nominate candidates, nor even discuss their merits in its meetings." (Grange Declaration of Purposes.)

"Yet the principles we teach underlie all true politics, all true statesmanship, and if properly carried out, will tend to purify the whole political atmosphere of our country. For we seek the greatest good of all." (Declaration of Purposes.)

The study of politics (which is but another name for the science of Government) is of itself all right. It is the duty of every one to give the subject much thought. But the practice of politicians is quite another thing. Keep company with the first named, but beware of the last named.

Has anybody heard of a farmer being appointed to office? The papers of late have given the names of many appointees who are to take office Jan. 5, 1891. Who has seen the name of any farmer in the list? Is it possible no farmer in California is competent? Or is no one willing? Or, to the point, has no one been asked?

Do you know that certain people refuse to read an article or to listen to a speaker unless the opinions expressed coincide exactly with their opinions? A greater mistake could hardly be made. You never know how strong a case is till you get both sides of it. Therefore we

can well afford to listen to any one who talks good, solid sense, even though we may not agree with him. Any subject that is not worth investigation better be ignored entirely. Get the truth. To do that, one must work. It will pay you every time to get at the "other side," as well as your own side of a proposition.

The following very pleasing letter, from a gentleman not a member of the Grange, was recently received. It shows the respect the Grange has won (from one very competent to judge of such things) for its steady, honest, progressive, yet conservative, course. The Grange is not parading all or many of its virtues before the public. But it is going straight along, growing, elevating its members, and helping, in a quiet but successful way, to purify politics and educate and assist the farmer.

Dear Sir: I acknowledge, with thanks, the receipt of Journal of Proceedings of the State Grange of Patrons of Husbandry. I beg leave to say, what every impartial man must admit, the proceedings are characteristic of high mental training, and all through is manifest a desire to improve and elevate the condition of man; to enlighten his mind; to imbue him with proper conceptions of his duties, his capabilities and his opportunities; to strengthen the feeble; uphold the weak; and to encourage the despondent. May its sun never pale and its shadow never be less is the wish of, respectfully yours, Forestville, Dec. 23. GEO. E. JEWETT.

## Bro. Cressey in New Hampshire.

EDITORS PRESS:—Bro. C. J. Cressey of San Jose, Treasurer of the California State Grange, was in attendance at the annual session of the New Hampshire State Grange, on Dec. 17th, and gave a practical and very earnest address. He came direct from the Maine State session, and although sick and weak, he appeared before the Patrons of New Hampshire, after an absence of 45 years, and was warmly received and his address was greeted with storms of applause. He alluded to the great accomplishments of the Order in the Golden State and warmly complimented the Patrons of the Granite State for their achievements.

The last annual exhibition of the N. H. Grange Fair Association was eminently successful, notwithstanding it was held in the middle of the longest storm of which the present generation has any knowledge. All bills will be paid in full and a good sum left in the treasury.

The N. H. Grange Fire Insurance Company is increasing its business and has thus far been very fortunate in not having any large losses.

The annual session of the State Grange at Manchester, now just closed, was one of the most interesting and profitable in the history of the Order. The attendance has annually been increasing and this year was about 20 per cent greater than last year. The interest was unabated and the reports of the officers and committees were excellent. Fraternally yours, Manchester, N. H. GEO. R. DRAKE.

[The above letter from the Secretary of the New Hampshire State Grange will be gladly read by the members of the Grange on the Pacific Slope. Separated as we are by the entire width of the United States, we are glad to hear of the growth and prosperity of the Order in the old White Mountain State and the other New England States. We know that every Patron will join us in our thanks to Bro. Drake for his subscription to the RURAL PRESS and kindness in writing, and to the different Granges and Patrons East for their kindness to our Worthy Treasurer, Bro. Cressey, for "in him" we are all received.—EDS.]

## A District Union Installation.

There will be a joint installation of Grange officers belonging to the sixth district at Watsonville, Jan. 3, 1891. Past Master I. C. Steele and District Deputy will do the honors of the occasion. All officers and members of the sixth district are particularly invited to be present, and a cordial invitation extended to other Patrons in the State.

TO ALL GRANGES about to install officers, the RURAL sends a hearty greeting. May all elect be present in strength for a year of excellent service, and success and happiness finally crown their sincere efforts. Let every brother and sister strive to see who can best assist their chosen servants to increase the membership and good standing of their Grange.

ALL PATRONS are invited to the installation of Eden and Temescal Grange officers, at Old Fellows' hall, Oakland, Jan. 31, at 10 A. M. Worthy Master Davis will be present, and we hope also a good number of other able Grange speakers, and visiting brothers and sisters. Bros. Amos Adams and Rev. A. T. Perkins are the W. M.'s elect.

EIGHTEEN HUNDRED AND NINETY-ONE finds the Grange in California in harmony, with greater numbers and more funds now than at the beginning of any year within a decade. It should make good and substantial advancement within the 12 months. It is for all members unitedly to determine what that progress shall be.

## Appropriations.

During this, the short session of Congress, the most important work that is expected to be done is that of passing the appropriation bills, by which the different departments of the Government may be able to secure the sinews of war; and immediately following, the estimates for 1891, as contained in the bills to be acted on within the coming two months.

To keep them in good running order, I have been looking up some of the figures, past, present and prospective, and from a farmers' and Patrons' standpoint I find some of them full of interest, containing some pointers that should set farmers to thinking and acting.

We now have eight regular departments of the Government, the heads of which form the President's Cabinet. To these may be added the legislative, meaning Congress, all of which are supported by the appropriations made from year to year. I will give the figures of the appropriations made for each for 1890:

	1890.	1891
State Department.....	\$ 2,477,636	\$ 1,981,435
Treasury.....	180,661,369	1 7,030,989
War.....	38,608,626	47,052,073
Navy.....	24,347,220	26,440,159
Interior.....	112,784,818	117,054,420
Postoffice.....	2,072,229	9,119,131
Dept. of Justice.....	4,816,002	4,800,700
Dept. of Agriculture.....	1,089,037	1,288,430
Legislative (Congress).....	6,358,042	6,420,583

There is plenty of proof for study and thought in these figures. Over seventy times as much spent in the army and navy as for agriculture at a time when we are at peace with all the world, so strong within ourselves that no nation on earth dare attack us. Six times as much spent for the months Congress is in session as for the great industry which is at the foundation of all our greatness, and that feeds and pays for running all the machinery of Government, manufactures and commerce. Study the figures carefully, and see if you don't come to think that in this, as in matters of taxation, finance and tariff, we should still insist upon "equality before the law."—Farmers' Friend.

## Sensible Talk, Anyway.

The inaugural message of Gov. Tillman of South Carolina covers considerable ground. It is the message of a man of the people who has studied the needs of the people. He says in reference to education that the Military School should be wiped out and its appropriation used for a girls' school. This girls' school should teach useful things. There would be no place in it for oil paintings and the ologies; but there would be a large place for cooking and other branches of housekeeping, and a place for telegraphy, phonography and other branches which fit girls to earn their own living. He proposes to put a stop to lynch law if he has to remove every sheriff in the State. He is going to have speedy trials, and to have one fair trial end a case. That trials may be fair, he will do away with professional juries and drunken justices. To make these reforms possible, there must be a new Constitution. The present one, he says, was framed by "carpet-bag vampires and baser native traitors." He will have a Constitution under which the two races can live together in peace. South Carolina has for many years been ruled by the aristocrats, mostly of the land-owning class. Tillman is a man of the people, who two years ago was an every-day farmer. He is a man of force and character, and with four-fifths of the voters at his back may lift the State out of the ancient rut it has run in so long.—S. F. Call

## A Gala Day in Prospect.

EDITORS PRESS:—We expect to have a grand time Installation Day, Jan. 3. We have invited all the Granges in our district to join us in a general installation in our hall at Watsonville, and we hope they will all accept. We are going to depart from our old-time custom of having our Harvest Feast in our hall, and are going to have it in a hotel kept by one of our brothers, Conrad Jensen. We are going to march down the street in a body, with our regalia on, and our banners flying to wooing breezes of the broad Pacific.

We are getting a number of proposals for membership, and all indications are good for another prosperous year for Watsonville Grange.

Wishing and hoping that you and many others of the State officers may be with us on Jan. 3, 1891, I remain,

Yours fraternally,  
GEORGE E. ABBE,  
Sec'y Watsonville Grange.

WATSONVILLE will no doubt have a glorious reunion on Jan. 3d—the Granges in San Benito, Santa Cruz, and the northern part of Monterey county being invited to join in a union installation of officers. Past Master I. C. Steele will officiate on the occasion. He can always be depended upon for an interesting and elevating address. His noble and generous acts for the Good of the Order are an inspiration for love and labor for its welfare and progress. It seems entirely fitting that Bro. A. P. Roache should again assume the gavel in his own Grange, for which he has done so much and so well.

## FARMERS' ALLIANCE.

SUBSCRIBERS who are members of the Farmers' Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage.

## Alliance and Institute.

## Two Important Meetings to Be Held at Hanford.

Hanford will enter upon the new year with two important conventions, and both should be well attended.

The first of these is the Farmers' Alliance, which will convene at 10 A. M. on Wednesday, Jan. 7, 1891, and every Alliance in the county is requested and urged to send delegates, and the Register hopes that every Alliance in the county will do so. It is probably too late to begin work for this Legislature to consider, but it is not too early to begin movements for the people and Legislature to consider two years hence. Nothing can be gained in politics except through organization and determined effort. The farmers of California can govern California if they will. Will they?

On Thursday, Jan. 8th, at 1 P. M., there will be held, also at Hanford, a session of the Farmers' Institute of Tulare county, and we hope that this, too, will be well attended. We are looking forward to a time when Farmers' Institutes shall be held all over California, and not only held, but well attended. These Institutes are especially needful in a county like Tulare that is just entering upon a business new to most of us and which requires a high degree of intelligence and skill to make successful.

The subject for discussion will be, "What, where and how to plant," a continuation of the discussion begun at the Tulare meeting.

This subject is timely and important. Everybody invited to attend the meeting and everybody should go.—*Tulare Register*.

[We do not see why the present Legislature should not help the Farmers' Institute, but many reasons for fairly establishing the system. EDS. PRESS.]

## An Encouraging Outlook.

John S. Dore, member of the State Alliance Executive Committee, writes the following inspiring letter to the Fresno Republican:

*Editor Republican:* The Farmers' Alliance has been thoroughly organized in Fresno county for several months. Sub-Alliances were formed early last summer in West Park, Walnut, Fowler, Selma, Madera, Chicago, Lone Star, Iowa, Franklin, River Bend and Reedley, and the Fresno County Alliance was fully organized, elected officers and received its charter from the National Alliance nearly six months ago.

It had three representatives in the first annual session of the State Alliance in San Jose last November. At that time there were already 14 counties organized in this State, with a membership of nearly 8000. Since the State meeting several counties and many sub-Alliances have been organized, and the work is steadily going forward, there being to-day over 10,000 members in the State.

Mr. J. L. Gilbert of Reedley is the State Lecturer and has the authority to organize Alliances anywhere in the State. I would refer all who may be desirous of having Alliances organized, especially in any part of Fresno county, to Mr. Gilbert at Reedley, or Mr. J. W. Webb of Fresno, who is also duly commissioned as an organizer.

The meeting of the County Alliance at Fowler on Friday, Jan. 2, 1891, has several important matters to consider, among which will be the selection of some paper as an official organ of the Alliance in Fresno county, and the appointment of a business agent. A large attendance at that meeting is expected and desired.

The meeting of the Executive Committee of the State Alliance at San Francisco on the 12th of January next is for the purpose of auditing accounts, and such routine work as properly belongs to such a committee. The social and business features of the Farmers' Alliance are not less important than the influence that may be exerted upon the action of political parties where the farmers' interests are in jeopardy.

So far as I am concerned, I want the true aim and work of the Farmers' Alliance understood, and then it will stand or fall on its merits. Yours respectfully, JOHN S. DORE, West Park, Dec. 22, 1890.

If Jay Gould had not owned the wires, and through them controlled the Associated Press, and through the Associated Press controlled the daily papers, he could not have so readily used his mighty wealth to hurt nearly everybody else in America. But for the matter of that, were it not for his grip on the wires and the press, Jay Gould and a few others of his sort would not own half so much wealth. Do you see it?—*Texas Stockman*.

THE FARMERS' CLUB.—The Lakeport Farmers' Club was organized last Saturday. The following were the officers elected: R. D. Merritt, President; Frank W. Gibson, Vice-President; Thomas Porteus, Secretary; Wm. Gessner, Treasurer. The next regular meeting will be held in the office of McCraney & Son, on Saturday, Jan. 3, 1891, at 2 P. M.—*Lake Co. Avalanche*.

## Thirty Million Dollars.

Jay Gould made \$30,000,000 the other day. It is spoken of by the press in about the same way as it would speak of a man selling a house and making \$500. Jay Gould made thirty millions of dollars the other day! How? While making it, did he contribute anything to the wealth and happiness of the people? If the farmer succeeds in making any profit at all, he at the same time does something that is valuable to the community. If the manufacturer makes even an unreasonable profit, he helps to make others rich and more comfortable. But is there one man, woman or child on the face of the earth, outside of the Gould family, who has been benefited one iota by Mr. Gould's accumulation of another \$30,000,000? Mr. Gould made \$30,000,000 the other day! What did he do that was so immensely profitable? Well, he did this:

Concluding that he would like to possess himself of certain railroad properties, he went into Wall street with his peculiar methods and ran down the price of stocks, which in many cases were held by men and women who believed that they were good investments because the roads in question were doing a good business, and because there was no good reason why they should not continue to do a good business. They had invested their money in these stocks as a legitimate business transaction. Gould wanted the stock; he wanted it at a low figure, and so with his immense fortune he began to depress the price. In plain, unvarnished language, Jay Gould sought to possess himself of property to which he had no more moral right than the pickpocket has to the pocketbook and its contents which he has taken from the pocket of his victim. When he had succeeded in getting the price down as low as he wanted it, he bought the stock.

Jay Gould made \$30,000,000 the other day; and that is the way he made it. It is not so very difficult to make money by such a method. It principally requires gall and an easy conscience. Other men have made a good deal of money from time to time. A New York bank cashier made a few hundred thousand dollars the other day. It was easy. He simply took the money belonging to other people and went to Canada. Young Ward, of Grant & Ward notoriety, made a large sum of money the other day. He robbed Gen. Grant and everybody else with whom he came in contact. Harper made a big profit the other day, but every cent he made was a forced loan from somebody else.

Old Shylock is regarded with contempt simply because he wanted his pound of flesh. But the bond gave it to him. His debtor made a contract. There is no contract to warrant Jay Gould in whetting his knife for the purpose of carving his victim. He simply strolls forth and lays his hands on what he wants; and this sleek, cunning, sudacious plunderer, with one hundred millions of other people's money in his possession, has been permitted to go unwhipped of justice for all these years. It seems almost incredible; it would appear to be unimpeachable evidence of the utter stupidity and idiocy of this American people; and it is unquestionable evidence of the fact that well-clothed, brazen dishonesty passes as the spirit of enterprise in this country.

And now it is further announced that the dark conspirator against the people means to form a railroad trust, through which to rob the people perpetually. He means, if possible, to do with the railroads as he has done with the telegraph, make them a weapon for the brigand to use. Will the people stand it? We do not believe it, and if the government permits this man to go on with the accomplishment of his designs, it will find that there will be a much larger political rumpus in this country than the McKinley bill is supposed to have caused.—*Western Rural*.

## Tax the Net Value.

The whole trend of public opinion is in the direction of levying taxes only on what a man is really worth, and not what he seems to be. There is no question whatever that this is the just and equitable method, and if some plan that is certainly feasible shall be evolved, we do not doubt that legislation will soon be enacted to put the theory into practice.

"Many of our farms are heavily mortgaged, and it is gross injustice to collect a tax on the full valuation of property when some rapacious money-lender holds a claim against it for half or two-thirds of its worth. Clearly such claim ought to be deducted from the valuation of the realty, and the mortgage itself he made to bear its share of the burden of taxation. And further, there is great injustice in the fact that hidden property may escape all assessment. Our tax laws discriminate against the farmer, bringing him to account for possessing property which he cannot put into bank vaults, and allowing the bondholder, the speculator and stock gambler to secrete their wealth beyond the reach of the tax-collector. Will either of the chief political parties of this nation, having as they do heavy capitalists for their leaders, ever lift these burdens? To look for such a thing would be to expect the impossible."

Thus speaks the *Rural New Yorker* on this subject, and it but echoes the universal sentiment of the agricultural press of the country. But we may safely look for such a thing if farmers continue to acquire and wield political

influence. It will take long and diligent study to formulate and put into effect tax laws which will relieve the farmer of the disadvantages under which he now suffers by shifting from his shoulders a portion of the burden that belongs to others. But when once all are aroused to the necessity of it, it will be done.—*Journal of Agriculture*.

FARMERS' ALLIANCE.—P. T. Durfy of Monte Vista, who was a delegate to the Farmers' Alliance meeting at San Jose, thinks the future of the organization depends mostly on maintaining its purity of elements and of purpose. One of the great troubles is to keep the membership confined strictly to farmers, to those who are directly interested in the cultivation of the soil in some shape. The great success of the organization is attracting attention, and all sorts of combinations seem anxious to get into the new Order. Many labor organizations are coming to the door to make inquiries as to terms of affiliation, and the Nationalists are asking for direct admission. While the labor people are practical, their interests are not by any means identical with those of the farmers, and the Nationalists are mostly theorists. To let in all sorts of people means to complicate the aims and workings of the organization. Antagonisms and divisions, misunderstandings and strife will ensue. As it is desirable to keep the membership free from entangling alliances, so is it to preserve the Order from the interferences of the old political parties.—*Santa Rosa Democrat*.

## Arizona Notes.

EDITORS PRESS:—'Tis time to write the RURAL a line. Twice lately I penned quite lengthily to the RURAL, but on reading over after it had gotten cold, fearing an attack of land agents, I hacked off. I have not forgotten till yet being published as a "hired liar" in the interests of Northern California, when 17 years ago I wrote up Southern California.

Our favored portion of Arizona is weathering the surfeit of land speculators slowly. For three years have these parasites sat on our facilities, and time and interest and taxes have shaken their firm grip a little.

Some 15 families from the East have bought in and around Tempe, and will plant out fruit trees and vineyards on land that heretofore has been devoted to alfalfa and bronco and steer.

Since the silver legislation several of our stagnant mines have begun operations, which gives our town of Tempe new life.

The old-time jerk liner, with his long string of worn wagons and mules, is busy about our railroad depot.

Jake and Joe have lately stumbled on to a Mr. to their names since they have sold out their mine, and now have a fast bank account and own the cottage down on the avenue.

Our two English boys, Dick and Sam, have struck it rich out in the Escaton mountains, and so they have no time to prune the vine this winter, so some one else can get their former contracts while they attend to another calling, superinduced by the Silver bill passed by our late Congress.

While our enterprising people have been busy in our various lines of trade and speculation, a heathen Chinese came in above our town and offered \$5 per acre rent for a certain piece of alfalfa of 20 acres. He had a terrible time to plow up the alfalfa, but finally whipped the fight, planted to potatoes and in November was offered \$100 per acre for the crop in the ground before digging, but John's almond eye couldn't see it. Well, who wants to imitate the heathen? He has no trotting horses, nor does he take an active part in party politics, nor does he run a long bill at the grocery store as we do and pay up with beef at a cent and a half, and ship over the railroad at fancy prices per car.

The weather is exceptionally fine, so much so that if it runs along in this style for two weeks, the busy bee will be working on the willow and maybe the peach-bloom. On an average, Arizona is at par, or a little above. Tempe has quite a lot of tourists sojourning for the week with us, and all things are in shape to make an impression. GEO. KAY MILLER, Tempe, Arizona.

## Our Public Schools.

EDITORS PRESS:—I mail you a copy of the Fourteenth Biennial Report of the Superintendent of Public Instruction. An examination of the statistics will show that the increase in the number of census children in the State during the past two years was 10,382. The increase in the average number belonging to the public schools for the same time was 15,714.

The increase in the daily average attendance was 14,362, thus showing that the daily average attendance was increased by 3980 more than the total increase in the census rolls for the same time.

During the past two years 381 new school-houses have been erected, the total number in the State now being 3121, of which 115 are of brick. Increase in number of teachers, 496; increase in number of teachers graduates from Normal schools, 328; increase in number of volumes in school libraries, 77,050; increase in number visits by county superintendents, 831; increase in number of teachers attending institutes, 631; increase in number of school visits

by trustees, 3930; increase in number of school visits by parents and friends, 32,116; increase in value of school property, \$3,060,363; total value of school property in the State, \$13,627,143.

In retiring from office, I desire to express my sincere thanks to you and the public press of the State generally for the cordial courtesies which you have extended to me during the past four years and the encouraging, friendly helpfulness which you have given to all engaged in promoting the interests of the public schools.

IRA G. HOITR,  
Supt. Public Instruction.

## ENTOMOLOGICAL

## Insect Pests in Ventura County.

EDITORS PRESS:—The Horticultural Association of Ventura county met at Union hall, Ventura, Saturday, December 13th. The convention organized with N. W. Blanchard of Santa Paula, Chairman, and M. E. Isham, Secretary. Messrs. Sharp, Hill, Prince, Rice and Decker were chosen Business Committee by Chairman Blanchard, who then opened the convention by a few pithy remarks about the object of the meeting and the necessity of taking concerted action against insect pests which are already in the county. He thought something should be done to prohibit the bringing into Ventura county, in future, pests from other portions of the State. It has been demonstrated that the Australian lady-bug cleans out white scale effectually. Mr. B. considered the red scale the next worst pest here.

Near Santa Paula, in the orchard of W. Easley, last season Mr. B. found a few codlin moths. He thinks they came from fruit imported from the East. As this pest is supposed to be gotten rid of if the season's fruit could be destroyed, a discussion was entered into by the convention as to the feasibility of purchasing fruit where this moth has been found and destroying the same, as it is not yet widespread.

In Mr. Hodson's orchard near Ventura can be found a few San Jose scale—the worst scale which infests our deciduous fruit trees. This scale is pretty well distributed throughout the county, not in great numbers, but in the different orchards of the county, and we have got to exterminate or fight it. Mr. Blanchard stated that it would be worth hundreds of thousands of dollars to us if it could be gotten rid of.

Mr. Rice of Santa Ana considers San Jose scale the most important thing to look after in the county, as it affects fruit as well as trees. Thinks there is no orchard six years old here but what is infested with this scale. He has found Red scale at the Ojai.

Mr. Sharp of Saticoy said his experience with pests had been limited, but had at one time a few trees infested with Black scale.

Mr. Decker of Cienega had pear-tree scale, but used kerosene wash and eradicated it entirely.

At the afternoon session, the subjects treated and discussed by members of Horticultural Convention were as follows:

- 1st. Codlin Moth.
- 2d. San Jose Scale.
- 3d. Bees and Fruit.
- 4th. Best Means to Eradicate Fruit Pests.

There were about 30 members present, and the discussions showed our fruitmen alive to the interests of their business and that brain-power was not lacking any more than muscular.

Messrs. Blanchard, Rice and Isham were elected Board of Horticultural Commissioners of Ventura Co., to make inquiries and report at the next convention.

It has become evident that decided action must be taken here to protect our orchards, and it is hoped that the laws already passed may be enforced for their protection, and that means may be voted by the supervisors to carry on all necessary work. M. E. D.

Dec. 16, 1890.

## Rosin Wash for the Orange Red Scale.

R. C. Kells, J. C. Gray and H. P. Stabler, Horticultural Commissioners of Sutter county, recommend the immediate and thorough use of the following wash on orange trees infested with red orange scale. This remedy is known as the rosin wash. It has been indorsed by the State Board of Horticulture and has been used with great success against the red orange scale in Southern California:

Eighteen pounds rosin.  
Five pounds caustic soda—70 per cent strength.

Two and a half pints fish oil.  
Water to make 100 gallons.

Boil the rosin, caustic soda and fish oil in about 20 gallons of water. Be sure the ingredients are thoroughly dissolved, then add water to make 100 gallons. This wash, used on orange trees, will in a great measure rid the trees of the red orange scale, but it must not be expected that one application will entirely eradicate the pests. It will require several thorough sprayings to accomplish that result on badly infested trees.

SENATOR PETTIGREW favors the total extinction of the seal. He says they eat up more good, nutritious codfish every year than their hides are worth.

### The Forsaken Farmhouse.

Against the wooded hills it stands  
Ghost of a dead home staring through  
Its broken lights on wasted lands  
Where old-time harvests grew.

Unplowed, unsown, by scythe unshorn,  
The poor forsaken farm-fields lie,  
Once rich and rife with golden corn  
And pale green breadths of rye.

Of healthful herb and flower bereft,  
The garden now no housewife keeps;  
Through weeds and tangle only left  
The snake, its tenant, creeps.

A lilac spray, once blossom-clad,  
Sways bare before the empty rooms;  
Beside the roofless porch a sad  
Pathetic red rose blooms.

His track, in mold and dust of drouth,  
On floor and hearth the squirrel leaves  
And in the fireless chimney's mouth  
His web the spider weaves.

The leaning barn about to fall  
Resounds no more on husking eves;  
No cattle low in yard or stall,  
No thrasher bears his sheaves.

So sad, so drear! it seems almost  
Some haunting presence makes it sign;  
That down yon shadowy lane some ghost  
Might drive his spectral kine!

—John Greenleaf Whittier.

### Mrs. Hawes' Twins.

Mrs. Hawes had returned to her work of looking over old coats and trousers with a view to making them into rugs. She remarked to herself and to the cat that it "wasn't no manner of use to waste her breath calling when folks didn't want to hear."

She stood tearing off a strip from an old-time Sunday coat belonging to her husband, when the door opened quickly and a girl about sixteen years old walked in with an air as if she had been running.

"Here I am, mother!" she said. "What is it you want?"

Mrs. Hawes glanced up.

"'Twas Martha Jane I was calling," she said.

"I'm Martha Jane. O mother, when will you know me?"

The girl threw back her head and laughed, Mrs. Hawes dropped the coat skirt, gazed a moment and then laughed, too, but with a vexed air.

"That comes of having twins to contend with," she remarked. "I thought by the way you broke into the room 'twas Jane Martha. She's liable to come through a door as if she had been shot out of a gun. Where've you both been?"

"Down to the brook. The wind blew so we didn't hear you when you first called. Did you want anything particular?"

The girl tried to speak patiently, though she was longing to go back and resume making a swing between the two cider apple trees.

"Miss Lawler's jest hen here," Mrs. Hawes announced.

"Oh, hae she?"

Martha Jane clasped her hands as she put this question. Her face flushed and her eyes sparkled with interest. Her mother partially ripped a sleeve before she spoke again. Then she continued:

"She's decided to have that music party—musikari, she calls it—next Wednesday evening. That German Herr Rickerstruther or somethin' can come then—sooner'n she expected. She invited both you girls. She said it would be finer'n anything you've ever heard. Miss Dalrymple from Boeton's gonn' to sing. I thought you like to know right off. That's why I called, though I knew you was havin' a good time at the brook."

Martha Jane turned and walked to the window. From there she asked:

"You said we both were invited?"

"To be snore. I'm afraid you'll have a hard time decidin'," the mother answered, anxiously.

"There's nothing to decide," said Martha Jane. "It's Jenny's turn; I went to the church fair last month, you know."

She came from the window and stood before her mother. She flung out her hands with a quick gesture as she exclaimed, passionately:

"I do wish we had more than one dress! It does seem sometimes as if I couldn't bear it!"

"You don't wish so any more'n I do," said Mrs. Hawes. "You know jest how 'tis; we keep havin' doctor's bills to pay for my sick spells, 'n now it don't look as if we could ever afford for you each to have a nice dress. I s'pose we ought to be thankful you c'n have one, 'n so swap round 'bout gonn' to places, bein' jest of a size, 'n as like's two peas un-way. I wish 'twas diff'rent, but I can't help it," she sighed as she ran her knife across the stitches.

Martha Jane was moving restlessly about the room.

"Praps Jane Marthy'd give you her chance," suggested Mrs. Hawes, more to see what this daughter would say than for any other reason.

"I shouldn't wonder," was the response. "She's twice as good as I am, but she wants to hear that music as much as I do. She loves it just as well. No, it's her turn. She must go and I must stay at home and envy her. It's horrid to be so poor!"

The girl tried to keep the tears that rushed to her eyes from falling on her cheeks. She saw her mother's lips tremble.

"I'll be good about it after a little," Martha Jane said, in an unsteady voice. "Only give me time to think it over and get the upper hand of myself."

She hurried out of the room and up the steep stairs to the chamber under the roof which she shared with her sister. She sat down on the bed, crying out in a whisper:

"I rather hear Miss Dalrymple sing than anything else in the world."

Then justice compelled her to add:

"So would Jenny, and it's her turn."

In ten minutes she came down the stairs. She opened the door and tried to speak with brave cheerfulness.

"All right, mother! I don't mean to be a mean wretch this time."

She ran at the top of her speed down to the brook, where her sister was now trying the new swing, dreamily "letting the old cat die" in the soft, sweet air.

Mrs. Hawes left her work and watched the young figure as it bounded along.

"They couldn't either of 'em be mean wretches to save their lives," she said aloud, with a kind of sorrowful pride.

But Martha Jane had not yet fully got "the upper hand of herself." When she told Jane Martha of the invitation, and said "It's your turn, you know," she felt rather bitter. It seemed to her that her sister's turn always came at the best times.

There was silence for a moment. Then Jenny said, as if speaking to herself:

"Only to think of hearing Miss Dalrymple sing!"

These twin girls were gifted not only with the musical temperament, but with rarely sweet singing voices. Not to be able to improve these gifts under competent instruction had been one of the great trials of their poverty.

Martha did not speak. She felt very hard and disagreeable. She recalled the resolves just made in the little chamber, but the recollection did not do her much good. She knew she was yielding to evil. She felt her eyes burn and snap.

The two girls sat in the broad seat of the swing, which barely moved. A red-shouldered blackbird came into one of the apple trees over them and sang out his delicious melody.

At the first note Jenny turned toward her sister. She knew instantly all that Martha was feeling. She had a moment's fight with herself, then she said:

"You shall take my turn, and I'll have the next two turns at our gown. That'll be fair, won't it?"

Martha had spoken truth when she had said that Jenny was better than she was. She knew in her heart that she had often taken advantage of that self-sacrificing spirit, and she had had many a "crying fit" of remorse because she had done so. Now she was tempted again and almost ready to yield. She shrugged her shoulders violently. "No!" she said, with emphasis, "it wouldn't be fair. You know as well as I do that this chance is worth all we may have in a year." She made a great effort, and added, "and I won't take your turn, eo there!"

She kept bravely to her resolve all through the three days which followed. It was Jenny, the lucky one, who went about her work in a perturbed state of mind. She kept looking forlornly at her sister.

It was only on the morning of the Wednesday she appeared to cheer up somewhat. She had a private consultation with her mother, who constantly interrupted her with the exclamations, "The land's sake! it'll never do! it's just a crazy idea!" But she laughed as she uttered these interjections, and finally said: "Well, praps there's no harm in it, but don't ask me to help you'n if you get into any trouble, but blame nobody but yourself."

"There's no trouble to get into," responded Jane Martha, confidently. "Nobody'll ever know anything about it anyway. I'll go up to the village now and call at Mrs. Hardy's. I know she'll be willing."

It was not half an hour later when Mrs. Hardy, who lived just across the street from the tall verandahed house which was Miss Lawler's home, opened her front door to find one of the Hawes twins waiting.

"Come in," she said cordially. Of course I don't know which 'tis, but you're welcome all the same."

"It's Jane Martha," replied the girl, stepping into the cool hall.

When she was seated by the kitchen table, whereon Mrs. Hardy was rolling pie-crust, she hesitated and blushed a good deal before she really announced her errand. When she had done so, however, she went on easily enough, and laughed with the good-natured lady who listened to her.

"Mother finally told me I might," she said, "if you were entirely willing."

"Just as willing as I can be," was the answer. "There'll be a great time at the Lawlers' to-night. Very select, too. Only musical people going. I suppose Miss Lawler thought you and Martha Jane was musical, and so you are."

When at a quarter before eight that evening Jane Martha timidly went up the path leading to the great Lawler house, she saw through the windows how brilliant the rooms looked, and how lovely were the flowers in them. She felt very small, but still very eager.

Miss Lawler herself, a tall lady in thin, shimmering silk, was coming through the hall when the servant let in the twin. She smiled on the shrinking child, and Jane Martha collected her wits.

The first thing the lady said was what everybody said when Martha or Jane was met alone: "Which is it?" and when the girl had told her, "I'm sorry you could not both come. I'll put you in a good place where you can see and hear."

Jane, in the pretty, light-colored cashmere which belonged to her and her sister, was placed in a chair near the door, where she could see the piano and every one who played or sang. She looked at the open door and breathed a sigh of relief. Then she prepared to enjoy herself.

The German Herr, as she called him, played. She had not known that a piano could sound like that, but still she waited for the singer. She knew that the slender girl in white, who had at her throat a cluster of carnation pinks, must be the one.

Yes, it was she; and at last she sang. It was only in dreams that Jane had ever heard such tones, but she had dreamed of them often and now it had all come true. The notes penetrated and thrilled Jane's heart until she could hear no more. She had unconsciously pressed her hands to her bosom, and as the last high notes soared and soared in pure sweetness, Jane, still not knowing what she did, rose from her seat and leaned forward.

Miss Dalrymple, turning when her song was done, saw the figure and met the vivid glance of the eyes.

Hardly noticing the applause, she turned to her hostess and said, "That child can sing."

Miss Lawler looked at Jane, who was now shrinking back.

"Indeed she can. You shall hear her. She loves music so well, I think she will not even be afraid to sing now."

"Let me ask her."

The next moment Jane Martha felt a hand on her shoulder. She looked up adoringly into Miss Dalrymple's face, and that lady felt that she had never given more pleasure.

"Will you sing for me?" she asked.

"Now?" whispered Jane.

"Presently. You shall stand close by me, and I will play for you. You shall sing what you please. Are you willing?"

"O, yes, for you!" answered the girl.

Miss Dalrymple smiled down upon her and took a small, cold hand in her own.

So it happened that Jane's fresh, unsullied soprano voice, full of suggestions of power, was heard at Miss Lawler's musicale.

Miss Dalrymple listened in admiration. She rose from the piano and said, so that every one could hear, "I could not do nearly as well as that when I was the age of this child. It would be a shame if such a talent should be wasted."

Then there was a hustle of movement and oompliment, and "the Herr" was going to play again.

Jane went back to her seat quite dazed by what she had done, and by what Miss Dalrymple had said. No one noticed her now, and she could listen undisturbed.

It was not until nearly an hour later, after cake and coffee and ice had been handed among the guests, that Miss Dalrymple again remembered the girl. There she was in her corner. She was eating an ice. The lady walked toward her.

"I want you to sing once more," she said; "I have a plan in my mind. Perhaps I can give you a couple of hours a week for the next two months. I shall live here with my friend until winter."

The girl clasped her hands and began to tremble. She seemed bewildered.

"What, you are afraid this time, are you? It was really a treat to hear you before, or I would not ask you when so many are present."

"Yes, I am afraid," said the girl, "but since you wish me to try, I must."

Miss Dalrymple was sorry for the child when she had placed her by the piano again. The small face was white and the lips almost stiff.

"Take heart," whispered the lady. "You did so well before. What shall it be?"

When at last the song was selected, Miss Dalrymple looked at her companion in surprise.

"Do you know in what key that is written?" she asked.

"Yes."

"But can you sing as low as that?"

"O yes."

The other stood in amazement with the sheet of music in her hand.

"I don't understand it," she said.

The girl gazed pleadingly at her, but was silent.

In a blind way the accompaniment was begun; but when an untutored but rich contralto voice commenced the song, there was a discord among the keys of the piano, and Miss Dalrymple wheeled round and stared at the girl

beside her, who trembled so that she could scarcely stand.

There was entire silence among the people present.

"What does it mean?" cried Miss Dalrymple, looking about her in wonderment. "It cannot be that this child has two distinct singing voices—one very high and the other very low. She is a phenomenon."

Judge Lawler, in the doorway, began to chuckle audibly. He had seen a slight figure steal out and soon return, and now he thought he understood.

The girl at whom everybody was looking tried twice to speak before she could say a word. Then she burst out shrilly:

"Oh, if you please, I am the twin!"

"That explains," cried the Judge, and he began to roar with laughter. All the company joined in, and the "other twin" stood in the midst, blushing, and finally laughing, too.

"You are not the one who sang first?" she was asked.

"No, ma'am. That was my sister Jenny. It was her turn with the dress—"

Martha Jane stammered, then was silent, growing more painfully red than ever.

She had waited across the way at Mrs. Hardy's for her sister to leave the party. Then the two had changed frocks so that both should have a share of the music. This had been Jenny's little plot. In the hurry of changing she had not told that she had been obliged to sing.

"No matter about the dress, now," said Miss Dalrymple with ready tact. "Let us finish the song."

The distressed young face appealed to her deeply.

Afterward, sitting by the child, she heard why the twins were obliged to "take turns in everything nice," as Martha Jane expressed it. "But," said the girl, "it did seem as if we could not both give up hearing you. It was Jenny who thought of the plan."

The next morning Miss Dalrymple returned to Boston. As she left the phaeton, in which Miss Lawler had driven her to the station, she saw two young girls in plain gingham gowns and broad hats, hurrying down the road. They were the twins, and they brought two lavish bunches of roses which they shyly offered.

It was Martha Jane who spoke for both. But all she was able to say was, "Miss Dalrymple, we could not help coming to see you off—and to thank you."

The singer kissed each young face as she took the flowers. She thought she had never received homage so sweet as that she saw in their eyes.

The train was coming. "I shall remember the lessons I am to give you," she said.—*M. L. Poole in Youth's Companion.*

### Kitchen Experiment Stations.

In Printing House Square, one of the busiest places in New York City, one sees a stone drinking trough with these words cut deep into its sides: "Drink, patient friend." A clear stream of water gushes into the trough and the weary dray horses stop to take long draughts. On many a liquor saloon in the neighborhood one might imagine he read the same words, "Drink patient friend;" but the human creature that takes whatever is offered him is not to drink to his refreshment and increased working power. And over many of the restaurants would be a not inappropriate motto "Eat, patient friend;" for we know how submissively the average clerk of the region will take his seat on the high stool and eat of grease-soaked meat, soggy potatoes and sawdusty bread, topping off with the national pie and doughnuts.

To the hundreds of thousands of us who "eat what is set before us asking no questions," it seldom occurs that we have actual cause for envy in the condition of our friend the horse, whose food has been studied by learned men as to kind, quantity, and proportions, and with such success as can be seen on any fine stock farm.

There are few of us who do not love a horse and cattle show, but we would appreciate it still more than we do, could we compare these beautiful racers and sturdy draught horses, these Ayrshires and Jerseys and Guernseys, with the horses and cattle in use among us one hundred or even fifty years ago. Would that the human race could show in a half century any such improvement in its physique!

Of course not all this improvement is due to the scientific study of food, but that is confessedly the largest factor, the animal always responding to improved food by greater effectiveness, whether in flesh forming, milk giving, or working power.

It is scarcely half a century since the first Agricultural Experiment Station was erected, and they now number over one hundred in Europe alone.

Now is it not time that there were experiment stations for the study of a person's food, and especially for the proper preparation of it? The German scientists have informed us in the "standard dietaries" just how many ounces of bread, beans, and other foods are necessary to sustain a human being

daily. But that these foods may yield to us their full analyzed amount of nutriment, how shall they be cooked, Mein Herr? Shall our beans be boiled, or Boston baked, or shall they be prepared in some way known only to the Fatherland? Surely a link is missing here.

For those who think that cookery has reached tolerable perfection as an art or even may be numbered among the sciences, this question will have no interest; but most of us think that not only is the science of nutrition in its beginning stages, waiting, as it must, on the growth of chemistry and physiology, but that the knowledge already available has been but little applied to the preparations of food.

Numberless questions throng upon us of the greatest economic importance, not to speak of their relation to hygiene.

How shall the cheaper cuts of meat be cooked so as to make available all the nutriment and to develop all the flavor? Then there is the life of our most valued and least understood house plant, the yeast, and not less important, its death in the oven, a study of temperature from beginning to end, and only to be fitly conducted thermometer in hand. A hundred other questions in animal and vegetable cookery are waiting for answer.

When we come to cooking utensils and methods we are indeed in an unexplored country. The kitchen range was long ago pronounced dirty, wasteful and not easily controlled, but what is to take its place only careful experiment will decide. That coal will not be the fuel of the future is more than probable, but when we talk of gas, gasoline, or petroleum, and their application to different cooking utensils now in use, we meet questions of relative expense, safety and availability; and what housekeeper's opinion on these points is supported by well-observed facts covering the whole ground? How many, for instance, know or have any means of determining how many cubic feet of gas are necessary to boil a gallon of water?

At the Agricultural Stations extensive experiments are made on ensilage, the softening of vegetable fibers by acids developed in the process. Does not this suggest much needed experiment of softening of meat fiber by hanging? And if it is well to study commercial fertilizers, made foods for grains and grasses, shall we not know with more certainty about the growing list of prepared foods for human beings?

"The modern feeding of pigs, its influence upon the formation of the skull and dentition," is no doubt a useful study, but it suggests one that would perhaps be of equal value, the food of children, with accurate observations as to the effect on growth and development.

Some one says, "Oh yes, these are all important matters, but why an experiment station? Cooking is the business of the cook, let her experiment in the kitchen." No doubt there were people fifty years ago to say, "Why an agricultural station? Every farm should be one." But it was found that the farmer with his planting, his mowing and his reaping, his stock feeding and his fence mending, had little time to experiment on silos and cross-fertilization even had he possessed the necessary training and facilities.

And so it may be found that the making of clothes, the care of children, and the thousand duties that come to the mother of the family possibly may forbid her becoming an ideal investigator. It would seem that she who now bears the blame of our national failures in cookery has had more than her share laid upon her. Considering all that is required of this remarkable person, is it fair that we should ask her to turn her kitchen into an experiment station? It would be difficult to name any other manufactory that is expected to do the work of a laboratory in the same four walls and with the same utensils; and the kitchen is a manufactory where the daily output must not fail. If the housewife learns and applies what some one else with all the needed facilities has discovered, she will do as much as we expect of the farmer, the manufacturer, or he who follows any other business.

Intelligent women know that home hygiene together with the whole subject of food and cookery is in an unsatisfactory condition. There are many reasons for this, but none that would not melt away before intelligent study.

A Kitchen Experiment Station would be a center for such work; it should have its laboratory or a connection with one already existing, and its practical work should begin with a study and comparison of cooking methods and utensils. A modest beginning at this work has been made at the New England Kitchen on Pleasant street, in Boston, but it is still too early to say what results it can offer us.—*Mary Hinman Abel in Chautauquan.*

## YOUNG FOLKS' COLUMN.

### Mabel and Billy's Journey with the Lapwing.

[Written for the RURAL PRESS by ALICE KINGEBURY COOLEY.]

Once upon a time there was a little boy and girl sitting under a tree in what was a beautiful garden in summer-time.

"It's real nice sitting here and having the pretty red and yellow leaves falling in a shower on one, for they make one think of gathering nuts and having a good jolly time," said Mabel.

"That's so," said Billy, "but I think when people plant trees, they might think something of other people's comfort; what fun we could have if this was a nut tree, hickory or walnut; I could climb up—"

"But you might tear your pants, Billy," interposed Mabel.

"Pshaw! Don't you think I can climb?" retorted Billy.

"Yes—but—oh! what is that?" exclaimed Mabel, as a bird fell at their feet.

"Oh! the poor little thing, I believe its leg is broken."

Billy picked it up.

"Yes, it is; I wonder how it happened. I didn't hear a gun go off, did you?"

"No. Oh! I'm so sorry. Can't we do something for it?"

"Yes, I think I can; you hold it while I whittle this stick smooth—there." Two pieces were soon ready. "Now about the bandage."

"Take this ribbon," said Mabel, removing it from her hair; "but what kind of a bird is it, Billy?"

"Don't talk till I get through," he replied.

The bird lay still as if it knew something was being done to help it. The operation was neatly performed.

"I wonder if it can stand," and Billy placed it on his finger carefully. The bird stood on one leg and turned his head knowingly.

"What is it called, Billy?" persisted Mabel.

"Let me think—lark—no, linnnet—"

"Lapwing," exclaimed Mabel triumphantly.

"So it is," said Billy. "Isn't there some fable about it being able to discover hidden springs?"

"You're both right," piped the lapwing.

Billy nearly dropped the bird, he was so startled.

"O—h!" was all Mabel said. But her eyes were round as saucers.

"You are both surprised, but why shouldn't I talk as well as the parrot? But as you have both been so good to me, I'll show you some of the wonders inside the earth, that is, if you are not afraid to follow me."

"I'm not afraid if Billy goes," cried Mabel.

"I'll go, I'm fond of adventure; besides, a bird can't hurt us," he said in an undertone.

"Quick Billy, hoist me up, we can't stop to go to the gate," and Billy hoisted her, then climbed the wall himself and let her down on the other side, then he got down. They had to cross a little brook to follow the lapwing, which they did in time to see it boring a hole with its beak in the side of the steep hill opposite. It whirled round and round, just like a pin-wheel on the Fourth of July.

"Follow me, but don't talk," it said, and disappeared in the opening.

"How can we follow through that little hole?" cried Mabel. "Let's make it larger, quick," and Billy opened his jackknife and dug away energetically, and Mabel did the same with her nails.

"Let's squeeze through that, Billy, and see where the bird is."

"All right, I'll go first," and as his feet were disappearing Mabel called, "Is it very dark in there?"

But Billy kicked his foot for her to hush, then helped her through, and they found themselves in a sort of cave. It was filled with a mysterious light like that from a glow-worm. The lapwing flew slowly before them.

"There it is," cried Mabel, but the bird quickly turned its head and Billy gave her such a nudge that she nearly fell off the ledge on which they were walking.

"Oh!" she uttered, then slapped her hand over her mouth and on they went. Soon they heard a tinkling sound and all of a sudden they beheld a group of the funniest little fat men, who were hammering, smiling and nodding, but never a word came from their lips. The most musical sounds came from their lips. The children paused and watched them. What queer little men they were! big eyes, bare pates, great smiling mouths and dumb.

"Tinkle, tinkle," sounded as their hammers fell, and soon one of the little men held up admiringly a great gold star. It glittered like a gem from the Southern Cross.

"Oh, how pretty!" cried Mabel, but suddenly all the stars, made and unmade, fluttered up through the roof of the cave and disappeared. The queer little men had all vanished, the sweet sounds had ceased and all was silence.

"Stupid!" cried Billy.

"I couldn't help it," said Mabel. This not being allowed to talk took all the pleasure from this mysterious journey.

Again strange musical sounds were heard, and such a sight greeted them—a group of men so tall and slender that, shining in the light, they looked like part of their strange work—they were making moonbeams! As

they raised their long arms and their hammers fell, the sweetest sounds echoed through the cave, and the long, glittering beams trembled and sparkled. The tall men scanned their work with raised eyebrows and puckered mouths, shaking their heads, but not speaking a word. The beams were about finished when they broke into a perfect chime, playing the rarest tunes. Mabel could restrain herself no longer, but cried, "Oh! Oh! O—h!" and the moonbeams trembled and shivered, and shook themselves clear through the roof and soon were shining down upon the earth, frightening the people nearly out of their senses.

"Where's the moon?" they cried, and looked behind church steeples, but no moon could they see. "There's the beams, but where's the moon?" and they hurried home and hid their heads in the bed-clothes.

The tall men were so angry at this turning nature topsy-turvy that they looked so sour that all the milk on the doorsteps was clabbered. Then they seized on to the ends of the beams and disappeared into space.

"Stupid!" cried Billy, with a still sharper poke in her ribs, but poor Mabel began to cry, so he repented and tried to comfort her. Soon all ill-temper was forgotten in wonder at the gigantic pillar, sparkling with every color of the rainbow, and the huge, fantastic heaps of crystal, and all so beautifully lit up with the wondrous light.

"Isn't it beau—" but Mabel stopped suddenly and Billy looked black and the lapwing shook its head. On they went, the light ever increasing and the beauties of the cave becoming more resplendent. Suddenly such a sight burst upon their view that they stood perfectly bewildered; there lay the great, big, laughing moon flat upon its back, and a lot of round, laughing moon-men pounding and hammering it with all their might, but what delicious music the hammering made!

"This must be the music of the spheres," thought Billy. They stood on a slight elevation, so could look down upon the moon, and there was the big face all upon a grin and one eye was half shut and seemed to be winking at them in such a comical way that Billy forgot all caution and cried, "Oh, my!" and burst into such a fit of laughter that he broke some of his buttons off.

"Stupid!" cried Mabel triumphantly; then all the round, fat moon men, with one eye closed in a horrible wink, gave the moon a little hoist and away it went wabbling up through the cave, the moon men clinging to its horn, and that's what makes the moon not quite round when we see it rise big and red and battered some nights.

"Now who is stupid?" cried Mabel, almost in tears, for the cave had become suddenly dark.

"You can talk now," piped the lapwing, "for you've done all the mischief you can; but follow my voice and you will soon be able to see."

A faint light now appeared and they saw that the beautiful cave had changed into a long, narrow, irregular passage like a level of a California mine, and yes, there were the little Brownies they had heard about digging away for dear life. Mabel and Billy walked along, not daring to speak a word. At last they came to a little hill with quite a hole above through which the sky shone.

They now noticed a good-natured looking Brownie picking up stones and rolling them in halls of hard clay, then throwing them through the opening north and south and east and west.

"What is he doing?" whispered Mabel.

"I don't know," answered Billy.

"Mister—will—you—please tell us—what you are doing?" asked Mabel.

"Aha! so you want to know?" answered the Brownie. "Well, this is where we supply the pretty ladies with their sparkling jewels. See, this is a ruby; how grand it will look in the ear of some dark beauty;" all the while he was wrapping it in its covering of clay; "this one goes to Ceylon, and will save a lovely lady from being poisoned by a rival!" Then he ran up to the opening and threw it with all his might to the east. "This diamond goes to the mighty Amazon, and will free a poor slave finding it, who will never cease thanking the Great Father; then a young bride will own it, whose faith and love for her husband will make her happy, until—but there, I can't tell you all their histories, or you would have to come down here and live to hear them."

"Oh, please a little more," pleaded Mabel.

"Well, perhaps you will prize the little stones if you know something about them. This emerald is just like the one worshipped in the idol in Peru long ago. It goes to the Indies and saves a dear little boy from being bitten by a terrible serpent, that becomes petrified on seeing this stone, so fails to strike the little fellow, who—but that is enough."

"More, please," from Mabel.

"Well, do you see this pretty turquoise—"

"That's the stone for the month I was born in, ma told me so!" cried Mabel.

"Don't be talking so much," grumbled Billy.

"This one is going far away and will make a poor young man happy who is breaking his heart over a pretty girl, and—but I can't tell you all their history," he said, throwing the turquoise into the stream that ran past the opening. "But here's a present for you—a necklace of the pretty stones—and you must keep it forever."

"Oh, thank you, Mr. Brownie," cried Mabel,

"and here's my neck ribbon to remember me by."

"That's nice," said the Brownie. "We have no silk under here."

"If you like it so, take my necktie, too," said Billy.

"Well, you are both kind children—"

"That they are," said the lapwing; "they mended my broken leg."

"Ah, well, well!" and the Brownie filled their hands from his capacious pockets with priceless treasures, then gave them a fine diamond for their mother.

"For bringing you up so kind," he said.

"He has forgotten pa," thought Mabel, "but I'll divide with him."

"Now, good-by, for you must go," said the Brownie, helping them through the opening into a little boat that was in the stream outside.

"Good-by!" they shouted, and away they went, past waterfalls, trees, flocks of sheep and climbing goats; then they went slower, and the scene became familiar, the lapwing had disappeared, and there was their house in the distance. The boat stopped and they got out.

"I don't like to leave the pretty boat," said Billy, looking at it wistfully.

"It can't go any further," said Mabel; "let's hurry home," so they did, and rushed to their mother all out of breath. It took some time to tell their story, but their mother said:

"It's New Year's and you've been dreaming." But when they showed her their presents and gave her the diamond, she thought *she* must be dreaming.

Billy hurried away to call after the boat, but could not find it, and many a day afterward they climbed the big hill, but never could discover the hole made by the lapwing or the stream, or the Brownies, and at night they would try to discover the sour-looking men hanging on the horn of the moon, but the moon laughed at them as of old, and the beams danced upon the waters and the stars sang together for joy, but Billy and Mabel never had any more wonderful adventures as long as they lived.

708 Fulton St. S. F.

## DOMESTIC ECONOMY.

### Excelsior Yeast.

EDITORS PRESS:—This preparation is made as follows: One handful of hops, one teacup of corn roasted to a cinnamon brown, four large potatoes, one pint of flour. Boil hops and corn (put together in a bag) three or four hours or until the corn is soft to breaking. Boil separately the peeled potatoes until soft and mash fine, adding to the liquid (a full quart) the potato and flour rubbed to a smooth paste in a little cold water. To this add one teacup of sugar, one-half cup of salt and one tablespoon of ginger. Finally, add a full quart of the corn and hop liquid and cook all together until it thickens. When cool, add rising, and after 12 hours' fermentation, jug and keep in a cool place. This yeast, owing to the fine flavor given to bread and its long keeping qualities, is specially adapted to country-house use and warm climates.

C. E. KINNEY.

GOOD COOKIES.—One cup of molasses, one cup of sugar, two eggs, two teaspoonfuls of soda, three tablespoonfuls of vinegar, flour to roll soft. Nice for children's school lunch.

HASH ON TOAST.—Take small bits of cold meat, one pint of hot water, thicken with two tablespoonfuls of flour, a good-sized piece of butter, pinch of salt. Turn over toasted bread and serve immediately.

SOFT GINGERBREAD.—One pint of molasses, two tablespoonfuls of butter, one cup of sour cream, one teaspoonful of soda in the cream, one teaspoonful of cream tartar in one cup of flour, one tablespoonful of ginger, and enough flour to make an ordinary cake batter.

APPLE CHARLOTTE PUDDING.—Butter a pudding dish; line bottom and sides with slices of bread one-half an inch thick, buttered and dipped in cold water. Fill dish with sliced, juicy apples, one cup sugar, one cup cold water, little spice. Cover with slices of buttered bread, cover and bake very slowly four hours.

GRAPE JELLY.—Heat ripe black grapes over a slow fire, stirring and mashing them until they burst and the juice runs out. Strain through a thin muslin bag without pressing them. Return juice to the fire and boil rapidly 20 minutes, then stir into it two heaping teacupfuls of white sugar to three cups of juice. Boil briskly 15 minutes after adding the sugar, skimming carefully and stirring it while boiling. Remove and pour into glasses before the jelly begins to cool.

RICE PUDDING.—Put two tablespoonfuls of rice and two tablespoonfuls of sugar into one quart of new milk, stir until the sugar dissolves, add a grating of nutmeg, and if you like, one-half cup of raisins. Place the pan in the oven and cook very slowly for about 1½ hours, stirring the pudding every ten minutes until the last half-hour. If the oven is too hot the pudding will be too thick. Probably the reason why your pudding settled to the bottom was that you did not stir it. This constant stirring makes them creamy and well mixed.

## The Week.

We go to press one day earlier than usual to allow our force to participate in New Year's festivities and rejoicings.

Monday night and this (Tuesday) morning brought rainfall varying from a small fraction to a whole inch at different points. It was, as a rule, a quiet storm and not such a lively shaking up of the skies as we hope will soon follow.

Thus far, the rainfall for the season is at most places but one-quarter to one-tenth as great as last year up to this date, but of course last year was unusual and excessive beyond all needs or desires. Still we need much more than we are receiving, and must look to January to make a record.

Next week the new State officers will take charge and the new Legislature assemble. It behooves all who have honest interests to serve or to protect, to keep their eyes upon public affairs during the next three months.

The gas flow for the Court House at Stockton is 60,000 feet per day.

## Please Remit.

The beginning of a new year is a good time to settle up the debts of the old ones. We are obliged to remind those who owe the RURAL on subscription account, that it will be a great convenience to us if they will soon remit what is due. Those who can also pay in advance will also do us timely and well-appreciated favor. We are doing our best to present a very valuable paper, divested of all features deleterious to the interests of the most carefully guarded households. To do this we deprive ourselves of some of the most lucrative lines of patronage available to the average newspaper. The cash in advance price of our paper is low compared with its size and quality, and we wish to keep it so. By paying as promptly as possible, friends, you will greatly encourage us in our sincere efforts to favor you and the best interests of your calling.

## The Weather.

Another area of local rains has covered considerable portions of the State, and still further relieved apprehensions of a dry year. This year, as ever before, fear and confidence have alternated, according as fog or raindrops filled the air. The mind naturally turns from one extreme to the other with, perhaps, slight reason for either extension. During the last week there has been much published in the newspapers around the bay about land fogs as observed by a farmer living on the east side of the bay, and by him taken as a warrant that the year will be dry, and consequently he will proceed with seeding of low lands, which in a season of ordinary rainfall would be too wet for early sowing. When such land fogs occurred in previous years, he did this, and made much money from his low ground, and proposes to do it again this year. Now it is the part of wisdom in a farmer to be observing and to draw conclusions from his experience, but we fear that the publication which has been given to one man's conclusions may be given undue weight. He may be right and he may be wrong this time; therefore his policy and practice should not be followed blindly.

We notice that Sergeant Barwick gives the *Record Union* some notes on this subject which seem to us to be conservative, and perhaps calculated to restrain people from drawing weather prophecies from insufficient data. We quote as follows:

These long-continued land fogs may be regarded as a pretty sure sign of what we may consider as a dry season. I took charge of this station in March, 1881, since which time—and in fact from the first opening of this station in July, 1877—the records show but one spell of foggy weather that in any manner compares with the present, and that one was far ahead of this, as the following record will show:

That foggy period was in the year 1881, commencing as early as November, and prevailed from the 9th to the 17th. Each morning was foggy, although the sun did make its appearance each afternoon on almost every day during the nine days of November fog, but in the December following there were 11 continuous days of fog and clouds that obscured the sun. This foggy spell began on Dec. 5th and ended on the 15th, making a total of 11 days; and, counting the nine days in November, gave us a total of 20 days of fog, as against about 15 foggy and cloudy days, combined, for the present month.

The records of this office show that the season of 1883 and 1884 was not a dry one by any means, for there was precipitated 24.78 inches of moisture—5 inches over the average. The amount that was deposited before Jan. 1, 1884, was but 2.91 inches, as against 3.70 inches for the present season to date.

From the above comparisons, it is not desirable to give positive advice to the farmer to plant his low-lying ground earlier than usual for fear he might lose his seed and labor also. That Contra Costa farmer, who proposes to sow low land earlier than usual, ought to know by this time that the most unreliable thing in California is to judge the future weather or rain prospects by the past. I had a sad experience in that respect, for, by all rules of judging the future weather by the past, last winter should have been an exceptionally dry one, but instead it was an exceedingly wet one, there having been over 33 inches of rain measured.

The better and safer plan for the farmers to follow is to take no stock in the coming season being a dry one simply because there has been so much foggy weather during the present month, but rather to wait and see for themselves and sow and plant at the usual time.

The deduction from this plainly is, that we have not yet reached a point when the weather can be definitely foretold for any considerable period ahead. It seems likely that we shall have a year of less than usual rainfall, and yet there may be very heavy downpours which might render disastrous any marked departure

from usual times of sowing different classes of lands. There may come rains so placed that there may be large crops, although the season's aggregate may be less than usual, and in such amount that all good soils, except in the distinctively arid regions of the State, may prove profitable this year. Therefore, it behooves the farmer to get his work along as sharply as he can, but not to make any sharp departures from methods which have served him well, merely because another man in another district feels himself warranted in a certain course.

## The Marysville Citrus Fair.

Preparations for this fair are progressing favorably, and indications are for a splendid display and satisfaction to visitors. The following excursions and excursion rates have been arranged for by the Marysville Citrus Fair Association:

Oroville excursion. Leaving Oroville at 10:30 A. M., Wednesday, January 14th, and returning leave Marysville at 11 P. M. Fare, \$1.50.

Sacramento excursion. Leave Sacramento about 10:35 A. M., Saturday, January 17th, and returning leave Marysville at such hour as may be desired. Fare, \$2.50.

San Francisco excursion. Leave San Francisco at 7:30 A. M., Saturday, January 17th, and connect at Davisville with the Sacramento special. Tickets good on regular and special trains as above returning on regular trains of Saturday, Sunday or Monday, the 17th, 18th and 19th. Fare, \$4.10.

From Dutch Flat, Red Bluff, Oroville, Sacramento and intermediate points to Marysville and return, tickets will be sold good on regular trains going from the 10th to the 17th, returning from the 12th to the 19th, inclusive, at two-thirds the regular round-trip rates.

Fare from Woodland and return will be \$1.50, and from Moore's Station and return, \$1.

As will be seen, the Sacramento and San Francisco excursions will be run over the Knight's landing road and the fare for the round trip from the latter place will be \$4.10, the regular fare for one way. This should induce a large attendance from the vicinity of San Francisco. City people ought to know more of the development of the industrial interests of the interior.

## Japan Persimmons

This fruit, so highly esteemed in the Orient and so highly praised by travelers, has not become as popular as expected on this coast, though its future must be regarded as promising. Its slow advance in popular esteem is probably due, in part at least, to lack of knowledge as to its manipulation to bring out its lusciousness.

At a fruit-stand in Berkeley we found the fruit packed in pasteboard compartments, like those of an egg-case, and each one wrapped in a soft paper wrapper upon which this was printed:

Ellwood Japanese Persimmons.

The great value of this fruit is as yet not fully known. When unripe and not properly cured it is astringent and exceedingly unpleasant to the taste. But when ripe, it is highly nutritious, luscious, and for delicacy of flavor is unequalled.

**DIRECTIONS.**—Place on shelf or sideboard or table for ornamentation until it becomes soft. It will shrink somewhat and turn a darker color; if it ripens properly will be uniformly soft in every part—must not be eaten until it is—then peel from the top. The skin is very thin and will leave the pulp readily.

ELLWOOD COOPER.

Santa Barbara, Nov. 1, 1890.

The grower is the well-known president of the State Board of Horticulture, and he is doing public service by thus placing his fruit upon the market.

**THE CHINO SUGARIE.**—Concerning the establishment of a beet-sugar factory at Chino, the *Pomona Progress* says: "The main building to be constructed at once will be 300 by 100 feet, and the outbuildings, including the refinery, will be on a corresponding scale. The works when in operation will have a capacity of 1100 tons of beets per day and will require for fuel from fifty to seventy-five tons of coal per day. Mr. Gird will plant at once 5000 acres to beets, and has ordered a 50-horsepower Best traction engine and the necessary gang-plows to prepare the ground. The factory is to be ready to begin work by August 1, 1891."

**BEE-KEEPERS' MEETING.**—The Southern California Bee-Keepers' Association will meet in Los Angeles, at the rooms of the Chamber of Commerce, on Thursday, Jan. 8th, at 1 o'clock. A large attendance is expected.

## QUERIES AND REPLIES.

## Perfume and Drug Farming.

**EDITORS PRESS:**—Do you think the cultivation of lavender, peppermint, poppies and plants that might be utilized by chemists would pay? Sheep have been our industry, and though still very profitable as a business, the Government land on which they grazed has been taken up by settlers so that we have been obliged to take them to less civilized parts. We have some fruit trees planted and are farming also, but I thought you could inform me if there are any wholesale chemists or laboratories in the city where we could dispose of such produce. We have been readers of the PRESS ever since we came from England in '76, and know that all kinds of improvements and agricultural interests generally are discussed in its columns.—READER, Monterey Co.

This proposition has been advanced several times and some enterprises have been started, but none, so far as we are aware, have realized as much as their projectors hoped. We have always thought that some of these industries might be made successful here, and believe that with proper management they will be. But one must remember that in such undertakings there is much time required usually to find a market for the produce, as it comes into competition with supplies long known to the trade and which thus have an advantage. Capital is also required, and skill, for these special products require special training in manipulation. We believe that patience, perseverance, experience and research will win in this line, but we cannot encourage any one to undertake it unless he is ready to give all of them to the undertaking. We shall be glad to hear from readers on the subject.

## Cotton in Los Angeles County.

**EDITORS PRESS:**—Last spring I procured some cotton-seed from you, and according to promise, I beg to report results:

The soil is a kind of adobe or stiff loam, the ordinary mesa soil of Los Angeles. The excessive rains followed by dry north winds made the land cloddy and hard to work, but it was got into pretty fair tilth. The seed, soaked as directed in the pamphlet, was planted April 14th. The weather remaining dry, some of it never sprouted, but what did come up grew slowly, evidently needing more moisture. It was cultivated once in June. It grew from two to four feet high (one plant only reaching the latter dimension), and blossomed in two colors, some being pink and some yellow; and I noticed that the plants bearing pink blossoms were the larger and had more flowers. The bolls opened in due season and were pronounced very good cotton by those who had seen cotton before. I placed some in the exhibit of the Chamber of Commerce in Los Angeles, but most of it was carried off by children as a curiosity.

The last season was a bad one to test anything, but I judge that cotton would prove a paying crop in this locality, and on mesa land, provided means were at hand for irrigation. Without water it would hardly be a success. —W. F. BRAY, Santa Fe Springs.

## Fruit Driers.

**EDITORS PRESS:**—Having noticed in your number of this date a cut and plans of a spraying apparatus, I have been requested to ask you to publish simple but explanatory diagrams of the various fruit evaporators of considerable capacity, such as are in use in California. This would be a matter of much interest and utility to our horticulturists here, for we have as yet no machine that is satisfactory. Especially would we like to see the plan of one owned and operated by Mr. Blowers of Woodland, Yolo Co. This would be well received here and be of great use; if they are patented, you could say who owns the patent. Respectfully, JOHN SIMPSON, Eugene, Or.

The task of illustrating and describing the fruit driers claimed to be in successful operation in California would be too great for us to undertake. The best thing we can do is to publish our correspondent's full address, so that the parties having patents or machines for sale may submit descriptions and testimonials to him.

## Cloture.

**EDITORS PRESS:**—What is the meaning of the rule cloture, as used in the English Parliament?—OLD SUBSCRIBER, Stockton.

Cloture or closure in parliamentary practice is a method of putting an end to debate and securing an immediate vote upon a measure before a legislative body. It is similar in effect to "the previous question." It was first introduced into the British House of Commons in 1882. The French word *cloture* was originally applied to this proceeding.

**FREE CORN FOR MEXICO.**—The President of Mexico has approved the bill recently passed by the Congress of that republic admitting corn from the United States free of duty.

**STREET TREES.**—The Redlands Horticultural Society has adopted *Acacia Melanoxylon* and *Grevillea* as leading street trees.

## FRUIT MARKETING.

### Bogus California Dried Fruit in the Eastern Markets.

[The following important document was presented at the meeting of the State Horticultural Society, Dec. 26.]

To the Officers and Members of the State Horticultural Society: In accordance with a resolution adopted at the State Fruit-Growers' Convention held at Santa Cruz, Nov. 20, 1890, I transmit to you a report of the remarks made there by Professor Chas. H. Allen, late superintendent of "California on Wheels," on his observations of the condition of California dried fruits as he found them in the Eastern market, and a copy of the report of the committee appended thereto, as follows:

Prof. Chas. H. Allen of San Jose: I accepted the position of superintendent of "California on Wheels" chiefly in the interest of fruit-growing; I wanted to know something of what our fruits were doing East, and I will briefly give you the result of some of my observations. I joined the exhibit train in Northern Wisconsin and at the various places visited I got leave of absence and visited the fruit dealers in the locality, particularly those that were wholesale dealers where the place was large enough, and inquired of them what fruit they were selling, where they got it, what prices they realized, what their criticisms were, if any, upon California fruit. I made it a point in each place to get as much detailed information as I could of that kind. This side of Chicago our fruit, in most of the places I visited, was well known and the market prices and the sale of the fruit seemed to be satisfactory, and as Mr. Buck very tersely stated, the sale is increasing immensely. The world is very large; I come to that conclusion after going over there and seeing the amount of fruit that is wanted, and the demand that is coming on and will continue to come, and I come back with no fear of overproduction. I had had some fears of overproduction, but I am satisfied now that there is no danger of that.

When I got east of Chicago, I found it considerably different; our fruit is almost an unknown quantity to the consumer in intermediate places east of Chicago. We went down on the Baltimore and Ohio, stopping at all those little hamlets and towns of from five to twelve and fifteen thousand inhabitants, and very few there knew California fruit, I mean our dried fruits; they knew something of our green fruits. I found the green fruits on fruitstands everywhere in all those little towns; not of the best quality, but a vast amount of it sold, such as I had hardly expected. There were a dozen fruitstands in every town covered with California fruit. But the dried fruit in most of them was almost an unknown quantity. They would come through the car and would look at our samples of dried fruit (no better than we are exhibiting here and putting up all over the State), and would come back to me and say: "Where can we get that kind of fruit? We have never seen anything of the kind." They came not by ones or twos or scores even, but by the hundreds, and said: "Why don't you people get your fruit out here?" I found that all the way, east of Chicago; every little place that was the cry, all the way through, and until we got into Wheeling and Pittsburgh, where I left the train. Pittsburgh, I believe, is the greatest dried-fruit market in the world, from reasons a gentleman gave me. He said: "Our people are all mechanics; your dried fruit does not sell to bankers and merchants and that class, because they can afford to buy your canned and fresh fruit; it does not sell to the farmer because they raise a little fruit of their own; but here we are all mechanics, as a whole, from Wheeling clear through to Pittsburgh, and they live on dried fruit, and here is where your market is, and we are anxious to learn all that can be learned of your fruit, and to know where it can be had and where we can get such quantities as you are exhibiting here."

I found, as I suppose one might expect to find, knowing the peculiarities of human nature, a good deal of fruit sold as California fruit that was never nearer California than Chicago. I found some exceedingly inferior fruit marked "California Dried Fruit." I went into one large and thriving city and went to a wholesale dealer and in my ordinary way gave him my card and told him what I was doing. We were made very welcome everywhere; they didn't look upon us as drummers at all, but they wanted information; they were anxious to learn. I asked him: "What fruit are you selling from California?"

He said: "We can't sell California fruit; it is poor stuff. I have got a hundred boxes upstairs and they bring it back."

I said: "May I ask permission to look at the fruit?"

"Yes," he said, and he went up with me to the loft, called his man in charge and took down some boxes marked "California Spanish Prunes."

I said: "That is an unknown term so far as I know; I know California pretty well, but I do not know any Spanish prunes. Will you have your man open one of these boxes?"

He opened the boxes and they were, I should judge from appearance, dried Damson plums, all bone except a little skin drawn over, and when you could get anything better, entirely

profit even for swine. I could not see that anybody would ever buy anything of that kind, if they had tried it once. He had a hundred boxes of those that had been sold to him for California fruit. I found that duplicated in a number of places where I looked at the fruit, and knew that it never came from California. Question by Mr. Adams: Is that distributed by any well-known dealer in California fruit?

Professor Allen: It had a name on the outside of the box that I am familiar with.

Question by Mr. Adams: What was it? I think we are entitled to the information; whose name was on the box?

Professor Allen: The man who bought it can give it to you. No, gentlemen, I should be sorry to believe that the brand on the outside of those boxes was put on by the men who deal in that fruit. I believe it was a forgery. I do not believe that Porter Bros. sold fruit that was never raised here and palmed it off for California fruit. I do not believe they did it, and yet their name was there, and I give it with that statement because I know the gentlemen. I believe that the forgery occurred farther East than that. I believe that is where the fruit is put up, and that the fruit is sold all the way through there in that way, spoiling our trade, for anybody who would get one of these boxes would never want any more California fruit. It seems to me there should be some way that we could secure a guarantee that our fruit is genuine, because such practices are largely injuring the trade not only in our dried fruit but in our green fruit. They have constantly sold there an Egg plum for the Silver prune. I found boxes packed by a drier and marked "Egg prunes," and they are selling them as a sweet prune.

I asked a gentleman: "How does the Silver prune sell?" He said: "It is so sour that nobody wants it." I said: "The Silver prune is a sweet prune." He said: "Oh no, it is the sourest thing you ever tasted."

He had bought a large quantity of dried Egg plums which are sour enough to suit anybody, and bought them as "Silver prunes," and supposed he was dealing in Silver prunes. That sort of thing is polluting the demand for California fruit. They do not know what our fruit is, and if in some way we could remedy those things, get this fruit that is well prepared and is suitable for table, and could put it on the market, and in some manner suppress the other, we could not do a better thing for our California fruit industry. Whether this organization can do anything of that kind I do not know, but I did feel very much interested. I felt indignant that we were thus swindled; that we were having palmed off as our California fruit, fruit that was neither grown nor prepared here, and I could see that it was working an injury, so that for years there will be no demand for California fruit in such places.

Question by Mr. Adams: Do you think that that evil of adulteration or fraudulent practice is sufficiently extensive to call for any expression of opinion or any action from any horticultural body in this State, or is it merely a trifling matter which occurred in one or two instances?

Prof. Allen: It was pretty widespread. I will give this as a suggestion, and perhaps a wiser man can work it out. It seems to me if there could be a little pamphlet prepared giving an accurate description of the various brands—not personal brands now, but kinds of fruit—that the dried Prune d'Agen was so and so in appearance, tasted so and so, and the Silver prune was so and so, and the Egg plum and so on, a general description of our dried fruits either with or without cuts—and I do not think cuts would be necessary—if that could be generally distributed throughout the East, it would help to mitigate the trouble.

They seem to be exceedingly anxious, particularly the wholesale dealers there in Pittsburgh, to get into closer connection with the grower. They said: "We do not want to go through all this manipulation; why don't you have some organization there so that we can buy direct and not through the brokers and middlemen?" They say: "Of course we can't buy from individual growers; we don't know you." I returned the compliment and said, "We do not know you." "No," he said, "but you can go to Dunn's Commercial Register and you can find out all about us, and we can't find out anything about you. If we buy of you, we have no guarantee at all. If you can get any organization to give us any guarantee that we can buy direct your California fruit, you will get all our trade." That is one point that may work.

Question by Mr. Adams: I would like to ask the Professor if he thinks they scratch off the names on the boxes.

Prof. Allen: I found boxes that obviously had every trace taken off of the box that was put on by the grower, and nothing that they grow, nothing that my friend Mr. Morrill grows, nothing of that kind that we have supposed was getting a little reputation there, had any name or any traces of any on. They do not know where they come from. All that I found east of Chicago had all been removed and a new stamp put on. I had vainly hoped we would get a little reputation, but there was not anything of that. It was not so in Chicago. I attended the fruit sales in Chicago and I found Mr. Buck's and Mr. Block's fruit sold green with their stamp on; but when we got east of there, the dried fruit is not so sold—it is the name of the broker.

Remarks by Dr. R. H. Claflin of Riverside: I wish to state on this subject that the orange-growers of Riverside have endeavored to solve this problem in this way, by organizing a fruit-growers' association, adopting a trademark, having it registered and having the trademark placed in such a way that when it is placed upon a package, the package cannot be opened without disturbing the trademark. On that trademark is a statement of the place where the fruit is raised and packed, so that any person buying packages with that trademark on will have the guarantee that it is raised and packed there. With that trademark which is established under the signature and authority of the Board of Trade, guaranteeing the reliability of the fruit which is covered by that trademark, it seems to me that that might be done in any place.

Remarks by Mr. Adams: I believe from what Prof. Allen has told me at other times that it is one of the most important subjects that could engage the attention of the fruit-growers here, and I am utterly opposed to bringing up these things and talking about them without trying to do something, and I move that a committee of three be appointed to consider this subject and report thereon. Adopted.

In accordance with the motion, the following were appointed on said committee, viz.: Edward F. Adams, D. M. Locke and Geo. Hummann. The committee, after due consideration of the subject, presented the following report, which was adopted unanimously, to wit:

#### The Committee's Report.

Mr. President: Your committee, to whom was referred the subject of fraudulent sale of Eastern or inferior California dried fruits, under the names of our well-known and first-class products, have had the same under consideration, and beg leave to report as follows:

As to the facts in the matter, our only definite information has been the statements of Prof. C. H. Allen, made to the convention yesterday, of facts which came under his personal observation while at the East in charge of the State exhibit, known as "California on Wheels," which statements will form part of the records of this convention, and need not be fully repeated here; in substance, Prof. Allen stated:

1. That he saw a sour and almost worthless product which he believed to be Eastern dried Damson plums, marked and sold as "California Spanish Prunes," a name of course entirely unknown in this State, and properly representing no fruit of which we have knowledge. In this case the mischief was increased by the fact that the boxes in which this fraudulent fruit was found bore the brand of a firm whose connection with the fruit-shipping interests of this State has been such as to warrant Eastern fruit dealers in supposing fruit sold under their brand to be real California productions, true to name.

In this connection your committee recommend that the Secretary of this convention send a verbatim report of the remarks of Prof. Allen on this particular matter to the firm named by him, with the suggestion that they address to the State Board of Horticulture, a letter asking whether they are selling at the East any dried fruit under the name of "California Spanish Prunes," and if so, to accompany their letter with a sample of such product.

2. That he saw dried Egg Plums sold as "Silver Prunes," and heard them loudly and properly denounced as sour and unpalatable, instead of a sweet prune as had been represented. The casual conversation about this connection leads your committee to believe that this form of fraud is in general practice in the trade, to the very grave injury of the producers of that excellent fruit, the genuine Silver Prune. "Egg Prunes" is another name by which this very sour plum is sold.

3. That from what he saw it is his belief that brands of producers are habitually removed and replaced by the brands of brokers, thus rendering it impossible for the careful and conscientious producer here to obtain any credit for his careful and conscientious work.

Your committee respectfully suggest that brands of this kind are to be expected to the injury of any business which becomes successful, and that the only possible remedy is the simple one usually adopted in other lines of business, of promptly exposing the swindlers and warning the people against their practices.

Your committee is using this language advisedly, as more closely than any other expressing their precise meaning; whoever sells some unknown product, as "California Spanish Prunes," instead of giving the product its true name; or calls "Egg Plums" "Egg Prunes," when there is no prune called the "Egg Prune," or knowingly sells Egg Plums under the name of "Silver Prunes," is a deliberate swindler; and no custom or competition can any more justify such practices than the custom of other criminals can justify them in committing the crimes to which they may be addicted.

Your committee suggest that the proper remedy for this state of things is publicity. It can probably be stopped by maintaining standing yearly advertisements, for a year or two to come, in the leading newspapers of the principal Eastern sections, calling attention to these frauds and warning the people against them. Any experienced business man can very soon put a stop to the business if the fruit-growers will give him the money to do it. If not prepared to put up the money to pay for exposing the rascals, the matter may as well be dropped. We can no more get rid of these pests without

expense than we can exterminate without cost the burrowing gophers whom they resemble.

Touching the practice of erasing producers' marks and substituting those of brokers, the only remedy is by advertisement, to educate consumers to demand dried fruits in original packages with producer's name, and to mark the packages by actual branding or other indelible mark. The organization of the California Dried Fruit Union, which is apparently not likely to prosper as a shipper of fruit, might be utilized by employing it to adopt a trademark and sell the branded box ends to members only, the association protecting itself by accepting as members only those who were properly vouchered for as honest men and who would in addition give written pledges of strictly complying in their packing with specified rules.

Rigid integrity and fair dealing is certain, if steadily pursued, to bring its proper reward; so is the opposite; and as no matter who it is that sells had fruit under our name, the California producer is certain to get the discredit of it, it is of the utmost importance that we take all steps necessary to protect ourselves. As this work can be properly done only by a permanent body, your committee recommend that the secretary of this convention be instructed to transmit to the State Horticultural Society, a copy of the remarks of Prof. Allen, and of this report, with the request of this convention that the society investigate the subject and take such measures in relation thereto as the facts may appear to demand.

Respectfully submitted,

EDWARD F. ADAMS,  
D. M. LOCKE  
GEORGE HUMMANN,

Committee.

In accordance with the recommendation in the above resolutions and action of the convention, I have addressed a letter to Porter Brothers, of Chicago, in which these facts have been fully set forth, and expect very soon to receive from them an explanation, which I will lay before you at your next meeting.

Respectfully submitted,

B. M. LELONG,

Secretary State Board of Horticulture, and of State Fruit-growers' Convention.

This matter was presented at the meeting of the State Horticultural Society on December 26th, and elicited discussion. Finally a committee composed of A. L. Bancroft, E. F. Adams and J. L. Mosher was appointed to consider the points advanced, and to report concerning action desirable by the State Horticultural Society.

#### Census Changes.

A recent bulletin from the office of the Commission of Census shows that the relative standing of the different States has been changed from 1880 as follows:

Illinois has advanced from 4th to 3d; Massachusetts from 7th to 6th; Texas from 11th to 7th; Georgia from 13th to 12th; Wisconsin from 11th to 14th; New Jersey from 19th to 18th; Kansas from 20th to 19th; Minnesota from 26th to 20th; California from 24th to 22d; Arkansas from 25th to 24th; Nebraska from 30th to 26th; West Virginia from 29th to 28th; Colorado from 35th to 31st; Florida from 34th to 32d; Washington from 42d to 34th; Montana from 45th to 44th; Idaho from 46th to 45th.

Ohio has dropped from 3d to 4th place; Indiana from 6th to 8th; Kentucky from 8th to 11th; Tennessee from 12th to 13th; Virginia from 14th to 15th; North Carolina from 15th to 16th; Mississippi from 18th to 21st; South Carolina from 21st to 23d; Louisiana from 22d to 25th; Maryland from 23d to 27th; Maine from 27th to 30th; Connecticut from 28th to 29th; New Hampshire from 31st to 33d; Rhode Island from 33d to 35th; Vermont from 32d to 36th; District of Columbia from 36th to 39th; Oregon from 37th to 38th; Delaware from 38th to 42d; Utah from 29th to 40th; New Mexico from 41st to 43d; Nevada from 43d to 49th; Arizona from 44th to 48th.

Dakota, which ranked as 40th in population in 1880, has been divided, and South Dakota now ranks as 37th and North Dakota as 41st. Oklahoma has been created a Territory and now ranks as 46th. New York remains at the top, and the State of Nevada drops to the foot of the ladder, having fewer people than the Territories of Arizona, Utah, New Mexico and Oklahoma.

MORE than half the railway track in the world is on this continent, and nearly half of the whole is in the United States. This proportion may or may not be kept up, as Asia and Africa are beginning to shorten their long distances by using steam bores on the iron track. In the past four years 40,000 miles of track have been laid in America, and in the United States 30,000 miles of this, while all the rest of the world built only 24,000. Railroads in Europe cost an average of \$115,000 per mile. Here the average cost is \$60,000, and this is about the rate elsewhere. Rates of fare are, however, lower in Europe than here, the denser population and lighter expense for running the roads more than offsetting the difference in their original cost.

It is claimed by reliable persons on the ground that there are more than 30,000 destitute people in Oklahoma.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Amador.

**OLIVES.**—Jackson *Ledger*, Dec. 20: L. Foster gathered his crop of olives last week and manufactured them into oil. The two trees which he has on his ranch have this year yielded about 150 pounds of fruit. However, a great many of them were pickled, and the oil extracted from only 50 pounds, as a mere experiment. The result was very satisfactory. The olives were crushed in an old-style wooden roller grape-crusher, it being so set as to break the berry but not the pit. The pulp was next placed in a jute-sack, and that into a wine-press. After the first pressing the sack was removed, hot water added, and after standing for several hours, again pressed. The yield of oil was about the same each time, but the latter proved of inferior quality. The oil readily separates from water and sediment by placing the liquid in tin vats and allowing it to stand for some days. Mr. Foster secured something over a dozen large-sized bottles of excellent oil. The flavor is equal to the finest grades of imported oil, and the color about the same. The pickles put up are green, such as are seen in the markets. The ripe olives are too delicate and perishable for a commercial article, though much superior in quality. Mr. Foster and Mr. Holsinger, who own adjoining ranches, will each put out between 1500 and 2000 outtings in January.

## Kern.

**INCREASING CULTIVATION OF THE ORANGE.**—Bakersfield *Californian*, Dec. 27: Branches of orange trees loaded with the golden fruit were extensively used in our Christmas decorations. They came from different parts of the valley, frequently from places where we had not suspected the existence of oranges before, indicating that there has been more experimental and widely extended culture of this fruit than was generally known. The oranges were of a superior quality.

## Los Angeles.

**ORANGE SALES.**—Alhambra *Review*, Dec. 20: A few of our orchardists have sold their oranges at a good price, but the majority appear to be in no haste to dispose of their fruit. It seems to be generally expected that prices will rule higher here than last year.

## Monterey.

**MONTEREY COUNTY COTTON.**—Salinas City *Index*, Dec. 25: A sample of cotton raised in the Gabilan foothills, bordering the Salinas valley, near Gonzales, was presented to the *Index* by J. R. Hebborn. The bolls are of fair size and the quality is pronounced by experts to be excellent. It is among the possibilities that cotton-growing will become an important industry in Monterey county.

## Napa.

**HOP-RAISING.**—St. Helena *Star*: The hop-raising industry is not one of very great importance in Napa valley, the low prices making it unprofitable and it having almost entirely given way to the wine industry. But there are still a few hopyards left, and should the prices rise to a good figure the industry may yet be one that will encourage others to engage in it. In 1865 A. Clock, one of the early settlers of St. Helena and a man of thrift and enterprise, planted the first vines near David Cole's place on Pope street. He was successful in the industry and his yards were very fine, as were his hops. In 1876 he sent a sample to the Centennial Exposition in Philadelphia and received the first prize, the hops being considered of a very excellent quality and far superior to any on exhibition. As time rolled on and the industry became less and less profitable, and as that of wine sprang prominently before our people, vines were pulled up, the poles sawed into stovewood, vineyards set out and wine-cellar built. At present there are not more than fifty acres of hops within several miles of St. Helena. Those, however, are healthy and yield about 2000 pounds per acre, and when prices are good it will readily be seen are paying pieces of property. The fact of there not being many hopyards in the valley does not signify that the land and climate are not suitable to that industry; on the contrary, the soil along the banks of Napa river is exceptionally fine for that purpose and none better can be found anywhere in California.

## Nevada.

**EXTENSIVE TREE-PLANTING.**—Grass Valley *Tidings*, Dec. 26: Recently an agent of the largest and oldest established orchard in Oregon, at Woodburn, sold between 8000 and 10,000 trees to growers in this county, of which 5000 or 6000 were delivered at the Grass Valley depot Thursday and 3000 or 4000 at Nevada City. It is claimed for these trees that they were raised in a colder climate than here and hence are hardier, and that they bear no injurious insects, neither scale nor codlin moth being known in Oregon. The bulk of the importation is made up of pears, apples, peaches, plums and prunes; also apricots, nectarines, cherries, chestnuts, walnuts and almonds; and in addition are strawberry, raspberry, blackberry, gooseberry, currant and even cranberry plants and bushes. Several thousand trees coming from other nurseries will also be planted.

## Placer.

**MORE GRAIN SEEDING.**—Auburn, Dec. 25: Roseville farmers are all plowing and say they

never had a better season than this for that work. The acreage already sowed is as large as the total area of grain in that district last season. Robert Theille had 50 acres of summer-fallow in last Friday and will sow about 100 acres more. James Astill will put in 160 acres of wheat, 40 of barley, 40 of oats, and 100 acres of hay. A. J. Sprague will put in about 200 acres of grain, and altogether the acreage will be three or four times greater than last year.

**OLIVE YIELD.**—Auburn *Republican*, Dec. 24: Pressing out olive oil is in progress at the Roberson ranch near Auburn. Mrs. Roberson is making careful tests of the yield and quality obtained from the different varieties, as there are over 20 kinds of olives on the place, the principal being the Picholine. From this variety she is obtaining about 15 per cent of oil at the first pressing, with a prospect of about 3 per cent at the second. This is better than has ever been done at Santa Barbara. The foothills is the place for the olive.

## Sacramento.

**PROSPERITY AT VINA.**—Sacramento *Record-Union*, Dec. 25: Capt. McIntyre, superintendent of Senator Stanford's famous vineyard and winery at Vina, was in town yesterday. He reports a most prosperous state of affairs at the vineyard. During the season just closed, 11,000 tons of grapes were crushed for the still, and several carloads of raisins were shipped to the Eastern markets.

## San Benito.

**LARGE VINEYARD.**—Hollister, Dec. 26: Nine miles from Hollister are located the celebrated orchard and vineyard of Wm. Palmtag. This extensive and highly cultivated place shows what industry and enterprise can accomplish in these chemical-covered hills. This is no experiment, for it is one of the oldest vineyards in the State. In 1852, Theophile Vache, a French vintner, secured this tract from Monterey county and set out a small vineyard, but kept increasing his area until 1883, when he had 50 acres of bearing vines, and during most of these years he had manufactured wines which bore a State-wide reputation. In 1883, Mr. Palmtag, the present proprietor, purchased the place and commenced clearing the land adjacent to the vineyard already planted, until at present there is a vineyard of 150 acres covering hillside and valley. Among the varieties of grapes grown we may mention: Burgundy, Zinfandel, Cabernet, Sauvignon, Cabernet Frsno, Cabernet Pfeffer, Grosse Verdot, Carbone, Mataro, Malvec, Malvoisie, Mission, Pinot, Muscatel, Muscat of Alexandria, Malaga, Emperor, Morocoo, Black Hamburg, Flame Tokay and Rose of Peru. Besides these are a number of varieties which Theophile Vache imported from France years ago, the names of which are not known. Although so much attention is paid to vines, there is not a tree fruit that is not grown and which does not develop perfectly. Apples, peaches, pears, plums, prunes, spricots, cherries, oranges, olives, figs, all varieties of small fruits, every description of "garden truck," while corn was planted, grew and developed to perfection this season all along the hillside and even to the very summit of the hills—this, too, without irrigation.

**A FEW SAMPLES OF FRUIT PROFITS.**—Hollister *Free Lance*, Dec. 26: In order to show what are the actual profits in fruit-raising in California, we give below the following figures: Peaches, Ernest Dewey, Golden Cling peaches, 10 acres, seven years old, produced 47 tons green; sold dried for \$4800; cost of production, \$243.70; net profit, \$4556.30. Soil, sandy loam; not irrigated. H. H. Rose, 2.67 acres; produced 47,543 pounds; sold for \$863.46. Soil, light, sandy loam; not irrigated. Produced in 1889, 12,000 pounds, which sold at \$1.70 per 100 pounds. E. R. Thompson, 2.16 acres, 233 trees, produced 57,655 pounds, sold for \$864.82; cost of production, \$140; net profit, \$724.82. Soil, sandy loam; irrigated three times in summer, one inch to seven acres. Trees seven years old, not more than two-thirds grown. P. O'Connor, 20 acres, produced 4000 pounds, sold for \$60; cost of production, \$5; net profit, \$55. Soil, sandy loam; not irrigated. Crop sold on ground. P. O. Johnson, 17 trees, ten years old, produced 43 tons; sold 4 1/2 tons for \$120; cost of production, \$10; net profit, \$110; very little irrigation. Sales were one-half cent per pound under market rates. Prunes, E. P. Naylor, 15 acres produced 149 tons; sold for \$7450; cost of production, \$527; net profit, \$6923. Soil, loam, with some sand; irrigated one inch per ten acres. W. H. Baker, 1 1/2 acres produced 12,529 pounds; sold for \$551.90; cost of production, \$50; net profit, \$501.90. Soil, sandy loam; not irrigated. W. A. Spaulding, one-third of an acre produced 10,404 pounds; sold for \$156.06; cost of production, \$10; net profit, \$146. Soil, sandy loam. E. A. Hubbard, 4 1/2 acres produced 24 tons; sold green for \$1080; cost of production, \$280; net profit, \$800. Soil, dark, sandy loam; irrigated. This entire ranch of nine acres was bought in 1884 for \$1575.

## San Bernardino.

**THE RAISIN PACK.**—Riverside *Horticulturist*, Dec. 27: The total number of pounds of raisins shipped from Riverside this season is 4,447,890, with 12,000 pounds yet to ship. The crop brought over \$250,000 to the raisin-growers of the valley. This is very good, considering the rain.

## San Diego.

**PLOWING AND SEEDING.**—Olay *Press*, Dec. 25: The work of clearing, plowing and planting goes on on every hand, and people have stopped waiting for something to turn up, and

have gone to work turning up the mellow soil. Most of the farmers on the mesa have their grain sown. W. Lohman has in 80 acres, F. W. Lohman has sown 300, and James McCool expects to have in 400 acres before the season closes.

## San Luis Obispo.

**SORGHUM-CANE GROWING.**—Arroyo Grande *Cor. S. L. O. Tribune*, Dec. 24: Since it has been announced that sugar can be made from sorghum cane by a celebrated Government chemist, by means of alcohol and very cheaply, many of our farmers contemplate going into raising cane.

**FRUIT TREES AND VINES.**—Creston *Cor. S. L. O. Tribune*, Dec. 26: The best and most practicable thing that a prospective orchardist can do is to thoroughly post himself in the nursery business and grow his own trees and vines. For a reliable work on tree-growing, he should get the book of "California Fruits and How to Grow Them," wherein he would learn the whole modus operandi, from the planting of the seed, its care and culture, to the gathering and marketing of the perfect fruit, and by getting this work, reading and practicing its rules, he would not be dependent on nurserymen and tree peddlers, but would find himself independent of all of them, saving thereby, by growing his own nursery stock, from 100 to 500 per cent.

**EXTENSIVE GRAIN SEEDING.**—Creston, Dec. 25: Seasonable rains have put the land in the best condition for plowing. The farmers in general throughout this section declare that the land never has been in better condition for working. A larger acreage is going to be put into grain this season than heretofore. Every rancher is whooping the work up for all it is worth, and many of them are striving to make a grand windup of seeding for this season's crop by New Year's Day.

## Santa Clara.

**ACTIVE PLOWING.**—Guthrieville *Cor. San Jose Times*, Dec. 25: From the activity of many plows now at work, the fields are rapidly changing color. The present weather is most thoroughly appreciated by the farmers of this locality, as early seeding usually means successful crops.

## Shasta.

**GROWING FRUIT SECTIONS.**—Anderson *Enterprise*, Dec. 25: W. S. Wilcox, the owner of one of the most valuable farms in Northern California, situated on Battle Creek, will plant this season 15 or 20 acres of Bartlett pears and peaches and 10 acres of Proporturien walnuts. It is on his land that the famous Chinese peach orchard and vegetable gardens are located, from which, the third year from planting, the Chinamen took \$250 worth of peaches from each acre, and each year since (having been there seven years), they have derived a large income over and above the rent of the land. They have yet five years of the lease before they deliver their fine orchard to Mr. Wilcox. Opposite to the latter's place, E. F. Howell will plant 15 or 20 acres to various varieties of different kinds of fruit, but principally the French prune.

## Sonoma.

**THE FIRST ORANGES.**—Cloverdale *Reveille*, Dec. 20: The first oranges ever placed on the market that were grown in Cloverdale will be sold at M. S. Connor's. Mr. Connor bought the crop grown by Jno. Field from about 25 trees which are five years old, and will have them for sale during the holidays. The crop consists of about 1000 pounds, and are pronounced to be of better quality than any orange ever brought to this market from the southern district.

## Sonoma.

**MEADOW LAND BEING RECLAIMED.**—Sonoma *Index-Tribune*, Dec. 27: Bordering the shores of San Pablo bay and Sonoma creek is a vast body of rich alluvial land that is subject to overflow. This land embraces an area of nearly 100,000 acres and if reclaimed and put under a state of cultivation is capable of supporting a population of many thousands. Small patches have been reclaimed here and there for a season on the west side of Sonoma creek and planted to wheat and barley. The result was astonishing, as high as 70 bushels of the latter having been raised to the acre in a season that was considered a dry one in the great wheat-producing valleys of California, and where the crops were almost a total failure. These meadow lands of Sonoma are not only adapted to the raising of cereals, but are capable of producing immense crops of fruit, berries and vegetables, and for dairying purposes are much sought after and highly prized by our Swiss dairymen, who claim that butter and cheese made from the milk of cows that have been pastured on the native grasses of these meadow lands command a higher price, on account of the excellence of the product, than those made at dairies located in other sections of the State. W. B. Pless, the inventor of one of the greatest labor-saving machines designed for the reclaiming of overflowed lands that has ever been given a practical test, knowing the fertility of the Sonoma meadow lands when once reclaimed from the encroachments of the waters from Sonoma creek and San Pablo bay, has succeeded in interesting Senator John P. Jones, a large owner of these lands, in his invention. Last June Mr. Pless commenced work on the body of land belonging to the Senator, consisting of some 12,000 acres. In the seven months that Mr. Pless has been pursuing his dredging operations he has constructed a levee on the west side of Sonoma creek 7 1/2 miles long, 8 feet

high and of an average width of 60 feet, and has reclaimed 1500 acres. All this work has been accomplished by his wonderful dredger, manned by only four men on double shifts, the dredger running night and day. Mr. Pless by his invention and a six-months' practical test on Sonoma creek, has made possible the reclamation of every acre of our overflowed lands. He is now at work on a model for a dredger that will do just twice the amount of work of the one which he is now using.

**PROFIT IN POULTRY.**—Sonoma, Dec. 27: J. S. McClemmy, lessee of a small farm on the Buena Vista tract, has raised the past year 527 chickens and 217 turkeys. Of the chickens, 317 are laying hens, which, with eggs at 40 cents per dozen, the present market price, net a nice little sum daily. The chickens and turkeys were raised with very little care and attention. To the question as to whether the raising of poultry will pay in Sonoma valley, Mr. McClemmy's experience, we are sure, answers the question in the affirmative.

## Sutter.

**LARGE SALE OF WHEAT.**—Yuba City *Farmer*, Dec. 26: The Farmers' Union last week sold to the Buckeye Mill Co. 420 tons of wheat. The wheat was the property of Geo. Harter, and the larger part of the lot had been carried over for three years. The price received, we are informed, was \$1.15 per cental.

## Tulare.

**PRUNE ORCHARDS.**—Fresno *Republican*, Dec. 26: F. Comings, the prominent fruit-grower of San Jose, has come to the conclusion that the lands in the San Joaquin valley, especially when not too far distant from the foothills, are better adapted to the prune than the Santa Clara valley. He has just bought 160 acres near Kaweah, on the Porterville branch railroad, and will set out the entire tract to prunes. Other San Jose fruitmen have recently bought lands in Fresno and Tulare counties and will plant large prune orchards.

## NEVADA.

**THE CATTLE INDUSTRY.**—Reno *Gazette*, Dec. 25: For five years stock cattle have been going down, and beef has kept pace with the downward tendency until it is poor encouragement for stockmen to pay much attention to fattening cattle. The ranges in this State, those in Southern Oregon, and in the counties of Lassen, Modoc and Sierra in California, met with such heavy losses last winter that this State and the sections alluded to above will not have the usual quota of beef to market this year. It will take the stockmen fully five years to recover from the loss of last winter, and it is very doubtful if ever again Nevada will support as many cattle as she has in the past. A year ago last winter, Montana lost fully 50 per cent of her cattle, and last winter a fourth of the cattle in this State died. We look for a material advance in cattle of all grades throughout the country the coming year. As the land becomes settled up, the ranges are necessarily curtailed, and there will not be range for such large herds to be successfully handled by one man. The large abattoir now being constructed near Port Costa, Cal., will take 800 head of beef of all grades per day. San Francisco and Oakland now take about 400 daily. This enterprise will make a market for all the range cattle the country produces, so that stockmen can keep their herds cleaned up. Every animal that could possibly be beefed has been taken to the shambles in the past five years, and is it a wonder that that article of food has been low?

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. "Now is the winter of our discontent made glorious summer" by Ayer's Sarsaparilla. This wonderful medicine so invigorates the system and enriches the blood that cold weather becomes positively enjoyable. Arctic explorers would do well to make a note of this.

Spring is Coming—Planting Time is at Hand.

If you are thinking of planting Roses, Hardy Shrubbery, Climbing Vines, Bulbs or Seeds of any kind, write The Dingee & Conard Co., West Grove, Pa., for their New Guide—124 pages beautifully illustrated—free on application. This house is well known as one of the most popular and reliable in the country. They make a specialty of all the Newest and Choicest Roses, New Hardy Plants, New Bulbs, New and Rare Flower and Vegetable Seeds of all best kinds—almost every thing you can need for home planting is offered post-paid to your door. Satisfaction guaranteed. Address The Dingee & Conard Co., West Grove, Pa., and please mention this paper when you write.

## "It Can't Be Beat."

SAN FRANCISCO, CAL., Dec. 11th, 1890. LAWRENCE, WILLIAMS & Co., Cleveland, Ohio—GENTS: Will say we received your letter the first of Nov. in reference to your Gombault's Caustic Balsam, but as we had changed foreman at stable, could not tell anything about the merits of same, so we went and bought a bottle of it and have tried the same; for blistering it can't be beat; for common use he says it is too strong, but he thinks to reduce as directed it will be splendid and is going to try the same reduced. Resp. yours, FARNSWORTH & RUGGLES.

## Agriculture in Mendocino County.

EDITORS PRESS:—The year in Mendocino county has been one of varied fortunes. The rainfall, always abundant with us, was excessive last winter, and there was much snow in the northern valleys. The stock interest is paramount in the Little Lake, Sherwood, Long, Round and Eden valley sections, the mountains being in large sheep and cattle ranges, and the valley lands either forming part of the ranges or growing hay or grain, which finds a market with the grazers. The losses of cattle and sheep were very great. Hay was bought of the valley farmers at high prices, to try to winter the stock, and at heavy original cost and for hauling. The good prices for wool could not begin to replace losses, and besides the range interest had not been prospering for years. Their land was bought when at high prices, and cost too much to be used profitably at current prices for wool. The prices for grazing lands are getting lower now and will in a year or two be down to living rates. The country along the railroad, from Cloverdale to Ukiah, is in a transition state of farming. Formerly it was all hops, hay and grain. Fruit is now being planted largely at the expense of the grain acreage. French prunes and Bartlett pears are almost the only sorts planted, and both grow finely and produce a superior quality of fruit in this section. The acreage of hops decreased during the years of low prices, but for several years has remained about stationary. This year's crop was a little below the average in quantity, but of fine quality. But few were contracted, and the bulk of the crop sold in the neighborhood of 30 cents. Nearly all are now out of growers' hands. Several growers, L. F. Long among others, made trial shipments direct to London with satisfactory returns. The hop crop of the county, mostly from the Sanel, Ukiah and Redwood valleys, sold for about \$300,000. The hop-growers are very enterprising, and the kilns are of the most approved patterns. The most of the growers are not speculators, but men who have stayed with hops for years and made money out of them in the long run.

Six or eight miles above Ukiah, the railroad terminus is Calpella, in Redwood valley. Here is a large body of land mostly in benches and low hills, covered with fir, oak, madrone and manzanita, and very similar in character to the Swiss-Italian colony lands below Cloverdale. This section is being sold in small tracts and is fast settling up with a thrifty class. Vines do unusually well on the hills, as do all fruits, and the brushy lands seem the best. Anderson valley, with its lower end called Christine, is an old, well-tried fruit country, producing most fruits in good quality and apples hard to excel. Here fruit-growing is extending rapidly. They are 30 to 40 miles from a railroad, but are solving the problem by building evaporators and drying the fruit. With lumber at \$10 to \$12 for rough redwood at their very doors, building is cheap there, and the valley is certain to settle up very rapidly with a fruit-growing population. There is a fair local market for fresh fruit to the lumbering section on the coast at Navarro, Mendocino City, etc. The coast section is given up to lumbering, but the agricultural interest is steadily increasing as the woods are cleared.

At Point Arena is a fine dairy section. Cuffey's Cove and Ten-Mile river grow large quantities of potatoes, while all along the coast a farming population finds at the mills a ready market for hay and produce. Throughout the county, the hay and grain crops were short. Almost all grain is winter sown, and hay volunteer or grain sowed. Land stayed so wet that much could not be plowed till April. A great deal went into corn and produced good crops, but both hay and grain are insufficient for home consumption.

Ukiah. CARL PURDY.

Whooping cough, croup, sore throat, sudden colds, and lung troubles peculiar to children, are easily controlled by promptly administering Ayer's Cherry Pectoral. This remedy is safe to take, certain in its action, and adapted to all constitutions.

The German Savings and Loan Society,  
526 California Street.

## DIVIDEND NOTICE.

FOR THE HALF-YEAR ENDING DECEMBER 31, 1890, a dividend has been declared at the rate of five and forty-hundredths (5 40-100) per cent per annum on Term Deposits, and four and one-half (4 1/2) per cent per annum on Ordinary Deposits. Payable on and after FRIDAY, January 2, 1891.

GEO. TOURNEY, Secretary.

## ANNUAL MEETING.

THE REGULAR ANNUAL MEETING OF THE STOCKHOLDERS OF THE GRANGERS' BANK OF CALIFORNIA, for the election of Directors for the ensuing year, will take place at the office of the Bank, in the City of San Francisco, State of California, on TUESDAY, the 13th day of January, 1891, at one o'clock P. M.

For Grangers' Bank of California,  
ALBERT MONTPELLIER,  
Cashier and Manager.

FOR DYSPEPSIA,  
Ayer's Sarsaparilla

Is an effective remedy, as numerous testimonials conclusively prove. "For two years I was a constant sufferer from dyspepsia and liver complaint. I doctored a long time and the medicines prescribed, in nearly every case, only aggravated the disease. An apothecary advised me to use Ayer's Sarsaparilla. I did so, and was cured at a cost of \$5. Since that time it has been my family medicine, and sickness has become a stranger to our household. I believe it to be the best medicine on earth."  
— P. F. McNulty, Hackman, 29 Summer st., Lowell, Mass.

FOR DEBILITY,  
Ayer's Sarsaparilla

Is a certain cure, when the complaint originates in impoverished blood. "I was a great sufferer from a low condition of the blood and general debility, becoming finally, so reduced that I was unfit for work. Nothing that I did for the complaint helped me so much as Ayer's Sarsaparilla, a few bottles of which restored me to health and strength. I take every opportunity to recommend this medicine in similar cases."  
— C. Evick, 14 E. Main st., Chillicothe, Ohio.

## FOR ERUPTIONS

And all disorders originating in impurity of the blood, such as boils, carbuncles, pimples, blotches, salt-rheum, scald-head, scrofulous sores, and the like, take only

## BEET SUGAR FACTORIES

## E. H. DYER &amp; CO.,

Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar.  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufacturers of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

## 'Planet Jr.'

Improved Farm and Garden  
Tools for 1891.

BETTER, Both Horse & Hand, THAN EVER; better and more money saving. We cannot describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardener's Harrow, Cultivator & Pulverizer, combined, adjustable teeth; Market Gardener's & Beet Grower's Special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potatoe Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now. S. L. ALLEN & CO., Philadelphia, Pa.

# THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

## WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

## H. M. NEWHALL & CO.,

AGENTS.

309 &amp; 311 SANSOME STREET, SAN FRANCISCO, CAL.

N. B.—By courtesy of the Southern Pacific Company we have low rates on this Fertilizer to all parts of the State.

## "P. & B." PATENT IDEAL ROOFING & PRESERVATIVE COMPOUND.

Cheapest, Most Durable and Fire-Resisting Roofing in the market.

PRESERVATIVE COMPOUNDS FOR WOOD, IRON OR METAL.  
Acid and Alkali-Proof.

## "P. & B." COATED BUILDING PAPERS.

Water-Proof and Odorless. No Deader than Common Sheathing.

## PARAFFINE PAINT COMPANY,

116 BATTERY STREET, SAN FRANCISCO.

## BROWNE'S Patent

## Squirrel Exterminator.

This is an apparatus for burning straw and sulphur and also forces the fumes down their holes which never fails to kill. I will give \$100 in case the exterminator does not kill (if properly applied) every ground squirrel that its deathly fumes come in contact with. Thousands are in use. Price \$3.00. Send for circulars to

F. E. BROWNE,

30 S. Main St., Los Angeles, Cal.

## FAY'S WATER-PROOF MANILLA ROOFING, SIDING, CEILING, SHEATHING, &c.

Used extensively on Houses, Factories, Warehouses, Etc. Absolutely Water-proof. Send 2c for Illustrated Catalogue and Samples.

J. F. WYMAN,

AGENT FOR PACIFIC COAST,

221 Front Street, - - San Francisco, Cal.

## Little's Antipest.

THE GREATEST DISCOVERY OF THE  
NINETEENTH CENTURY.

Silver Medal Awarded by the State Fair of 1890.

This preparation is a Sure Destroyer of the SCALE, WOOLLY APHIS and INSECT PESTS of any and all descriptions. It may be as freely used in the conservatory, garden or greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportions. It is SAFE, SURE and CHEAP. No Fruit-grower or Florist should be without it. Send for Circulars and Price List.

CATTON, BELL &amp; CO.,

406 CALIFORNIA ST., SAN FRANCISCO.

Sole Agents for the Pacific Coast.

## Wainwright's Tree Sprayers AND WHITEWASHING MACHINES.

SIX CASH PRIZES, SILVER MEDAL AND A DIPLOMA at the late State Fair for the best Spray Nozzles and Spraying Apparatus. Complete outfits, prices from \$3 to \$90. Send for Circular and Price List. Wm. Wainwright, No. 10 Hayes Street, San Francisco.

## Acme Spray Pump.

This is a strong, light bucket pump, and is just what has been needed by small Orchardists, Farmers, Stock and Poultry Raisers. This pump will stand a pressure of from 50 to 75 lbs. to the square inch. When charged it will keep up a continuous spray from 5 to 15 minutes, without pumping, according to the amount of air in the reservoir.

Sample pump sent complete for Spraying, with Suction Hose, Strainer, Discharge Hose, Rod, one Line and one Chemical Nozzle, for \$13. All my pumps have brass and Rubber Valves.

Spray Rods made to spray, from the ground, from 1 foot to 30 feet high and at any angle.

For Orchards, Farms, Stockmen and Poultry Raisers there is nothing like them.

CONTRACTS TAKEN FOR LARGE JOBS OF WHITEWASHING & TREE-SPRAYING.

## H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

Messrs. H. H. Moore & Sons, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

Santa Barbara County Notes.

EDITORS PRESS:—The winter season has so far been very propitious for the farming interests, the rain of a couple of weeks ago having been efficient (three inches) to start the plows and grain-seeding for hay and grain. Since then we have had warm growing weather, and the grain is coming up finely. Farmers are generally keeping the weeds down with cultivators and harrows, thus saving plowing two or three times during the season, and also keeping the moisture which would be absorbed if weeds were allowed to grow. Thus a crop can be grown with a very scanty rainfall. Grass on the ranges is growing well and stock will soon be doing well. On account of no spring rains, feed was short this fall and stock in many places got quite thin. Hay was very high, reaching \$20 a ton just before the storm of two weeks ago. Even now good hay is very high and scarce. About one-eighth of an inch of rain fell a few days since and helps to keep things growing.

Business is lively in Santa Barbara on account of the holidays. Some building is going on all the time. Many stores and dwelling-houses are for rent. Liveller times are looked for as soon as work is commenced, building the railroad from Elwood to Santa Margarita. It takes much time and labor to raise the \$15,000 necessary to secure the right of way, but it is hoped that this amount will be made up soon.

The Occidental Mining Co. have a flow of twenty-five barrels per day at their oil well back of Carpinteria, and have had an oil tank put up on the railroad switch at Carpinteria wharf and are now laying a pipe line from the well to the tank, some four or five miles. Matters are quiet at the Summerland gas wells. The Gas Company has secured a franchise to lay gas pipes in Santa Barbara. Summerland is growing quite rapidly and is a very pretty little city. Several new business houses have been opened there recently.

Quite a strong movement is noticeable among the farming classes in the way of forming Granges and Farmers' Alliance clubs. It is to be hoped most sincerely that something may come from this movement in the way of State and National legislation.

The principal part of the bean crop remains unsold. The crop being very light, high prices were hoped for, and the beans were held with that purpose in view, but the demand did not justify, or was supplied elsewhere, leaving the farmers here in the lurch. They still hope, however, that matters may clear up before next season and all the beans he sold. The walnut crop was about all contracted early in the season and delivered as soon as gathered. Prices averaged well, ranging from eight to ten cents per pound.

In this part of the county there is not much stir in the matter of tree planting, as Lima beans pay better than fruit with the chance of having to dry the fruit in a drier, or else paying the heavy freight charges on the green fruit to Newhall, where it is dried on the ground by the heat of the sun.

L. B. CADWELL.

Carpinteria, Dec. 20, 1890.

Oregon State Horticultural Society.

Secretary E. R. Lake gives notice of the annual meeting to be held in City Council Chamber, Portland, January 13-14, 1891. During the past year this society has been entirely reorganized, and is now placed upon as good working basis as any similar organization on the coast. The membership of the society, though not as large as it ought to be in a State so favored as Oregon, horticulturally speaking, is composed of the leading orchardists and gardeners of the whole State. Every section is represented, but in many the membership is too small to truly represent the horticultural interest of those sections. At this meeting we are very desirous of seeing every phase of horticulture and every section of the State fully represented.

The S. P. R. R. and the O. P. R. R. will give the customary reduced rates. All papers presented will be open for discussion by those present.

All meetings are public, and every one interested in the upbuilding and advancement of Oregon's horticulture is most cordially invited to be present and take part in the proceedings.

THE IMPERIAL EARLY PEACH.—This is the name which W. W. Smith of Vacaville gives to a new variety which he has originated to meet the demand for a large yellow freestone ripening earlier than the Crawford's Early. Mr. Smith writes us that he is receiving many applications for buds, scions and trees, but he is not able to supply any this year, and wishes to notify RURAL readers to that effect. He is propagating the variety largely and expects to have sufficient stock next season which will enable him to sell at rates so reasonable that they can be planted by the thousand. Next summer he expects to bring the fruit prominently before the fruit-growers so that they can judge of its claims as the best early yellow peach.

THE STANFORD MUSEUM.—The contracts have just been let to Oakland parties for the construction of the Stanford University Museum at Palo Alto. The building is to be a monolithic structure, walls and floors of concrete and twisted iron, the same as used in the Academy of Sciences in San Francisco. This branch of the work alone will cost \$150,000.

Blind Requests.

Careless Subscribers.

It is surprising how thoughtless and careless some persons are in remitting money to newspapers, and in making requests in regard to changing the address of their papers. Almost every week some "blind" requests and blunders reach us, resulting from oversight and carelessness on the part of those who send them.

It is a common thing for us to receive requests like the following:

"Please change my paper to Blankville, as I have gone there to live. Yours truly, JOHN SMITH."

But as "John Smith" failed to give us his former or present address, we cannot make the change he requests without searching over thousands of names on our mail list—a work that would require a week to accomplish; and as there are many John Smiths, it would probably be unsuccessful in identifying the one sought after, even if the search were made.

Some persons request us to send their paper to such and such a place, not only without giving their present address, but even without giving their names. Of course, not knowing who the writer is, nor where he receives his paper, we cannot make the change he requests, and must wait until he writes again to complain that his former request was not attended to. But this was entirely his own fault. If he had sent in his name and former or present address, his request could and would have been promptly attended to.

Sometimes persons remit money in letters, and with similar carelessness neglect to give their address or name. In such cases we cannot enter credit for the money thus blindly sent us until we are subsequently informed from whom it came by the person who sent it and who complains that he has not received credit for his remittance. Of course, the delay in crediting the money was caused by his own carelessness.

It is the custom of printers to call all defective, disconnected, mislocated and unintelligible manuscript, or portions of it, "blind," and the term is appropriately applicable to the kind of requests sent us which we have cited above. They are "blind" requests and cannot be attended to for the reasons stated.

We hope, therefore, that all our friends will hereafter exercise a little thoughtfulness and care in this matter, and whenever they remit money to us, or desire us to change the address of their papers, we beg them always to state the postoffice, county and State to which their paper is now sent, as well as the one to which they wish it sent, together with their full name, and their requests can then be complied with. In short, we beg them to send us no more "blind" requests.

Do Poultry Select Food by Sight or Smell?

EDITORS PRESS:—At a late meeting of the Muskegon (Mich.) Horticultural Society, while the subject of poultry-raising in connection with horticultural pursuits was under discussion, the writer, for the purpose of setting the members to thinking, asked the question whether poultry selected their food by sight or by smell. This caused a deal of sight of thinking and no small amount of talking. The proponent of the question took the ground that sight alone guided not only domestic fowls, but all others in the selection of their food. The secretary of the society, Prof. Whitney, declared it was instinct and neither sight nor smell that guided them. A majority of the members inclined to the opinion that sight was the only guiding sense. Can any of the readers of the PRESS say positively whether fowls possess the sense of smell at all?

Muskegon, Mich. J. S. TIBBITS.

CREAM AS A CURE.—Very few housekeepers know the value of cream as food, and its superiority over butter or any other solid fat by permitting the gastric juice to mix with it in the most perfect manner, and in this way aiding and hastening digestion. It is most invaluable in the case of invalids, for it serves as nutriment in the most readily available form. It is also superior to butter, because it contains more volatile oils than butter made from it. Persons consumptively inclined, those with feeble digestion, aged persons, and those inclined to chilliness and cold extremities, are especially benefited by a liberal use of sweet cream. No other article of food or medicine will give such satisfactory results. It is far better than cod-liver oil, and is an antidote against consumption and a nutritious food for any one at all times. It would probably be used very freely were it not for the impression that it is an expensive luxury, and for this reason we restrict ourselves in the use of cream, and use butter, a still more expensive luxury, lavishly. The impression seems to be that the legitimate end of cream is to make butter, while, in fact, butter-making is the least useful purpose for which milk is employed.

IN MEMORY OF CAPTAIN COOLEY.—The Loyal Legion has issued a handsome memorial circular giving a life sketch of Capt. F. M. Cooley, who recently died in this city. Capt. Cooley was a brave soldier and a good citizen. He was husband of Alice Kingsbury Cooley, an esteemed correspondent of the RURAL, and well known to many of our readers who will feel deep sympathy with her in her bereavement.

AN installation for the purpose of plowing the land by electric motors has been set up in Spain on property belonging to the Marquis de la Laguna. The power of a water-wheel of some 20 horse-power will be employed, and the implement for working the land is expected to work at a distance of three miles from the generating dynamo.

Hollywood Trotting Stock.

The entire stock of the Hollywood Farm, at Floden, three miles from Vallejo, on the Napa Railroad, consisting of 60 head of standard, registered and thoroughbred stock of horses, will be sold at auction on Wednesday, 7th of January, 1891. After over 30 years of breeding, the proprietor, B. C. Holly, owing to failing health has concluded to close out at public auction, this high-class stock, representing, as it does, strains of the best blood and the most honored producing families in the United States. Mr. Holly has had a large experience and made the subject of breeding and nicking horses a study during the best years of his life. In looking over his catalogue, there can be found representatives from all the leading families, among which are some which were purchased in New York and Kentucky.

He has been very successful on the turf as a winner in trotting and running; having won the great stallion race with Woodnut in 1888. During the last four years he has expended a great deal of time and given a large amount of money in securing the most fashionable blood and the most remarkable getters that could be found. A RURAL representative made a visit to this great breeding farm one day last week, and spent three hours looking over the stock, and witnessing the performances of these royal-bred horses. A pair of yearlings, one of which was by Stamboul, were speeded around the track under a three-minute gait. After such a high standard has been attained in breeding horses as can be seen at Hollywood Farm, it is nothing less than a misfortune to the Pacific Coast to have it closed.

Any one who is interested in this high class of horses, would do well to send for a catalogue for the purpose of studying the pedigrees and performances of noted families here represented. Mr. Holly has had long prices made by breeders and speculators in horses, for several of his horses since the issue of his catalogue, but has refused to accept any, as the Hollywood trotting stock will be sold at auction as advertised in our columns.

Good News to Fruit-Growers and Farmers.

The Judson Manufacturing Company are selling Rabbit-Proof Fencing so cheap that it finds a big demand, especially their 2-ft. high rabbit-proof fence with three galvanized steel wire cables. It is so strong that hogs cannot break it, and farmers are putting barbed wires above it to any desired height and thereby have a very cheap fence that will turn anything. Their fencing is colored red by a chemical solution that preserves the pickets. See their advertisement on page 17.

NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

To Subscribers and Readers.

A HANDY PAPER BINDER.—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

Land to Rent.

A Splendid Opportunity

To rent on exceedingly favorable terms, either for cash or a reasonable portion of the production, 164 acres of well-tilled land, a very comfortable house, with abundant shade trees, and splendid well of excellent healthy artesian water flows through the garden and dooryard. Water sufficient to irrigate 100 acres or more. Much of the land leveled, checked and ditched. Large barn and convenient outhouses. About 25 acres of alfalfa, and seven of orchard. The land is conveniently fenced into subdivisions, including a good pasture, large reservoir, etc. This place is one of the pleasant, healthfully located places in the Tulare valley, seven miles S. W. of Tulare city. Possession given immediately. Also, 156 acres adjoining on the east side and 180 acres on the west side of the above tract, making FOUR HUNDRED AND EIGHTY ACRES all well-tilled, productive land for all kinds of grain-growing, etc. Also 640 acres three miles from Pixley, and 160 acres within one mile of Tulare city, also on very favorable terms.

Apply soon to Capt. Thos. H. Thompson, Tulare; E. M. Dewey, Porterville; or A. T. Dewey, 220 Market Street, San Francisco.

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Dec. 30, 1890.

Trade in general produce has hung, but not more so than usually obtains at this season of the year. The money market has probably seen its worst, and from now on a steady improvement should set in. The large sums of money tied up will begin to be disbursed with the beginning of next month. The aggregate will be largely in excess of former annual disbursements, which will tend no little in easing the money market. This ease would be more pronounced if Congress would stop partisan legislation and pass a free-coinage bill, besides other legislation calculated to restore confidence. The English wheat market has held strong throughout the week. The following is to-day's cablegram:

LIVERPOOL, Dec. 30.—Wheat—Strong. California spot lots, 7s 4½d to 7s 7½d; cargoes off coast, 38s 3d to 38s 6d; just shipped, 38s; nearly due, 38s 3d; cargoes off coast and on passage, firm and held higher; wheat on passage to Continent, 74s, 000 qrs; wheat and flour on passage to Cork, U. K., 2,011, 000 qrs; French country markets, stiff; wheat and flour in Paris firm.

## Foreign Grain Review.

LONDON, Dec. 29.—The *Mark Lane Express* in its review of the British grain trade during the week past, says: English wheats are firm for good sorts at an average advance of 6d. Foreign wheats are steady. Oats and corn are slow. At to-day's market English wheats were well sustained. Foreign was firm for white sorts. Flour was in good request. Round corn was 3d higher. Oats were 3d lower.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

Day	Dec.	Jan.	Feb.	Mar.	April.	May.
Thursday	104½	103½	103½	103½	103½	103½
Friday	104½	103½	103½	103½	103½	103½
Saturday	104½	103½	103½	103½	103½	103½
Monday	104½	103½	103½	103½	103½	103½
Tuesday	104½	103½	103½	103½	103½	103½

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

Day	O. C.	P. S.	N. D.	Market.
Thursday	104½	103½	103½	103½
Friday	104½	103½	103½	103½
Saturday	104½	103½	103½	103½
Monday	104½	103½	103½	103½
Tuesday	104½	103½	103½	103½

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day	Dec.	Jan.	Feb.	Mar.	May.	July.
Thursday	104½	103½	103½	103½	103½	103½
Friday	104½	103½	103½	103½	103½	103½
Saturday	104½	103½	103½	103½	103½	103½
Monday	104½	103½	103½	103½	103½	103½
Tuesday	104½	103½	103½	103½	103½	103½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day	Dec.	Jan.	Feb.	May.	July.
Thursday	104½	103½	103½	103½	103½
Friday	104½	103½	103½	103½	103½
Saturday	104½	103½	103½	103½	103½
Monday	104½	103½	103½	103½	103½
Tuesday	104½	103½	103½	103½	103½

NEW YORK, Dec. 30.—Wheat—\$1.06½ for cash, \$1.04½ for December, \$1.04½ for January, \$1.05½ for March; \$1.05½ for May, and \$1.00½ for July.

CHICAGO, Dec. 30.—Wheat—89½c for January and 97½c for May.

## Hops.

NEW YORK, Dec. 28.—Hops are in a tame condition for local or export use. The prices, however, have not shrunk, which is a favorable feature of the dull market at the close of the year. Light orders from brewers directed to good olds and under grade. The New York crop of 1890: Choice, 38@40c; good to prime, 35@37c; common to fair, 32@34c; crop of 1889, 20@25c; crop of 1888, 12@18c; do, old olds, 7@10c. Pacific crop, 1890: Prime to choice, 36@38c; good, 33@35c; common, 30@32c; crop of 1888, 12@18c; Eastern and California old olds, 7@10c; Bavarian, 60@62c; Bohemian, 62@65c; Altmarc, 52@55c. Exports for the week, 359 bales.

## Eastern Wool Markets.

NEW YORK, Dec. 26.—Bradstreet's will say: The wool sales for the week show a strong active movement in both Texas and Territory supplies. Some large lots of Texas wools were disposed of at full values, showing that confidence in high prices has not weakened. Fleece wools are in strong demand. Australian wools are moving better, while pulled wools are very firm. Prices have not been changed on any grade. It is said 300,000 bales have been shipped from Melbourne for the next London sales. A recent decision of the Treasury Department to assess a duty of 12¢ lb. on common goat hair has stirred up considerable discussion among carpet dealers and carpet manufacturers.

NEW YORK, Dec. 28.—New York makes a light showing in wool business, the weather and holidays restricting the evident disposition to trade. All seaboard points have a hopeful outlook for prices. The early new year is expected to bring a line of manufacturers needing selections of the remaining light supply, especially for bosierly worsted.

Boston retains an active tone. Sales—2,393,000 lbs. domestic and 103,000 lbs. of foreign. The bulk of Texas was closed out at 18@23c; 140,000 lbs. of California went at 17@23c. The Philadelphia market is in good shape for the new year, and buyers are unable to shake the holders' views.

## Dried Fruits.

NEW YORK, Dec. 28.—Raisins continue to be offered at low prices, and unless some unforeseen demand springs up the holders are fearful that the season will wind up with many invoices in storage. Retailers are not heavily stocked, which is encouraging for really useful loose or clusters at current quotations. Prime parcels in bags, 7@7½c; good style layers offered, 2¢; choice and best Three Crowns as before.

Prunes, apricots and peaches almost nominal,

NEW YORK, Dec. 29.—The *Commercial Bulletin*, discussing the dried fruit situation, says: It would be difficult to picture a more stupid condition of affairs than that observed at present. There is absolutely no demand for goods from interior points, and among the local large dealers there is a complete absence of speculative interest, the low prices current for most lines attracting not the slightest attention.

The foreign markets reflect generally a firm tone, though naturally at this time the cable offerings of stock are not frequent. The crop of prunes in France the past season was in fair quantity and of an unusually good quality. The market in Bordeaux appears well sustained, with no disposition to urge supplies, the belief being entertained that there is on hand the entire available quantity required during the coming season.

The Turkish prune crop was a comparative failure this year. The stock of Valencia raisins is exceedingly small and consists chiefly of better class fruit. The crop of Malaga raisins this season was small, but as this country has become almost wholly dependent on California for a similar class of fruit, the scarcity has been without influence on this side of the water. For grades of imported fruit there is yet a moderate call. Good fruit has been in fair demand all along. For such, full prices have been and are exacted.

## Miscellaneous.

NEW YORK, Dec. 28.—The long pause in trade in mustard seed makes some room for parcels on the way from the Coast; 3½c is quoted for yellow brown. Pacific Coast of irregular quality does not compare well with the foreign.

Honey strong; sales, 6½@7½c for amber shades. Lima beans slow with easy prices. Nothing above last price. Quality unsatisfactory.

## Local Markets.

Day	Buyer Season.		Seller 1891.		Buyer 1890.	
	H.	L.	H.	L.	H.	L.
Thursday	149½	149	106½	106½		
Friday						
Saturday						
Monday						
Tuesday						

## WHEAT.

Day	Buyer Season.		Seller 1891.		Buyer 1890.	
	H.	L.	H.	L.	H.	L.
Thursday	149½	149	106½	106½		
Friday						
Saturday						
Monday						
Tuesday						

BAGS—The market is essentially unchanged at 6½@6¾c for May-June delivery.

BARLEY—The sample market has held firm under moderate receipts and a fair call. The Call Board adjourning for three days interrupted trading in futures, but with business resumed on yesterday more activity is noted. The following are to-day's Call Board sales:

Morning Session: Buyer season—100 tons, \$1.49½; 300, \$1.49½; 700, \$1.49½; 1,000, \$1.49½; 2,000, \$1.49½; 3,000, \$1.49½; 4,000, \$1.49½; 5,000, \$1.49½; 6,000, \$1.49½; 7,000, \$1.49½; 8,000, \$1.49½; 9,000, \$1.49½; 10,000, \$1.49½.

BUTTER—The market is firm but no higher. There is very little if any choice pickled. The Eastern creameries are sending liberal supplies to this coast, which interferes with the California product. It is generally claimed that with milder weather on this coast, the output of butter will increase.

CHEESE—The supply is light, the demand good and the market strong.

EGGS—The market is shading off under increasing supplies and buyers haggling for still lower figures.

FLOUR—The market is steady. The demand is fair.

WHEAT—For the first three days of the week under review, trading in sample parcels was quiet owing to the adjournment of the Produce Exchange. On yesterday fair business was done. Holders appear very firm, only letting go when compelled to do so. In futures, trading yesterday and to-day was fair. The following are to-day's Call Board sales:

Morning Session: Buyer 1890—200 tons, \$1.31½; 100, \$1.31. Buyer season—200 tons, \$1.42½; 100, \$1.42. Buyer 1891—300 tons, \$1.48½; 700, \$1.49; 1,000, \$1.49. Buyer 1890—200 tons, \$1.31. Buyer season—400 tons, \$1.43; 200, \$1.43½; 1,000, \$1.43½; 200, \$1.43½. Buyer 1891—200 tons, \$1.49½; 100, \$1.49½; 100, \$1.49½; 100, \$1.49½.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending Dec. 29th, were as follows:

Flour, qr. sks.	100,619	Middlings, sks.	2,526
Wheat, cts.	293,923	Alfalfa, "	543
Barley, "	17,177	Chicory, bbls.	200
Rye, "	216	Broomcorn hds.	865
Oats, "	5,437	Hops, bbls.	100
Corn, "	11,160	Wool, "	5
*Butter, "	407	Hay, tons.	1,150
do bxs	314	Straw, "	44
do bbls	133,700	Wine, gals.	133,700
do kegs	19,820	Brandy, "	19,820
do tubs	4,578	Raisins, bxs.	4,578
do bxs	51	Honey, cts.	320
†Cheese, cts.	281	Walnuts, sks.	31
do bxs	3	Flaxseed, "	1,523
Eggs, doz	35,360	Mustard, "	22
do " Eastern	44,750	Almonds, "	22
Beans, cts	343	Peanuts, "	370
Potatoes, sks	34,072	Popcorn, "	431
Onions, "	1,716	Beet sugar, bbls.	30
Bran, "	14,863	do do sks.	300
Buckwheat, "	10		
*Overland 654 cts.		†Overland 845 cts.	

## Cereals.

Owing to adjournment of the Produce Exchange, the local wheat market has been very dull, barely enough doing to afford quotations. Home receipts continue quite light, but receipts from up north were free. In this State there is no decided disposition to meet buyers' views, although the latter claim that with a light supply of tonnage the offerings are ample. But there is no doubt they would not be

were Oregon and Washington to hold back supplies. It looks as if the majority of farmers in Western Washington and Western Oregon are forced to sell, having placed themselves in the power of moneyed sbylocks. The elevator system up north gives to unscrupulous persons the reins to drive any kind of bargain desired by a grain ring. All ring records are such as to warrant the assertion that the bargain was against wheat growers.

Silver has fallen in London, and in sympathy, wheat has declined; and still speculators and Shylocks say that the free coinage of silver with its attending higher price would benefit only mine-owners.

There are several disengaged vessels in port, against none two weeks ago.

The weather has been of the best for outdoor work. Owing to heavy rains last winter, the ground was soaked down to a greater depth than for several years, and consequently it is affirmed that good crops can be grown next year with light but seasonable rains.

Barley has ruled fairly firm under moderate receipts and a fair demand. Oregon and Washington sent us more than in the preceding week. The supply in California is light, barely enough to meet home requirements, consequently receipts from up north are welcomed by buyers. The Hawaiian Islands continue to draw freely, with rolled barley making nearly as large a showing in the shipments as does whole grain. There will be a large acreage seeded this season to barley, consequently seed barley will be required in localities where the crop was light.

Oats show continued strength under light receipts and small supplies to draw from. The demand is fair, notwithstanding high prices restrict some feeders.

Corn is still coming in freely, causing a shaving off in prices. The demand is of an offish character. Rye and buckwheat are unchanged.

## Feedstuff.

The demand for ground feed has held steady—about equal to the receipts. If the rains yesterday and last night are followed by milder weather, natural feed, in a short time, will be so abundant as to considerably curtail the feeding of ground feed.

The receipts of hay are still light, causing a steady market to obtain. The supply in the country is light, but the fear that mild weather may set in at any time causes feeders and dealers not to anticipate their wants. With mild weather, grass will make a good start and excellent pasturage would soon follow. If the present rains are succeeded by severe cold weather there will be an increased call for hay and all kinds of feedstuff.

## Fruits.

The receipts of oranges are increasing, causing a slight advance in prices. Choice ripe thin-skinned are given preference by buyers. Rough thick-skinned will be again discriminated against. Consumers have not taken hold freely; this no doubt is due to apples being in liberal stock and given preference by consumers. Limes and lemons are in light stock, but the demand is slow.

Apples continue to come in freely, yet the market holds up well. Taking receipts as a whole, they average in quality better than for years past. This speaks well for orchardists. With more attention given to pruning, cultivation and keeping trees free from pests, the fruit will continue to improve, which will make poor stock still more unsalable.

Oregon is sending us larger quantities of apples than it did last season.

Winter Nels pears are not worth quoting.

In dried fruits there is absolutely nothing new to report, and probably will not be until well into February.

Raisins are slow of sale. Quotations are more or less nominal.

## Vegetables.

Garden truck is in light supply. The southern part of the State still supplies this market with early spring vegetables, for which quotations are more or less nominally high, changing according to the demand and supply.

Onions are in better supply, but the market holds steady. Choice good keepers are wanted. The crop the next season, it is said, will be large.

Potatoes are barely steady under free receipts and liberal supplies to draw from. Large speculators in this city are working off their holdings. New potatoes are making a better showing, but, as yet, receipts do not justify quoting sales. Sweet potatoes are generally in poor condition. Choice good keepers fetch top prices.

## Live-stock.

Attention is still paid to holiday stock. The display of meats this year was never equaled in this city. Bullocks, hogs and mutton sheep corn-fatted to perfection. At Sampson's market in Oakland, two hogs were killed—one weighed over 1100 lbs. and the other over 900 lbs. He bought the hogs from a Contra Costa farmer and fattened them himself. These were the largest the writer saw the past Christmas. The offerings of bullocks are still free. Mutton sheep are firm, as are hogs. More of the latter are being put into packed than for years past. Horses and milch cows are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4½@4¾c lb.; dressed, 7@8c lb.; heavy, 4@4¾c lb.; dressed, 6½@7¾c lb. Stock hogs, 3@3¾c lb. BEEF—Stall fed, 7@—c lb.; grass fed, extra, 6½@—c lb.; first quality, 5½@6c lb.; second quality 4½@5c lb.; third quality, 3½@4½c lb.; bulls and thin cows, 2@3c lb. VEAL—Small, 8@9c lb.; large, 6@7¾c. MUTTON—Wethers, 7c lb.; ewes, 6½c lb.; lamb, spring, 8@9c.

## Miscellaneous.

Exports by sea the past week aggregate as follows: Flour, bbls, Central America, 6065; Panama, 378; Hilo, 300; Kahului, 400. Wheat, cts, Hull, 56,914; Dunkirk, 61,500; Antwerp, 127,790; Cork, 33,171. Barley, rolled, lbs, Hilo, 97,735. Beans, lbs, Victoria, 3200; Mexico, 6121; Central America, 21,554; Hilo, 1980; Honolulu, 1536. Apples, bxs, Mexico, 872. Corn, cts, Central America, 1019. Dried fruits, lbs, Mexico, 2115; Central America, 1317; Honolulu, 2400. Wine, gals, Mexico, 1867; New York, 52,248; Washington, 1010; Central America, 600. Raisins, bxs, Mexico, 205; Central

America 417. Potatoes, sks, Mexico, 541; Central America, 335. Brandy, gals, New York, 145; Providence, R. I., 150.

Poultry has held up well, considering the heavy receipts. More fowls were bought this Christmas than ever before, which speaks well for the condition of all classes. Last winter the city was full of idle workmen; this winter there are very few here.

Game is in light supply, but the rains may bring in more on the various hunting grounds which will cause hunters to send more into market.

Beans are barely steady. There appear to be strong buyers for large desirable parcels.

In hops there is nothing doing.

Wool is dull, with no important change, if any, expected until after the turn of the year.

Nu s are easier under a slower demand.

Honey is very firm at full prices.

From the *Commercial News* of Dec. 30th the following summary of tonnage movement is compiled:

On the way to	1890.	1889.
San Francisco	273,433	199,664
San Diego	12,676	11,368
San Pedro	7,478	2,735
Oregon	32,341	25,950
Puget Sound	38,526	15,255

Totals.....364,454 254,979

In port at

San Francisco, disengaged	1890.	1889.
" engaged for wheat	10,734	7,864
San Diego	47,941	83,739
San Pedro	4,250	
Columbia River	2,009	1,476
Puget Sound	12,948	

Totals.....77,882 93,079

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Dec. 24, 1890, the following are the exports from this port:

	1890.	1889.
Wheat, ctls.....	5,859,269	6,233,523
Flour, bbls .....	567,116	546,302
Barley.....	176,369	815,865

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. TUESDAY, Dec. 30, 1890.

Importation of Horses to Los Angeles.

The arrival at Los Angeles during Christmas week of two cars of imported stallions by Holbert & Conger, importers and dealers, adds another lot of grand sires for the use of California breeders. There was one car of English Shire draft horses and one car of Cleveland Bay and German coach horses.

Among the number they have a German coach horse, which is perhaps the only one on this coast. He was bought from the Government stud in Germany and is claimed to have no equal as a coach horse in America to-day.

The German coach horse received marked attention at the American Horse Show in Chicago last fall, and was pronounced the coming great coach horse for America. This firm invites the attention of first-class breeders. A very interesting article on the German coach horse by A. B. Holbert was published in the RURAL of July 12, 1890, and it is an acquisition to have such an excellent breed introduced into the State.

Always Take a Receipt.

Subscribers to this paper are earnestly requested to take a receipt for every payment made on subscription, no matter how small the amount or to whom paid. We use printed receipts, with stubs attached, to prevent mistakes, through carelessness (or other reason), by agents or others. For our mutual interests take a receipt, whether you preserve it or not.

T. D. MORRIS, Agua Caliente, Cal. Fine Poultry, Bronze Turkeys, Toulouse and Embden Geese, etc.

- NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co. in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Dewey & Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

ORANGE CULTURE

A practical treatise by T. A. GARREY giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F.

Raisin, Fruit and Grain Lands

At Extremely Low Prices,

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasturage, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low. Address E. M. Dewey, Publisher, Porterville, Tulare Co., A. T. Dewey, 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.

THE CALIFORNIA STUMP PULLER

In its improved condition is now universally admitted to be the most practical, powerful and rapid-working machine in America, and the only machine in existence that can be successfully operated on hill land. The prejudice existing against stump pullers, the result of the many failures with machines of this class, should not deter land owners from investigating the merits of this machine, as it has been designed strictly to meet Pacific Coast wants and conditions, being entirely free from the defects that have made other machines failures, and every machine is fully warranted. Illustrated descriptive catalogue sent free on application. Address

GEO. HARVEY,

547 BRANNAN STREET, SAN FRANCISCO, CAL.

VINE PRUNERS, ATTENTION!

Use E. M. T. Hilgard's GRAPE BRUSH RAKE.

With which one horse and a boy can do the work of eight or ten men in gathering and bunching the prunings ready for loading on wagon. Its cost will be saved in one season's work on 65 acres of vines. Address TRUMAN, HOOKER & CO., 427 Market Street, San Francisco.

The steamship America, built at Dundee for  
the National line of freight boats, and which is  
nearly ready for service, is 450 feet in length  
and is constructed of steel on the cellular  
double-bottom principle. She has three  
decks of steel and engines of the triple-expan-  
sion type.

## Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting busi-  
ness on this Coast now for so many years, the firm's name  
is a well-known one. Another reason for its popularity  
is that a great proportion of the Pacific Coast patents  
issued by the Government have been procured through  
their agency. They are, therefore, well and thoroughly  
posted on the needs of the progressive industrial classes  
of this Coast. They are the best posted firm on what  
has been done in all branches of industry, and are able  
to judge of what is new and patentable. In this they  
have a great advantage, which is of practical dollar and  
cent value to their clients. That this is understood and  
appreciated, is evidenced by the number of patents  
issued through their SCIENTIFIC PRESS Patent Agency (S.  
F.) from week to week and year to year.

## Don't Fail to Write.

Should this paper be received by any subscriber who  
does not want it, or beyond the time he intends to pay  
for it, let him not fail to write us direct to stop it. A  
postal card (costing one cent only) will suffice. We will  
not knowingly send the paper to any one who does not  
wish it, but if it is continued, through the failure of the  
subscriber to notify us to discontinue it, or some irre-  
sponsible party requested to stop it, we shall positively  
demand payment for the time it is sent. LOOK CAREFULLY  
AT THE LABEL ON YOUR PAPER.

'IMMIGRATION has increased this year over  
that of 1889. The arrivals from Ireland, Eng-  
land and Germany have fallen off, while those  
from Italy, Russia and Southwestern Europe  
have largely increased.

## Seeds, Plants, Etc.

## Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEAD-  
ing varieties of Strawberry together for five years, I  
have produced a variety unlike any of the former.  
I have picked the fruit daily since April 20th to the  
present time, October 13th, and the vines are still full  
of bloom and berries. Roots are long and stand the  
drouth well. The berries are large, fine flavor and high  
color, and resemble the Jessie in shape somewhat. I am  
prepared to furnish them in small lots at \$1.50 per doz.,  
postpaid. R. E. FARRINGTON, General Nurseryman,  
Phoenix, Arizona.

## MAY'S NORTHERN GROWN SEEDS. EARLIEST, HARDEST, MOST PRODUCTIVE.

THIS ENTIRE COLLECTION OF SEEDS ONLY 10 CTS.

OFFER NO. 2, SURE HEAD CABBAGE. The surest heading variety, large size, firm and fine texture. V. Klune of Kokomo Ind. says: Sure head exceeds anything I ever saw in the cabbage line. Out of some 400 plants not one failed to make a fine solid head. CHRISTMAS WATERMELON. The finest keeping variety combined with the richest flavor of any melon grown. C. Weaver of Rendville, Ohio, says: Christmas Melon is the finest producing melon I ever grew. I had 22 large melons from four vines, and had them after Christmas. LENTZ BEET. A splendid sort, dark red color, will produce a crop in six weeks, a fine keeper. H. Miller of Goshen Ind. says: Lentz Beet takes the lead in our market. They are fine croppers. Test Northern Crown Seeds and be convinced they are superior to all others. To introduce our seeds, we will send one package each of the above cabbage, melon and beet to any address on receipt of 10cts. and our finely illustrated catalogue which is indispensable to any one interested in Plants, Seeds or Bulbs, being the most complete manual ever published. Contains over 500 illustrations and a colored plate of the famous Bladen Roses. Every person sending silver and mentioning this paper will receive extra a package of the famous Extra Early Carmine Radish. Mention number of offer. L. L. MAY & CO., Seedsmen and Florists, St. Paul, Minn.

May's Catalogue acknowledged the finest and most complete ever published.

Home Grown, Honest, Reliable.

1891.

I offer you my Vegetable and Flower Seed Catalogue for 1891 FREE. Note the immense variety of seed it contains, and that all the best novelties are there. Not much mere show about it (you don't plant pictures) but fine engravings from photographs of scores of the choice vegetables I have introduced. Would it not be well to get the seed of these from first hands? To be the oldest firm in the United States making mail and express business a specialty proves reliability. Honest and honorable dealing is the only foundation this can rest on. My Catalogue is FREE as usual. A matter on second page of cover will interest my customers. J. J. H. GREGORY & SON, Marblehead, Mass.

OUR SPECIALTIES:

## Cultivated Wild Oats,

Red Top, Timothy, Red Clover, Kentucky Blue Grass, ALFALFA SEED, Etc.

W. H. WOOD & CO., 117 to 125 J Street, SACRAMENTO.

A REVOLUTION  
IN PLOWING.

# Best's Traction Engine.

## THE MONARCH OF THE FIELD!

IT WILL DO THE WORK OF 100 HORSES.

OF  
LIBRARY 31 '90

Plowing Reduced to a  
Minimum Cost,

And from 35 to 45 acres plowed each  
day at an expense of 50 cts. to 60 cts.  
an acre.

Three Sizes Built,  
30 40 & 50-Horse Power,

—AND—

22 Best Traction Engines  
AT WORK NOW.

A Fifty-Foot Harrow  
is Used,

With which from 100 to 125 acres  
are harrowed each day, doing  
the work much better than  
horses.

Messrs. Reed & Frisbie of  
Kings City are pulling a gang of  
25 ten-inch plows, moving at the  
rate of three miles an hour and  
plowing eight acres an hour  
with a Best's Traction Engine.

Plowing by Sunlight by  
Day and Headlight  
by Night.

## THE PACIFIC GAS OR GASOLINE ENGINE.

Patented June 17, 1890 — Nos. 430,604, 430,605, 430,606—also in Great Britain and Other Foreign Countries.

**Starts Instantly Without the Necessity of Boiler, Fire  
or Experienced Engineer.**

**OVER 150 IN ACTUAL OPERATION.**

The Engine uses from 20 to 25 feet of Coal Gas, or  
about one-eighth of a gallon of Gasoline, per hour per  
horse-power. Is now in use for Pumping Purposes, run-  
ning Printing Presses, Small Factories, Elevators, Jewel-  
ers' Lathes, Polishers, Dairymen's, Agricultural, Mining  
and Wood-working Machinery, Well Boring and all other  
purposes requiring cheap and convenient power. Persons  
having but little space will find this the most suitable of  
all Motors.

**USE IN BOATS.**

The Company makes a Specialty of  
ENGINES FOR SMALL BOATS AND LAUNCHES.

**PACIFIC GAS ENGINE CO.,**

230 FREMONT STREET, - - - SAN FRANCISCO, CAL.  
Send for Circular and Price List.

**Cheaper Than Windmills for Farmers!**

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour.

—NO—  
Boiler,  
Fire,  
Smoke,  
Steam,  
Ashes,  
Or Heat

—No

#### Oranges and Lemons.

As pertinent to the holding of the Citrus Fair at Marysville, under the auspices of the State Board of Agriculture, we give upon this page photo-engravings showing the two leading fruits of the citrus family. Common printing ink can but remotely represent these masterpieces of vegetable growth, and still such pictures are suggestive and convincing beyond words.

Both pictures show the prolific bearing of the orange and lemon under favorable conditions. The early fruiting of the orange is shown by the photograph of a tree in the orchard of H. A. Mayhew, situated at Niles, in Alameda county. The lower engraving shows a lemon branch from a tree growing on the Tejon Ranch, near Bakersfield, in Kern county.

#### New Citrus Varieties.

At the last meeting of the State Horticultural Society, Mr. B. M. Lelong showed two interesting citrus fruit varieties which are but little known in this State, but which may become of prominence and value.

One is the orange of Joppa, taking its name from the famous old seaport of Palestine. The fruit shown by Mr. Lelong was grown upon scions secured in Joppa by a Californian traveler who saw the fruit there and brought the scions home with him.

The orange is large, seedless, exceedingly fine grained and free from "rag"—the significant term which is applied to the fluffy white layer which lies between the true skin and the pulp. The orange though seedless has no rudimentary seed vessel which forms the characteristic mark of the Navel orange and occupies part of the space of the fruit with a non-edible material.

The other fruit shown by Mr. Lelong was a genuine Villa Franca lemon grown from stock secured in Portugal. Mr. Lelong claims that the common Villa Franca lemon as grown in California is not true to name. Among other objections in this common variety is a sooty foliage which does not properly protect the fruit. The genuine Villa Franca has good foliage.

As the stock of these varieties is now introduced and bearing fruit in this State, the distribution of them will no doubt soon be effected.

The area suited to the lemon is not so wide as that on which the orange thrives, and yet California is advancing in the lemon industry and the fruit will bring the State a grand revenue.

BEARING ORANGE AND LEMON TREES, GROWN IN ALAMEDA AND KERN COUNTIES.

## THE STOCK YARD.

### The English Fat-Stock Shows.

**EDITORS PRESS:**—The year 1890 was a winning year for Shorthorn cattle. All the champion prizes of the year, both in England and in America, were won by cattle of that breed. Not only at the fat-stock shows, but at the exhibitions of breeding stock throughout the country, as well as at the London Dairy Show, where the premiums are awarded according to both the quality and quantity of milk given, have the Shorthorns been victors.

The Birmingham and Smithfield Fat-Stock Shows have always been considered the two leading exhibitions of the world for that class of stock. For a year or two the American Fat-Stock show held at Chicago was a strong rival, but according to the most authentic reports that institution is on the wane and it will require some very energetic management to bring it back to its short lived grandeur. The number of fat cattle of all breeds at the respective exhibitions of which we have any account up to date for 1890 are as follows: Chicago, 109 head; Norwich, England, 91 head; Birmingham, 217 head; and Smithfield, London, 284 head.

Some account of the Chicago show was given in the *RURAL PRESS* of Dec. 27, 1890.

Of the Norwich show, the *Mark Lane Express* says: "The fat-stock shows of the year commenced on Thursday last (Nov. 20th), when one of the best exhibitions we have seen at Norwich opened its doors.

"The cattle classes were, on the whole, good. "In the two-year-old class for steers of any breed, the premium was awarded to a Hereford and Shorthorn cross, described as a really good beast, the second premium going to a long, level, ripe Shorthorn; a pure-bred Hereford takes the reserve and h. c. (highly commended).

"The premium 2-year-old roan steer, just over 35 months old, girths 8 feet 9 inches, and has a weight of 2140 pounds, a daily gain since birth of 2 lbs. 0 1/2 ounce—a remarkable figure for a beast of that age—say 1060 days.

It is rare, indeed, for an animal to make as great a growth as 2 lbs. a day from birth up to the age of 900 days. This will be found to be the fact, I think, by any who will take the trouble to look over the tables of weights and ages given at any fat-stock show on either continent. I do not know that the above record is unprecedented; at any rate it is one of the best, if not the best, in some years, for a bull of that age. The best and heaviest growth for the year was 3.11 lbs. per day since date of birth, made by a Shorthorn calf exhibited at Chicago.

The third or reserve and h. c. 2-year-old, a roan steer, at Norwich, made the remarkable growth of 588 pounds gain in weight since last year's show.

Growth like the above not only are proof of extraordinarily good animals, but also of rare skill in the feeder.

In the Shorthorn cow class, a nice level white cow is placed first and a nice roan second.

In the class for cows or heifers of any breed or cross-breed other than Shorthorn or Red Polled, both premiums are taken by crosses between the Shorthorn and Polled Angus breeds. Premiums are given for cattle bred and fed in the county of Norfolk.

In the classes for steers, the premiums are all awarded to crosses between the Shorthorn and either Hereford, Polled Angus or Red Polled breeds.

In cows, the first premium was awarded to a roan Shorthorn and the second to a "ourious cross between a Hereford bull and a Red Polled cow. The result is a perfect Hereford in miniature."

The Norwich Show was followed by the Birmingham Cattle and Poultry Show, of which the *Mark Lane Express* of Nov. 24th says:

A comparison of the returns which have been published shows that the entries for this, the 42d annual exhibition (November 29th and December 1st, 2d, 3d and 4th), considerably exceed those of former occasions, and the resources of Bingley Hall will be taxed to the uttermost in order to provide the necessary accommodation.

Ninety breeds of poultry and 115 varieties of pigeons will be found represented in the 4022 pens which make up this extraordinary collection, and 20 judges are required to award the prizes in this section.

The *Agricultural Gazette* says: There are 27 entries of cattle, and a very fine display they make, the various pure breeds being well represented, while the section for cross-breeds is, as usual, of a very interesting description. The success achieved by Her Majesty the Queen is even more marked than it was last year. The Elkhington Challenge Cup again goes to an animal from the Royal Farm at Windsor, and having been won two years in succession, this trophy becomes the absolute property of the Queen, a victory that has only been achieved twice before in thirteen years, by Mr. John Price with his Herefords, and Mr. Clement Stephenson with his Aberdeen-Angus. The Queen gained the prize last year and this year with Shorthorns—both, it may be remarked, bred in the north of Scotland, and in the same county. The Elkhington Challenge Plate is given for the best animal in the cattle classes, but the President (the Earl of Aylesford) offers a prize of £25 for the best animal bred and fed by the exhibitor, and this also falls to the Queen with a beautiful Devon. Moreover, in addition to four first-

class prizes, Her Majesty secures the special prizes for best Devon, best Hereford and best Shorthorn—a series of successes that, we believe, is unparalleled, and which reflect much credit on the skill and care bestowed upon the selection, feeding and breeding of cattle on the Royal Farm.

Another point that may be noticed is that the society has cut off one of the prizes for steers above three years old. This has had the effect of diminishing the entries of these, and it is only to be expected that before long the classes for over-aged animals will disappear altogether from the fat-stock shows. With the development of early maturity they have survived their usefulness.

In regard to the doing away with prizes for over-fed and over-aged beasts, the American Fat-Stock Show is ahead of the English, in that the managers have already given notice that after 1890 no more prizes will be offered for animals over 36 months of age. This is progress in the right direction, for if, in these days of boasted early maturity in cattle-feeding, they cannot be fully ripened before the age of three years, we might as well give up breeding and fattening pure-bred cattle, keeping the several breeds distinct and all that, seeing that the cross-bred beasts generally make as good a growth as any of the pure-bred animals. Especially was this the case at Birmingham, where a yearling cross-bred Shorthorn and Galway showed a gain per day of 2.37 lbs. since birth, age 581 days. However, this is nearly equalled by a Shorthorn, age 631 days, weight 1481 lbs., daily gain 2.34 lbs., there being so slight a difference in daily gain that the 50 days' difference in age probably makes the animals about equal, if not fully so.

These two animals had made the best use of their time of any in the show—not one that was over two years old having made as much as two lbs. per day, while all the Shorthorns under two years old had made a growth of over two lbs. a day since birth, no other yearling class of any breed having done as well.

The folly of keeping fattening cattle till they are over three years old, or even after 30 months of age, is apparent from the limited growth made by animals over that age when compared with that of those under two years old.

The *Mark Lane Express* of Dec. 8th gives some account of animals sold at the Birmingham show, among which were the Queen's Devon bullock, which won the first prize in its class, the £50 (\$250) prize offered for the best Devon, and was also reserved for the Elkhington challenge cup, was sold privately for £93 (\$465); and her first prize steer in the middle class was also sold for £35 (\$425). A white Shorthorn steer, two years and nine months old, was sold for \$287, and a fine, fat cross-bred Shorthorn and Polled Angus heifer, two years and five months old, for \$250.

#### Ensilage in England.

The same paper also says:

An interesting fact with regard to the extra stock classes was the good show made by ensilage-fed animals. For instance, Mr. R. Boddington of Colebrook Hall got the third place in steers with an 18-months' Shorthorn, weighing 11 cwt. 2 lbs. This animal was fed on a mixture of cornsack and silage, the last-mentioned ingredient being used as a substitute for roots, and the same amount of corn and cake having been given as would have been given with roots. In the same class were two other animals, which do great credit to the ensilage system. Mr. Boddington's beasts had no hay, and at the show they refused to touch the hay provided for them, keeping exclusively to their favorite silage.

Having no account of the Smithfield show beyond the opening day, Monday, Dec. 8th, I leave that for another week, when I may also have something to say on the recent London dairy show.

## THE VINEYARD.

### Charles Krug on the Wine Interest.

In an article for the St. Helena *Star*, Charles Krug, the well-known vigner, writes as follows:

The wine industry of California appears for the past four or five years in a rather depressed condition. [Overproduction is considered by most of the vinemen the cause of the depression. I do not fully agree with this opinion. Overproduction of a low grade of wine is the main trouble. Ordinary or poor wine always found as quick a sale as those of good quality. Good and poor wines brought the same price. This caused the discouragement in our business; ambition among the vinemen was badly suffering. Can you, for instance, expect that our wine-growers shall raise vines producing small crops but of superior quality, as Cabernet, Miller, Burgundy, etc., instead of heavy-bearing Malvoise, and shall they raise Zinfandel on the hillside, producing fine claret grapes, instead of Zinfandel on rich bottom-land, producing double and triple the quantity of wine, but 50 per cent lower in quality than the hillside grape, when the price is the same for good and poor wines? There is no overproduction of fine wines; it is overproduction of those of poor quality. But phylloxera will change this situation before long. Destruction of vines is increased by its attacks every year. A good many wine-growers are now replanting the land of their destroyed vineyards with well-paying fruit trees. Energetic and ambitious ones, however, replant with resistant stocks and graft them with the finest varieties of vines, lately preferring the fine claret

grape. The production of wine therefore is decreasing, but the quality is greatly improving. The present advanced prices of brandy will lessen the quantity of poor wine offered for sale, therefore wine-growers, do not lose your courage when prospects are brightening.

It is undeniable that our situation will soon be improved, when production of wine is now decreasing and quality considerably improving. There is still another, a third point coming to our assistance. Consumption of California wines is considerably increasing in this country. Read the statistics published in the *Wine and Spirit Review* and you will not doubt the truth of this. Five years ago 3,000,000 or 4,000,000 gallons of wine were used on the Pacific Coast, where to-day over 6,000,000 are used. During the month of October last, shipments of about 1,000,000 gallons of wine were reported. Times will improve, particularly in Napa county, where the capabilities of cellars and the energy of a good many wine-growers will cause the desired change. No county in the State has a larger number of solidly built cellars than Napa, and the elegant and immense one of W. B. Bourne of St. Helena is undoubtedly the best, finest and largest in America. The size and solidity of these buildings enable its proprietor to age and improve wines and establish markets for his fine products. We find among the wine-producers of this country a larger percentage of independent dealers of good wines with larger stocks on hand than in any other country.

### Vine-Grafting.

In an article published in last week's *RURAL* we gave the introductory part of Prof. H. Mann's instructions for vine-grafting as communicated to the *Napa Register*. The writer continues as follows:

I prefer to graft when the stock is large enough to hold the scion firmly, say one inch or an inch and a half in diameter. There is then less danger of the scion being moved, no tie is needed and there is really no time lost, as the graft can bear nearly a full crop the season following, and even a partial crop the first summer. There are many methods of grafting, all successful enough if well performed, but the simplest and quickest for the novice is the common cleft graft. For this we need for large stocks a fine sharp knife to cut the scions, a saw and grafting chisel. The last-named, any good blacksmith can make from a straight piece of steel, the blade to be about 2 1/2 inches wide, the two ends of the bar bent around in the form of a wedge.

A wooden mallet will complete the equipment. A common budding knife is as good as any, because they keep a good edge. If the stocks are not more than one inch in diameter, a pair of pruning-shears can take the place of the saw. Three good men are a convenient force, one to dig around the stocks and cut them off, one to cut the scions and insert them, and the third to cover up after grafting.

#### The Modus Operandi.

Let the first man take away the earth from the stock with a spade, to a smooth place in it for the insertion of the scion; in resistant stocks, as near the surface as such a place can be found, as it will save labor in cutting off the roots which the graft may throw out at the junction, if far below the surface. Then the stock is cut off horizontally with shears or saw, as the case may be. The grafter now follows, and it is needless to say that he should be the most skillful of the three. The scions should be of medium size, short-jointed wood, about the size of a common lead pencil or somewhat larger, and, of course, well-ripened, as on their careful selection depends most of the success. I prefer to have them 18 inches long, as the upper buds, which will throw out the young growth, will then be about the height to form the future head of the vine. The number of buds will also prevent stagnation of sap and black knot, and also bear a partial crop the first summer. The scion is cut to a long, sloping wedge of, say an inch or even an inch and a half long, just below the lowest bud, with the bud on the outside of the wedge, and the inner side somewhat thinner. Then split the stock with the chisel. To make a solid "fit," the stock should be cut about an inch and a half above a joint or node, which will prevent its splitting too far. Hold the cleft open with one of the wedges, and push the scion down firmly, taking good care that the inner bark or cambium of stock and scion meet, for on their close junction depends the success to a great extent. If the stock is only an inch in diameter, one scion will do. If larger, I prefer to put in one on each side, as it doubles the chances. If both live, the weakest can be cut off next spring.

Our third man now follows. If the stocks hold the scions firmly, no tying is necessary, but in some cases it may be advisable to pass a strip of some good material around the stock, to make a firm junction. Press some moist earth on and around the cut, which is all that is necessary, and then fill up around it with finely pulverized earth, up to the upper buds of the scion. This will keep the sun and air from it, and the young shoots, when they appear, will easily penetrate the fine earth.

If suckers from the stock appear, they should be removed promptly, but care should be taken not to move the scion in any way. Do not be discouraged if these do not grow until a month or two after the operation.

They will keep coming out as late as August, and the later grafts will often make the strongest growth when they do start. With every operation thoroughly done, and good scions and stocks, 90 per cent should grow. It would seem needless to say that the grafts should be staked and tied, to prevent their blowing off. I will discuss varieties in my next.

## SHEEP AND WOOL.

### Wool from a Manufacturer's Standpoint.

[A paper read by C. G. ROBERTS at the Farmers' Institute recently held at The Dalles, Oregon.]

In presenting this article on "American Wools from the Manufacturer's Standpoint," I propose to consider equally the best interests of both the wool-grower and the manufacturer. In much their interests are identical, are closely allied to each other. The manufacturer ought to and must have the various classes and conditions of wool necessary to produce the fabrics our people buy, and certainly the grower's interest is to produce and supply the manufacturer with those qualities he needs for that purpose.

It would be hard to estimate the sacrifice made by the manufacturers to the growers in the convention held at Syracuse, N. Y., in 1865, the effect coming into operation in 1867, when they agreed to the higher duties on wools imported, which they had been accustomed to use especially in the production of the higher classes of goods. It was hoped, we may say believed, the promises made by the American Wool-growers' Association that the higher duties would encourage the wool-growing industry; that all classes of wools would in abundance be supplied; that soon we would be independent of foreign wools, and thus firmly establish another great and important industry within our own borders. The public as well as wool-growers have a dim, hazy impression that this has in a great measure been accomplished, and flatter themselves accordingly; but the facts in the case are very different.

#### The Fine-Wool Product.

The fine working-wools furnished us are practically comprised inside the limits of the older wool-growing districts situated east of the Missouri river. These wools, many of them, approximate closely in value to the best foreign but, instead of increasing the production to replace that hitherto used, it is sufficient to note, and avoiding going into statistics, that there is less produced now than there was 25 years ago.

The great expansion in the wool growth of the country has been in the newer States and Territories west of the Missouri. This has been of great magnitude, and so far as that is concerned, no dissatisfaction can be expressed, but in quality, irrespective of quantity, is found the great fault which we note the second and great failure.

So far, then, and after a generation of beneficent legislation in behalf of this special interest such as no other wool-growing community in the world has or does enjoy, it is bluntly claimed, disagreeable as the fact may be to those most interested, that the American wool-grower has not performed and come up to his part of the agreement; that he has not fulfilled his proposition and produced for the use of the manufacturers the various qualities and staples he positively requires to manufacture the goods his business demands.

Let us first investigate the conditions necessary to attain in the merino blooded wools. Length of staple is not of first importance, the short staple being of as much importance and necessary and nearly as valuable for carding wools as are the longer staple merinos for combing purposes, but we must have strength, fineness, elasticity and softness, so that in every operation or process in the various stages it passes through in the factory the rich, soft handling improve. This is the most valuable quality required in these wools. Now what is furnished us in the great wool districts? A merino which in nearly every instance works "hard," as it is technically termed, that is, in finished goods handles briefly and rough and having an entire absence of those conditions which give the pleasing finish in high-class goods. The staple is mostly tender, much of it actually frayed. Whole sections produce little else and were the choicest produced, and in this city of The Dalles from the John Day and Canyon City you receive what, by common consent, is admittedly the best produced in Eastern Oregon. From some cases these never sell on the second pound in Boston, New York or Philadelphia within 20 to 30 cents as do the Australian, and yet both are bred from merino sheep. Why this great difference in value? Be assured the manufacturer understands what he is doing and that he buys according to the intrinsic value to him for these two qualities and that there is a just discrimination.

You will note, therefore, that on account of the limited quality of the really superior wools and the larger of medium to low, our mills are practically confined to the manufacture of the medium and low classes of goods, and, in the excessive quantity produced, with the forcing process necessary to put them into distribution, you can quickly understand the difficulties under which our mills have struggled for some years past, and also why the manufacturing of woollens is termed justly "the

most depressed of the American industries." The continued increase in importations of fine wools, both ladies' and gentlemen's dress goods, the increasing demand for fine wools, so that we might furnish the market with at least a fair proportion of these higher-priced goods, ought to show that something is wrong somewhere.

The American manufacturer can claim justly, we believe, that he is equal in skill and ability to his foreign competitor, but he must have equal materials to effect equal results. None of us "can make a silk purse out of a sow's ear."

#### Mission Blankets Made of Imported Wools.

The old Mission mills of San Francisco were most favorably known over the Pacific Coast, and even over the continent, but in the finish, softness, wearing qualities of these goods they had but little assistance from the California wool-growers. It was the imported Australian fleeces, blended or mixed with native wools, or used entirely, that raised their fabrics to the high standard they attained. When these mills took the gold medals at the Paris and Philadelphia Expositions for the finest blankets produced in the world, they were not made from native wools; there was not then or now any fleece raised in the United States which could have produced the same result—that wool was raised in Saxony and was bought in Scotland at a cost of \$1.12 per pound, this price for wool shrinking 40 per cent.

This wool cost, scoured, duties paid, etc., \$2.70 per pound, and yet this was cheap enough, as these 12 pair of blankets were sold for \$1200. We mention this in detail to illustrate to growers the prices which are possible to gain in the production of the finest wools. Now such wool and costing such prices is always on hand in the European high-class mills. The demand and consumption is steady and certain. Not much is used, it is true, but for certain purposes in manufacturing it is essential, and it is ready for use when wanted, and unless you produce similar staple we are certain to be discounted. Produce us such staple and we can stand on an even footing with foreign manufacturers. You promised us all kinds and conditions in abundance. This was the statement: "We can soon produce all the clothing and combing wools we need, that no admixture of foreign wools is required to give success to wool-growers or wool manufacturers."

I won't profess to know anything about breeding any class of wool. That is not the manufacturer's business; it is solely the grower's. But we are all interested in the necessary improvement and so may legitimately make an inquiry into the matter. Climate and environment are generally admitted to have much to do with the quality of staple. An outsider might well doubt from results if we really do possess the best conditions in that direction; but here again those who do know whose business it is to know it, the growers, claim to have them to raise all the classes. We must take that for granted, then; it adds so much the more to their responsibility. Is the business on an average so profitable that any extra exertion on new lines seems unnecessary and financial pressure does not enter as a competition to improved values? Is the business to many growers considered as of a temporary nature, but only to make a quick "stake," so that improvement, patient, experimental, possibly costly, and lengthy, is no part of the business and does not enter into the wildest dream?

#### Have We Fine Merinos?

Is the business so very unremunerative that he has no means at command wherewith to improve his flock to the highest standard? Can the type of merino you have be improved? Is this mixed and mongrel merino you breed in the West the best you can do or the best that can be done? The German authorities declare (in analysis of such facts we cannot get superior authorities) that "a mongrel is always a mongrel," and that sheep cannot be improved by arithmetical progression; that there is a point where improvement stops. You think you produce fine staple, but how about your inability to produce a merino that works soft and kindly in the processes of manufacturing, instead of hard and harshly as mentioned before? You have yet to overcome that problem; that most important point where progression falls and stons, and so the mongrel is always a mongrel. Now, why not improve from thoroughbred ewes as well as rams and so give it a fair trial? Have you equal to the best merino-blooded sheep in America? You claim to have, and indeed we all know very well, you claim to have in the distinctly American merino the best in the world. The Australian growers don't think so, and judging from their products, it may be admitted they know something about their business. I noted the final verdict in the colonial papers on the few shipments of Vermont bucks made some years ago. It was condemnatory. There was nothing in quality superior that made them especially valuable to them, and they produced too much natural yoke or grease.

I have scoured hundreds of bales of Australian wools unwashed—that is, with all the natural grease in them—and they shrink from 50 to 52 per cent. Yours average 10 to 15 per cent more of what is purely a by-product and valueless. It is worse than valueless; to the grower it is a cause of expense for transportation. Also, there seems occasion for inquiry

if it doesn't cost you just as much to produce that 10 to 15 per cent of grease which ought to have gone either into mutton or wool. To the manufacturer those heavy, greasy wools must always prove objectionable, and more especially if they had access to light, shrink wools. The greater difficulty of estimating shrinkage in the first place is in buying; again, in a technical way, unnecessary obstacles are placed across the path in getting it into a clean, scoured condition. If his scourer makes a slight blunder, or is careless or at all incompetent, he may use too much of the alkalies used in scouring, thus destroying the enamel of the wool and the wool will work harder still; he may even make it tender in staple. He is apt to leave a residuum of grease in the wool, and in this condition sent to the dyer he makes the effort to color on top of the grease, and this is the primary and most fruitful cause which some of our American factories have acquired of an unsavory reputation of poor or fugitive colors. Lighter shrink wools would save much of this annoyance and expense, and you a better market for the wool.

No wonder the Australian grower found objections to this peculiar feature in our bucks; their competition in the world's markets teaches them the necessity of studying the manufacturing requirements and interests as well as their own. The advisability of shelter and feeding in winter, of dogging and hounding a flock half to death (and this will, I have seen it, deteriorate wool in a remarkably quick time) and many other points in the management, might also be worth investigation, but it would only result in an inordinately long article, and these we may safely leave to the grower; his interest will make him give attention to them.

#### Natural Conditions Favorable.

Now, nearly every point mentioned above applies to our long-wooled breed of sheep, while in the high, dry plateaus east of the Cascade range we find a natural home for the merino blood, and where the improved breeding of the same ought only to be encouraged. We find in the climate and surroundings of the Willamette valley and district on the western slope as natural a home for the breeding of the best types of the Leicester, Cotswold Down and their crosses. What occasion is there for the importation, annually, of from 10,000,000 to 15,000,000 pounds of such wools from Canada, England and New Zealand when one part of Oregon could do it just as well as not?

Instead of 200,000 head of generally scrubbed animals of these long-wooled breeds it might carry 2,000,000 and produce 12,000,000 pounds of the highest-priced wools and yet not be nearly as heavily stocked as in England and Scotland, with climate and conditions somewhat similar. It is impossible to overestimate the business impetus to merchants as well as producers such a clip as this would create to all interests in that part of the State. Why don't the farmers there realize to some little extent, at least, that trust of sayings an old master left behind him when he wrote: "Sheep is the profitablest cattle that a man can have." It furnishes them an important source of revenue, and is the readiest means of maintaining the fertility of their fields.

I believe that in that district we have every natural condition to produce these long wools inferior to none—the Leicester, with the clear luster; the cheviot, with its substantial wearing quality, its softness and flexibility enabling a manufacturer to spin it two or three ply, as fine as the ply yarn made from the coarser flanks of some of our underbred so-called merinos or the scrubby stock from the valley sheep, and which an American citizen buys for—and is badly sold when he does buy it—a cheviot suit, but which has not the first element of merit of a real cheviot suit, which he, the grower, ought to have furnished as promised, and must admit to have not even made an effort to do so. I don't suppose there is a cheviot sheep in America, or has the slightest effort been made to get one, and how can the manufacturer produce these valuable goods without the wool? Now, I am American enough to believe that an American is desirous of the best of everything so long as he pays for it, that he ought not to be confined to the wearing of cheap goods; and I differ altogether from that sentiment of the Hon. John Lawrence, of Ohio, and others of the American Wool Growers' Association, when he (admitting at the same time that we could in three generations of sheep produce the highest lustrous wools) said that our ladies, if they would have dresses made of such wools and must get them abroad, they would have "to pay dear, very dear, for their whistle." Now, when growers claim that they can, yet don't, produce those very wools which will enable us to clothe our lady friends in luster as fine as any tradesman's wife or bedecked "my lady" in Europe, they ought to be exhibited as public curiosities, as I am sure our mothers, wives, sisters, sweethearts are worthy of it; deserve it; ought to have it, and will have it anyhow.

Now, can anything be done to give some impetus in a proper and more creditable direction? Merchants and all interested in the distribution of commodities ought to be as anxious for this as wool-growers and manufacturers. That mine of wealth has hardly been opened and cannot compare with what it ought or might be.

#### What of the Future?

We are now at the beginning of another period of higher duties on wool and its substitutes. Whether you retain their aid or lose it completely, depends on what you do in fur-

nishing the raw materials they need. The financial prices in their business must in future be in their ability to produce the higher class and higher priced goods. In not furnishing the necessary wools, you are an obstacle and hindrance to the higher art in woolen manufacturing and its advancement to that plane that can successfully compete with foreigners, and that we have a right to expect of it. The manufacturing interest is now too powerful and important in wealth, numbers, and brain power to resignedly sit still and quietly let their interests be destroyed or injured, and unless greater progress is made by growers in the future than in the past, and they continue forgetful of their obligations, privileges and advantages, if they persist in squaring with the motto: "It is more blessed to receive than to give," it can only meet with a justly deserved rebuke in the contempt and the stern condemnation not alone of the manufacturer, but of an intelligent American people.

It is not a pleasant task, sometimes, to tell the truth. It is, however, generally our best friends who do it, and I earnestly wish, for their own interests, that the too often amusingly ignorant conceit the average Western wool-grower possesses about the conditions that go to making a true wool, and the high opinion he believes his own clip to possess, no matter how little merit may be in it, may be forever dispelled, and that he could moralize, as did Burns, on seeing that little insect on poor Jenny's bonnet in church one Sunday:

"Oh, wad some power the giftie gie us  
To see oursel's as ither see us,  
It wad frae mony a blunder free us,  
And foolish notion."

I trust this candid, plain article may assist in spurring on to great improvements our friends, the wool-growers, with many of whom I have broken bread, eaten salt, and (figuratively speaking) broken the bottle, and whose truest, permanent prosperity has my heartiest good-will and assistance when possible.

C. G. ROBERTS.

#### The Mohair Situation.

EDITORS PRESS:—The importations of foreign mohair have been quite limited recently, caused by the slack demand for foreign stock; consequently there has been a reduction in prices at the foreign ports of importation. This has caused a corresponding temporary depression with our home productions.

The market at present is easier on the manufactured goods, especially demi-lusters, but full-luster goods are always in request and at stable prices.

As the adaptability of mohair plush is being developed for various uses, the demand for the future would seem to be beyond the supply. This mohair question is a momentous one for this country, and is yet in its infancy. It is only a very few years since plants of any importance have been successfully established and maintained, but the improvements in quality and style, together with improved machinery, have developed with such rapidity that even at these early stages foreign manufacturers find great difficulty in successfully competing with our home productions.

Our manufacturers have been very wary until recently in using our domestic product, objecting to its quality and condition, and even now it requires much diplomacy to convince them to the contrary; and it now rests with our growers whether, by careful attention to breeding and care of their flocks, they will bring their stock up to the standard of the foreign hair. We have the climate and soil and can produce as fine a quality here as in any other country. All we require is determination and pluck on the part of the growers to bring out these requisites.

The erroneous impression that we cannot successfully compete with foreign hair is a fallacy, and is so accepted by the more intelligent manufacturers; and the time is not far distant when we shall be able to meet all home demands and not be at the mercy of foreign competitors.

We shall be pleased later on to forward to you our annual collated statistics of the mohair market for 1890.

New York City.

## AGRICULTURAL ENGINEER

#### Improvement of Roads.

A correspondent of the Stockton Independent writes thus pertinently upon the subject of highway improvement:

That good highways are necessary to high civilization is a maxim in government. Ages ago the Saxon law required of every citizen what was called the *trinoda necessitas*—the three-fold necessity. It was to repair bridges and ways, to maintain garrisons and to repel invaders. The reason is obvious. Macaulay says that the alphabet ranks first and the highway second among the agencies by which man has passed from savagery to civilization. No man, whether he ride or walk, whether he be a millionaire or a tramp, but is interested in having a good road over which to pass. No man ever sits down

to his dinner; no horse is ever fed a pound of barley; no child ever drinks a cup of milk or eats a piece of bread and butter, that has not paid toll over a country road, and it is self-evident that the better the road the higher the toll.

These considerations are of peculiar force to an agricultural people like ours. Careful estimates based on accurate experiments show that on an average it costs more in America to carry a bushel of wheat from the field to the shipping point than it does to carry the same bushel of wheat from the shipping point to the seaboard.

The price of wheat is fixed in London. A great and permanent increase in price cannot be hoped for. The only chance for increased profit is to diminish the cost of production. The cost of plowing, seeding and harrowing cannot under present conditions be very much lessened. The same may be said of harvesting, sacking and freighting. There seems to be only one point where any saving can be made. That is in carrying from the farm to the landing or station. This can be done by means of better highways. No one who has not studied the subject has any idea of the enormous amount of expensive power which is every day wasted in this country.

To illustrate: Experiments made in 732,000 cases show that an English horse does twice as much work as an American. He is no heavier, no better bred and no stronger, but works on a better road. The Americans, therefore, feed, care for and use twice as many horses for road freighting as they need. It costs less to keep a mile of good macadamized road in perfect repair than it does to feed one poor horse. Prof. Jenks, an authority on this subject, says:

"In the State of Illinois a full load for a two-horse team can be carried for three months of the year, two-thirds of a load for three months, and half a load for six."

In San Joaquin county the rate would probably be a full load for six months, half a load for three months, and none at all for the remaining three. To quote further from Prof. Jenks' report:

"The Illinois roads cost \$15,346,000 per annum in extra hauling and reduce the value of farms at a distance from railway depots over \$160,000,000. If Illinois spent \$250,000,000 on good roads, the interest on this sum would leave enough of the sum now spent on hauling to build a new State capital every year, to say nothing of the nervous wear and tear and the prismatic profanity induced by country roads when the frost is coming out. Good roads would save the State taxes every year and the labor misdirected and wasted now would go far toward making good highways."

In New York City a careful and accurate estimate shows that there are 12,000 trucks carrying an average load of one and a half tons for 12 miles on each of 300 days in the year, at an average daily cost of \$4 per truck. Sixty-five million pounds are thus transported one mile in every year at a cost of \$14,400,000, or over 22 cents per ton per mile. The same goods are carried in that State by rail at six-tenths of one cent per mile. On asphalt pave the same horses could haul three times the above amount, which would save nearly \$10,000,000 per annum.

Elaborate experiments show that 200 pounds traction force will draw a ton on a good dirt road in first-class condition. One hundred pounds will do the same work on macadam, 33 pounds on granite blocks and 15 pounds on asphalt pave, such as Center street in Stockton. It has been demonstrated beyond a doubt that a locomotive can haul a ton of wheat more cheaply than a farmer can haul a bushel, and it is very doubtful whether a locomotive could move at all over an ordinary country road. Our noble, patient, much-abused horses are simply living traction engines, and every advantage that could be given to a machine by a good road can be gained for them. They are entitled to it. They ought to have it.

General Q. A. Gilmore has made a series of accurate experiments with a dynamometer, which proved that any one of the better class of permanent roadways would enable a team to draw on a level about four times the amount drawn on a common dirt road.

These startling facts have attracted the attention of the people East. The result is a movement for better highways, which is one of the most universal and powerful agitations our country has known for years. The wealthiest, the brightest, the most learned men in America are giving to the subject of roadway improvement their very best efforts, and the results are wonderful.

The city of Buffalo has over 60 miles of the best streets in the world. This improvement is a monument to Grover Cleveland, who started the movement while mayor of that city. The repairs on these streets in the last six years have cost less than \$100. In Georgia and Pennsylvania public meetings for consultation on this subject are frequent and large. In New Jersey a fine road system is already in operation. The Governors of Massachusetts, New York and Ohio have addressed special messages to their respective Legislatures on this subject. College presidents, carriage builders, farmers, great physicians, civil engineers, railway presidents and men of eminence in all occupations are lecturing and contributing to gather information. Great journals, like the New York Sun, are writing and publishing special articles in the same line. The movement will soon be here and will bear fruit.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## Farmers and Organization.

" 'Tis true 'tis pity,  
And pity 'tis, 'tis true."

EDITORS PRESS:—The Patrons' department in the *Tulare Register* is now numbered with the innumerable trifles of the past; trifles which loomed up with magnificent prospective proportions, with the very best intentions at their back and the widest field on which to stand, and yet hardly left a ripple on the surface to indicate where they had been.

The *Register* man attempted a little ripple, a sort of requiem, over departed hopes and wasted energy and a slight reflection on wasted generosity. His little ripple fairly huddled over in pessimistic prophecies of the present tidal wave of Alliance effort. Of course he has as a basis on which to place his augural tripod the mistakes and failures of the Grange which were its necessary foundation of experience and the general tendency of farmers to "go it alone" and "get left."

Farmers have been and are the easy prey of speculators and the whole brood of middlemen, who have so got the combination of circumstances and organized conditions that the farmer must sell at the cheapest and buy at the dearest; and the combination is so set that the farmer must gradually gravitate to tenantry, the serf of the lords of the land who toll not, neither do they spin. The annual increase of farm mortgages indicates too plainly the future of the toiler on the soil. It is easy, then, to predict.

If no new factor enters into the present arrangement of things, the tiller of the land will not be the owner of the land. If he continues, as a quotation in the *PRESS* puts it, to go on "economizing, cursing the ring politicians and voting the old party ticket," working as he must all day and every day, with no time to meet his brother unfortunates in farming, no time to read a farmer's paper and no money to spare for one, no time for anything but to raise enough to pay his interest and taxes and live at the lowest minimum rate—if that continues, the prophecies of the editor of the *Register* will surely come to pass.

But I do not believe that those pessimistic predictions will come true. I have faith in the general intelligence of the farming community, and the only reason why farmers have not acted so as to bring about the best results is simply because the matter has not yet been so brought before them that they could see it.

The Grange has made some mistakes, but its face is toward the light, and while the Grange may yet feel the smart too keenly of burnt fingers to act hastily, there are in her actions educational lessons which may yet save the farmer. But it is the Alliance which is now the seen of all beholders, the "fly blister" on the old parties and the keenly watched by business men; for if the Alliance succeeds in carrying out its purposes, it will revolutionize the political, mercantile and agricultural worlds, as the Grange would have done had it succeeded.

I do not believe, I cannot believe, that our present system of society can go on and reach the ultimatum indicated at present—the division of society into two classes, a few capitalists with the remainder of mankind as slaves! I dare not believe that evil is the supreme providence of the world; that the only progress is in the line of wealth; that all that is involved in this world's existence can only evolve sensuality and selfishness, dominant greed and servile subservency. No; the spiritual in man will at last assert itself. The man will be the victor; and not what a man possesses, but what he is, will be the prominent feature of his estimate in the eyes of his brothers and sisters.

Neither the Grange nor the Alliance may effect this—the certain destiny of man—but they will be no mean agents in its accomplishment. The farmers may be slow in taking needed lessons, but I think they are taking rapid steps toward the schoolhouse.

The first lesson the farmer needs is to transact his own business; the next is co-operation to render the transaction more effective, not for the purpose of crowding out other people, nor compelling consumers to pay the price farmers may demand, as his agents now do, but to co-operate with the dweller in the city, the mechanic and the manufacturer.

This is the lesson the Alliance is holding up before the farmer, the lesson the Grange has been talking about so long, and the lesson the farmers are beginning to con over and learn. In their effort to spell fraternity and justice, some mistakes will be made; tricksters will introduce themselves, and tricks will be resorted to by the agents of the old to prevent the success of the new, and even farmers may and likely will be parties to the trick; for with all the goodness in the movement, we are not all saints; in truth, I have met with very few saints.

I have spun my yarn longer than I intended, but when my pen gets loose on its favorite subject, I never know when or where it will stop.

To the editorial staff and readers of the *RURAL PRESS*, I send my New Year's greeting, wishing all a happy and prosperous New Year.  
*Tulare, Dec. 31, 1890, J. W. MACKIE.*

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

The report of the Secretary of Agriculture, one of the members of the President's Cabinet—thanks to the Grange—is on my table. The document is a credit to Uncle Jerry Rusk, and will do the cause of agriculture much honor. If you have not received a copy, be sure to write for one, and when it is received be very sure to read it with care. Kindly reference is made to silk culture. This is pleasing to California Patrons, for we have been agitating that subject for some time past. But get a copy of the report and read for yourself.

Every young man should take an interest in politics—not party politics; he should not aspire to be a ward or saloon politician, but he should study political economy and know why parties are a necessity. Then knowing, he should rise above party and have partisans come to him. They will surely do this if the man is fitted to help and elevate the party. We want men in politics who are as pure and true as the principles they teach. The country needs and demands honesty rather than brilliancy in public life. Give us honest politicians and office-holders and we can endure any political party. Cultivate and equip the young men!

Secretaries and Masters of subordinate Granges must use the seal of the Grange on all official communications. It is truly surprising how few officers use the seal. During the new year use the seal. If you write an official letter without the impress of the seal of your Grange and do not get an answer to your letter, don't blame any one but yourself.

I hope every subordinate Grange in California will at once pass a resolution calling on the Senate of the United States to pass the Conger bill. Send a copy of the resolution, under seal of your Grange, at once to Hon. Leland Stanford and Hon. Geo. Hearst at Washington, D. C. The Conger bill has passed the lower house and is liable to die in the Senate. The bill is to prevent bologna and other compounds and adulterated foods. Act at once. Delay is dangerous.

Can the membership in California be doubled this year? It can if every member of the Order will secure just one member to his or her own Grange. Who is so little interested as to be unwilling to try to get one application for membership?

Do you know, if you use all of your opportunities to do good, that even then there will be many opportunities left for others? You can't monopolize the business if you would.

B. O. W. L. Overhiser, Past Master of the California State Grange, P. of H., has been engaged by the Executive Committee to organize new Granges and to reorganize dormant ones. Bro. O. will also represent the *RURAL PRESS*, the official organ of the State Grange of California. No community of farmers ought to be without a Grange. Organization is the key to success. Let the farmers of the State consult their own interests. To do this they must be a compact and intelligent body, with avenues for receiving and imparting useful information and for giving and getting financial aid. If any dormant Grange wants to know how to reorganize, or what the Grange has done and will do, let those interested call a meeting of farmers and give Bro. Overhiser notice. He will convince you that the Grange will do you good and not harm. The Grange is national, not sectional; progressive, not partisan; charitable, not stingy; useful, not idle; developing, not contracting; helpful, not binding; thoughtful, not thoughtless; prosperous, not puny. If you are a farmer, you ought to be a Patron. For further particulars about organization, write W. L. Overhiser, Stockton, Cal., or A. T. Dewey, 220 Market St., San Francisco, Cal., or E. W. Davis, Santa Rosa, Cal. An Organizing Deputy will be sent to any part of the State on application.

Spring will soon be here. Before we know it the hills, vales and valleys will be dotted with wild flowers. Already fruit trees are in blossom. The cherry tree in our yard is now white with blossoms. But the thought in this paragraph is, why not have a "Flora Day" in your subordinate Grange some time this spring? It is now time to prepare for it. Appoint a day in April or May, as will best suit your section, and allow Flora and the Worthy Lecturer to prepare a program. Have a feast, both for body and mind. Invite the public to the entertainment. Ornament your halls and tables with flowers. Have poems about flowers; sing about them, talk about them, think about them, praise them, for they are always your friends. Why not have a day for Flora?

The Legislature is in session. Farmers, to your post! Be on guard till the session adjourns. Watch your representatives. We don't want, and won't stand, the heavy tax-rate of the past two years. Keep an eye on the Appropriation bill, and another eye on the appropriators.

Permit me to suggest to the Masters-elect of subordinates that they appoint the following standing committees for the year 1891: Com-

mittee of two brothers and one sister on Delinquents and Dues. Let their duty be to collect arrearages from delinquent Patrons. A committee of two sisters and one brother on New Members. My word for it, if this committee is chosen with care, your Grange will soon have applications for membership. Then add a committee of one sister and one brother on "Fun and Instruction." If these committees are appointed and will go to work, your Grange will have no dull or idle meetings this year.

The Master of a subordinate Grange is the only person who is authorized to communicate the Annual Word to the members of a subordinate Grange. Remember that!

The officers of your Grange may be ever so willing and competent, but to make a success, they must have your help and your presence. The day of "wishing well" is past. The hour of labor has arrived. Let each one put the harness on.

Who can best work and who can best agree?

Which Grange in California is to make the largest per cent of gain in membership?

Report the name and address of your new Master and Secretary, as soon as installed, to Bro. Dewey, at 220 Market St., San Francisco, Cal.

## San Jose Grange.

EDITORS PRESS:—You will think it strange, probably, to receive a few lines from one who has been silent so long and who once more comes to the front to express his gratitude for the unity and good-feeling among the members of San Jose Grange. It now looks like old times when the Grange was in its palmiest days. With our hall well filled and old members coming back and meeting with us who have been absent for many months, and others talking of coming—all this makes us feel very much encouraged.

Our officers were installed to-day by our retiring Master, F. Dunn, in a beautiful and impressive manner, and it was gratifying to the installing officer to see every new officer present. Each was heartily cheered as he or she was conduced to his or her station and introduced to the Grange by the very efficient Marshal, after which the Worthy Lecturer called on Bro. C. J. Cressey, who was present for the first time since his return from the East, for a speech. He responded with one of his masterly efforts although feeling feeble from a recent illness.

Miss O. Calhoun gave us a song and accompaniment on the guitar, after which Grange closed to meet next Saturday (10th inst.), at 10:30 A. M., when we expect to confer the first and second degrees on a class of ten, which will test the mettle of our new officers.

We send greeting to all subordinate Granges and hope they may also have a revival.  
Jan. 3, 1891. CYRUS JONES.

[Thanks, Bro. Jones. It is very gratifying to observe so good an old soldier and Grange at the front again. Write often.—EDS.]

## Santa Rosa Grange.

EDITORS PRESS:—The last meeting of Santa Rosa Grange for 1890, held last Saturday, found the afternoon almost too short for the work to be done.

For want of time at the last meeting, the election of Trustee was deferred until this meeting.

E. A. Rogers was re-elected Trustee, and Miss Ella Mndrock, Organist.  
Mrs. A. J. Mills tendered her resignation of Ceres-elect, and Mrs. Fannie Bonner was only elected to that office.

Installation of officers takes place on January 10th (second Saturday) at 10 A. M. We hope to have a number of visiting Patrons with us on that day. We have invited the Worthy Master of the State Grange to act as Installing Officer. Of course there will be the usual Harvest Feast. Grange at 10 o'clock always means that.

A committee, consisting of Bros. Conlter, Strong and Chinn, was appointed to meet with a similar committee from the Horticultural Society and others interested in the World's Fair Exposition, at a public meeting to be held Jan. 3, 1891, for the purpose of organizing a local association for this county to act in conjunction with the State Executive Committee.

The following resolutions were offered and adopted:

*Resolved*, That Santa Rosa Grange hereby expresses its earnest protest against the appropriation of a million of dollars or any other sum of money from the State Treasury in aid of the Columbian Exposition to be held in Chicago in 1893. Also

*Resolved*, That Santa Rosa Grange hereby gives expression of its approval of the views of Postmaster-General Wanamaker on the postal telegraph.

That we may be kept fully aware of Congressional affairs, the Secretary was directed to ask some of our Representatives in Congress to furnish us with a copy of the *Congressional Record*, that it may be kept on file in our Grange hall for the use of our members.

Fraternally,  
T. L. G., Sec'y.  
*Santa Rosa, Dec. 31st.*

## Executive Committee and Conference Meeting.

Bro. George Ohleyer, at our request, has contributed so good a mention of the meeting at the office of the Secretary of the State Grange, S. F., Dec. 31st, that we have concluded to introduce it in our record of the event as being far more agreeable to readers than the usual formal official report of such proceedings, viz.:

The meeting last week of the Executive, Legislative and Co-operative Committees of the State Grange, held at the office of the Secretary, was well attended; not a member of the two former was absent. Never was there a more earnest and harmonious gathering of leading members of the Order than on that occasion. Each individual appeared to carry the good of all at heart and promised ready response to any demand that might be made upon his time. The Executive Committee audited bills and reviewed their field of labor generally, which it is gratifying to know is growing in prosperity and numbers.

Worthy State Master Davis was present in excellent health, and Bro. Cressey, improving. Both had much good news to relate about their Eastern trip, and especially of their visit to Atlanta and the National Grange. Bro. Davis presided at the conference, and many subjects of vital importance to the agriculturists were discussed with a zeal that presaged success.

Several measures to come before the present Legislature were discussed and the Committee on Legislation was instructed to attend the sessions of the Legislature and urge their passage before the appropriate committees. Among the measures prominently spoken of was a law providing for the assessment of property that had heretofore escaped. It was stated that such losses ran up into the millions, which of course had to be made good by the property of the farmers, which never escaped the eye of the Assessor. A statute was favored making taxes payable semi-annually, to the end that less money would be tied up in the State and county vaults, thus blocking business and restricting trade and reducing the circulating medium which is already below a healthy standard.

County road matters came in for a good share of attention, and it was unanimously agreed that the roads need more and better treatment. A farmer-lawyer and several actual and ex-supervisors were among the audience, and all agreed as to the evil, but were not so sure as to the remedy.

The general sentiment, as gathered without notes, was that the road districts were too large, rendering it impossible for the road-master to oversee the roads at the proper time. It was stated that in some counties the districts had several hundred miles of roads to be looked after, which happened generally in sparsely populated sections. Small districts and separate elections for road-masters were most favored.

If appointed by the supervisors, it should not be done on petitions, as the unworthy nearly always succeeded in securing the largest list of signers. The utility of hiring out the roads to the lowest bidder was doubted and the policy was not generally indorsed, though plausible arguments were given on both sides.

The discussion revealed the remarkable fact that under the present road law nearly, if not quite, all the desirable reforms in road management were possible; that the size of the districts and elections were within the powers of the county supervisors, etc.

The Australian ballot-law was favored by all present, with such amendments as experience in other States dictated. GEO. OHLEYER SR.

[Further items of the proceedings will appear in our Grange Edition.—EDS.]

## Installation at Stockton.

Stockton Grange, No. 70, installed its newly elected officers on Saturday, Jan. 31. P. M., Thomas G. Ketoham officiated, assisted by Mrs. M. F. Merrill.

Precious to the installation ceremonies, a bountiful lunch was enjoyed by all, and everything passed off satisfactorily.

## Elk Grove Grange.

EDITORS PRESS:—Elk Grove Grange, No. 86, will have a meeting and installation of officers Jan. 17. Bro. E. W. Davis, W. M. S. G., is expected to be present.

Bro. H. E. Hayes, W. M. S. G. of Oregon, is most respectfully invited to be with us on that occasion, also all Grangers who can come.  
A PATRON.

A WORTHY SELECTION.—We are pleased to note that our esteemed contributor, C. E. Mack Jr. (Edwin Thistle), has been elected Worthy Secretary of Sacramento Grange. The honors of the office could hardly fall upon a more able representative. We trust Bro. Mack will not allow the duties of his position to interfere with his continued enrichment of our columns by his facile pen.

SPECULATION IN FUTURES.—Salinas Grange, No. 24, P. of H., at its last regular meeting, Saturday, Dec. 27th, adopted the Watsonville Grange resolutions petitioning the State Legislature to pass an Act forbidding speculation in futures on the products of the farm.

## The Postal Telegraph.

### Some Plain Reasons Why the Government Should Adopt It.

Telegraph service—what is it? It is a quick transmission of the mails—a sort of rapid delivery—bearing the same relation to the mail service as the multiplication table does to that of addition. Both accomplish the same results only in a different manner and speed. Time, in many cases, is money, and the saving of time between the two services, postal and telegraphic, means the saving of many thousands of dollars to the people.

The Constitution of the United States says that Congress shall have the power to establish a postal service, mail routes and the rates of postage. This has been done since the foundation of our Government, and there can be no question that Congress has the same right to extend the present postal service until it embraces all the known methods of transmitting news, etc. There can be no more just right for the telegraph to be controlled by private corporations than that the Government should turn over the present limited mail service to a private monopoly. Limited, for the reason that the people, who, under our system of government, are the Government, are entitled to every advantage that the laws—among which are the patent laws—make possible. We would be surprised if a railway should refuse to employ inventions that would cheapen the cost of carrying passengers or freight either by shortening of the time taken to transmit such freight or passengers, or by acquiring new appliances that would render the cost of service less. Why, then, should we hesitate to do the same thing for ourselves in the carrying of our mail system? There are few, when confronted with the question, but who will acknowledge that the telegraph should be as much a Government charge as the railway mail service. Indeed it would be a very few who would not agree that it is not only right but proper for the Government to utilize the steam horse instead of the slow coach. Why? Because it lessens the time. Why, then, shall we not go farther and take the next step, and utilize that grand force of nature, electricity, as used in the transmission of messages? As Chas. A. Sumner, representative in Congress from this State, said in a speech before a committee of that body:

"First—I lay it down as a proposition that I want to have duly considered by this committee and the country: That the Constitution of the United States, as interpreted by a century of unchallenged legislation, does imperatively require that the Congress of the United States shall establish a postal system.

"Second—I lay it down as a fundamental proposition that a postal telegraph is a part of the postal system of the Government, the postal system of the United States having been established for the purpose of 'transmitting intelligence between the inhabitants of the land.'"

The next question that would naturally strike the reader's mind is, Will it pay? This is a question that always bobs up at every proposition which is brought forward and is both right and proper, as the great mass of the people have no more money than they know what to do with. The cost of the great Western Union Company is said to be \$125,000,000, that of the Postal Telegraph and Cable Company, \$50,000,000—making a total of \$175,000,000. Now is that the true cost? It is held by a number of prominent electricians that both systems could be duplicated for \$38,850,000. The average message now costs 32.5 cents, allowing the companies to pay a dividend on a stock of nearly \$200,000,000 of about 12 per cent per annum, on a plant that can be duplicated for one-fifth of that amount. Allowing that the other expenses would be equal to what they are at present, to make the same dividend on the actual cost of the plants, the cost of messages would be reduced from 32.5 cents to 8.5 cents. Does any one doubt that at that reduction the wires would be idle, or that the business would be enormously increased, giving more profit and allowing more people to reap the benefit of the improved service?

In addition to this, a greater benefit would be given to the people in the nature of impartial press reports. As it is well known, the great mass of the people depend on the daily press for their news, and how much better for them would it be for them to receive their news from the servants of the people than through the tools of a gigantic monopoly. Would not it be more reliable, more trustworthy? As far back as 1846, Postmaster-General Johnson, in his report to the President (Polk), said:

"It becomes a question of great importance how far the Government will allow individuals to divide with it the business of transmitting intelligence—an important duty confided to it by the Constitution. In the hands of individuals or associations the telegraph may become the most potent instrument the world ever knew to effect sudden and large speculations; what a mantle of prophecy was on the old

Postmaster-General!] to rob the many of their advantages and concentrate them on the few. If permitted by the Government to be thus held, the public can have no security that it will not be wielded for their injury rather than their benefit. \* \* \* The use of an instrument so powerful for good or evil cannot with safety to the people be left in the hands of private individuals."

Would not we object most seriously if the Government should try to turn over the mail service to the Wells-Fargo Express Co.? Yet why would it be any more absurd than to allow private corporations to handle exclusively that branch of the postal system, the telegraph?

## Farmers' Mutual Insurance Co.

At a meeting of the Garden Grove Club, held on Dec. 22d, the question of Farmers' Mutual Fire Insurance Companies was discussed by the different members present. The subject was ably presented by Mr. Beckett and Dr. Head. Mr. White related that while living in the East he had been a member of a Mutual Fire Insurance Company for nine years, and the total cost for \$1000 insurance had amounted to \$5.

The following we clip from the Blade concerning the discussion:

"Dr. Head gave an eloquent talk on the subject, during which he stated that the insurance business on this coast was controlled by a trust, and that so far as the Legislature is concerned, he thought they were owned by the trust, so that it would be useless to ask help from that quarter. He did not know what they could do. A voice from the audience replied: 'Go into the Alliance.' 'Yes, that is it. No honest man can repudiate such a just platform as the Alliance is working under.' He told us also that if our representative, Mr. Smith, were to offer a bill to help the farmer it would never get beyond a first reading, and would then be buried in the committee-room and never have a second reading."

"The fact was noticed that insurance rates were as high here as in the East, while we have no lightning here—a frequent cause for fire. Some of the companies, it was claimed, paid dividends as high as 35 per cent, showing the profitability of the business."

"We also have no long, cold winter nights to keep warm by hot coal fires to increase the risk."

"The general sentiment was that the farmers were letting moneyed trusts and monopolies weld a chain around their wrists that, in time, could not be broken, and in the Farmers' Alliance seemed to be the only hope they had to rescue themselves by co-operation. 'In union is strength.'"

The next meeting of the club will be on Jan. 3 1891.

## Santa Cruz and Santa Clara Counties.

### From an Active and Successful Lady Organizer.

EDITORS PRESS:—Since writing you November 13th, I have organized 11 sub-Alliances and the

County Alliance in Santa Cruz County; Also organized one sub-Alliance, besides speaking for five sub-Alliances in Santa Clara County, and attending the County Alliance of Santa Clara; also the sessions of the State Alliance—even visiting and speaking for four of the new Alliances in Santa Cruz county. You will see that there have not been many hours to spare for correspondence. \* \* \*

I hope the PRESS does not indorse the communication of J. V. Webster in your issue of November 29th, wherein he extols the merits of Mr. Wanamaker's postal-telegraph scheme. It seems strange that a gentleman of his seeming clear-sightedness does not see that government control without government ownership will simply mean to subsidize the already bloated corporations. The idea of our Government paying a rental upon a valuation of 80 millions of dollars for existing lines which could be replaced by government construction for from 20 to 25 millions is something which I hope every farmer and right thinking person in our land will protest against.

I think time will prove the Wanamaker scheme to be thoroughly in the interests of the money power, and that it is an attempt to longer perpetuate the power which they are fearful will slip from their grasp; and if they can blind the people, they may well laugh in their sleeves at the docility of the farmer. I hope the Grange as a body will protest against such a measure, either that compromise or any half-way measures with the railroads. I would like much to hear your opinion.

Senator Chas. A. Sumner's bill for postal telegraph is the only system that has been proposed in the interest of the people, and the monopolists put that out of sight as they would this (Wanamaker's) if it were not in their favor. San Jose, Dec. 20th. KATE L. SQUIRE.

[Our Grange department this week, showing the conditions only on which J. V. W. advocate the Wanamaker plan, will throw some light on this subject, while we call on the old veteran to give the wide-awake Lady Organizer the why and wherefore of his faith. Mrs. Squire is a most active and successful organizer. She will accept our sincere thanks for the above. Many of our readers will be pleased to hear from her often.—Eds.]

## A Sentiment.

In the war which has been declared by us against sectionalism, the farmer and his fireside is the citadel around which the heaviest battles are to be fought. We are not content in simply shaking hands across the bloody chasm. Our work is to fill up and efface the chasm. We are many as the waves, but one as the sea. Sectionalism must not, shall not, live. Upon our banner, written above and below the plow, the sheaf and the cotton bale, is a new device, born of a new era: It is "Fraternity and Unity." From the petition to Congress adopted by the National Farmers' Alliance at Ocala, Florida

## Meeting of the Executive Committee.

EDITORS PRESS:—The Executive Committee of the California State Farmers' Alliance and Industrial Union will meet in San Francisco, Monday, Jan 12th, at 10 o'clock A. M., at 220 Sutter street, Room 18.

JESSE POUNDSTONE, Sec'y Ex. Com.  
Grimes, Colusa Co., Jan 6.

## FRUIT MARKETING.

### Action by Santa Clara Fruit Driers' Association.

As reported in the Mercury, a meeting of the Santa Clara County Fruit Driers' Association was held in San Jose Jan. 3, N. J. Haines presiding and W. F. Parker acting as Secretary.

The President called for the report of the Transportation Committee, explaining that one of the points urged when a meeting of the association was called, was that all of the members had been informed that now was the time to take action in regard to securing a reduction in freights. It had been said that now was the time to present such a petition before the Transcontinental Association had concluded its meeting.

Mr. Gordon said this committee had held no meeting.

George Fleming thought that whether or not the committee had a report, this was an important point. He said now was the time to commence working in this direction, and in all probability the rate could be reduced to \$1.20 or even less. He said the association must be able to show that a reduction in freights was necessary to the prosperity of the business; the company would then accede to the request. When it could be shown that the business would suffer unless reduction in freights was given, the company would then come to terms.

J. H. Flickinger thought it would be a waste of work and talk to commence the work now, as an advance taking effect January 1st had already gone into effect.

James E. Gordon said all the efforts of the association should be concentrated upon the Southern Pacific and Santa Fe roads, as all the other roads had signified willingness to make a reduction.

Mr. Flickinger suggested that the Secretary communicate with similar associations throughout the State, with the green and dried fruit and the raisin men. These combining, it was certain the request would be considered and in all probability be granted. He made a motion to this effect, but Mr. Fleming objected to combining with the green-fruit men, as they already had as low a rate as it would be possible to get, and to ask a lower rate for them would be to injure the cause of the dried-fruit men.

Others gave their views, all favoring the idea, and the motion was passed, after agreeing to drop the green-fruit men and include only the growers and dealers in dried fruits. The Secretary was instructed to do this work under the direction of the Transportation Committee.

James E. Gordon spoke of the fact that much inferior fruit was packed and sold in the East as California prunes.

George A. Fleming spoke of instances in the East where egg plums and Victoria plums were sold as silver prunes. He knew of no way in which this could be stopped.

W. F. Parker was appointed to fill the vacancy on the Conference Committee caused by the resignation of Frank Buxton.

Mr. Fleming stated an organization was on foot which would probably be called the Fruit-Buyers' Association, the object being to establish uniformity in the grades of fruit. He said the association would meet to-morrow afternoon at 1:30 to perfect organization, and all the fruit driers were invited to be present.

S. P. Sanders presented his resignation, which was laid over for action until the next meeting.

Dues for the months during which the association had not met were remitted.

Under the head of new business Mr. Fleming suggested that as there was considerable money in the treasury, it would be a good thing for the association to have an entertainment and banquet. His motion that a committee of five be appointed to arrange for this was carried, and Messrs. G. A. Fleming, W. F. Parker, James E. Gordon, W. D. Morrison and J. H. Flickinger were appointed.

Adjourned to meet the first Saturday in March.

## Lines.

Suggested by reading "California Sunshine," by Mrs. L. H. Shuey.

[Written for the RURAL PRESS by ISABEL DARLING (Lupa).]

A sudden trill of joyous notes  
Across the summer stillness floats;  
A rippling song that warbles, chirps  
And dies away, then gaily darts  
In merry mockery far up  
Where distance fades and sound grows still;  
Then, with a prophecy of ill,  
It circles down to earth again,  
And whispers of the lily's cup,  
Of grass and dew, and mist and rain,  
But never hints of angry pain,  
Of sullen depths and blasting fire,  
The vengeance of untamed desire,  
Of loneliness and tempting wrong,  
Of agonies of sin, despair,  
The longing to be blotted out  
Forever from the page of life.

These lend no quiver to the song,  
Its tones of grief (when grieve they must)  
Are tender, hopeful, breathe of cheer  
And make a rainbow of a tear.  
No giant strength of discord mars  
The clear-voiced flow of restful sound.  
Its power comes of faith and hope—  
'Tis all, and yet it is enough  
To make one dream of harmony,  
Of beauty, peace, of all that's good,  
Of noble life, of truer art,  
Of heavenly "Sunshine" in the heart.

## Doctor Margaret.

When Madge Harrington, the beauty and madcap of the family, announced her determination to study medicine, it created such a commotion among her aunts and cousins that would be too long a story even to try to tell. What protestations there were, what entreaties, what dismal prophecies of failure, or what another outcry there was when, at the end of her course, instead of settling in the city, she chose to accept Uncle Jeremy's offer of a partnership in his large practice and bury herself in the country. Neither need I relate how Ben Harris followed her there for the express purpose of offering certain arguments of a personal nature on the subject, and came away with a decided disinclination to talk of his cousin or her doings. Nor even how he begged her photograph, and like the careless fellow that he was, lost it before he left the little hotel at the Junction. Nor yet how his friend and law partner, Robert Cortright, only a few weeks after found himself stranded at the same dreary little Junction House, and thought himself a very hardly used young man because he must stay there until morning.

It was a wretched place; he was angry at having missed the train, and altogether in no very enviable frame of mind when he retired to his room and tried to lose himself in the pages of a railway novel. Evidently it was a fruitless effort, for after a half hour he gave the book a toss into the farthest corner of the room, where, as if ashamed of its own dullness, it retired from view behind the washstand. A few turns up and down the room served to convince him that his own thoughts were no better company, and smiling somewhat contemptuously to himself, he gave the rickety stand a push which brought to view not only the book, but—"By Jove, a photograph," he ejaculated. "The last occupant has probably left his sweetheart's picture behind him." He gave a long whistle of astonishment as he held it up to the light; it was no rural Phyllis, but a beautiful girl photographed by Sarony.

Mr. Cortright was something of a physiognomist, so it was with a purely scientific interest that he gave it the benefit of a long and careful scrutiny. Perhaps longer because there was something puzzling about it. A mischievous wrinkle at the corners of the mouth seemed strangely at variance with the great earnest eyes and the firm contour of the chin. There was no clew to its identity except the one word "Margaret" written across the back. Of course he carried it away with him, it would never do to leave it to fall into the hands of the next chance comer, and destroying a face like that was not to be thought of, it would be vandalism, so it was finally deposited in a secret drawer of his own private desk.

He had engaged in numerous flirtations without any serious consequences, to himself at least, and now at the great age of thirty-two he prided himself upon being quite removed from all sentimental considerations. It was a task of no small difficulty to reconcile this idea with the fact that an unknown face had for him a fascination he had never felt before; indeed it was so difficult that he gave a great deal of thought to it. Certainly there was no one else to sit in judgment on the matter, for he never thought of showing his treasure trove to Ben Harris, who shared his office, his private sitting-room at the Windsor, and, up to this time, all his secrets. If he had done so, it is hard to tell who would have been most astonished; but all the more surely for this reserve,

there grew up in his mind an ideal woman, as visionary and impractical as most such creatures are, but which he worshiped as ardently, and apparently as hopelessly, as the old sculptor his marble woman—one was stone and the other air; he sometimes said to himself that this was the only difference.

Still he did not grow thin and melancholy after the orthodox manner, and when in the summer Ben proposed a bicycling tour which should have for its objective point the Harris country house, he made his preparations with the feeling that after a winter of good hard work he had fairly earned his holiday. The family were hospitable in the good, old-fashioned way, and they came and went as they pleased, sometimes alone, sometimes with Ben's sister Carrie, a gay little witch with a face he would never have thought of calling pretty had it not been for a certain mocking, elusive resemblance to the picture safely locked away at home. But the most adroit questioning failed to elicit any information, and Miss Harris grew a little impatient. "People seem always hunting for resemblances," she cried; "they even say I am like Madge Harrington, I am so little and dark."

"What is she like?" he said curiously.

"Like? I can't describe her, but you will have a chance to see for yourself. She is coming here, if measles and whooping-cough permit."

"Measles and whooping-cough!" repeated he, greatly mystified.

"Why, she is a doctor, you know."

"No, I don't know, and I devoutly hope she won't come; there is one of the species at home, the homeliest and most cold-blooded woman I ever knew; looks upon her patients simply as 'cases'—the scientific temperament her friends call it. I call it simply abominable."

"Madge isn't that sort at all, cried Carrie, angrily; "she is young and pretty."

"So much the worse, then," he interrupted.

"I think all such women ought to be left on a desert island, to prey on each other, instead of on society."

"I more than ever hope she will come. I'd like to see you fall a victim," was the retort.

He would hardly have been so rude had he not fancied for a moment that he was on the verge of a discovery, and that the clew should lead to this made him unusually wrathful toward the whole medical profession. Measles prevailed against Carrie's wish, and he finished his visit in peace, which was marred by only one deep bite, Ben declaring that he had enough of "cycling," and Mr. Cortright that he would carry out his original plan.

"I'll go home on the oars, like a Christian, and be there, ready to receive you, when you come, if you ever do. There's some awful roads about Randolph," Ben added.

"Madge can mend his bones, if he breaks them," said Carrie, mischievously; "she lives at Randolph."

He adhered to his original intention, in spite of all Ben's argument, and quite pitied Ben until the afternoon of the second day, when he came to some of the prophesied "awful roads." It tried nerves, sinew and temper; and, as the Fall, in which, we are informed by the unquestioned authority of the New England Primer, we "sinned all," was occasioned by a woman, so it was with Mr. Cortright's fall.

He was struggling over a particularly rough bit toward a point where three roads met at acute angles, all equally bad and all apparently leading to nowhere in particular. He would have dismounted and taken the next few rods on foot, had he not discovered a stylish little wagon, drawn by a black pony, rapidly approaching the point of intersection. One glance enabled him to take in the whole establishment, even to the bunches of golden-rod on either side of the pony's head, strongly suggesting blinders, and to decide that the driver must be a young lady, though he could not see her face distinctly. She wore a white tailor-made gown, and a broad-brimmed hat with a white plume, and he classified her at once as a summer boarder. Should he meet her on foot, ingloriously dragging his "machine" after him? Perish the thought. He would pass that corner in a manner befitting the captain of the Wheel Club, even if he risked his neck in the attempt. But, alas, pride must have a fall, and the wheel striking a particularly tough root, he took a header on a pile of stones by the roadside.

Things seemed very strange and indistinct that night. He was floating around in space, and the Margaret of his dream was near him. Sometimes she held his hand for a moment and spoke to him in a low, clear voice; but he could not answer her. Then she disappeared, and he slowly came back to earth again, and found himself in a large, cool room, with a motherly-looking old lady sitting beside him. The faint, subtle odor of ether lingered in the air, and a dull pain in his head reminded him of his fall. The old lady leaned forward eagerly when he began to speak.

"Will you please tell me just what has happened?"

"Why yes; your leg's broke just below the knee—compound fracture, the doctor called it—and there's some bad cuts on your head; and you must keep quiet, and the doctor'll be here again at 10 o'clock," she said.

I regret to say that Mr. Cortright made use of a naughty word. "You don't mean to say that you sent for that young woman to reduce a compound fracture?"

"Now see here," said the old lady, energetically, "you haven't got any oall to worry.

There wasn't no one else to do it, for the old doctor is away out West for his health, and there ain't no one for thirty miles around can equal her on a bone. I called it real providential that she was drivin' along just as you fell off your velocipede."

He subsided into silence and angry reflection. He would be likely to make the rest of the journey in very different fashion from the beginning, and it was worse than all to have fallen into the hands of that horrible young woman. He would send for Ben and Dr. Cummings at once; no, he would not. Ben should not have the chance to triumph over him in that fashion.

Just then there was a rattle of wheels in the front yard, and he looked up in bewilderment, as the young lady who had been the unwitting cause of his downfall entered. "You are not the doctor?" he said, slowly.

"I certainly am," was the prompt reply.

"I told you all about it, don't you remember?" said Mrs. Brown, but he was absolutely speechless with astonishment. She had removed her hat, and it certainly was the face of the picture. There was the same earnest eyes, the mischievous wrinkle about the corners of the mouth. He pinched himself to be sure he was not dreaming, and answered her questions so incoherently that Mrs. Brown suggested that his head was not yet quite right.

It was not imagination, then, when last night he thought Margaret was with him and took his hand, but hard professional reality. He would not telegraph Dr. Cummings that day, but wait until he became a little used to the novelty of the situation. Mrs. Brown found her patient anything but tractable that day, but attributed it to the natural perversity of unrenowned male nature. It was a grievous disappointment to have all his illusions destroyed in this fashion; of course she could not be a doctor and still be the Margaret of his dreams. He was a fool, an unmitigated fool, to build up a woman just from a face, and then fall in love with his own creation. He would telegraph to Dr. Cummings that very night just to make sure everything was all right, and then let her cure him of his injuries and his folly at the same time. This decision did not bring much comfort with it, for he found that he did not want to give up his folly after all, and so fought the same battle over and over again. He was cross and almost rude to her, but she never lost patience, and when he came to repentance and a better mind, received his apologies with a quiet dignity that made him more uncomfortable than before. But the climax came on the day when Ben Harris brought his crutches from the city and he was allowed to hobble out on the wide porch.

"What do you think now about leaving all the women doctors on a desert island to prey on each other instead of on society?" Ben demanded.

Mr. Cortright looked painfully, undeniably guilty.

"Oh, you needn't be so agonizingly penitent," continued his tormentor remorsefully. "Madge don't care, she has no personal human interest in you—regards you simply as a case, you know."

"Indeed, I have a very decided human interest in any one who is so misguided," she said kindly, for she pitied his evident embarrassment. "He must be converted."

"I'm converted already, but you need not withdraw your human interest on that account. I have been such a troublesome case, let me try to redeem myself as an individual."

"If you think you can do any better in that capacity, I would be tempted to try you," she answered, laughing.

"I'll hold you to that bargain," was the quick reply, but after Ben left he did not always find it an easy matter. When he begged to drive with her, she indulged him, at first, as she might a whimsical boy, leaving him to hold the horse before lonely farm-houses while she made her visits. He used to look at her curiously; she seemed to him some champion fighting the battles of the weak against the cruel monsters, disease and death, and he learned to know by her face whether she or the dragons were being worsted in the fight.

Still their acquaintance progressed rapidly, for he had the rare tact which taught him to divine her moods as if by instinct, so that, almost incessantly at first, she found herself leaving many of her anxieties in the darkened room she visited instead of carrying them with her, an ever-increasing load, to the end of the day. He never reminded her of her promise to regard him as an individual, instead of "Cortright, C., compound fracture, serious contusions about the head," but flattered himself that she was fast laying aside the professional manner, and even growing to depend on his companionship and sympathy. Neither did he ask himself what he expected would result from it, a rising young lawyer, who had even distant views of the ermine, could hardly be expected to devote his life to driving about the country with a doctor, holding a very sedate black pony before the doors of high and low, even if the doctor was a young and handsome woman. He knew it could not last forever, and when the end came, told himself bitterly that he might have expected it from the beginning; for he had staked everything on one throw and lost.

Though Dr. Harrington missed her patient more than she would admit even to herself, she thought she did not regret her decision. Indeed there was very little time for regret, for there was an unusual amount of sickness

that winter, and kind old Uncle Jeremy, who, no doubt, would have mended Mr. Cortright's bones had he not been away in quest of health, died suddenly on the homeward stage of the journey. She took long drives, often extending far into the night, and almost as often reached home only to find an imperative summons in another direction. The month of December was intensely cold, and on Christmas eve the wind swept through the valley, carrying the snow in blinding whirls that piled high above the fences, and the black pony fought his way along almost inch by inch. There was a bright fire in the grate and she sat down and spread her chilled fingers to the blaze. It seemed to her that she had never been so tired; she dreaded the morrow and the next. Would there be a hundred morrows like it? Could she endure them if there were? She could bear the cold and the fatigue, for often she was too tired to eat, but the thought that to so many people she seemed to hold life and death in her hands was terrible. With a sudden, swift impulse, she crossed the room and took up a little hand-glass. Her own photograph stood on the mantel; Uncle Jeremy had placed it there, and she had never disturbed any of his belongings. She looked from that to the face in the glass. There were dark rings under the eyes; it was pale, faded and anxious. The lamplight fell full upon her bent head and revealed a single, shining white hair, the first she had ever found. She pulled at it spitefully with a queer sinking of the heart. "Am I growing gray at twenty-five?" she said piteously. Her youth seemed suddenly to have fled, and she saw only a ghost, and stretching away before her a solitary old age.

Just then some one stumbled up the steps, and there was a sharp ring at the bell. Most women hesitate before answering a late ring, but she only shivered as she thought, "Must I go out again to-night?" A tall man stood in the little porch with his coat-collar turned up over the lower part of his face, and a sealskin cap drawn down over his eyes, so that nothing was visible but a very frosty mustache. "May I come in and wish you a Merry Christmas?" said a clear, ringing voice. The tell-tale blood rushed into her face, and there was a suspicious quiver in her voice as she answered him.

"I didn't frighten you?" he added. "I should not have dared to stop to-night only for the light."

"No, I was not frightened, only I am rather nervous, I think, and your coming was so sudden and unexpected."

Her evident perturbation gave him courage; she could not be entirely indifferent, if seeing him had power to disturb her so much.

"You never used to be nervous, and how thin and pale you look; you must be ill."

"Oh, no," she said, struggling vainly to regain her composure, "I am only tired out; there is a great deal of sickness, and I am busy night and day."

"You are killing yourself," he replied. "How many miles have you driven to-day?"

"Thirty, perhaps."

"And you will do the same to-morrow, and to-morrow," unconsciously repeating her own thoughts. "You shall not; I have tried to forget you as you said, and I cannot. I will not try any longer."

Next day a friend of Mr. Cortright, who was starving in the city, while he waited for patients, received a telegram summoning him to go to Randolph to take charge of a large country practice. A few weeks later in the season, when there was an accident at one of the quieter winter resorts on the Carolina coast, and no surgeon at hand, the local paragrapher related that "A very charming lady from the North, evidently a bride, improvised a apint, and set the broken bone as calmly as though it was an every-day occurrence."—*Godley's Lady's Book.*

## After Christmas.

[Written for the RURAL PRESS by MAUDE S. FRASER.]

At last the hurry, the excitement, the bustle of preparation are over! Christmas, with all its joys, is a thing of the past.

There were some of us, perchance, who failed to finish our presents in time; many, I am sure, who put the last touches on Christmas gifts late Christmas Eve. Does one ever begin in time?

Have any of the readers of the RURAL PRESS, warned by this season's haste and anxiety, resolved to begin a Christmas box at once?

This practice, advocated in so many of our household papers, has its good points and its weak ones. Let us try to use the idea only so far as is practicable to each one of us.

Without doubt many enjoyed, as did I, the privilege of seeing dainty presents made by the ingenious hand of one friend for another. We might have made the same things had we known how or thought of them.

Right here, then, I'll begin my Christmas box. Fearing that my memory will play me false at the right moment, I keep a small blank-book where I jot down ideas for fancy-work, suggestive couplets for decorative purposes, and sometimes the quantity of material required for an especially admired article.

This little book I would keep among my materials for fancy-work, if I were you. Experience has taught me that such things are best kept together.

Then, as the months go by, I would suggest adding to this stock of zephyrs, silks, satins and velvets such odd pieces or quantities as may often be picked up at bargain counters or on great sale days. At the same time, I should

not buy without some definite purpose in view. This may be done whenever an opportunity presents itself, provided it is possible to keep an emergency fund to be used in such and other ways.

I have one friend who set aside for three months the eggs she got from her hens as her holiday capital. Another began in June to drop into a good-sized china egg with a slit in the top every small bit of money she felt she could spare. Sometimes she walked home from town instead of taking the street-car, and as soon as she reached home, she dropped in the nickel. Sometimes (they took their meals out "at her house" that summer) she bought a simple and frugal lunch, and put the extra pennies in her bank, as the family soon grew to call it. Whenever she denied herself any particular pleasure, a new ribbon, a ticket to the theater, candy or novels, for instance, the price was carefully laid away. She couldn't touch the money without breaking the egg, so her savings were safer than in her purse and served her well at Christmas.

Now, it seems to me, money is always "tight" and hard to get at just about Christmas-time. Winter clothing, wood and provisions must be laid in, and then come the taxes. They must always be paid, and how often it happens that the very money you have depended on is not forthcoming.

Jones can't pay your husband that little bill he owes him. Smith has had so much sickness in his family he must ask you to wait till spring. Somebody else evidently never intended to pay, for he has left the country without mentioning his bill; and so, at the very time you wanted to do Christmas shopping, Harry will tell you how hard it will be to pay the taxes and he is so sorry, but he can't let you have any Christmas money this year.

Then, if you have been a wise little woman, you will think cheerfully of the material you bought and stored away last summer, and turn a smiling, cheerful face up to Harry as you assure him you can manage to make a very little go a long way.

When you will give you an affectionate kiss and an appreciative look as he tells you that no one in the world is so—

There, you know as well as I do what he will say, and you know, too, that it sounds much sweeter from his lips than it would look on paper!

"Yes," you say to yourself, as you hurry through the evening work so you can get out that wonderful box of many-colored silks and various odds and ends, "yes, I can make a little money go a long way, but what would I do if I hadn't my box to help me out?"

Don't say it amounts to the same in the long run—the money has to come out of the purse anyway, so it may as well be one time as another.

You know, and I know, that there are times when we can more easily spare money than others; and past experience has taught me to buy all material possible, even all Christmas toys, if I can, before the month of November has ended at the very latest. Should it be a "fat" Christmas, and money more plenty than usual, then something may be done for the poor and needy whom we have "always with us."

In any event, our nearest and dearest have been provided for by timely care.

I would advise this early preparation in any case, so that time, strength and money may be given to making some outside heart happy on that day—that is really what we are apt to neglect on Christmas Day, and it is in all respects nearer the true spirit of the season than all the rest.

Now, however, it is past and we are free to pick up the raveled threads, the ragged edges left by the inevitable rush of the weeks preceding the holidays.

One friend said to me the other day, "I'm going to begin the day after Christmas and put my clothes in nice order. There are six buttons off my best shoes and all my stockings need mending."

I laughed at her then, but I have since had to do the same myself, or rather am doing it.

I hadn't a moment to spare for days before Christmas, and it really seems good to get my various belongings in nice order again.

There is apt to come a time of inaction after such a strain as the holidays bring. This is well enough if not prolonged or indulged in until life seems dreary and monotonous for want of motive.

Spring sewing always comes upon us too soon. Why not begin sooner? Surely underclothing may be made up in January and prettily trimmed with knit or crocheted edgings.

I know our pocket-books are apt to be empty after the late drain upon them, but trimmings may at least be made, and what material is on hand may be used.

Often half-made garments are on hand. Finish them up one by one, and by the time you are ready for new material you can surely get a dollar's worth of muslin to begin work on your new underclothing.

You can work on your crazy patchwork, too, and your slumber-robe that you put aside in November for lack of time.

That same lack of time was your reason for dropping your practice on the piano and your daily reading. Begin these again at once, and let the busy evenness of your life make up a harmonious whole. Make up your mind what you will read and what you will accomplish during the next few months, and try to have the stormy days that we will soon have full of beauty of purpose and strength of life.

## YOUNG FOLKS' COLUMN.

### A Suggestion.

[Written for the RURAL PRESS by DOROTHY SHIRLEY.]

I am wondering how many have made New Year's resolves, and how many will break them. It is the most natural thing in the world to have the desire, indeed, to make the attempt to start in afresh with the dawn of a new epoch, however long or short.

The greatest trouble with New Year's resolves is that we are likely to make too many of them. In the endeavor to suddenly reconstruct our characters, we undertake too much. It calls for too much self-denial—too much effort.

First one good resolve is broken, then another, and finally the whole list is swept away in an overwhelming tide of disgust for the weakness that each year leads us to make New Year's resolves only to break them.

Much courage and self-respect is in this way lost, and it may, I think, be avoided, and still we may make, say, and keep good resolves.

Hence—a suggestion!

Sit down quietly and carefully consider your faults. Pshaw! You are brave enough for that. Have you twelve? Have you more? As it may be, consider them carefully and write out a list of twelve. Be sure to give a prominent place to your besetting sin, or, if you choose, have twelve without it, and take that one every month in addition to the one set aside for that month.

Give plenty of time, thought and care to your list; put it carefully away in some safe hiding-place; say nothing of your good resolves; let the result tell the story, and go to work hard on the fault laid down for the first month.

Each month try to carry along with you what you have gained on that part of the list already checked off. You surely will gain strength and self-respect, if your efforts are faithful. At the same time each month, pay special attention to the fault for that month.

I cannot conceive any way in which you can grow mentally and morally, more rapidly, than by conquering some one fault each month. A month of faithful, persistent effort, hammering away on some one fault, will make it very easy, methinks, to keep that fault in hand the rest of the year, and leave plenty of strength to "tackle" the new work each month.

Think of this and give it a trial.

Shall I further my suggestion by a sample list? Not a model one—for few have the same faults to contend against.

To accompany each month—Control my temper!

January—Keep my room in nice order.

February—Relieve mamma of the care of my clothes.

March—Be faithful in my practice hour.

April—Try to make some one happier every day.

May—Be careful about exaggerating.

June—Be more unselfish.

July—Think less of pretty clothes.

August—Quit using slang.

September—Be more faithful in small duties.

October—Avoid gossip and slander.

November—Read fewer novels.

December—Think of the poor.

An entirely different list may be constructed, filling the needs of the one who undertakes it.

Only be honest in making it—honest in carrying it through the full year.

### Miss Mason's Party.

It was to be a *curio* party. Miss Mason was an original person and aimed to arrange something out of the usual order for her young friends.

In a quiet village on the sea-coast there is not a constant succession of church fairs, concerts, lectures or other mild forms of dissipation to shorten the winter season; but books and papers abound, and every house contains interesting objects from abroad, trophies from foreign voyages.

The invitations read thus: "Miss Mason requests the pleasure of your company on Tuesday evening next. She also desires you to bring some *curio* and prepare a little sketch upon it for the entertainment of others. She would suggest complete secrecy upon the object selected until that evening."

The young people were thrown into considerable excitement on the receipt of the dainty notes. It was easy to connect *curio* with the carious; but did it apply to works of nature as well as art? They consulted dictionaries and discussed, and then each held "his own opinion still."

Robert Sayles wanted to take his baby sister as the greatest *curio* he knew about. Jack Strong, who had seen electric lights in a city, so longed for one of those to carry.

What more attractive to a girl heart than a real secret? A girl possessing this feels as consequential as a politician just elected to office. It shows in her very gait.

Soon all settled down to the work of preparation in earnest. Upon the appointed evening they appeared with mysterious packages, which were given into the care of the hostess.

After an exchange of greetings, Miss Mason carefully opened one box and took out an exquisite piece of Japanese workmanship. It was a Cloisonne vase. This was brought by Rose Lapham, and she was called upon to tell something about it. Then she described how the metal foundation is prepared, the gold

wires put on for the outlines of flower and leaf, the colors added and burned, and the whole ground down and polished to perfection. She suggested that this may well be called a "patience" vase.

The next box contained a bird of paradise, and the owner told about its home and surroundings, and made his hearers admire more than ever its wonderful structure.

Then came a specimen of Chinese carving in ivory, a ball within a ball, each cut in beautiful designs.

Alice Swan brought East Indian embroidery in gold thread upon silken fabrics, and showed how the women sit and ply the needle so skillfully.

Benny Stone brought one pressed flower from the spot nearest the North Pole where there is any vegetation, and told the story of brave explorers who had gone through such hardship to reach that latitude.

One specimen looked like a chip from a wood-pile; but it proved to be a bit of wood found near the bones of a mastodon and buried under twenty feet of solid rock and twenty feet of peat. It was an object rich in suggestions, and carried the company back long centuries.

One brought a bit of amber, with imprisoned insects, and another a quaint figure—half human, half monkey—found buried with the mummies in Egypt.

How the young faces lighted up as different facts were unfolded and their minds stimulated to gain further information! Indeed, next to the exercise of the affections and giving happiness to others, there is probably nothing so pleasurable in life as acquiring [knowledge, learning about the wonders of nature and art.

Miss Mason skillfully inserted question and comment, and made her guests feel how rich their lives might be in great thoughts, whatever their surroundings.

The *curio* party was indeed a success, and the hostess will long be remembered for her kind thoughtfulness.—*M. Louise Robbins, in Christian Register.*

## DOMESTIC ECONOMY.

### Cooking Potatoes.

In an essay before the Garden Grove Farmers' Club, Carrie M. Kimball said:

Among the many and various methods of cooking the potato, I will only attempt to mention a few.

One very nice way, and where one wishes to do so quickly, is to peel, slice and boil in milk, being careful not to let them burn. Adding some water to the milk will prevent this. These, after being salted and peppered to taste, are very good for a change. Old potatoes may be improved by soaking in cold water several hours.

Then we have the potato pie. Grate four large potatoes, scald one quart of milk and pour on the potatoes; when cold, add four eggs well beaten, four ounces of butter, nutmeg, and sweeten to taste.

Potato soup is made by boiling in one quart of water a small slice of pork and two onions; take eight good-sized potatoes, boil and mash fine, add to the pork and onions with one quart of milk, boil one-half hour, season and strain.

I also have a very nice receipt for potato salad. Six cold potatoes, chop fine, one gill vinegar, two teaspoons of mixed mustard, one teaspoon each of pepper, salt and sugar, one large tablespoon of butter, one beet chopped, one hard-boiled egg pounded fine, three sliced and placed on top.

Will give just one more receipt of the many, and one that I have found very nice. Slice cold boiled potatoes very thin, sprinkle a thin layer of cracker crumbs in a baking dish and cover with a thick layer of potatoes, scatter on salt, pepper and bits of butter, repeat the layers until the dish is full, then pour on a cup of rich cream and bake half an hour in a quick oven.

TONGUE TOAST.—Take a cold tongue that has been boiled, mince it fine and mix with cream and beaten yolk of an egg, and simmer on the stove. Having first put off the crust, toast slices of bread and butter them a little, lay in a flat dish and spread over them thickly the tongue while it is hot.

CRULLERS.—One cupful of sugar, a piece of butter the size of an egg rubbed well into the flour, two eggs beaten into the sugar and butter, one cup of milk, three teaspoonfuls of baking powder mixed into a cupful of flour. Add a little salt, unless the butter is very salt. Flavor with  $\frac{1}{2}$  teaspoonfuls of lemon extract. Mix very soft.

RICE BALLS.—Put a half-cup of rice, one pint of milk, cook it in a farina boiler until the rice has absorbed the milk. Add a half-teaspoonful of salt, a dash of pepper, about five drops of onion juice and the yolk of one egg; mix and turn out to cool. When cool, form into balls, dip into egg and then in bread crumbs, and fry in smoking hot fat.

HARD SOAP.—Dissolve one can of potash in a quart of cold water, then stir slowly into it six pounds of melted grease; the cleaner the grease the whiter the soap. Stir a few minutes until it is very thick; pour into a square pan. If you want to cut it in pieces, you must do it as soon as cold, or it will harden so it cannot be cut easily. Mixing oatmeal in this soap makes a good toilet article; it is very good for the hands

## GOOD HEALTH.

### Prevention of Consumption.

The health department of the city of Providence has issued the following circular:

Consumption causes more deaths than any other disease the human race is subject to. Nevertheless it is to a very large extent preventable. It is, though not generally known, a contagious disease. Consumption, or pulmonary tuberculosis, is in every case caused by disease germs which grow in the lungs in enormous numbers. When a person is sick with this disease, these germs are coughed up in great quantities in the expectoration, and when this becomes dry and crumbles, or is trodden to dust, the germs float about in the air and are liable to be breathed into the lungs of any one. If the lungs of the person who does breathe them are poorly developed, or if the constitution is feeble, the germs are very sure to grow and cause the disease. Unfortunately, we do not know how to kill them when they are once in the air-passages. The best that can be done is to build up the system and strengthen the lungs by the use of cod liver oil, good food, and fresh air.

Much, moreover, can be done to prevent the spread of the disease by destroying the germs as completely as possible in every case.

(1) No person with consumption should ever spit on the floor or in the street. If handkerchiefs or bits of cloth are employed, they should at once be disinfected or burned. A good plan is to use a small wide-mouthed bottle with a rubber stopper. The contents should be thrown into the fire and the bottle and stopper thoroughly scalded with boiling hot water every day.

(2) The dishes used by a consumptive should be at once scalded, and the unwashed underwear and bed-clothing should be thoroughly boiled as soon as possible.

(3) When a person with consumption has diarrhea, the discharges from the bowels should be at once disinfected, as at this time they contain the disease germs. A good way is to add a half-teaspoonful of fresh chloride of lime, or fill up the chamber vessel with boiling water.

(4) No one with consumption should sleep in the same room with another person, and the room occupied by a consumptive should be thoroughly cleansed as often as possible.

(5) No mother with consumption should nurse an infant, and children ought never to be taken care of by a consumptive person.—*Boston M. and S. Journal.*

BRAIN WORKERS AND ATHLETICS. — *Life* is puzzled over the careers of the late Cardinal Newman and John Boyle O'Reilly. The former was a frail, slight man of infirm constitution, but despite this he lived to a very advanced age; the latter was a man of splendid physique, who kept his system in training by physical exercise, athletic sports, and followed all the suggestions of modern physical culture. Yet he died in the prime of life. Shall we not, then, live quiet, ascetic lives, ignoring the body and cultivating the spirit? Or shall we cultivate both body and mind? The latter course is the one so much commended to-day; yet it is not a sure passport to longevity, as many cases prove. In fact, the brain-worker is better off if he lives a regular, temperate life, and pays no attention to the development of his muscles. A little walk, some fresh air, and sound sleep are all he needs. Some people, to be sure, can be athletes and do brainwork also, but it is not the rule. A sound mind should have a sound body, but it does not need heroic muscles. The best athletic work is done by growing boys and adolescents, who have an extra supply of vitality. When they have matured, and undertaken the responsible work of life, they speedily drop out of the championship; and the lesson we would draw from the opposite cases brought up by *Life* is that athletics are not needed by brainworkers, and will, if carried to excess, shorten life rather than lengthen it.—*Medical Record.*

TO TELL THE APPROACH OF DEATH.—Dr. Chiappoli states that he has frequently noticed in patients, apparently very far from death, an extraordinary opening of the eyelids, so much so as to give the eyes the appearance of protruding from their orbits, which he considers an invariable sign that death will occur within 24 hours. In some cases, when only one eye is wide open while the other remains normal, death will not follow quite so rapidly, but will take place inside of 72 hours, there not being the slightest chance for recovery after these symptoms set in, however remote final dissolution may seem to be. Chiappoli says he is utterly at a loss for an explanation of this death symptom, but ascribes it to a diseased state of the sympathetic nerve.

NUTRITIVE PROPERTIES OF CREAM. — The fact is not so well known as it deserves to be that cream constitutes an admirable nutriment for invalids. It is superior to butter, containing more volatile oils. Persons predisposed to consumption, aged persons, or those inclined to cold extremities and feeble digestion, are especially benefited by a liberal use of sweet cream. It is far better than cod-liver oil, and besides being excellent for medical properties, it is a highly nutritious food.

## The Week.

General attention is turned this week to public affairs. The recurrence of showers, not in great volume but over a great area, has done much to allay the present apprehension, and time not required in pushing field orchard and garden work is devoted to discussing the stirring events transpiring at the State and National Capitals and at the scene of the Indian wars in the new State of Dakota.

The Legislature of 1891 is now organized and at work. The names of the present race of law-makers are given in another column. Before the end of the week Gov. Markham will have been inaugurated and inaugural-balled and set to work in his new place. Ex-Gov. Waterman will have retired to private life with the consciousness of having labored earnestly and untiringly in the promotion of what he conceived to be for the public interest.

## Orange Crop and Markets.

Readers will remember the announcement in our columns of the shipment of oranges from Oroville to the East about Dec. 10th. A report on the sale of this fruit is now made public in the form of a letter from the shipper, who purchased the fruit from the Oroville growers, as follows:

LOS ANGELES, Jan. 2, 1891.

DEAR SIR: I have your letter of December 30th, which has been sent down to me at Los Angeles. I have to say with regard to the several carloads of oranges which we shipped from Oroville to Eastern points, that they gave absolutely entire satisfaction in every case. The fruit arrived in prime condition, and was well received by the trade. A dealer in Denver wrote us that it was very superior, highly

statement telegraphed from Los Angeles on Monday of this week states that the orange-shipment season has opened up and the harvest has commenced. The crop this year is over 125 per cent greater than last. It was 2600 carloads then, while this year it will approximate 4000 carloads. The quality of the fruit is far superior to last year, both in texture and brightness. A condition which will make it difficult to market a portion of the crop is the fact that seedlings are running in a great many off sizes in small oranges. The regular sizes are from 128 to 226 oranges to a box, while inclusive of seedlings it will run largely from 250 to 300 a box, which are very undesirable sizes,

OLD ORANGE TREES IN A MARYSVILLE GARDEN.

colored, uniform-sized, good flavored fruit. Please remember these cars were shipped early in December. It will be understood by fruit men that our Northern California oranges are always bound to be a profitable crop, as they reach market at a time when there is very little fruit to be had.

P. E. PLATT, Manager W. R. Strong Co.

This is we believe the first shipment of northern-grown oranges eastward by carloads, and these facts are very important to the many growers who have young trees just coming into bearing. It now looks as though the product would increase rapidly. Northern-grown oranges have also sold well in this city during the last month, though they have come into competition with unusually large quantities of imported Japanese oranges, which are piled up in peddlers' wagons and on the street fruit-stands, retailing sometimes as low as three dozen for two bits, though sometimes ranging higher. They are poor trash inwardly, so far as our experience with them goes, and outwardly are rich in scale-bugs. No doubt they are plucked for shipment long before they are ripe enough to be eatable.

All reports indicate a very large orange product in Southern California this winter and rather an interesting trade in the crop. A

being too small for first-class trade. With Navels it is just the reverse. They are running to large sizes as compared to other years. Safely one-third of them are off sizes, being too large. The regular sizes of Navels are 112 to 176 to a box, while this year the crop is running largely from 80 to 96 to a box.

The opening of the season's trade is marked by an organization among buyers which has adopted a style of contract they will use, and published a sort of a platform of principles upon which they will operate this winter. The contract is a simple agreement to sell at a certain agreed price, subject to the conditions described on the back of the contract as follows:

The regular sizes of oranges to be as follows: Navels, 128 to 176, inclusive; Paper-rind St. Michaels, 128 to 300, inclusive; Seedlings, and all other varieties, 128 to 220, inclusive; 96 and 200 Navels, 360 St. Michaels, 96, 112 and 250 of Seedlings, and all other varieties, to be 50 cents less per box; 64s and 80s Navels to be sold \$1 per box less. Larger or smaller sizes of Navels than those named above to be classed as Seedlings of same size. Larger or smaller sizes than those named above of all other varieties to be classed as culls and weighed back to the seller.

All oranges to be stem-cut close to fruit, and all windfalls, thorned, limb-scratched, bruised, frosted, sunburned, buttoned or otherwise injured oranges,

to be considered unmerchantable, and classed as culls, and charged back to the seller.

Seventy pounds to be considered a box of Paper-rind St. Michaels, and 65 pounds to be considered a box of all other varieties exclusive of culls.

In their statement accompanying this document, the buyers expressly state that they did not consider the prices to be paid for oranges and seem to desire that they should not be charged with being a combine on the subject of prices. They agree among themselves concerning prices to be paid for packing as follows:

We establish a uniform rate, to pay per box for packing oranges, of three cents per box for graded fruit where the work is done by piece-work. Where fruit is not graded, four cents per box. Where fruit is carried to and from the packers, not to exceed two and three-fourths cents per box.

The dealers, however, seem to apprehend some little friction from the enforcement of their terms, for they make the following formal suggestion:

That it is the sense of this meeting that the orange-growers of Riverside and other orange-growing districts, be requested to call a meeting, and appoint for the whole men to represent them and their interests, at each packing-house in Riverside and other orange districts throughout the packing season, and to remain there and represent them in the weighing and culling of oranges, so as to insure the growers fair treatment, and enable the buyers to buy oranges in the way that they are compelled to sell them.

Whatever the declaration, as stated, of the ten buying firms who have agreed upon the terms which we have outlined, that they have not acted in the matter of fixing prices, there seems to be an impression at the South that the arrangement is not so innocent as appears upon its face. A Los Angeles telegram of Jan. 5th is so unkind as to say: "Buyers of Southern California oranges have perfected an organization for the purpose of controlling and regulating prices. The combine has held a meeting and the evident intention is to freeze out the grower and force him to accept any price they may dictate. The result of this will probably be an organization on the part of the growers for the purpose of disposing of their crop themselves."

This telegram fortunately gives the remedy as well as the disease, so that the latter can be at once applied, in case of the outbreak of the former. The Southern orange-growers have had a good deal of experience during the last ten years, and they are a wide-awake and resourceful people. They can combine and do their own business if need be, and do it successfully. They have done it before.

No doubt, however, the enterprising merchants operating in Southern California oranges are entitled to reward for their energy and business skill, and we trust they will not endeavor to secure more than a fair recompense. If they do not, the vast and increasing trade will proceed satisfactorily and enrich all concerned either as growers or dealers. On the other hand, an iniquitous combine will create a conflict and occasion vexation and losses all around.

## The Marysville Citrus Fair.

On next Monday, Jan. 12th, the Northern and Central California Citrus Fair will open at Marysville. The event has been fully heralded in our columns from week to week, and we are glad to announce that our friends in the Marysville district will give their visitors something worth going long distances to see. The *Appeal* of Tuesday, speaking of the preparations for the fair, says:

It will be a feast for the eye; an astonishing, entrancing display of beauty in foliage and fruit. Everybody in the State should see it, for it will be worth a long journey to behold. It is to be a proud week for Northern California, for Marysville is doing more than justice to the occasion. Scores of enthusiastic ladies are lending their skill and taste to voluntary labors of adornment. Some idea of the extent of the decoration may be gained from the bare statement that thousands of feet of evergreen "ropes"—literally more than a mile of it—has been made for festoons, wreaths and ornamental effects, and many thousands of oranges have been used in the ornamentation of the walls and ceilings. Such beauty and fullness of decoration as will distinguish this fair has never before been attempted in displays of citrus fruits. And the showing of fruit promises to be of a completeness, merit and attractiveness corresponding to the decorative effects.

As shown in last week's *RURAL*, there will be excursions from all leading points in Central and Northern California, and reduced rates for the round trip. There should be a full attendance during the week beginning next Monday.

Visitors will not only see the fair at Marysville. They can find within the city limits many old bearing orange trees like those shown in the engraving on this page.

## Ice Spring Craters in Utah.

The historic Lake Bonneville, which was the largest of the lakes of the Great Basin, was fed chiefly by the snows of the Wasatch and Uintah mountains. Its catchment basin embraced about five degrees of latitude and three of longitude, containing about 54,000 square miles, or the fourth part of the area of the Great Basin. This region of Utah has been made a subject of special study of late years by the U. S. Geological Survey, and many facts of great scientific interest have been developed.

Of the various volcanic districts of Utah, that which is the most interesting in this connection occupies the eastern portion of the Sevier Desert in the vicinity of the towns of Holden, Fillmore, Corn Creek, Kemosh and Deseret. Nearest to Fillmore is the Ice Spring lava field, with its cluster of craters. The lavas of this locality are the most recent within the Bonneville area, and their phenomena are typical of sub-aerial eruptions. The craters are grouped closely together. There have been at least twelve successive eruptions through as many independent vents within a radius of 1500 feet, and none of these eruptions appears to have been large.

One of the largest of the Sooria hills is the Crescent, shown in the accompanying engravings. It is a crater fragment showing nearly one-half of the original circle. It rises 250 feet above the eastern base, and the entire crater appears to have had a diameter of 2200 feet. One end of the Crescent is buried

ICE SPRING CRATERS; THE CRESCENT AS SEEN FROM THE MITER.

CRESCENT. MITER. TERRACE.  
ICE SPRING CRATERS; BIRD'S-EYE VIEW FROM THE WEST.

beneath a lava crater, the Miter. The other is cut off by a stream of lava flowing from the same.

The Miter, also shown in the engraving, is perhaps the most recent of the craters. Its rim is nearly circular, with a diameter of 950 feet. Its highest side, on the east, rises 275 feet above the central depression. Its history has involved at least two overflows. After it had reached about its present size, the lava rose within it, breached its north side, and discharged.

The discharge was followed by explosive eruptions and the breach was repaired.

Between the Miter and the Crescent, stands a low cone resembling the Miter in form, but only 400 feet in diameter.

The Terrace crater lies just south of the Miter, with an irregular outline and an extreme length of 1100 feet; width, 700 feet. The depth of the crater below its general rim is 260 feet.

The name of the Ice Spring lava beds is derived from what may be regarded as a natural ice-house, existing in one of the deeper hollows of the fields. It is in a natural pit among the lava blocks, and so sheltered by an overhanging ledge that it never receives the direct rays of the sun.

## QUERIES AND REPLIES.

## Grass for Hillside Orchards, Etc.

EDITORS PRESS:—I wish to ask again a question which I asked about a year ago, but to which I got no satisfactory response. Can any one recommend to me a grass, for use in foothill orchards, which will not be injurious to trees and which will serve to prevent the "wash" of late rains to a certain extent?

Also, can any fruit-grower give me his experience with Routier's seedling apricot in the foothills?—P., Stillwater, Cal.

1. Is not the failure to get any satisfactory response to the first question due to the fact that any grass which would fill the soil with roots sufficiently to resist washing would, during the dry season, exhaust so much moisture from the soil for its own growth that the trees would make small growth and bear small fruit? Hillside usually part with their moisture all too soon, even if kept clean and well cultivated, and if turfed would receive less by penetration from winter storms and would lose more by the

demands of the grass roots. We imagine our correspondent seeks for that which he would be glad to be rid of soon afterward; and if he obtained what he sought, in the form of a grass with running roots to hold the soil, he would have something which he would find it very hard to get rid of. What say others?

2. We would be glad to hear more of the Routier's apricot. Perhaps Robert Williamson of the W. R. Strong Co., who first catalogued the variety, can tell us of its adaptations, etc.

## The Linasina Tree.

EDITORS PRESS:—With this I send you a photograph of the South American Linasina tree (*Parkinsonia*), as it appears growing in our yard. It was grown from seed brought by us from the Argentine Republic, is four years old, and is about 15 feet high. The bark is always bright green on the branches and twigs; the limbs are always angular, or jointed, with a thorn at each angle, long and drooping. The compound leaves are composed of a long, flat, slender, midrib (often 20 inches long) with a multitude of very small leaflets arranged alternately on each edge; these fold across the midrib at night in a peculiarly graceful manner. The flowers are about three-fourths of an inch in diameter, light yellow, with a delicate fragrance, and appear from June to September. The fruit is a slender pod, containing from one to seven small beans.

It is a tree of unique appearance, is quite hardy, stands drouth well; will bear some freezing, but how much cold it will stand I cannot say. It makes a beautiful lawn tree, is fine for avenues, and one of the best hedge trees known, where a useful hedge is wanted. It can be pruned and trained as desired.—H. CHURCHMAN, Whittier, Los Angeles Co.

The photograph shows in its general features the points described by our correspondent, but unfortunately is too defective in detail to make it available for producing an engraving. Our readers may, however, be interested in the description as given.

## Prunes at the North.

EDITORS PRESS:—I have heard a prominent fruit-grower of Western Washington make the statement that the Italian prune cannot or is not grown successfully for drying purposes in California. He also claimed that that particular variety of the prune family grew to greater perfection in the south part of Western Washington and in Oregon. I should very much appreciate information as to the above statement. I have set out an orchard of 1500 prune trees (Italian) on newly cleared upland soil, one-third sand and two-thirds shot clay. Do you think the trees need fertilizing, and in place of barn-yard manure, what would you suggest?

There are splendid fruit lands all about this town, and a large number of fruit trees and vines are be-

ing set out this fall and winter.—WM. F. TOLES, Centralia, Wash.

We have heard of this claim before. It may be true, but we apprehend the reason why we grow so few Fellenbergs in this State is not that this variety is worse than at the north, but that the Petite d'Agen does so much better in every way that it takes the lead. The French prune does better than the Italian in the orchard, it makes a better prune and it sells better. It may be very likely that one variety is just the thing for California and the other ditto for the North. This fact is not discreditable to either region.

## Stocks for Soils and Climates.

EDITORS PRESS:—Can you not obtain from practical fruit-growers a series of articles on adaptation of stocks to different soils and climates, as also to different varieties of fruit? It would help many.—GROWER.

Our book, "California Fruits and How to Grow Them," gives quite full consideration to these subjects, and the RURAL correspondents keep the same alive by the receipt of recent individual experience. We always enjoy the receipt of a letter giving actual observations on stocks for fruit trees. Get the root right and the victory is more than half won.

## AGRICULTURAL NOTES

## CALIFORNIA.

## Alameda.

**STEAM PLOWING AND SEEDING.**—Haywards *Journal*, Jan. 2: A steam plow is in operation on a number of the fields of Irvington, and is attracting a good deal of attention. It does its work very speedily and effectively; but some of our old-time farmers think it looks rather uncanny walking over the fields.

Much seeding has been done by the farmers since the recent rains, although the land is a little hard in some places for the plow. There will be much more adobe planted this year than for some years past. Many farmers think best to get the seed in early, and if a dry season follows it will have the benefit of such rains as we do have. Sufficient rain to plow is all that is necessary for some time in this section, as there is plenty of moisture in the ground from last season's downpour.

## Butte.

**EARLY RESULTS.**—Palermo *Progress*: J. Wheeler, who resides about a mile and a half northeast of Palermo, was in town this week and presented us with a dozen seedling oranges grown on his place on trees set out in 1888. The oranges are fine, large ones. Lots of the Palermo trees are loaded with the golden fruit. Mr. Trim has some fine lemons. There is no question but that Palermo will raise some of the finest oranges and lemons in this State.

**LARGE PEACH ORCHARD.**—Palermo *Progress*, Jan. 2: R. A. Moore of Hamilton will plant this winter nearly 5000 peach trees. They will include the orange, Edwards, Tuscan, and other fine varieties of the cling peach, and also the early Crawford, Salway, Muir and other choice freestone peaches. He will plant his orchard north of his residence on the fine rich bottom-land adjoining the famous Hatch & Rock orchards.

**EXTENSIVE RAISIN-GRAPE CULTURE.**—Chico *Enterprise*, Dec. 29: The Marysville Vineyard Co. of Colmena, organized to cultivate grapes on a large scale, has purchased 100 acres at Colmena and will begin at once. Raisins produced there this year are excellent and the yield is good. The directors are H. Juch, J. M. Berry, F. C. Miller, F. H. Greeley and J. H. Flint.

**SECOND-CROP PEARS.**—James McPherson, Garden Ranch, Dec. 29: I had a considerable second crop in my Bartlett pear orchard and when picking the first crop pulled off at least two-thirds of the second crop and threw them away. In October I picked the remainder of the second crop, about 400 pounds. They were of good size and seemed to me to contain more sugar when mellowed than the first crop; so Butte county is not behind in anything I can see, except roads.

**TREE PLANTING NOTES.**—Oroville *Mercury*, Jan. 2: The Messrs. Power, three miles east of Oroville, have 18 acres of oranges and are now preparing ground for seven acres more. They will be content with a 25-acre orange grove and about as many acres in peaches, olives and figs, which they are now preparing to plant. . . . Oroville *Register*, Jan. 2: Chas. Charvot of Thermalito will begin planting next week 500 orange trees. These will be 400 seedlings and 100 Washington Navels. He will also plant 1000 early White Muscat grapes, 300 Tokay and 200 French wine grapes, and will set out 50 White Adriatic figs and 100 Villa Franca lemons. Mr. R. Power of Olive district will plant this winter 22 acres in addition to the number of fruit trees now growing upon his land, thus making an orchard of 40 acres. Of this, 25 acres will be in oranges, while the remainder will be in olives, almonds, etc.

**INCREASED ACREAGE SEEDED TO WHEAT.**—Gridley *Herald*, Jan. 3: Grain sown upon summer-fallow land long enough to sprout is coming up nicely and presents a very thrifty appearance. Winter sown has not been planted a sufficient length of time to germinate, although we hear of several tracts sown the early part of last month upon which a slight tinge of green can be seen. From the information at our command, however, we judge that the present area of this class of sowing will be increased fully one-third during the next fortnight, the weather and condition of the soil being exceedingly fine for the work. In fact, three-fourths of our ranchers seem to be thus engaged at this writing. It is safe to say that the aggregate acreage sown to wheat in Gridley township will exceed that of last season over one third, while the season so far has been so favorable that ranchers whose judgment is generally accepted as reliable, predict the largest crop harvested since 1890. The indications are that the acreage sown in barley will be at least twice that of last season.

## Colusa.

**A FARMERS' TELEPHONE.**—Willows, Jan. 1: Jeff Garnett has utilized three miles of barbed wire fence for a telephone. It runs from his old home to his new residence. A small wire is attached to a telephone in each house and thence to the wire fence.

## Fresno.

**SMALL FRUITS PAY WELL.**—Fresno *Expositor*, Jan. 3: There is considerable interest being taken among the fruit-growers of Fresno county, and particularly the colonists, in the culture of strawberries, blackberries and raspberries. The strawberry in particular has received much attention during the past year. One of our col-

onists has been very successful in producing the variety known as the "pineapple." It has a fine flavor and grows luxuriantly. The most profitable results can be obtained by planting out between rows of fruit trees, and they usually provide more plant food in the way of fertilizers than they take off. They generally produce best and grow more readily when placed upon ridges where they can be irrigated from the ditches. The profits derived from the strawberry are very large, as the home product, being fresh for the market, is always preferable. Blackberries are being produced extensively in the orchards, and, like the strawberry, they provide fertilizing food in excess of that which they consume when planted and cultivated with fruit trees. Several of the small land-owners in the colonies have adopted this plan, and the results have been very satisfactory. The Kittatinny and Lawton are the favorite varieties, and are found to produce very largely. The New Rochelle raspberry has been a favorite with producers, but the best results have not been obtained, owing to the sun beat, which overtakes them before the ripening season. In shaded localities they mature and are delicious.

## El Dorado.

**AN EL DORADO NURSERY.**—El Dorado *Republican*, Jan. 1: The W. R. Strong Co. of Sacramento is preparing to start a nursery near Placerville, and is now negotiating for about five acres of land favorably located for that business.

## Humboldt.

**FRUIT INDUSTRY.**—Eureka *Humboldt*, Jan. 1: Over 14,000 boxes of apples have been sent out of the county during the last six months. There are many people interested in the question of apple-growing. All of the owners of the 2000 orchards in the county are beginning to feel that good varieties of apples find a ready market than the more common products of the farm. They already know that they are a surer crop, and that the labor involved in fruit cultivation is much lighter and pleasanter work than growing potatoes and cereals.

## Los Angeles.

**BANANA-GROWING.**—Santa Monica *Outlook*, Dec. 31: John Steere brought into our office this morning some large ripe bananas, grown on his premises and picked from a bunch of 65, all ripe. Mr. Steere also showed us specimens that had attained the remarkable growth of eight feet during this year. This is a specimen of richness that belongs to at least 20,000 acres of land in this vicinity.

## Napa.

**VITICULTURAL NOTES.**—Napa *Register*, Jan. 2: There are in the county upward of 640 vineyards, containing five acres and more each. The great bulk of these are located between Yountville and Calistoga. From the former town to St. Helena the valley is almost a solid vineyard, and large fields of vines extend far up the slopes of the hills on either side. There are 20 or more vineyards in Pope valley, though none of them are of great extent. In Conn and Chiles valleys and contiguous billides there are quite a number of vineyards in good condition. There are a few excellent vineyards on Howell mountain, where a very fine quality of grapes is produced in good quantity. Foss, Berryessa, Wooden, Capelle and Gordon valleys cannot be said to be ranked as grape-producing localities. Not but that vines would flourish and bear abundantly there, but their isolation and the expense of transporting grapes when ripe or wine when pressed is too great to justify the investing of much capital in this industry. In the Sycamore hills there are but few vineyards. In Brown valley, the Redwoods and away toward and to the Sonoma county line, along the highway leading from Napa City to Sonoma, are to be found vineyards of greater or less extent. In almost all vineyards in the county there are to be found two or three varieties of vines, viz.: Zinfandel, Riesling and Chasselas. These appear to be standard wine grapes. In very many there are grown from five to 20 other varieties, many of which are the finest wine grapes to be found anywhere on the globe. The yield of grapes this season has, in many instances, been larger than viticulturists counted upon in the early summer months; in other cases not so much. The quantity is considerable, the quality superior. Good prices ought to be obtained for the season's yield. There are in the county over 17,000 acres of bearing vines. These have yielded from one ton to five or more per acre, according to the location, age and condition of the vineyards.

## Orange.

**THE POTATO CROP.**—Anaheim *Gazette*, Jan. 1: Tim Carroll's big potato patch was a scene of activity last week. A gang of men was engaged in digging the second potato crop this season. The first crop went 375 sacks to the acre, and the second crop will go in the neighborhood of 150 sacks, worth 2½ cents per pound for seed. This potato land has produced on an average over 500 sacks per acre the past season. The first crop brought in over \$4000, and the present one will go well up toward that figure. Next year Tim will have 100 acres planted to this paying crop. J. L. Holly, who some weeks ago purchased a Prun potato-digger, which E. A. White procured for him from the factory at Hoosac Falls, N. Y., informs us that it works like a charm on the peat-lands south of town. He digs five acres of potatoes per day with it. Mr. Holly has 25 acres in potatoes this season, and has just dug his second crop, which yielded largely. Next year he will plant

50 acres. There are several hundred acres planted to potatoes in this county. The second crop, now being dug, promises to bring prices quite as satisfactory as those which ruled for the first crop, although no one looks for a recurrence of the high prices paid for potatoes in the spring.

## San Bernardino.

**COLTS KILLED BY WIRE FENCE.**—San Bernardino *Times-Index*, Jan. 3: James W. Waters had two very valuable blooded colts, for one of which he was offered, a few days ago, \$300. Thursday morning he had a man take the colts from his stable to pasture them. The man proceeded with them all right until a dog rushed out and frightened them so that they ran into a wire fence, injuring both so that one of them will die from the effects and the other will never amount to much. The foreleg of one of the colts was cut almost off, while the other was cut and injured in several places. Mr. Waters will find out whether a wire fence is lawful or not.

**ORANGE-INDUSTRY GROWTH.**—Riverside *Press and Horticulturist*, Jan. 3: Riverside in 1872 was a poor sheep ranch. In 1880-1 it shipped 15 carloads, or 4290 boxes, of oranges; the amount yearly increased, until in 1888-9 it was 925 carloads, or 263,879 boxes. In 1890 it rose to 1253 carloads, or 358,341 boxes; and an important fact is that the largest shipment was in April (455 carloads, or 130,226 boxes) at the time when the supply from other orange regions for the markets East had nearly ceased.

**BEETS IN DECIDUOUS FRUIT ORCHARDS.**—Chico *Champion*, Jan. 2: The past year proved that deciduous fruits brought about as large incomes, acre for acre, as citrus. Deciduous fruit trees come into bearing sooner than orange and lemon trees. Now that the beet-sugar industry is established here, the expense of growing a deciduous fruit orchard can be more than met by cultivating beets between the rows. This is no theory but a demonstrated fact. There are many thousands of acres of the Chico moist and semi-moist lands, which are bigly suited to this kind of double culture. It has been very satisfactorily proven at Watsonville that over \$40 an acre net can be made from beets grown in orchards till they are three years old.

## Solano.

**CROP PROSPECTS.**—Dixon *Tribune*, Jan. 2: It is estimated that the acreage sown to grain in this locality will be at least one-third more than in ordinary seasons. After the heavy rains of last season, however, a very large area of land was summer-fallowed, but owing to the excessive moisture a large portion of it had been overgrown with rank vegetation, which exhausted the soil to a considerable extent, so the yield, under the most favorable conditions, cannot be expected to exceed the usual rate.

## Stanislaus.

**SEEDING ABOUT OVER.**—Oakdale *Oor. Modesto Herald*, Jan. 1: We have recently interviewed several leading farmers and find they have made the best of the favorable season for seeding. The area sown is large and the work has been thorough, owing to the favorable condition of the soil. John McHugh, a prosperous grain-grower, who resides south of Oakdale, stated to the writer yesterday that a few of his neighbors had finished for the season; that all had their work well advanced, and with a few exceptions would finish up this week.

## Sutter.

**CROP STATISTICS.**—Yuba City *Independent*: The crop statistics for the season of 1890, as returned by the county assessor, are as follows in acres: Wheat, 43,412; oats, 380; barley, 4899; corn, 106; hay, 4802; number fruit trees, 185,216; vines, acres, 691.

**RAISIN NOTES.**—Yuba City, Jan. 1: The Sutter County Fruit Co. packed 22,500 boxes of raisins this season. Wm. Calmes of College City sold last year over \$5000 worth of raisins from 17 acres. No irrigation. There will be between 300 and 400 acres of raisin grapes planted close around College City this year, besides a number of large vineyards farther out.

**GRAIN CROP ITEMS.**—Nicolans *Cor. Yuba City Independent*, Jan. 2: The ground was never in better condition for plowing than at present. The farmers are taking advantage of the favorable weather, and a large amount of winter plowing has been done. Owing to the late rains and the very heavy fogs which have followed them, the top of the plowed ground has been so sticky as to render harrowing exceedingly difficult, if not impossible. While it has not rained here for nearly two weeks, yet the absence of sunlight and continual presence of the fog have combined to keep a great deal of grain from being sown that would have now been in the ground. The acreage sown to grain will be the largest ever known here. Last winter's water on the acreage very short, and so a correspondingly large amount of land was summer-fallowed, which, together with the winter-sown grain, swells the acreage for next year's crop to the largest ever known in this community. The summer-fallowed grain is up and looks well, and with a reasonable season, a large crop may be expected.

## Tulare.

**POULTRY-RAISING.**—Tulare *Register*, Jan. 2: This is a great poultry region, and thousands of dollars are involved. In a ride out over the country, great flocks of chickens, turkeys and ducks are seen in such numbers that one wonders what will be done with them all; but they go and good American coin comes. The demand is great at home, while a dense popu-

lation of non-producers in the bay region is to be supplied. With all the home product, large quantities of poultry and eggs are shipped in from the East.

**LARGE ACREAGE TO GRAIN.**—Traver *Advocate*, Jan. 1: J. H. and Charles Johnson of Dinuba have just finished putting in 1000 acres of the Pleasant Valley Stock Farm, eight miles west of Huron, into grain. The company that owns this land has one of the largest and finest farming properties in the State. It has an abundance of water for irrigation even for its wheat-fields, also a large alfalfa-field and a nice one-year-old vineyard. Water for irrigation is taken from the Poso and the company is getting ready to still further enlarge its ditches for irrigation. This fall and winter has been one of the most favorable ever known here for farming. There has been no frost to speak of; the rainfall has not been so heavy as it was last year up to date, but for the past month the soil all over the 76 country has been in excellent condition for plowing and the land has been rapidly seeded to grain or being prepared for trees and vines. Even the adobe wheat-lands in toward the foothills, a good part of which could not be seeded last winter, or was poorly put in, owing to frequent rains causing the soil to become sticky and unfit to plow, are being seeded successfully this season, and if there is an abundance of spring rains the wheat crop of the 76 country for the season of 1890-91 bids fair to exceed in productiveness the noted season of 1889-90. Farmers are all pleased with the outlook for abundant crops and the work of seeding goes merrily on.

**TREE AND VINE PLANTING.**—Visalia *Times*, Jan. 1: I. H. Thomas estimates that 4000 acres of land in Tulare county will be planted to trees alone this winter. The acreage that will be devoted to vines may exceed this figure.

**ACREAGE TO RAISIN GRAPES.**—Visalia *Delta*, Jan. 1: About 2000 acres will be planted to raisin grapes this spring about Traver. The Carmelito Vineyard Company, of which S. F. Earl is secretary, and which purchased 800 acres of fine land, is building a nice residence, barn, etc., and will this year plant 160 acres to raisin grapes. Its ranch is located in the Kings river bottom, on the old 76 ranch.

**LARGE WHEAT RANCH.**—Traver, Jan. 1: J. M. Clark & Brother, who farm for wheat 2900 acres of land near Traver, are running eight 8-horse teams and putting in on an average 100 acres a day. They drill their wheat; hence their success.

## Ventura.

**VENTURA'S PRODUCE SHIPMENTS.**—Los Angeles *Express*, Jan. 2: The bean shipments of Ventura county have so far this season numbered about 600 cars. There are yet 400 cars to be shipped before the entire crop is sent to market. This crop is from 13,924 acres planted to beans. There were shipped from this county during the past season 6000 tons of apricots, 600 of prunes, 300 of apples and 200 of peaches. The walnut crop measured 150 tons, the orange and lemon crop 250 tons. There were 3600 acres planted to wheat, 60,200 to barley, 7500 to corn and 193 to oats. This season it is estimated that the crop will be 20 per cent in advance of that of last season. The available lands of Ventura county are being fast taken up and profitably cultivated, much of the credit for which is due to the Southern Pacific railroad and its extensions.

## ARIZONA.

**IRRIGATION.**—Yuma *Times*, Dec. 31: There are 701 miles of irrigation canals in the Territory, and 295,200 acres of land irrigated. The arable land which is practically irrigable, amounts to 5,550,000 acres. The Governor solicits the General Government to grant to the Territory all the public lands within its borders for reclamation and development. It is claimed that where irrigated, Arizona has the richest soil and is the best hay and vegetable country in the world.

**LARGE RESERVOIR AND IRRIGATING CANAL.**—Phoenix *Republican*: Few of our people are aware of the existence of one of the most important enterprises in Central Arizona. That old pioneer, Wm. A. Hancock, assisted by L. H. Orme, J. D. Monihon and N. O. Murphy, in 1888, organized the Agua Fria Water & Land Company, with a capital stock of \$3,000,000, for the purpose of storing in reservoirs the water of the Agua Fria river, in order that it might be used for irrigating the large body of land that lies on both sides of that river, that on the east side reaching down to the line of the Arizona canal, within 10 miles of the city of Phoenix. The lower reservoir site is at Frog Tanke, and with a dam 100 feet high, will store 8,000,000 cubic feet of water. The upper site, 10 miles farther up the river, with a dam 150 feet high, will store 30,000,000 cubic feet of water. The watershed of the river and its tributaries, above the lower dam, contains 150,000 square miles, and with an annual rainfall of 15 inches, it will afford 50,000,000,000 cubic feet, or an ample supply of water for irrigation of 150,000 acres. The main canal will be 45 feet wide on the bottom and 55 feet at the surface of the water, six feet from the bottom. The grade will be two feet per mile. At the Calderwood Butte, 12 miles below the dam, the water for the land on the west side of the river will be carried across the river in large pipes, supported by a suspension bridge, with a fall of 50 feet in crossing the stream. The construction of the dams and canals, including 40 miles of laterals, will involve the expenditure of probably \$1,400,000.

## The Northern Citrus Fair.

The California State Citrus Fair for the counties outside of the 6th Congressional district will be held at Marysville, Cal., opening Jan. 12th and continuing through the week. G. W. Hancock and John Boggs are Managing Directors. The officers of the local association are: Norman Rideout, President; G. W. Harney, Secretary; G. W. Peacock, Treasurer; James O'Brien, Jr., Superintendent.

The Southern Pacific railway will return exhibits free of charge on presentation to the agent at Marysville of a certificate from the Secretary of the fair saying that the property has been on exhibition, and has not changed hands. Wells, Fargo & Co. will also bring exhibits at their special fruit rates.

Enter exhibits and apply for space at once. Apply to or address G. W. Harney, Sec'y, 2d St., Marysville, Cal.

## PREMIUM LIST.

## Open to Producers Only.

## CLASS 1—COUNTY EXHIBITS.

Best exhibit of citrus fruits by one county.  
First premium...\$200 00 | Second premium \$150 00  
Third premium...100 00 | Fourth premium 75 00

## CLASS 2—WASHINGTON NAVELS.

The largest and best exhibit of Washington Navel oranges by one grower. The exhibit to receive an award under this premium must contain not less than 2000 oranges.  
First premium...\$200 | Second premium...\$100

## CLASS 3—WASHINGTON NAVELS.

Best exhibit of Washington Navel oranges. (Any exhibit competing in class 2 will not be entitled to compete in this class.)  
First premium...\$50 | Second premium...\$30  
Third...20

## CLASS 4—BUDDED ORANGES.

Best exhibit of budded oranges other than Washington Navel.  
First premium...\$25 | Second premium...\$15  
Third...10

## CLASS 5—BUDDED ORANGES.

Best 12 budded oranges exhibited and grown by one person.  
First premium...\$10 | Second premium...\$9  
Third...8 | Fourth...7  
Fifth...6 | Sixth...5  
Seventh...4 | Eighth...3  
Ninth...2 | Tenth...1

## CLASS 6—SEEDLINGS.

Best exhibit of seedling oranges.  
First premium...\$100 | Second premium...\$75  
Third...50

## CLASS 7—DOZEN SEEDLINGS.

Best 12 seedlings by one grower.  
First premium...\$10 | Second premium...\$9  
Third...8 | Fourth...7  
Fifth...6 | Sixth...5  
Seventh...4 | Eighth...3  
Ninth...2 | Tenth...1

## CLASS 8—LEMONS.

Best display of lemons.  
First premium...\$50 | Second premium...\$30  
Third...20

## CLASS 9—LIMES.

Best display of limes.  
First premium...\$10 | Second premium...\$5

## CLASS 10—SHADDOCKS.

Best display of shaddock and pumalos.  
First premium...\$5 | Second premium...\$3  
Third...2

## CLASS 11—OLIVES.

Best display of olives.  
First premium...\$20 | Second premium...\$10  
Third...5

## CLASS 12—PICKLED OLIVES.

Best display of pickled olives.  
First premium...\$10 | Second premium...\$5

## CLASS 13—OLIVE OIL.

Best display of olive oil.  
First premium...\$50 | Second premium...\$25  
Third...15 | Fourth...10  
Fifth...5

## CLASS 14—PERSIMMONS.

Best exhibit of persimmons.  
First premium...\$5 | Second premium...\$3  
Third...2

## CLASS 15—POMEGRANATES.

Best display of pomegranates.  
First premium...\$3 | Second premium...\$2  
Third...1

## CLASS 16—RAISINS.

Best display of raisins.  
First premium...\$100 | Second premium...\$75  
Third...50 | Fourth...25  
Fifth...10

## CLASS 17—DRIED FIGS.

Best display of dried figs.  
First premium...\$25 | Second premium...\$15  
Third...10 | Best display of dried White Adriatic figs 20

## CLASS 18—PRUNES.

Best display of dried prunes.  
First premium...\$50 | Second premium...\$25  
Third...10

## CLASS 19—DATES.

Best display of dates.  
First premium...\$5 | Second premium...\$2

## CLASS 20—DRIED FRUITS.

Best general exhibit of dried fruits other than raisins.  
First premium...\$100 | Second premium...\$75  
Third...50 | Fourth...25

## CLASS 21—PRESERVED AND CANNED.

Best exhibit of canned and preserved fruits exhibited by others than packers.  
First premium...\$15 | Second premium...\$10  
Third...5

## CLASS 22—NUTS.

Best general exhibit of nuts.  
First premium...\$15 | Second premium...\$10  
Third...5

## CLASS 23—NURSERY STOCK.

Best exhibit of citrus nursery stock...\$25

## CLASS 24—PLANTS AND FLOWERS.

Best exhibit of potted plants and flowers.  
First premium...\$10 | Second premium...\$5  
Third...2

## CLASS 25—ESSAY.

Best practical essay on orange culture (limited to 2500 words)...\$50  
The essay must be type-written and delivered to the Secretary on or before Jan. 10, 1891, unsigned but accompanied by a letter giving name of contributor.

## CLASS 26—WINES.

Best general display of wines by maker...\$50

## CLASS 27—MOST ARTISTIC DISPLAY.

Most artistic display...\$50

## Rules and Regulations.

1. All exhibits must be in position and readiness for examination by the judges at 12 o'clock noon Tuesday, and no premiums will be paid on any article on exhibition unless properly entered on the Secretary's books before that time, and in the place assigned them for exhibition.

2. All exhibitors must obtain a card with number on from entry clerk to agree with exhibit. This card must be kept in a conspicuous place near the exhibit.

3. Competitors must be producers except in the competition for wines, in which case maker is admitted.

4. No article or exhibit entered for premium can be removed before the close of the fair without permission of the superintendent.

5. Free cartage in Marysville for all exhibits.

The best anodyne and expectorant for the cure of colds and coughs and all throat, lung and bronchial troubles, is, undoubtedly, Ayer's Cherry Pectoral. Ask your druggists for it, and, at the same time, for Ayer's Almanac, which is free to all.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## \$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco.

## \$3,250,000

TO LOAN ON MORTGAGE ON RANCHES AND CITY real estate below market rates. HOWE & KIMBALL, 508 California St., S. F.

# Pretty Palermo!

## THE QUEEN COLONY OF THE NORTHERN CITRUS BELT.

The visitors to the Citrus Fair at Marysville should not make a mistake and return home without having seen the pretty and prosperous Colony of Palermo. It is but an hour's ride on the Oroville train and the time is well expended.

The Colony comprises about 7000 acres and is situated on the line of the branch Railroad from Marysville to Oroville, being five miles from the latter place, which, by the way, is the County Seat of Butte County.

A large tract, which gently slopes from the railroad to the foothills, is divided into

### LOTS OF FIVE ACRES AND UPWARD,

And the wide streets, avenues and beautiful drives form a feature of Palermo's prosperity.

A bountiful supply of pure fresh water is everywhere distributed. Large and permanent reservoirs assure to the Palermo Colonists an absolutely unlimited supply of water for irrigation.

As an indication of their belief in the increasing prosperity of Palermo, it may be mentioned that the Railroad Company has recently purchased the Townsite and constructed a commodious depot. Recently the "Palermo Progress," a weekly paper, has made its appearance, and telegraph, express and post offices were established long since. A general merchandise store, church, planing mill, blacksmith shop, etc., etc., form the nucleus of a future city.

### COMFORTABLE HOMES,

Surrounded by orange groves, dot the plains of Palermo. Thriving orchards and vineyards prove the great value of the various tracts now offered for sale.

PURCHASE AT PALERMO. PLANT ORANGES AND FRUITS AND BECOME PROSPEROUS AND HAPPY, is the advice of

## McAFEE, BALDWIN & HAMMOND,

REAL ESTATE AGENTS AND AUCTIONEERS,

10 MONTGOMERY STREET, - - SAN FRANCISCO.

## BLISTER FOR HORSES.

WHAT TO USE.

For a blister to use on live-stock,

## COMBAULT'S CAUSTIC BALSAM

Has NO EQUAL. Why?

Because it is a perfectly safe remedy for any one to use. After applying as directed it needs no attention, acts quickly and is effective. Removes all bunches or enlargements and guaranteed not to leave scar or blemish. Supersedes all cautery or firing. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LA WRENCE, WILLIAMS & CO., Cleveland, O.

## PEOPLES HOME SAVINGS BANK,

805 Market Street, in Flood Building.

### DIVIDEND NOTICE.

FOR THE HALF-YEAR ENDING DECEMBER 31, 1890, a dividend has been declared at the rate of five and fifty-two one-hundredths (5.52) per cent per annum on term deposits and four and sixty one-hundredths (4.60) per cent per annum on ordinary deposits, free of taxes, payable on and after FRIDAY, January 2, 1891. B. O. CARR, Secretary.

## The German Savings and Loan Society,

526 California Street.

### DIVIDEND NOTICE.

FOR THE HALF-YEAR ENDING DECEMBER 31, 1890, a dividend has been declared at the rate of five and forty-hundredths (5.40) per cent per annum on Term Deposits, and four and one-half (4 1/2) per cent per annum on Ordinary Deposits. Payable on and after FRIDAY, January 2, 1891. GEO. TOURNEY, Secretary.

## HORTICULTURE.

## Culture of Citrus Fruits in Northern California.

At the recent convention of fruit-growers at Santa Cruz, under the auspices of the State Board of Horticulture, the following essay was read by S. S. Boynton of Oroville. This interesting paper was first published in the *RURAL* of Dec. 13, but is here repeated as especially appropriate for circulation at the Marysville Citrus Fair:

The culture of citrus fruits in Northern California is no longer theoretical or experimental, no longer a conceit, a supposition or a belief, but is a solid, enduring, self-evident and living fact. The orange and lemon are there not dooryard ornaments, set as curiosities, placed in sheltered and protected spots, and are not grown under conditions more favorable than are elsewhere in this State awarded to these fruits. The "Northern Citrus Belt" has long been the butt of good-natured ridicule, the subject of jest and laughter by those who had interests to subserve by crying down its merits and deriding its possibilities. The time is, however, near at hand when its true light will burst forth with a vividness and brilliancy little dreamed of by those who have not studied its grand capabilities and its enormous territorial extent.

Within the next few years such a quantity of citrus fruits will be produced and shipped from that region as will forever set at rest any aspersions or reflections upon that land as a citrus-fruit region. The day is by no means distant when its orange and lemon trees will be numbered by millions, and when its annual output of these fruits will amount to thousands of carloads.

We are not talking at random upon this subject nor carried away by enthusiasm. We have given the subject not only months but years of careful study, and know whereof we speak.

For a full score and ten years the historic orange tree at Bidwell Bar, in Butte, 200 miles north of where we now are, has blossomed and borne fruit without the loss of a single crop, and stands to-day a mute but eloquent green and living witness whose testimony is worthy of consideration and belief. While in a hundred spots throughout the counties of Butte, Yuba, Placer and others that might be named, oranges, olives and lemons have been in bearing for the past 20 years, yet citrus culture in its broad and commercial sense is still in its swaddling-clothes.

In September of 1885, in the town of Oroville, the first suggestion was made of holding a citrus fair in Northern California. Then the Sacramento *See* caught up the idea and asserted that the citizens of Oroville knew that oranges could be grown there, but what was needed was to convince others of that fact. It urged that a citrus fair held in Sacramento, the capital of the State, ought to and would accomplish this purpose. The residents of Oroville coincided with the statements of the Sacramento journals and those of other towns fell into line. The business men of the capital city made that exhibition a reality, and fruit from 12 different counties was displayed at the first citrus fair of Northern California. That extensive, marvelous, and splendid display of the semi-tropical productions of the northern part of this State, at once, and for the first time, awakened the people of that region to the possibilities of their soil and climate, and was the direct cause of the great planting of citrus trees that has since taken place. The first fair was held in January of 1886, so that the oldest trees, set out since that date, and which comprise more than nine-tenths of the total number of the whole region, are only four years old at the present time.

It will thus be seen that citrus culture on an extended scale is a new industry in Northern California. The first man to be aroused and stimulated to action was Hon. John C. Gray of Oroville, who left the pavilion in which that fair was being held, hurried to his home, had 20 acres of land prepared, went to Santa Clara county and purchased 2000 young olive trees, and while the fair was still fresh in the minds of all, he had these 2000 young trees planted in Butte county soil. He has since continued in the line thus begun and has now 10,000 young and thrifty olive trees, and from several hundred of these he will this year gather fruit. That he made no financial mistake is evident from the fact that he has since been offered \$500 an acre for his olive plantation. Other citizens of Oroville were quickened to activity by his example and an organization of the leading business men of that town was speedily effected. Thirty acres of good land were secured; two of the company went to Riverside and purchased 2100 Washington Navel orange trees, and during May and June these were planted on the north bank of Feather river in what is now the colony of Thermalito. The land cost them \$100 an acre, the trees were \$1.25 each, and to this must be added the cost of transportation, planting and caring for them during the intervening years. It will thus be seen that these gentlemen were not afraid to back their ideas and opinions of citrus culture with their coin. This grove has since been increased and at present numbers 3300 orange trees. They are now loaded with fast ripening

fruit and this year will yield a large and abundant crop.

Citrus-fruit planting was by no means confined to Butte, but all the other counties of the Sacramento valley felt the influence. A second citrus fair was held in the capital city in December of 1886, two fairs thus being held in one year, one in January and the other in the following December, and at this last fair fruit from 22 counties was displayed. These fairs, and liberal advertising by newspapers, caused much attention to be paid to citrus culture in Northern California, especially in the Sacramento valley and its adjacent foothills. Trees were planted not only in the sheltering foothills and on high and well-drained land, but in the open valley, and even along the low river bottoms, the very last place where an orange grove should be set. As a result of this movement continued during the past three years we have in the vicinity of Oroville, Thermalito and Palermo in Eastern Butte 98,349 orange, 6812 lemon and 49,600 olive trees, a total of 154,761, or in round numbers about 1500 acres. The number of citrus trees planted in other Northern California counties I am unable to state with exactness, but know that Placer, Sacramento, Colusa, Tehama, have all large numbers, and that Yuba in addition to her smaller tracts has planted one splendid young orchard of 130 acres or 13,000 orange trees in a single body. I believe it would not be unjust to the other counties in that section to estimate that Butte has planted as many citrus trees as all the others combined, which would then make 309,000 trees or 8000 acres devoted to the culture of citrus fruits in that part of the State.

It is unnecessary that I should go into particulars regarding the planting of orange seed, the manner of growing the young trees, budding and grafting and other practical details of that kind. To one point I will, however, call particular attention. Hitherto, all the young trees—orange, lemon and olive—planted in that section have been brought from Florida or from Southern California; now there are vast numbers of young trees being raised, and the future planting will be done with these home-grown trees. In the vicinity of Oroville there are at least half a million young trees from one to four years old, and there are a large number of these trees at Palermo, Wyandotte, Marysville, Chico, Newcastle and other places that will ere long be set out in orchards, and thus will be largely extended citrus culture in that part of California.

## Markets.

The market for oranges is considered almost unlimited. On the north lie the great States of Oregon and Washington with a population of 600,000, while to the east lies a vast territory, a portion of which we may with confidence expect to supply with its citrus fruits. With these certain and ever-increasing markets in view, the prospect for growing oranges in Northern California is an alluring one. The profits of those who have bearing trees are such as to encourage others who have planted out young orchards and are now awaiting their coming into bearing. So flattering are these prospects that during the present year a ten-acre tract of two-year-old Washington Navel orange trees at Thermalito sold for \$650 an acre. Sales at Palermo have also been extremely flattering.

If the citrus-fruit outlook is now so attractive and brilliant, some may ask why this industry was not pushed ahead long ago, for orange trees have been in bearing in that part of the State for the past 80 years. May we ask in turn, are there no other latent and undeveloped resources left in that and other parts of our grand State? The olive flourished for four score years in Southern California ere the manufacture of olive oil by Mr. Cooper and others attracted general attention to that tree. Fig-growing as a commercial enterprise is a comparatively new one, yet it has been known for 40 years that the fig flourished in all our warmer valleys. Fifteen years ago California raisins were a rarity, while now our output is enormous and is rapidly increasing; yet the vine was known to flourish here in great perfection many years ere raisin-making became a business. Cork is worthy of attention here, is adapted to our soil and climate, and in Spain and Northern Africa immense fortunes have been made in cork, yet it is a neglected industry in our State. It is certain that money can be made here in producing camphor, and that tree grows readily in all the warmer parts of California, yet who thinks of planting camphor trees from which to make money? Why is it that we still import rhubarb from Europe when it can be so readily produced here? There is money in licorice, yet that is among the neglected industries of California. Our prune production has grown into a marvelous and gigantic enterprise, yet prune trees here in this State long ere the fruit in any quantity was put upon the market. Various reasons prevented the earlier planting of citrus fruits in Northern California upon a large scale, and one of these by too many has been overlooked.

The orange and lemon have been most successful along the low foothills, as in Butte, Yuba and Placer. The earth there is mostly a reddish clay soil mixed with gravel, and which requires considerable water to make productive. Nearly all the water for irrigation in those localities was brought from the mountains for mining purposes and was held at a high price. Now, until the general decline in mining, no man could afford to buy water for irrigating purposes, and from this cause more than any

other may be traced the lack of planting citrus-fruit trees. When mining declined the price of water was lowered, men saw that they could afford to experiment, and they began to increase the number of their citrus trees. Another reason was in the great expense in caring for an orange grove and bringing it into bearing. If the orange is king of fruits, it requires a royal revenue to pay the great expense during the time it is growing and coming into bearing. If to this we add the lack of knowledge regarding the cultivation of citrus fruits among the residents, and the further fact that many believed they could only be grown in sheltered and protected spots where the conditions were unusually favorable, the reason is fairly explained why citrus culture was not sooner begun upon an extensive scale.

The first citrus fair at Sacramento was the great awakening. When the fruit from 12 grand counties had been gathered and the productions compared, it was seen that citrus culture extended over a far broader area than people had heretofore realized. The moment this fact was fairly impressed upon the minds of the people, an almost instantaneous change was effected. It was like the traveler who emerges from the dark forest into the open sunlight of the broad valley, like the view presented from the top of a noble mountain when the earth grows at once tenfold larger than ever before. Vast and almost unlimited possibilities spread out before the inhabitants of that region, and some of these bright visions they set about converting into living realities. Nearly 300,000 orange, lemon and olive trees now growing as green and thrifty as they do upon Sicily's bright isle attest the faith and belief of the people of Northern California in citrus culture in the northern citrus belt. In the single colony of Thermalito there are 61 orchards, many of which are entirely of citrus fruits. In the colony of Palermo there are 65 orchards, containing 40,348 orange, 5112 lemon and 23,646 olive trees. Arrangements are already made to plant to citrus fruits 500 additional acres in that part of the State.

The essays, papers and discussions before this honorable body have always been of the most practical character. Facts relating to the best varieties of fruits, to the growth of the trees, to the methods of pruning, the various styles of packing and curing fruits, the destruction of insect pests and a hundred other useful points are yearly discussed. In presenting some facts upon citrus-fruit culture in Northern California, I cannot go into these details because this industry is yet immature and undeveloped. The citrus trees are free from scale except in one or two spots, the varieties planted are mostly those that experience in the southern part of the State has shown are most likely to be successful. The young trees in nearly all localities are grown without any kind of protection. But little attention has so far been paid to pruning, and no washes or sprays have been used except in the one or two spots where the trees have scale. There is none so far in Butte county, which is the leading section. In the matter of grading, packing and boxing citrus fruits, no new or novel ideas have been developed. I have only been able to present general facts to you without those practical and useful details that have made the meetings of this honorable body of such great value to all the fruit-growers of California.

That a grand future opens before the northern part of this State as a citrus-fruit region I am fully convinced, and ask your indulgence a moment longer, in presenting some figures that may be of interest. You are all aware that to grow citrus fruits successfully, three climatic conditions are necessary: First, that the annual average must not be too low; second, that the winter average must not be below 40 degrees; and third, that at no time during the winter must the cold be so great as to kill the trees. In order to present the claims of Northern California in a fair and candid manner, we have selected ten places in the citrus regions of Italy, ten in Southern California and ten in Northern California, and given the annual average, the average of winter and the lowest temperature of the winter. For convenience we have arranged these in tables.

## LOCALITIES IN ITALY.

	For Year.	For Winter.	Lowest.
Palermo.....	63°	53°	28°
Naples.....	61°	48°	23°
Rome.....	60°	48°	19°
Florence.....	58°	44°	12°
Pisa.....	63°	46°	26°
San Remo.....	63°	48°	25°
Genoa.....	63°	44°	10°
Mentone.....	61°	49°	23°
Nice.....	59°	46°	26°
Cannes.....	60°	49°	30°

The average of these ten places for the winter is 47.7 degrees, for the year 60.2 degrees, and the lowest temperatures run from 10 to 32 degrees.

## SOUTHERN CALIFORNIA.

	Av. Winter.	Av. Year.	Lowest.
Colton.....	52°	64°	20°
Daggett.....	47°	65°	20°
Santa Barbara.....	54°	61°	30°
Los Angeles.....	53°	60°	30°
San Diego.....	54°	60°	32°
Newhall.....	48°	60°	18°
Riverside.....	51°	60°	25°
Poway.....	50°	59°	21°
San Bernardino.....	49°	60°	21°
Spadra.....	54°	64°	28°

These figures give the average for winter at 50 degrees, for the year at 60.5 degrees, and the lowest temperatures run from 18 to 32 degrees.

## NORTHERN CALIFORNIA.

	Av. Winter.	Av. Year.	Lowest.
Auburn.....	46°	59°	18°
Chico.....	47°	64°	20°
Oroville.....	52°	65°	29°
Orland.....	52°	67°	26°
Williams.....	48°	63°	22°
Knight's Landing.....	48°	63°	20°
Sacramento.....	48°	62°	19°
Redding.....	48°	64°	24°
Red Bluff.....	47°	62°	22°
Marysville.....	50°	64°	24°

A recapitulation shows that the winter average for Europe is 47.7 degrees, for Southern California is 51.2, and for Northern California 48.6. The annual average for Europe is 60.5 degrees, for Southern California is 61.3, and for Northern California is 63.3. The lowest temperatures may be seen by inspecting the table.

These figures are taken from the best authorities and may be considered correct and reliable. Upon the evidence of the figures here presented we see no reason why even the most prejudiced should hesitate in believing that Northern California will become famous in time as a citrus-fruit region. We firmly, honestly and sincerely believe that in years to come its low foothills and extended valleys will become as noted for their fruit as its mountains have for their gold and its wide plains for their grain. It is true the Almighty Creator in His infinite wisdom has wisely withheld from man the ability to foresee the future with certainty and precision. The Elijahs and Jeremiahs of old are no longer with us. That Supreme Being has, however, given us, in thought, fancy and supposition, the power to rend aside the mystic veil that hides the morrow from to-day, and permitted us to picture to ourselves in the rosy hues of hope and anticipation what the coming years will bring to pass; and as we gaze with prophetic eye into the unnumbered cycles of time when the land we have attempted to describe shall be enriched by the labors of ourselves and our children, we behold that vast region teeming with millions of happy, prosperous and progressive people; a country made thrifty and productive by their enterprise and their energy; a land bright with fruits and gay with flowers; its foothill slopes covered with extensive, luxuriant and profitable olive orchards rivaling in extent and richness those of Italy and Greece; its broad and beautiful valleys dotted here and there with splendid groves of that noble tree,

"Laden with fairest fruit,  
Blossoms and fruit at once of golden hue;"

Its warm and sheltered nooks adorned with the continual blooming and ever-hearing lemon; far-spreading vineyards laden with grapes so large, sweet and delicious that none but California soil could have produced them. Magnificent fig trees lift their gigantic tops, filled with rich and luscious fruit. Lofty and towering date palms, of which the poet says:

"To man the palm is a gift divine,  
Wherein all uses of life combine—  
House and raiment and food and wine,"

Ornament the pleasing and fruitful landscape; and as we note the hill-slopes adorned with noble forests of chestnuts and walnuts, and the valleys green with vineyards and fair orchards—orchards of prune, pear, apricot and almond—orchards where

"Peaches glow 'neath sunny skies,  
Like maidens' cheeks when blushes rise"—

Orchards where  
"Pomegranates, rich and sweet,  
Show the print of the sunbeams' feet"—

Orchards where  
"On the grass land on the fallow  
Drop the apples red and yellow"—  
May we not apply the thought if not the exact words of the poet and say,

"This is the land of the orange and vine,  
Where the flowers ever blossom, the beams ever shine"—

A land so rich, hountiful and prolific in the most favored fruit for man's use that all within the borders of our grand and noble State will be proud of it; a region so promising, so hopeful, so assuring, and one in which we have such unbounded faith and confidence, that I would the power were given to us for a moment to sweep aside the dim, opaque and mysterious curtain that hides futurity and permit us to see Northern California in all her splendid and crowning glories as she is destined in reality to become.

S. S. BOYNTON.  
Oroville.  
With his thumb, a boy is said to have saved the Netherlands from inundation. Many people have been saved from the invasion of disease by a bottle of Ayer's Sarsaparilla. This medicine imparts tone to the system and strengthens every organ and fiber of the body.

## Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their Scientific Patent Agency (S. P. A.) from week to week and year to year.

**STEINWAY PIANOS.** Acknowledged by all leading artists to be the best toned and best wearing Piano in the world.  
MATTHIAS GRAY CO., 206 & 208 Post St.

**BAND COUPLING.**  
Malleable Iron. All Sizes.

These Couplings are the best in the world, most powerful and cheapest. They have a ball and socket joint, right and left screw and work freely. We use them extensively in our Tank Building Department.

# THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

**H. M. NEWHALL & CO.,**

AGENTS.

309 & 311 SANSOME STREET, SAN FRANCISCO, CAL.

N. B.—By courtesy of the Southern Pacific Company we have low rates on this Fertilizer to all parts of the State.

Sole Agents for the Pacific Coast.

## THE FIELD.

## Take Care of the Manure-Pile.

EDITORS PRESS:—It has been determined by actual experiment that nearly one-half of the fertilizing properties of horse manure pass away if the manure-pile is exposed so that any considerable amount of leaching takes place. If this is true in a locality where there is only an occasional shower, how much more so must it be true along the Pacific Coast during the rainy season.

Not only are the manure-piles in the open yard, but more often they are located where eaves run down upon them or upon a hillside, so that the liquid that escapes can run away with little hindrance.

The time is not far distant when the farmers along this coast will appreciate the value of barnyard manure as highly as the farmers of the Eastern States.

Farmers use too little litter in the stables. In a land of such an abundance of straw, why not give the stock a good, clean, dry bed, and at the same time convert the straw into a valuable adjunct for larger and easier productions?

A manure shed can be made a convenient shelter for young stock, and tools may be run under the shed for protection from the continuous damp weather and rain during the wet season.

When the horse manure and that from the cow stable is mixed and well put up in square heaps, there is less loss than from either when alone. Prof. Roberts of the New York Experiment Station carried on an experiment which indicated that there was little loss when the manure was thoroughly dried by exposure to the sun without allowing the rain to fall upon it.

Another practice which to my notion is wholly impracticable is the method of leaving the manure in small heaps in the field before spreading. It does not require any more time to spread the manure direct from the wagon than to unload it in piles and spread it afterward. This practice is followed no doubt with the idea that the manure will lose its fertilizing properties if not plowed under immediately.

The loss by escaping into the air is not, if there is any at all, so great as the loss from leaching in these piles and the loss from an uneven distribution of the litter over the ground. Where a pile of manure stands for any length of time, especially if there have been several good showers upon it, the crop following will show the presence of more fertilizing elements than on the surrounding portions of the field. If it is a wheat crop, the spots can be seen a long distance, and the wheat will not fill on these spots as well as where the straw does not get so much stimulant; spread the manure and let the showers take the fertilizing elements, evenly distributed, into the soil, where they will be retained for the needs of the succeeding crop.

Some one has said that the manure-pile is the pivot of successful farm operations. Certain it is that the management of this important factor will determine largely our successes or failures, our profits or losses.

H. T. FRENCH.

Corvallis Or., Dec 18th

## A Substitute for the Potato.

Albert Meyer, a chemist, while in conversation, recently, with the editor of the St. Paul Globe, spoke quite enthusiastically of a new tuberiferous plant which he thought would do exceedingly well if introduced in the Northwestern States. He said:

A few years ago a scientist discovered in Japan a plant resembling the potato, and sent samples of it to Berlin and Paris to be experimented on. These experiments have been decided successes, and the new potato has been extensively introduced in Berlin and Paris, especially in hotels and restaurants. A number of farmers in our vicinity, with whom I conversed on the subject, are willing to experiment on the plant next season. The Royal Prussian Society of Berlin has taken pains to make experiments with the plant. The scientific name of this plant is *Stachys tuberifera*, but as to their form they might be called pine cones. *Stachys affinis* is another name, and lately they have given it the name *Stachys Sieboldii*. The cultivation is the same as the potato, and there have been found over 100 knolls in one hill; some say as many as 300, but this is probably exaggerated. They are, of course, not as large as our common potato. According to the *Garden Flora*, the organ of the society, the analysis of the fruit is:

Water.....	73.33
Protein.....	1.50
Amide.....	1.67
Fat.....	0.18
Carbon hydrate (Principi galactan).....	16.57
Cellulose.....	0.73
Ashes.....	1.03

There is neither starch nor sugar, but galactan, a substance between both. *Stachys affinis* or tuberifera is an agreeable tasting vegetable when hotted in salt water and served with butter and parsley sauce. Some people like them seethed in oil, but that is merely a matter of taste. Prepared like *pommes de terre frites* (potatoes cut in small slices and fried in butter), they are claimed to be a delicious dish. The

taste is at first like that of a sweet potato, but one will soon feel a very fine piquant taste. They do not need to be peeled, but are only washed clean in water, which is another blessing to the housekeeper. They are kept in the ground as late as possible, and preserved packed in sand in the cellar during the winter months.

Exposed to the air, they will shrink and lose their nice, white mother-of-pearl-like color. The plant is winter-hardy, and thrives in any soil. Frost does not hurt them, and to have them always fresh, they are left in the ground and dug as wanted. In our climate it is best to keep them in a ditch or in sand in the cellar. W. Perring, Inspector of the Royal Botanical Garden in Berlin, informs me that the production is very large, and that there are many enthusiasts in favor of the new plant in that city, which prophesies for the plant a great future. The expectations of high prices and large yields will induce a good many farmers to make a trial with the new plant. I have already quite a number of orders for seed.

McBEAN & Co. of San Francisco have obtained the contract to construct the sewage system of Victoria, B. C. The contract price is \$245,970.

## Cough-Cures

Are abundant; but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Pectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectoration of matter. The physicians gave me up, but my druggist prevailed on me to try

## Ayer's Cherry Pectoral.

It did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Pectoral be changed to Elixir of Life, for it certainly saved my life."

—F. J. Olden, Salto, Buenos Ayres.  
"A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Pectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."—F. Adams, New Gretna, N. J.

## BEET SUGAR FACTORIES

**E. H. DYER & CO.,**  
Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar.  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufacturers of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

# THE "TRIUMPH" — ALL METAL — SPADING HARROW!

The Best Pulverizer in the World.

JUST THE THING

Specially Adapted

— FOR WORKING —

— FOR —

Summer Fallow Land.

ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

**H. H. H.**  
Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menio," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.

# STEAM VERSUS MULES---MAMMOTH AND PRACTICAL HAULING.

BEST'S TRACTION ENGINE HAULING GRAVEL IN SACRAMENTO.

THE ACCOMPANYING CUT  
Is from a photograph taken while at  
work.

**It is Cheaper and More  
Expeditions.**

One Traction Engine will do the  
work of 60 mules.

Best's Traction Engines have been  
in practical use for over two years,  
hauling coal, lumber, gravel and  
grain, one of which is now hauling  
cane in the Sandwich Islands.

**It will do the work of  
100 Horses.**

Plowing reduced to a minimum  
cost, and from 35 to 45 acres plowed  
each day at an expense of 60 cents  
to 60 cents an acre.

Three sizes built, 30, 40 and 50-  
horse power, and

**24 Best Traction Engines  
at Work Now.**

It hauls the Gang Plow and Har-  
row, propels the Best Combined  
Steam Harvester and moves along  
majestically with a train of wagons  
loaded with grain for the warehouse.

**GOLD MEDAL**

Awarded the Best Traction Engine  
by the State Agricultural Society at  
Sacramento, 1890.

## THE PACIFIC GAS OR GASOLINE ENGINE.

Patented June 17, 1890 - Nos. 430,504, 430,505, 430,506—also in Great Britain and Other Foreign Countries.

**Starts Instantly Without the Necessity of Boiler, Fire  
or Experienced Engineer.**

**OVER 150 IN ACTUAL OPERATION.**

The Engine uses from 20 to 25 feet of Coal Gas, or  
about one-eighth of a gallon of Gasoline, per hour per  
horse-power. Is now in use for Pumping Purposes, run-  
ning Printing Presses, Small Factories, Elevators, Jewe-  
lers' Lathes, Polishers, Dairymen's, Agricultural, Mining  
and Wood-working Machinery, Well Boring and all other  
purposes requiring cheap and convenient power. Persons  
having but little space will find this the most suitable of  
all Motors.

Patent Hoop-Clamp for Tanks.

F. O. 1.

F. G. 2.

The accompanying cut shows a device, the practical efficiency of which has been proven.

A in Fig. 1 are the hoop ends, which are looped around the cylinder outer ends of the heads B. The inner or adjacent ends of these heads are formed with hemispherical seats b, and in these are fitted hemispherical nuts at liberty to move in their seats. D is the adjusting or tightening bolt of the clamp, having one end provided with a right-hand thread and the other end with a left-hand thread, and at the center with a collar or wrench-hole, d. The threaded ends of this bolt pass freely through elongated apertures in the seats of the head and are connected with the hemispherical nuts in the sockets. An enlarged view is shown in Fig. 2.

The operation of the clamp is as follows: The ends of the hoops are looped around the heads as shown and then a wrench is applied to the central collar, d, of the tightening bolt. The bolt is turned and as its reverse threaded ends work in and through their respective nuts the heads are drawn together, thereby tightening the hoop. The strain being in a curve, deflects the heads from a straight line, the hemispherical nuts through which the bolt passes turning in their hemispherical seats in the proper direction to enable the clamp to conform itself to the curvature of the hoop, thereby exerting its strength in the line of said curve instead of in a straight line tangential to it. As before mentioned, the nuts will remain steady in the direction of rotation of the bolt.

This invention supplies a great want, particularly in dry and hot climates, where shrinkage of lumber is considerable. No device heretofore in use for the purpose of tightening hoops has been satisfactory, for the reason that the draft was not straight and therefore not direct on the hoops. The advantage of a clamp hoop over a riveted hoop, particularly in heavy tank work, must be apparent to all. To tighten a riveted hoop requires tools, scaffolding and capable men. It also mars the paint and injures the iron. To tighten with a clamp, working freely, requires simply a ladder and a wrench in the hands of anybody.

Clamp bands are convenient in transportation; heavy bands for large tanks can be handled in sections without folding. Mechanically considered, the device may be described as a right and left draw buckle, acting on ball and socket joints. It therefore works equally free, powerfully and effectually on long or short draft and on large or small circles.

The device has proved a great success and is now being used extensively in the tank-building department of Wells, Russell & Co., Mechanics Mills, cor. Mission and Fremont Sts., S. F.

To Subscribers and Readers.

A HANDY PAPER BINDER.—A. T. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, and very cheapest of all economical and practical file binders. Newspapers are quickly placed in it (as received) and held neatly, as in a cloth-bound book. It is durable, and so simple a child can use it. Price (size of this paper, Harper's Weekly, and Scientific American), 75 cents; postage 10 cents. Postpaid to purchasers of this paper, 50 cents. For sale at this office. Send for illustrated circular. Agents wanted.

NEBRASKA SEEDS.—Our readers who desire to experiment with seeds from another climate may be interested in the advertisement of Monk & Hupert of Greenwood, Cass Co., Nebraska. We have received their catalogue for 1890, in which we see notice of a new muskmelon, the Persian Monarch, which the catalogue says is called the "Shah" in Persia, and was introduced in 1889 by Johnson & Stokes. It is said to be "unapproached by any other, either American or foreign, in delicious flavor, wonderful productiveness, hardiness and distinctive appearance." Monk & Hupert announce that their catalogue for 1891 will be ready in a few days, and it will no doubt be sent to those who desire it.

Harness.

Mr. C. L. Haskell, No. 10 Bush St., wholesale and retail dealer in harness, saddlery, etc., has one of the largest stocks of goods in his line in San Francisco. He makes a specialty of manufacturing team and buggy harness and has gained a high reputation as a reliable dealer and skillful manufacturer. Anything in the way of horse clothing, boots, whips for the farmer, ranchman or horse-breeder can be had at his store, No. 10 Bush St., at bottom prices.

American and Foreign patents obtained, and general patent business for Pacific Coast Inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Skillman's Late Importation of Norman, Suffolk and Shire Horses.

[Written for the RURAL PRESS by J. C. H.]

A RURAL representative made a visit last week to the "Red Stable," East Petaluma and Magnolia Stock Farm near Petaluma, to see the horses lately imported by Mr. Skillman. Of this lot of Normans are Lignett 13810, a dark dapple-gray, foaled at Nogent-le-Rotrou, France, May 9, 1887, a very fine colt. Raglan 14739 was foaled April 1, 1885, at Orne, France, weighs 1800 pounds, and sold to Mr. Blondin of Livermore. Snperhe is a dark dapple-gray, stands 17 hands high, foaled March 5, 1885, at Normandie, France, and registered in Stud-book of Stallions, Paris, France. He is what his name indicates, superb, and is considered by expert horsemen one of the grandest stallions ever imported.

The Suffolk Punch horses include Winston 1997, bred at Woodbridge, England, took all first prizes, and was never beaten in the show ring. He has been sold at a long price to Hiram Corey of Salinas City, Monterey county. Gipsev Girl 2473 is a Suffolk Punch mare foaled in 1888 at Guilford, England, and sold to Hiram Corey. Ohilestord Duke 2d 1769, bred at Chilesford, England, 17½ hands high and foaled in 1887. A photo-engraving of this grand horse, with a fuller description, will appear in the RURAL soon.

Hero 1871, foaled in 1886 and recorded in Vol. 4, Suffolk Stud-Book. This horse won high mention at every place he was shown.

Among the Shire horses is Connt Counsellor 2340; will weigh at maturity 1800, and now at two years of age turns the scale at 1600 pounds.

Good Enough, a fine specimen of a draft horse, rare bone and muscular development, sold to Hiram Corey of Salinas City.

Mr. Skillman has three fine French coach stallions imported in 1889, together with a number of Normans at Magnolia Stock Farm. His importation this year is rated by good judges the best that has ever been made during any year since he has started in this great enterprise and which covers a period of ten years. Mr. Skillman has been one of the largest importers of high-class draft horses on the Pacific Coast, and the importance and material benefit to our State can hardly be realized until the coming years shall demonstrate the improvement in this class of horses.

A fine illustrated catalogue has been issued by Mr. Skillman giving a full and detailed description of the history of the different classes of horses he has selected, together with their pedigrees and breeding. There has been a large number of visitors from all parts of the State to see this notable importation, and of the lot it is considered safe to say that five have been sold to prominent breeders. His persistent effort and skill in selecting animals has given him a widespread notoriety as a sagacious and reliable dealer.

ALNEER'S SEEDS  
RELIABLE  
We give you BEST Seeds and Save you Big Money. Buy direct from the growers. Pkts. only 2 and 3 cts. Send for our Handsome Illustrated Catalogue mailed FREE. Market Gardeners ask for Wholesale Price List.  
ALNEER BROS.  
ROCKFORD, ILL.

Please Remit.

The beginning of a new year is a good time to settle up the debts of the old ones. We are obliged to remind those who owe the PRESS on subscription account, that it will be a great convenience to us if they will soon remit what is due. Those who can also pay in advance will also do us timely and well-appreciated favor. We are doing our best to present a very valuable paper, representing carefully, earnestly and conscientiously the welfare of its intelligent readers and the best interests of the arts, sciences and mining and mechanical industries of the Pacific States.

To do this we deprive ourselves of some of the most lucrative lines of patronage available to the average newspaper.

By paying as promptly as possible, friends, you will greatly encourage us in our sincere efforts to favor you and the best interests of your calling.

Oliver Chilled Plow Works.

This mammoth plant, situated at South Bend, Indiana, has become one of the largest manufactories of plows in the world. It has advanced step by step in capacity and improved features for the plow that seems to be in keeping with the growth of the United States and the wants of extensive and improved cultivation. Their policy has been to spare no expense to make a plow that was suited to the small farmer, ranchman, and all conditions of the soil. In its construction all portions are numbered so that the agriculturist can duplicate any part thereof, whether moldboard, landside, standard, share, beam or handles, and virtually build a new plow without the aid of a blacksmith. Several plows have been built, among which is the celebrated Vineyard plow, especially for this State.

The Pacific Coast branch, 37 Market St., under the able management of Mr. E. K. Lindsey, has extended its agencies to all the principal towns and cities west of the Rockies, and the growing popularity of their plows seems destined to give this great enterprise the leading place in furnishing the efficient and economical plow for the agriculturists of the Pacific Coast.

SAVE WOOD AND AVOID FIRE.

FARNHAM'S

PATENT

Stovepipe Drums.

It is a perfect SPARK ARRESTER as well as a FUEL-SAYER. Not a spark can escape through the pipe when the damper is properly turned, and for this reason alone, should be on every stove.

It is especially adapted to cooking stoves. If the oven is slow to heat, the drum will correct this fault, throwing more heat around the oven. It will last from 10 to 15 years. Parties desiring can give it a fair trial on their stoves before purchasing.

This drum is sold at the modest sum of \$5 and is warranted to give ENTIRE SATISFACTION. For further particulars apply to

M. P. FARNHAM,

GERMANTOWN, COLUSA COUNTY, CAL.

Shorthorn, Aberdeen-Angus and Jersey Cattle. Young Stock for Sale. Correspondence Solicited. G. W. DIMICK, Hubbard, Oregon.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

**THE SPALDING HUMANE WIRE FENCE** is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.**, 195 La Salle St., Chicago.

**PURE**

**TRUMBULL, STREAM & ALLEN SEED CO.**  
Grass, Field, Garden and Tree Seeds, Onion Sets, Etc.  
Send for Catalogue.  
Mailed Free.

## MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—

## Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

### H. MECHAM,

Importer and Breeder of Shropshire Sheep. They were all imported from England in '88, or bred direct from Imported Stock, and all registered.

### H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs., have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address, **Stony Point, Sonoma Co., Cal.** K. R. Station, Petaluma.

## New Importation!

## THEO. SKILLMAN

Has just arrived in Petaluma with a new importation of

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 7, 1891.

Rains followed by clearing weather have imparted a more cheerful feeling to the trade, which is supplemented by a feeling of greater confidence in the future, due to a greater acreage seeded to wheat, more tree and vine planting and more attention to other farm industries, and also to all information going to show that money will be fairly easy. Trading in farm products is still light. The Eastern wheat markets after advancing fell back slightly. Foreign wheat markets fluctuated to stronger prices. The following is to-day's cablegram:

LIVERPOOL, Jan. 7.—Wheat—Firmly held. California spot lots, 75 5/8d to 75 9d; cargoes off coast, 38s 9d; just shipped, 38s; nearly due, 38s 6d; cargoes off coast, firm, on passage, quiet but firm; Mark Lane wheat, firm; English and French country markets, firm; wheat and flour in Paris, steady; weather in England, hard frost.

## Foreign Grain Review.

LONDON, Jan. 5.—The *Mark Lane Express*, in its review of the British grain trade, says: The market has been a little better since the new year, but the effects of frost have not been as embracing as holders had hoped. In English wheat, prices are well maintained. Foreign wheat shows some signs of a better feeling, but no advance is quoted. Maize is id dearer. Oats advanced 3d.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Jan.	Feb.	Mar.	April.	May.	June.
Thursday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Friday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Saturday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Monday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Tuesday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38 1/2d	38 1/2d	38 1/2d	Advancing.
Friday.....	38 1/2d	38 1/2d	38 1/2d	Quiet.
Saturday.....	38 1/2d	38 1/2d	38 1/2d	Strong.
Monday.....	38 1/2d	38 1/2d	38 1/2d	Firm.
Tuesday.....	38 1/2d	38 1/2d	38 1/2d	

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Jan.	Feb.	Mar.	April.	May.	July.
Thursday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Friday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Saturday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Monday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Tuesday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Jan.	Feb.	Mar.	April.	May.	July.
Thursday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Friday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Saturday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Monday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Tuesday.....	103 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2

NEW YORK, Jan. 7.—Wheat—\$1.05 1/4 for cash, \$1.04 1/4 for February, \$1.05 1/4 for March, \$1.04 1/4 for May, and 99 3/4c for July.

CHICAGO, Jan. 7.—Wheat—97 1/4c for May.

## The Prune Market.

NEW YORK, Jan. 5.—Francis Cutting, the California fruit-packer here, sold a line of California prunes, 60s to 90s, Saturday, at 11c 1/2 lb., spot.

## Visible Supply of Grain.

NEW YORK, Jan. 5.—The following is a statement of the visible supply of grain, afloat and in store on Jan. 1, 1891, as compiled by the New York Produce Exchange: Wheat, 25,847,000 bushels, an increase of 83,000 bushels; corn, 2,758,000 bushels, an increase of 137,000; oats, 3,326,000 bushels, an increase of 100,000; barley, 4,059,344 bushels, a decrease of 126,000.

## Wool.

NEW YORK, Jan. 4.—The holiday week brought only a light wool business here, although eastward, where the observance was less marked, trade is active and encouraging, while prices are strong and stock statistics are admitted to favor the selling side. Heavy wools will start about the middle of January. The confidence of manufacturers is indicated by their willingness to have the refusal of certain lines which they will need after the recent heavy purchases are worked down.

Boston reports more liberal dealing in wool. All grades are supported in prices, especially fleeces, Michigan X to XX ranging from 29c to 34c. There were sales of 437,000 lbs. of foreign and 1,970,000 lbs. of domestic, including 115,000 lbs. of California Spring. The fall stock of wool on this market shows a falling off of about 2,000,000 lbs. from that of a year ago in the supply of domestic wool on hand and about the same amount in foreign supplies. To offset this the receipts of domestic wool have increased nearly 100,000 bags, while those of foreign have fallen off about 44,000 bales. The sales during the past year have been nearly 20,000,000 pounds greater than those of the previous one, the increase being entirely of domestic wool.

BOSTON, Dec. 31.—The *American Wool Reporter*, in an annual review of the wool trade of the United States, will say to-morrow: The amount of wool on hand in the most primary markets of the United States is now excessive. The supply in Boston is considerably lighter than a year ago. A recapitulation of stocks in the principal markets, to which is added the estimated amounts in other markets, concealed supplies of wool in pullers' bands, gives a total supply of 92,819,882 pounds against 99,284,459 a year ago. The figures for the first ten months of 1890 for the whole United States show the total importations to have been 87,944,104 lbs in comparison with 110,721,456 for the corresponding time last year, and in consequence the lessened amount of foreign wool on the market, and the fact that there is a very marked improvement in the woolen-goods business, supplies of wool in the United States cannot be considered burdensome. The only weak spot in the outlook is the probability of increased importations of foreign wools after the beginning of the year.

## Hops.

NEW YORK, Jan. 4.—Compared with last week the best State hops are marked 2c off; Pacifics, 1c,

There was not enough doing to test the situation, but it may be said there was no general weakness. Other grades were neglected. The receipts here for the season were 2000 bags above last year, while the exports were 5500 bags less.

LONDON *Agricultural Gazette*, Dec. 15: Trade for hops continues in the same quiet state that has marked the course of business for the past few weeks. Factors have on hand a limited stock of new hops which they are trying to sell at the prices made for similar qualities when the market was active; but the merchants are not disposed to give those values, and, as sellers will not yield, the trade has come almost to a deadlock. The arrivals of American and Californian hops are on a very limited scale, and are likely to fall off still further unless the prices obtainable here advance considerably upon present rates, which are much below the quotations that rule at New York and San Francisco. Belgian hops continue in fair demand on account of their relative cheapness. For all other Continental produce the inquiry is dull.

## Dried Fruits.

NEW YORK, Jan. 4.—Apricots are steady, and quoted in sacks at 18c; boxes, 19c. Prunes are quoted as follows: Forties, 13c; fifties, 12 1/2c; sixties, 12c; decent small, 11 1/2c. The marked difference in the quality of raisins kills the speculation noted in other seasons. Prime in boxes are not too abundant for owners to carry them for a prospective trade. No one wants to venture upon common bagged stock. The future of low grades is uncertain. Pie-fruit dealers and consumers expected to help out, but that means dictation of prices. Three carloads were recently taken at 5 1/2c a lb; Good bagged were the same as last week. Layers in boxes, \$1.90 @ 2 1/2; fancy Three Crown, \$1.80, ordinary, \$1.60 @ 1 1/2.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1890.
Thursday.....	154 1/2	154 1/2	154 1/2
Friday.....	154 1/2	154 1/2	154 1/2
Saturday.....	154 1/2	154 1/2	154 1/2
Monday.....	154 1/2	154 1/2	154 1/2
Tuesday.....	154 1/2	154 1/2	154 1/2

	Buyer Season.	Seller 1891.	Buyer 1890.
Thursday.....	154 1/2	154 1/2	154 1/2
Friday.....	154 1/2	154 1/2	154 1/2
Saturday.....	154 1/2	154 1/2	154 1/2
Monday.....	154 1/2	154 1/2	154 1/2
Tuesday.....	154 1/2	154 1/2	154 1/2

BAGS—The market is dull at 6 1/2c @ 6 3/4c May-June delivery.

BARLEY—The sample market has held strong with an advance established. Receipts are light and demand fairly active. In futures, trading has been quiet owing to operators being afraid of the situation. The following are to-day's Call Board sales:

Morning Session: Buyer season—100 tons, \$1.53 1/4; 200, \$1.53 1/4; 100, \$1.53 1/4; 100, \$1.54; 100, \$1.53 1/4. No. 1 Brewing, buyer season—100 tons, \$1.60 1/2; 100, \$1.61 1/2 cwt. Afternoon Session: Buyer season—100 tons, \$1.54 1/4; 100, \$1.54 1/4. Seller 1891—100 tons, \$1.06; 100, \$1.06 1/2 cwt.

BUTTER—The market is settling to lower prices. Sellers appear to be forcing sales, fearing heavy receipts. The receipts show a steady increase, chiefly from the south, where there is better pasture and more fresh cows coming in.

CHEESE—The stock is light, as are the receipts. The demand is good, which keeps the market strong. EGGS—The market is still sinking under fair receipts and lessened buying points. The lessened outside demand is owing to better local supplies.

FLOUR—The market has a steady tone for favorite brands. More outside brands from up north are offering.

WHEAT—The sample market closes fairly strong. In futures, trading has been fair. Eastern quotations appear to be taken as a guide in dealings in futures. This is wrong, for the New York and Chicago markets are largely controlled by freights, the latter by railroad and also ocean freights, while the former is controlled by ocean freights. In last October wheat was sent from New York to Liverpool as ballast, but now 3d a bushel is charged. The following are to-day's Call Board sales:

Morning Session: Buyer 1891—100 tons, \$1.49. Buyer season—1300 tons, \$1.43 1/2 cwt. Afternoon Session: Buyer 1891—200 tons, \$1.48 1/4. Buyer season—700 tons, \$1.43 1/2 cwt.

## Cereals.

Mark Lane (London) *Express*, Dec. 15: During the 11 completed months of exports the Russian Empire has sent off 10,863,588 qrs. of wheat, of which 4,107,000 qrs. have been received at United Kingdom ports. These figures, to which little attention has yet been paid, are certainly worthy of considerable notice, for they reveal the proportion of Russian exports received by us, and enable us to estimate the importance of Russian weekly exports

much more clearly than has hitherto been the case. It has been assumed that a clear half of what is exported reaches us, but we now find that 40 per cent is enough to allow.

The local wheat market has ruled fairly strong. The offerings are light. Buyers hold to the opinion that with continued favorable weather, farmers now biding their time will begin to sell. This opinion is doubtless grounded upon the fact that the acreage seeded to the cereal is the largest on record, and consequently with well-distributed rains in February and March an exceptionally heavy crop will result. While it is well to look on the favorable side for a large crop outcome, yet the fact must not be lost sight of that on or about harvest-time a "bot norther" may set in and thrash out more grain than can steam thrashers. We have not had hot north winds for several seasons past, and it is to be hoped that with extensive tree and vine planting the climate may have been so changed that if they should come, it will be too late to do any damage to crops. Wheat receipts from up north continue free, which give buyers here enough to keep them from having pressing wants to be met. Now that the United States Senate has virtually stifled partisan legislation, leading grain farmers are hopeful that a free-coinage silver bill will be passed so as to advance the price of the metal and increase the cost of Indian and Russian wheat. With these costing more, our wheat will appreciate. Tonnage in port is light, as it is in the Columbia river and Puget Sound. The tonnage on the way is larger than at this time last year, but the increased duty on foreign goods may lessen the supply on and after next June, in which event wheat charters will be bigger and against wheat-sellers. It is the farmer who has to foot everything.

The Australian wheat harvest is in full blast, which causes ships to load coal from thence to this port to ask high freights. The high rates deter coal importers from chartering freely.

Barley has held fairly firm. The demand has been good, although at the moment it is reported more quiet, but quotations remain unchanged. The supply in this State and up North is light. Many dealers believe that the supply will be about exhausted before next harvest. The acreage to be seeded is quite large.

Oats do not show any material change. Both receipts and demand are moderate. An increased acreage, it is said, will be seeded in this State, but there is more led out each year.

Corn is quiet but strong. The available supply appears to be held in, or at least we judge so from the strength exhibited by the market. The high cost of barley and oats causes more corn and its product to be fed.

Rye is steady at full quotations.

## Feedstuff.

The market for ground feed is strong under light receipts and a fair demand. Honolulu is drawing quite freely, steadily increasing its purchases of rolled barley.

Hay is strong. The receipts continue exceptionally light, while the demand is good for the season of the year. Backward pasture is in favor of holders of hay, but then the supply of the latter to draw from is quite light. It is generally claimed that the crop this year will be very large. More alfalfa has been sold than ever before, while many fields have been seeded to grain to be cut for hay. But the quantity fed is not only very large but is steadily increasing.

## Live-stock.

Bullocks are offering fairly free. As a rule, they are in good condition. Hogs are a shade strong for the block, but for packing there is no material change. Mutton sheep are higher. Milch cows are without change. Average dairy cows can be bought, as they run, at from \$20 to \$30, while selected are higher. One dairy is offering the cows at \$20, and another at \$25. It is their intention to sell the cows and lease out the land. Horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4 1/4 @ 4 1/2 cwt lb; dressed, 7 @ 8c lb; heavy, 3 1/4 @ 4 1/2 cwt lb; dressed, 6 1/2 @ 7 1/2 cwt lb. Stock hogs, 3 @ 3 1/2 cwt lb. BEEF—Stall fed, 7 @ 8c lb; grass fed, extra, 6 1/2 @ 7c lb; first quality, 5 1/2 @ 6c lb; second quality 4 1/2 @ 5c lb; third quality, 3 1/2 @ 4 1/2 cwt lb; bulls and thin cows, 2 @ 3c lb. VEAL—Small, 8 @ 9c lb; large, 5 1/2 @ 7c lb. MUTTON—Wethers, 7 @ 8c lb; ewes, 6 1/2 @ 7 1/2 cwt lb; lamb, 8 @ 9c lb; spring lamb, 15c.

## Fruits.

In reply to a patron of the *RURAL PRESS*, living at Riverside, we will state that in using small boxes for oranges, the 5 to 6 inches deep grape-boxes are brought into service.

The receipts of oranges are increasing, but consumers are as yet a little shy, owing to their being too many green. Thoroughly ripe fruit is quickly taken by dealers, for which top prices are given. It is very generally claimed that receipts from now on will steadily increase, while the consumptive demand will broaden. Hucksters are taking few, while retail dealers are carrying more in stock.

Lemons and limes move slowly. Apples are in large supply with receipts free. Supplies are coming in from all sections and under more competitive selling the market is shading. It takes choice gilt-edged apples to fetch over \$1.50 a box. Hucksters, owing to their cheapness, are enabled to do a good peddling business. Oregon and the northern counties of this State send us the large quantities.

Pears and also grapes are hardly worth quoting, owing to light supplies and light demand.

Raisins are dull, but there appears to be a prevailing feeling that the market will do better in the spring months. The advance in railroad freights on raisins, dried fruits, etc., more than offsets any advantage that higher duties might have given to fruit-growers. The railroads get the duty and growers get left.

The stocks of dried fruits are not large, yet there is a dull market for all kinds, except peaches. It looks as if better prices can be reasonably looked for in the spring months. Peaches are strong with slightly better prices bid. The demand is chiefly from points at the East, where the crop was light. The supply of peaches here is said to be only fair,

and any marked increase in the demand will cause higher quotations soon.

## Vegetables.

Early spring vegetables are coming to hand from the southern part of the State, but in such limited quantities as to make correct quotations very difficult.

Onions, after declining under free supplies, are again tending up for the more choice good keepers. The season has been favorable for a large increase in planting in the southern counties, while more attention will be given to their planting in the bay and river counties.

Potatoes are barely steady, outside of the more choice Burbank seedlings, which are higher. The receipts are light, but the well-established fact that large quantities are held back, keeps buyers from stocking up, while in the southern part of the State the second crop is large. There will be a large increased acreage planted this season in California, Oregon and Washington.

Cabbages and root vegetables are unchanged. The former are being shipped more freely. Choice hard good-keeping heads are wanted.

## Miscellaneous.

From the *Commercial News* of Jan. 6th the following summary of tonnage movement is compiled: On the way to 1891. 1890.

San Francisco.....	271,884	189,015
San Diego.....	4,085	11,368
San Pedro.....	7,478	2,735
Oregon.....	31,716	25,969
Puget Sound.....	22,955	17,170

Totals..... 338,118 246,238

In port at San Francisco, disengaged..... 9,346 11,546

" engaged for wheat..... 43,038 77,796

San Diego..... 2,613 1,476

San Pedro..... 2,009

Columbia River..... 15,754

Puget Sound.....

Totals..... 72,660 90,818

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Dec. 31, 1890, the following are the exports from this port: 1890. 1889.

Wheat, cts..... 5,859,269 6,233,523

Flour, bbls..... 567,116 546,302

Barley..... 176,369 815,805

In poultry there are no changes except in turkeys and large broilers. The former are lower, while the latter are tending up.

On Monday and yesterday wild game came in freely and sold for less money.

Honey is in light supply. An advance on our quotations can be obtained for desirable consignments.

There appears to be a slightly better tone to the wool market, but it is not so pronounced as to deserve particular attention at this writing. The advance in overland freights is against the market.

Beans are quiet but firm.

There is a continued free demand for grass seed, particularly for orchard and alfalfa.

Exports by sea the past week aggregate as follows: Flour, bbls, Honolulu, 1608; Liverpool, 15,460; Central America, 10,874. Wheat, cts, Havre, 57,286; Liverpool, 175,647; Dunkirk, 85,208.

Barley, cts, Tahiti, 63; Honolulu, 4561; New York, 4121. Rolled barley, lbs, Honolulu, 231,175.

Beans, lbs, Tahiti, 1275; Honolulu, 3272; Central America, 2503; Panama, 29,716. Wine, gals, Tahiti, 920; Honolulu, 7872; Liverpool, 1407; London, 823; New York 14,633; Central America, 3207.

Corn, cts, Honolulu, 461. Brandy, gals, New York, 1148; Central America, 360. Dried fruits, lbs, Honolulu, 2110; Liverpool, 7190. Hay, bbls, Honolulu, 850. Potatoes, sks, Honolulu, 844.

Onions, Honolulu, 206. Oats, cts, Honolulu, 1087. Cotton, tons, Liverpool, 50. Sugar, lbs, Panama, 26,369; Honolulu, 46,543; Jaluit, 3488; Central America, 400.

## Dried Fruits, Etc.

The quotations given below are for average prices paid. Something very fancy fetch an advance on the highest quotations while poor sells slightly below the lowest quotations. Prices named, unless otherwise specified, are for fruit in sacks. Add for 50-lb. boxes 1c per lb., and for 25-lb. boxes 1c to 1c per lb.

EXPLANATION. Cl. for clear; Cy. cloudy; Fr. fair; Cm., calm; indicates too small to measure. Temperature wind and weather at 5 P. M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. P C, partly cloudy. Rn., rain.

Land to Rent.

A Splendid Opportunity

To rent on exceedingly favorable terms, either for cash or a reasonable portion of the production, 164 acres of well-tilled land, a very comfortable house, with abundant shade trees, and splendid well of excellent healthy artesian water flows through the garden and dooryard. Water sufficient to irrigate 100 acres or more. Much of the land leveled, checked and ditched. Large barn and convenient outhouses. About 25 acres of alfalfa, and seven of orchard. The land is conveniently fenced into subdivisions, including a good pasture, large reservoir, etc. This place is one of the pleasant, healthfully located places in the Tulare valley, seven miles S. W. of Tulare city. Possession given immediately. Also, 156 acres adjoining on the east side and 160 acres on the west side of the above tract, making FOUR HUNDRED AND EIGHTY ACRES all well-tilled, productive land for all kinds of grain-growing, etc. Also 640 acres three miles from Pixley, and 160 acres within one mile of Tulare city, also on very favorable terms.

Apply soon to Capt. Thos. H. Thompson, Tulare; E. M. Dewey, Porterville; or A. T. Dewey, 220 Market Street, San Francisco.

WHERE TO GO.

While we have little fancy and still less space for "puffs," so lavishly indulged in by the average newspaper, we have no hesitancy in bestowing a word of commendation where it is clearly deserved. We deem it at least a part of the mission of true journalism to furnish the reader with the most reliable information obtainable concerning the various business institutions of the country. Among these are the hotels, of which the American Exchange, 319 Sansome street, San Francisco, will be found to fill every want of the business man and the general traveling public, being quiet and well conducted. The rooms are large, neat, airy, and well furnished, the table supplied with the best in the market, while the charges are quite reasonable. In brief, the liberal patronage retained from year to year is a sufficient guarantee of the popularity of this hotel as well as its gentlemanly proprietors, the Montgomery Brothers.

Selling Fast.

A Superb Lot of Bartlett's and Apples  
(on Whole Roots),

Cherries, Olives, Walnuts, Shade Trees,  
Table and Raisin Grapes, &c., &c.

## Arizona Everbearing Strawberry.

BY PLANTING QUITE A NUMBER OF THE LEAD-  
ing varieties of Strawberry together for five years, I  
have produced a variety unlike any of the former.  
I have picked the fruit daily since April 20th to the  
present time, October 18th, and the vines are still full  
of bloom and berries. Roots are long and stand the  
drouth well. The berries are large, fine flavor and high  
color, and resemble the *Jessie* in shape somewhat. I am  
prepared to furnish them in small lots at \$1.50 per doz.,  
postpaid. R. E. FARRINGTON, General Nurseryman,  
Phoenix, Arizona.

Six days earlier than

### The Health of Our Live-Stock.

It is announced that the Legislature now in session will make a record for economy and that the taxes this year will be considerably reduced. We sincerely hope so, for the vast expenditures during the last two years have been a grievous burden. There is no good reason why the cost of maintaining law and order and promoting intelligence in California should be so much greater than in other States. Therefore we hope the promises and pledges of economy made by both political parties will be sacredly kept and the desirable results realized.

But in such pruning of public expenditure, the legislator's eye should not be closed to actual needs of the people. One of those to which we have alluded each time the Legislature has assembled for the last decade or more is the provision of State service in the promotion of animal health and the stamping out of contagious diseases. Nearly if not quite every State in the Union has a State Veterinarian. Here, though our live-stock interests are large and growing, we have nothing of the kind. Contagious diseases and animal parasites proceed with only individual opposition and occasion losses which our stock-growers should be saved from. Our stockmen have been almost overlooked, while other industries have been fostered and promoted by State money. They should now be provided for and the cost need not be large.

We need a State Veterinarian to determine the character of prevalent diseases and with authority to stamp out contagion, to give information on animal sanitation which the public needs, to give instruction by lecture and demonstration at farmers' meetings and at the University, and to meet other pressing public needs. We trust that the bill introduced by Senator DeLong to meet these needs will be enacted.

### Orange-Growing.

It is Citrus Fair week in Central and Northern California, and a superlative effort is being made at Marysville. Two months hence Southern California will have her share of citrus encouragement from the State Treasury, and Los Angeles will be the center of attraction. Although there is much sectional feeling on this question of citrus-fruit growing for the last few years and may be for years to come, it is proving an excellent plan to provide for these two great winter fairs in the two rival regions. Much of the ill-feeling of the last few years seems to be disappearing, and much of the ignorance is being displaced with better information. The whole question is coming more

As the orange, king of our winter fruits, is now leading in public attention, it is natural that our columns should reflect the brilliance of the ruling sovereign. Those readers who

BOTANICAL CHARACTERISTICS OF THE ORANGE.

and more upon the plane of friendly rivalry and generous emulation, and therefore the results will be widely beneficial. Each side will be stimulated to do its best, and thus the whole will be advanced.

do not grow oranges will find matters more to their liking in later issues of the RURAL.

In this issue we have a very timely illustrated article by B. M. Lelong, Secretary of the State Board of Horticulture, on the culture of the

orange. Mr. Lelong grew to manhood among the orange groves of Los Angeles county, and is practically acquainted with the affairs of which he writes. His condensed essay was prepared to afford such information as will be most likely to be called for, while public attention is so strongly drawn to the citrus fruits by the fairs at Marysville and Los Angeles.

It will be found to cover all leading points of practice, and should be preserved for reference. The illustrations are all pertinent to the text. The botanical characters of the orange, the Joppa, a new variety to which attention was called in last week's RURAL, the showing of the several architectural designs produced at the Oroville fair last year by typical buildings all composed of oranges, the proper planting and pruning of the orange tree—all these are shown in engravings on the pages of this week's RURAL and add much to the acceptability of Mr. Lelong's effort.

The botanical characters of the orange, as shown in the smaller engravings on this page, will be of general interest. They are as follows: A. Compound unifoliate leaf of the orange (*Citrus aurantium*). 1. Point of union, marked by an articulation; 2. Petiole, winged on either side; 3. Lamina; 4. Flowering branch; 5 and 6. The fruit; 7. Flower complete; 8. Pistil; 9. Transverse section of ovary, which becomes the fruit as popularly known.

A NEW ORANGE, THE "JOPPA."

SCENE IN THE PAVILION AT THE STATE CITRUS FAIR, HELD AT OROVILLE, IN JANUARY, 1890.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## San Diego Notes.

EDITORS PRESS:—Among the very many peculiarities of San Diego county I propose mentioning some of the more remarkable. The size, when compared with other counties, is really wonderful, it being as large as the States of Massachusetts, Rhode Island and Connecticut combined, having mountains many thousands of feet in height and valleys 300 feet below the level of the ocean. There are also valleys on the Colorado desert, which, if flooded during the winter, are very fertile; but if not, gophers will starve there. There are also several rivers between the north boundary of the county and the Mexican line, among them the San Diego, Sweetwater, Otay and Tia Juana, which flow on an average about three months during the latter part of winter, when the mountain snows melt and mingle with the rains which fall on the mesas many miles below. For about two-thirds of the year they are entirely dry; but what seems very singular is, if one digs in the river-bed from two to three feet, plenty of water is found. As a general thing, cactus, sagebrush and several other varieties cover the ground until removed by the hand of man, but in some places the growth of timber is immense, oak and pine being abundant, and on moist ground willow and cypress; but when this ground is once cleared and put under cultivation, all kinds of fruit and ornamental trees flourish equal to those on any soil under the sun, especially where irrigation is used in connection with other culture.

Thunder-storms are almost unknown here, for during the three years we have spent here there have been only two. It often happens, however, that a thunder-storm arises at sea and comes toward us, looking very black and forbidding, but as it approaches San Diego bay it gradually dies away and we hear no more of it. The tradewinds come on early in the summer and commence blowing from the southwest until about 5 or 6 o'clock, when they die away during the night, which is invariably cool, so that one can sleep comfortably under one or two blankets.

During the winter season we often see the mountains 40 to 60 miles east of us covered with snow to a depth of two or three feet, but in order to see it we have to look away over the valleys and mesas covered with orange and lemon groves in full bearing, and it is never cold enough near the coast to kill our geranium blossoms or callas, and our hillsides and valleys are perfectly lovely with a great profusion of grasses, wild grain and all shades of flowers.

## Irrigation.

To any one who pauses to consider, it is marvelous what has been done by irrigation in Southern California during the past three years. When I came here three years ago last month, there was no irrigation practiced excepting such as was done with the wells and when the water was raised by windmills, and consequently the process was a very slow one. Many of the ranchmen relied more on cultivation than on irrigation, and some were so prejudiced against the use of water that they really believed many crops were injured by its use, and still persist in selling their fruit and vegetables for a higher price when they are not irrigated.

When crops are grown on the bottom-land in the valley, many of them along the borders of the streams on a sandy-loam soil, the roots no doubt find their way down to the water, which is but a short distance below and ample to supply the growing vegetation; but to one who notices the higher mesas and bluffs, which are now under cultivation and producing fine crops of fruit and grain by the judicious use of water from the reservoirs, it is at once evident what is being done by irrigation.

I find also that those who begin to irrigate are sure to enlarge their facilities instead of contracting, and this to me is a most convincing argument in favor of the use of water. The constant looking after new sources of supply and the expenditure of so many thousands of dollars to supply every locality with an abundance of water for irrigation purposes, shows at a glance the unbounded faith the people have in irrigation. So, also, any one who looks through the Chamber of Commerce from time to time and learns under what method the finer specimens of fruit, vegetables and grains have been produced, not forgetting the flowers, must be ready to exclaim, in the language of the mottoes at the celebration of the opening of the reservoir of the Sweetwater: "Sunshine, air and water, and the greatest of these is water!"

Three years ago some ranchmen in Otay were noted for their fine apples, plums and other fruits, but to-day we hear little said about it; but one of them was heard to remark at the time of the September rain that he thought it would be \$3000 damage to his vineyard. T.

## Jackass Rabbits and Others.

EDITORS PRESS:—The collection of giant straddle-bugs and other "fauna" is a harmless pursuit, as all can see; but why our Department of Agriculture should engage in it and what benefit we hayseeds are to derive from it would not have been so obvious had not the

article copied in last week's RURAL from the Examiner concerning the proposed exploration of Death valley made it plain. The "faunal area," theory as there set forth is so simple and comprehensive that when the surveys and maps are completed and distributed among the farmers we may expect to see agriculture receive an immediate boost.

To quote from the Examiner article: "For example, suppose it is determined what are precisely the limits occupied by the jackass rabbit. When that much is known, it must necessarily be true that any plant which thrives in one part of that area will do well in any other part."

Let's see: The jackass rabbit occupies Southern California; the orange thrives in Southern California; the jackass rabbit also occupies North Dakota; ergo, the orange will "do well" in North Dakota. There's a syllogism for you.

If our Department of Agriculture really expects to benefit the farmers of the country in the manner above intimated, there are other jackasses than the rabbits whose "limits" should be "defined." S. B. BAGNALL

Simi, Cal., Dec. 28, 1890.

## Cal. and the If.

EDITORS PRESS:—The custom has been continuous and universal in abbreviating the word California to use the letters Cal. Recently, however, some people have added two more letters and made the abbreviation Calif.

The reason given for this clumsy change is that the new State of Colorado has used the letters Col. to shorten its name in writing, and that Cal. and Col. are so nearly alike that confusion must result.

These abbreviations are alike, but nevertheless seem productive of no numerous errors in the transmission of mail. In ten years I have never had a case occur in which these abbreviations caused a misent letter or package. They are certainly not a frequent source of error.

If, however, they are, it is not for California, the older, the larger and the more important State, with its abbreviation thoroughly established, to make an awkward change and disagreeable increase of letters in its abbreviation. It is Colorado, the new-comer, whose abbreviation was made to resemble ours, that should change.

If and but are delightful words; to place one of them, however, on our letters without the other is a divorce not warranted in esthetics. It is, perhaps, with this view that our excellent reformers propose to put the "if" on all California letters, not only as a saving clause on things Californian, but also with the idea that the "but" will be there when Colorado makes fun of us.

Cal. belongs to us; it is for others to avoid infringing on our rights, and not for us to make a ridiculous retreat from an impregnable position. To set up this new-fangled notion makes a confusion in itself. It will never be generally accepted. Let us stand by the old familiar Cal. ABBOT KINNEY

Santa Monica, Dec. 30, 1890.

## SHEEP AND WOOL.

## Exterminate the Coyotes.

EDITORS PRESS:—At the last meeting of our Wool-Growers' Association it was the general sentiment of all members that the RURAL PRESS should be requested to publish the article which I send. [See below. EDS. PRESS.]

We are trying to exterminate the coyotes, and we want help from other counties. We want other counties to follow our example. We have killed 220 coyotes during the last two years and paid \$20 for each scalp, but if other counties breed them and drive them in here with their dogs, it will take a long time to wipe them out. We want you to publish the article in full so that it will reach all the wool-growers in the State, and let them know what we are doing.—G. W. SCOTT, Madison, Yolo Co.

## Coyote Scalps.

The Esparto Independent having been made the official mouthpiece of the Wool-Growers' Association of Yolo county, we propose to show in this article why the sheep industry should receive more protection from the county in the way of bounties for coyote scalps than it has yet received; and also why contiguous counties should adopt and cheerfully support, for the present, at any rate, a similar system.

Here are 12 reasons for our position:

1. In Yolo county there are about 60,000 acres devoted to the business of sheep-raising, mostly abrupt land, which would be worthless if need for other purposes.

2. This land is now used for the raising of sheep.

3. The sheep industry is one which helps to supply food and clothing to the people.

4. This industry pays a large sum into the county treasury yearly, for which little or no benefit is received excepting in the form of a bounty paid for coyote scalps, the bulk of which expense the Wool-Growers' Association of Yolo county now bears, being compelled to pay \$15 out of \$20 to hunters or trappers for coyote scalps.

5. This industry pays into the treasury of the county a sum of about \$5400 or thereabout, as taxes on the land and flocks occupying them, for which the county so far this year

has only been asked to expend \$405 for coyote scalps.

6. That the owners of this 60,000 acres do not want nor do not put the county to any expense for bridges or the maintenance of roads.

7. That the owners of these flocks and lands are as much entitled to an expenditure of the county money as people living along the Sacramento river, or any quarter of the county.

8. That the killing of these pests is one that the whole county (yea, the whole State) is interested in, because if they are not exterminated they will kill chickens, hogs, turkeys, geese, and become an unbearable nuisance.

9. That the amount now paid by the county—\$5—for coyote scalps should be raised to \$10, to more quickly exterminate the animals and to afford this valuable and tax-paying industry ample and just protection.

10. That the county is fully protected against fraud and imposition, because the Wool-Growers' Association does not pay any bounties for scalps until a member has vouched that the animal was killed in Yolo county.

11. That coyotes are a migratory animal, and if they are not killed off constantly they will accumulate in the valleys in such numbers, when driven from the mountains and the north, that this valuable and tax-paying industry would soon be ruined and large loss would ensue.

12. In San Bernardino county the people are obliged to shut up poultry at night on account of the coyotes. The same would be true here if they had been permitted to increase. The 220 coyotes which the association has been the instrument of having killed, would, if left unmolested, have grown to at least 500.

For the above reasons we claim the Board of Supervisors of this county is fully warranted in increasing the bounty.

The above article was read and incorporated in the proceedings of the Wool-Growers' Association, and the following resolution, offered by J. R. Parker, was unanimously adopted:

Resolved, That the Board of Supervisors be petitioned to request the Supervisors of Colusa, Napa, Lake, Solano, Sacramento and adjacent counties to join in with Yolo county and offer bounties for the extermination of coyotes. It is to be hoped this action will be taken.

## THE APIARY.

## Bees and Fruit.

EDITORS PRESS:—A San Diego county spiarist writes me as follows:

I have read your articles in the PACIFIC RURAL PRESS regularly, and I am always pleased with what you have to say. There is one thing that I have wanted to see you or some of our good writers do, and that is, write on the subject of law or California law in relation to bees or bee-keepers.

Some of my neighbors have an idea that they can make me get up and move my bees any time they see fit until those bees are five miles from any orchard or vineyard.

Now, if this is California law, we have not much right left us, and I don't feel like giving up a good business.

Give us the law in the next issue of the PACIFIC RURAL PRESS, or any law that you know of in relation to bees.—L. Y., Elsinore, San Diego Co.

Friend Y., don't get frightened; there is no danger of those neighbors of yours forcing you to move your bees five miles or five inches either for that matter, unless you want to.

Ignorance is generally the cause of the whole thing, and I strongly suspect that your non-agreeing neighbors are not up with the times.

In Placerville, at one of my apiaries, I was threatened with lawsuits on several occasions by a couple of persons who knew nothing at all of the habits of bees. They stated that the bees were eating up all their grapes, and in proof of their statement, invited me to come to their vineyard. I went. I found thousands of yellow-jackets and wasps at work, and also quite a number of bees.

"Now I want to see the bees opening grapes," I said. We watched a long time and took careful notice of a great many bees, and at last they had to admit that they were mistaken in regard to bees opening grapes. It is the yellow-jackets and wasps that do the real injury. Bees do nothing but suck at the juice after the fruit is injured, and unthinking persons seeing them do this, jump to the conclusion that the bee is the original trespasser.

I once asked the most extensive fruit-grower of Upper Placerville about how much injury my bees did his fruit in a season, and he said that he thought 50 cents would cover damages for the juice they sucked up. His ranch was about 300 yards from my apiary, and he dried quite a number of tons of fruit every season; besides, he had quite a vineyard. The only real damage I ever knew my bees to do was to suck up the juice of extra ripe Bartlett pears which a friend was trying to dry. In a case like this, I would always pay for the damage done by the bees. Bees are a great aid to fruit-growers in helping to fertilize the blossoms, and the good they do far overbalances the damage ever done by them.

Fruit-growers and bee-keepers should be friends. When they get involved in a difficulty about bees, let each come half-way and

talk the matter over in all its bearings, and in all cases try and arrive at a friendly conclusion.

Speaking of bees being trespassers, Mr. Thomas G. Newman, editor of the American Bee Journal, says: "Instead of bees being trespassers while gathering a few drops of honey from the flowers, they are positively required by the plants to fertilize them; and all Nature invites them to come to the feast simply to carry the pollen masses from flower to flower, and thus, as marriage priests, to cause them to become prolific and bear fruit in great abundance. In ignorance of this, many imagine that bees are trespassers and destroyers of fruit! Such nonsense vanishes before the revelation of scientific facts."

"If bees can trespass there is an end to bee-keeping," writes a member of the National Bee-Keepers' Union in the American Bee Journal; "for every homeman will be at the mercy of a surly neighbor. Apart from their merits as honey gatherers, bees are of incalculable benefit to market gardeners, florists, etc., in fertilizing flowers. If we had bees that could reach down to the honey cells of red clover, they would be of inestimable value to the farmer, as red clover depends for fertilization on insects—mostly bumble-bees. We are satisfied that the reason why the first crop of clover has so little seed is because there are not enough of the bumble-bees to fertilize it so early in the season. We noticed in one meadow, some heads were full of seeds and others apparently equally as ripe without a grain. The bumble-bees had evidently been on the one and not on the rest. Some wise men may laugh at this, but it has been carefully demonstrated by Darwin years ago, that when the bees are excluded the clover seed does not form."

## Experiments With Bees and Grapes.

Prof. N. W. McLain, of the United States Agricultural Station, Aurora, Ill., made extensive experiments to determine whether bees could perforate grapes. He placed several colonies of bees in a house, and endeavored by beat and other requisites to bring about all the conditions of a drought. In his report he says: "The bees were repeatedly brought to the stages of hunger, thirst, and starvation; the test continuing for 40 days. I obtained 13 varieties of choice grapes, and every inducement and opportunity was afforded the bees to appease their hunger and thirst by attacking the fruit which was placed before them. Mark this: Some of the bunches were dipped in syrup and hung in hives between the combs; some placed before the hives on plates; and grapes were suspended in clusters from the posts and rafters. The bees lapped and sucked all the syrup from the skins, leaving the berries smooth."

"They daily visited the grapes in great numbers, and took advantage of every crack in the epidermis or opening at the stem, appropriating to their use every drop of juice therefrom, but they made no attempt to grasp the cuticle with their mandibles or claws. I removed the epidermis carefully from dozens of grapes of various kinds, and placed them on plates before the hives. The bees lapped up all the juice on the outside of the film surrounding the segments of the grape, leaving this delicate film dry and shining, but through and beyond this film they were unable to penetrate."

"I punctured the skins of grapes of all kinds, by passing needles of various sizes through the grape, and placed these before the bees. The needles used were in size from a fine cambric needle to a sacking needle. The amount of juice appropriated was in proportion to the size of the opening in the skins and the number of segments of the grape broken. The same was true in the case of broken grapes burst from overripeness. Bees are not only unable to penetrate the epidermis of grapes, but they also appear to be unable, even when impelled by the direct necessity, to penetrate the film surrounding the berry even after the epidermis is removed. Grapes so prepared, without exception, lay before the hives until dried up."

"During the last season I made many visits to vineyards, and my observation and experience with bees in confinement and those having free access to vineyards furnish abundant proof to convince me that bees do not, and cannot, under any circumstances injure sound fruit."

## Law in Regard to Bee-Culture.

I do not know of any California law that has any special bearing or relation to bees or bee-culture. Mr. Gustav Bohm of San Diego county once had considerable trouble with some raisin-growers, but if I am correctly informed, he won the case, the raisin-growers admitting that they were mistaken. Mr. Bohm was a member of the National Bee-Keepers' Union, an association whose object is to promote the general interests of the pursuit of bee-culture throughout North America.

The Union has won all the cases brought against its members, and has gained several valuable decisions in regard to the rights of bee-keepers. The crowning victory won by the Bee-Keepers' Union was that of G. A. Clark of Arkadelphia, Arkansas.

The Supreme Court of Arkansas decided that the keeping of bees was not a nuisance, and Mr. Clark did not have to move his bees, as some malicious and envious persons tried hard to make him do.

In speaking of the decision of the Supreme Court of Arkansas, the general manager of the "Bee-keepers' Union," Mr. Thomas G. Newman, says: "That decision is our corner-

stone of defense. It calls a halt in all snob "careers of madness," and demands justice for the 300,000 Americans who are now engaged in the keeping of bees.

"What makes a business respected?" asked the president of the Union, and he answers his own question thus: Its usefulness to humanity. What makes a noisy, dirty rolling-mill respected? Its usefulness. What makes horses and horse-stables respected in large cities? Their usefulness. Why do we respect the constant blowing of steam whistles in large cities. Their usefulness. Who is a more useful member of our great pulsating humanity than he who gathers together a wealth that would otherwise be lost? Who accomplishes this in its entirety more than the honey producer? Why is not our business respected? I think it is because the general public are not informed of the fact that honey producing, with modern fixtures and methods, is a great business and of value alike to the bee-keeper and his country.

"When the people are aware of the extent of the pursuit and its usefulness, they will respect it; and, more, when they understand that bee-keepers stand by one another, and have a union for defense, they will respect it."

The coming season I hope to take a trip into the southern counties of this State, and I shall visit and interview a great many apiarists and fruit-growers, and hear the pro and con of the fruit and bee question, besides gathering many valuable items on bee culture for my new book, the "Western Bee World."

Grizzly Flats, Cal.

## HORTICULTURE.

### Peach-Growing in Sutter County.

A "Fruit-Grower" gives the *Yuba City Independent* the following interesting and suggestive article:

One of the leading industries of Sutter county, a few years hence, will undoubtedly be the growing of peaches. It has already been thoroughly demonstrated that our soil and climate are remarkably adapted to the culture of this fruit.

To those about to engage in fruit culture, we would suggest that peaches should be planted more extensively than any other fruit. The peach tree needs care and attention. It must be carefully pruned, cultivated and sprayed, but it will respond with generous returns when this care is bestowed upon it.

In planting a peach orchard, the grower should bear in mind the fact that there are three avenues of disposal for this fruit. It may be either canned, dried or shipped green. It is always better to plant an "all round" peach rather than one that is only suited to one market. To illustrate this, we might remark in passing that in a locality where canning and drying are extensively practiced, it would be folly to plant largely of a variety like the Alexander, that is only suited for shipping. There is a long list of peaches that are equally well suited to the three modes of marketing, and these are the kinds to plant. Then again the best peach is not always the peach to plant. The tree must be healthy, a vigorous grower, and prolific. The White Heath cling is one of the finest peaches known, but it is not grown extensively now because the tree is subject to mildew and curl-leaf and is not profitable.

Shipping green fruit East is yet a risky business, while canned fruit is necessarily expensive and is a luxury. Dried fruit is, however, fast becoming a staple article. It is economical and healthful, and should be largely used by every family in the land. Sutter county enjoys unusual facilities for producing a superior article of dried fruit. Our hot days and dry nights during the summer allow us to make a superior article of dried fruit in the sun, without recourse to evaporators.

Then in planting a peach orchard in Sutter county, choose varieties that are capable of being marketed in the three ways suggested above, but if they are a little better adapted for drying than for canning or shipping, so much the better.

A grower cannot go astray by planting any of the following varieties in Sutter county, as they are all grown at the present time here and are known to be profitable. These are all yellow free-stones and are named about in the order of their ripening: Early Crawford, Foster, Susquehanna, Muir, Wager, Salway and Picquet's Late. Of yellow clings there are not a great many varieties growing in the county, but these are standard: Tuscan, Runyon's, Orange cling, Lemon cling, Edwards cling and Crawford cling.

Clings are equally as good dried as freestones, and as the number of dried sorts is small, the grower should plant for experiment a few each of all the new varieties, and we would particularly recommend the planting of a few Sellers cling, Nichols cling, Grover Cleveland, McDevitt's cling and others.

No one will deny the statement that raw products are sold cheap—in fact at a slight advance on the cost of production—while the manufactured articles are expensive. The farmers of the United States are the poorest paid class, while the manufacturers are the wealthiest.

The farmer sells his raw product to the manufacturer, who adds to the cost of the material the expense of labor put upon the raw product, then receives a large benefit from the tariff, and

adds a large profit when he sells his goods. Let the fruit grower emulate the example of the manufacturer rather than that of the farmer. Do not sell your fruit green to a shipper at a cent and a half a pound or to a canner for two cents. You are then selling the raw material; but dry your product and make the profit yourself on the manufactured article.

Dried peaches are quoted in the paper to-day at from 8 to 27 cents per pound. The grower may say there is no money in dried fruit at 8 cents. Very true, but there is profit at 27 cents. Instead of making 8-cent goods, make the 27-cent article. The same fruit can often be made into the two different grades quoted above. The cheaper grade is carelessly picked, roughly handled, poorly sulphured and slovenly cured. Of course it is cheap. It has to compete with nearly every grower in the country.

On the other hand, the best quality of dried fruit is packed at exactly the right time, carefully graded, well bleached and thoroughly cured. After drying it is again graded, cleaned of its fuzz, etc., in a revolving wire screen drum, steamed or scalded and marketed in small packages.

When dried fruit leaves the orchard, packed ready for the consumer, the grower reaps the profit; but when the buyer tells you he prefers it in sacks, he does so because he wants to manipulate it himself, thus securing the enhanced price. There was an old saying in our Political Economy text-book: "Change the form of your product and double your profit." The example given was, "instead of raising grass and selling hay, raise grass and sell beef, thus making a profit on the grass and the beef." Apply this to peach culture in Sutter county. Instead of raising peaches to sell green, dry them and make a profit on the green and dried fruit.

But, above all, make a good article and make an honest article. Guarantee your goods to be exactly as represented, and see that they are. Let your name on the package be sufficient to sell the goods. A profitable business in drying first-class may not be built up in a single season, but if the fruit is as represented, buyers will soon know your pack and you will receive a price that will justify you for the extra expense incurred in making a superior article.

### Caution Against Poor Orange Trees.

EDITORS PRESS:—Are not the present high prices of orange trees going to lead to their destruction? I mention this because the present high prices for trees have set in motion all sorts of methods to produce them. Men without experience, and I fear sometimes principle, are rushing into the production of seedlings, and all sorts of culls, half ripe and immature fruit, are gathered up and put into the rot-heap for the seed. Surely this must in some cases bring a worthless, weakened seedling.

I have taken considerable pains of late to notice blocks of these seedlings set in rows for budding, some having been set two years, where one-third to one-half of them are so weak they were scarcely a foot in height and show every appearance of lack of vitality. These weaklings are often stimulated by strong fertilizers and then a bud is forced into everything that will receive it. Many of these buds, after a season's growth, are not more than a couple of feet in height. Now, owing to the present high prices, many of these light trees find their way into permanent setting (because of their being offered cheaper than good trees), where, if they live at all, they struggle along for years, when the fruit, owing to its inferior quality, again goes to the rot-heap for seed.

The health of the peach was very nearly ruined all through the peach districts of the East by the selection of improper seed—seed from trees that had the disease known as "yellows"—and all sorts of worked varieties that had been bred in and in until their vitality had been so nearly exhausted that in many cases the seed failed to germinate at all; or if it did, and was even budded, the tree often died without ever producing fruit, or at most yielded premature and worthless fruit. All reliable nurserymen now go back to the natural seed for stock, and as a natural result the health of the peach is becoming very much improved.

In my opinion, unless the producers of the orange pursue some method by which they can keep up a healthy seedling and select their scions from known healthy trees, the future of the orange industry will result in discouraging failure. Many of the best experienced growers of Florida use only seed from the native wild seedling. This is no doubt the proper method, and I trust our nurserymen will adopt some similar precaution before it is too late. There is probably no better seed to be had than the "Mission." It is a strong grower and seems to have all the requisites of a perfect stock, and could our seedlings all come from perfectly ripe fruit of that sort, there would be no fear for the future of the orange industry here; but so long as old seedling orchards are worth from \$500 to \$1500 per acre for the fruit, I fear not much of the fruit of this old sort will find its way into the seed-bed.

### Fruit Union Annual Meeting.

The sixth annual meeting of the stockholders of the California Fruit Union for the election of a board of nine (9) trustees for the ensuing year, and for the transaction of such other business as may come before the meeting, will be

held on Wednesday, Jan. 21, 1891, at 1 P. M., in Irving hall, No. 141 Post street, S. F.

H. A. FAIRBANK,  
Secretary California Fruit Union.

## THE VINEYARD.

### Wine Grapes for Napa Valley.

Prof. Geo. Husmann concludes his letters to the *Napa Register*, two of which have already appeared in our columns, with the following discussion of wine-grape varieties:

The choice must depend somewhat on the nature of the soil of the vineyard. If it is upland, which will produce fine clarets, the best red-wine varieties should have the preference, perhaps. If rich bottom-land, white varieties should predominate, as such soil will not produce color and tannin, which is generally sought for in red wines. It is the injudicious planting of Zinfandel and other varieties of black grapes on soil not at all adapted to them which has brought our red wines into disrepute, together with injudicious handling by the maker.

But in all cases it should be our aim to produce the best quality, together with sufficient quantity to be remunerative to the grower. In white varieties we have a better choice than in red, and I will name a few which are excellent bearers and also make the best wines. It is hardly to be expected, however, that they should be adapted to all localities. I have tried them in Talco vineyard and here in Chiles valley and found them all I could wish, producing heavily every year and making the best of wine.

Sauvignon Verte.—This is in many localities also called Colombar, which is, however, a misnomer, as Colombar is one of the synonyms of Semillon. The first name is used most generally in our valley, though there are doubts as to being the correct one. Mr. Crabb contends that it is the Pedro Ximenes of the Spanish. However this may be, it is one of the best varieties to produce a fine wine of the Sauterne type, and seems especially at home here. It is a very strong, long jointed grower and must therefore have stakes at least five feet long, when 50 pounds to the vine are not an unusual yield. It is very hardy also, and will withstand a moderate frost. Some of my vines have green leaves yet, where the Zinfandel were frosted nearly two months ago.

Semillon.—This is a beautiful vine in every respect, a good bearer, with fine persistent foliage, hardy and healthy, and producing a wine of the finest quality of Sauterne type, which is eagerly bought by the dealers at an advanced price. It grows more stocky than the foregoing, and will withstand heat and cold well.

White Pinot or Chablis.—This is the famous White Burgundy of commerce, which is also used in the manufacture of champagne; a fine vine in every respect, a good grower and bearer and makes excellent wine.

Green Hungarian, or Long Green (Verte Longue).—To those who desire a wine of the Hook or Rhenish type, this will be the grape, as its wine resembles good Riesling, and the vine is a very heavy bearer even with short or stool pruning. With long pruning it will overbear. It comes perhaps nearer than any I know of to being a model vine—short jointed, stocky growth, heavy foliage, not affected by the sun and very hardy. It can be grown on short stakes and even with stool pruning afterward, like Zinfandel.

These four are my choice. I do not like the Rieslings on account of their straggling growth and as they are also subject to coulure; nor the Chasselas because it sickers badly and its wine, though fair, does not come up to the high standard of quality which I have in view always.

### Grapes for Red Wine.

I do not pretend to be as well posted on these, as I think they should be grown only on particular soils adapted to them, such as our hillside, with that peculiar red soil which we know as the home of the redwood and manzanita. From a general standpoint, the soils of this State, as cultivated so far, do not seem so well adapted to the production of fine clarets as to white wines. The Cabernet Sauvignon, so highly lauded and which makes the finest type of clarets, is unfortunately a very poor bearer and will not pay the grower except at fancy prices. The vintner, who sells to the wine-maker, can better afford to grow Zinfandel at \$15 per ton than Cabernet at \$25 or even \$30 per ton. The same may be said of the Milbeo. In the best locations, the Zinfandel, if well ripened and carefully handled, makes about as fine a wine yet as any we have, but it has many faults. It is apt to sunscald, ripens unevenly, and is on that account difficult to ferment, and is a tender vine, subject to frost and black knot. It would be hard to find, among the many candidates for public favor, one that would answer all the requirements of a perfect vine. Therefore I prefer white varieties, where I think we have obtained perfection. Among the most deserving of the red, I will mention Petit Syrah, Mondeuse, Grosse Blane, Carignane, Tannat and Baco, or, as it is more generally known here, Crabb's Back Burgundy. Some advocate even Mataro and Grenache, which in my estimation are only second class. A variety which has been much overlooked, but which in my opinion will make a very fine red wine on good soil, is the Gamay Teinturier.

It is a stocky grower, a good bearer, the juice is very high-colored and makes a wine of that beautiful purple color so much admired in clarets. So far it has mostly been tested in bottom soils not calculated to bring out all its best qualities and therefore is not as well known.

In conclusion, let me say that it is of the utmost importance to get the best of wood for grafting, and obtain it true to name. Better pay double the price than to have poor soils and mixed varieties, and there are but few vineyards in this State where they can be had absolutely unmixed.

## THE STOCK YARD.

### A Buffalo Ranch in California.

Monterey county is to be the seat of a new California industry, in the shape of a buffalo ranch, near the Carmel Mission. There are now in the stables at Del Monte three fine specimens of the American bison, a bull, a cow and a calf, the last a progeny of the former two. Last Sunday's *Examiner* had a two-column article illustrated with the portraits of the illustrious trio, which, with the exception of a domesticated herd in Kansas, a small band under Government protection in the Yellowstone Park and a few held in captivity on a ranch in Colorado, are the last representatives of a distinctive and mighty American race, that can be saved from extinction now only by domestication.

A seven-mile drive took the writer from Del Monte to Pebble Beach, where the buffalo ranch is to be located, where Winston, the owner, was found busily at work arranging for their reception.

The ranch, which comprises about 100 acres, is located in the lee of Cypress point, overlooks Carmel Bay, and slopes easily down to Pebble Beach. Water is brought from the Carmel river reservoir, and cypress and pine trees afford ample shelter.

"I bought the cow of Redbreast, one of Sitting Bull's warriors, about three years ago," explained Winston. "She was captured during the last buffalo hunt of the Sioux, in the fall of 1882, on the headwaters of the Big Cheyenne, not far from Fort Pierre, on the Big bend of the Missouri, in South Dakota. I am the first white man who ever owned her. She is now in perfect form. You know a buffalo doesn't mature until eight years of age, and Janie is just past eight."

"The bull I captured myself on the 16th of June, 1886, 65 miles southwest of Jamestown, N. D. He is the last buffalo ever captured alive in the Dakotas. I killed his mother and the calf was then so small that he didn't try to get away, but lay hidden in the long grass. I picked him up and carried him away."

"The calf was born in Portland, Or., Oct. 1, 1889, and is named the Duke of Portland. He was the first buffalo born west of the Rocky mountains."

"These are the only buffalo on the coast and I am assured by Gen. Miles, Gen. P. E. Conner and other military men that they are the finest they have seen in captivity."

"Oh yes," he continued, "they stand captivity all right, and the climate agrees with them admirably. They eat anything that cattle will, and I am sure will thrive here."

"They know me, and I can do almost anything with them; but they will not make up with a stranger. The bull knows that I am not afraid of him, and submits to my will, but he can tell in an instant that a stranger views him with distrust, and when you glance at a tree or a convenient fence in case he should get loose, he knows just as well as any one that you are afraid of him, and immediately lowers his head and charges."

"I am going to stop here on the ranch and attend to the animals, which we shall have out here in about six weeks. I shall have an inclosure up there where you see the line of posts, under the pines, of about eight acres within the large field. The fence will be five boards high, and I think buffalo-tight. In order to make certain, however, I shall put rings on the bull's horns, and a triangle chain from the ring in his nose to the rings on his horns, which will keep him from breaking it down. I shall seed the inclosure to alfalfa and go about raising buffalo just as I would cattle."

"It will be a strange fact that here within sound of the bells of Mount Carmel, and just where old Father Junipero Serra located the pescadero, the buffalo should be saved from becoming extinct by domestication."

"In addition to rearing the pure buffalo I shall cross them with a herd of Galloways, and also with the native cattle. The cross is a successful one and has been carried down to the sixteenth generation. The Galloways are peculiarly adapted to this purpose; their coat is jet black and long, and in appearance they resemble the buffalo more than any other breed of cattle, except that they are hornless."

"The hair of the Galloways is extremely fine and the cross produces a superior buffalo robe, equal to seal skin. Some that have been obtained in Kansas have sold as high as \$280 each."

"We shall kill the progeny for their hides, and the beef will also prove valuable. Buffalo beef is the best in the world. Of course when the animal runs wild it is strong and sinewy, but when brought up in captivity and stall fed it has no equal."—*Salinas Index*.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## "And Still It Moves."

[By MORTIMER WHITEHEAD, National Lecturer.]

In one of our leading agricultural papers a few days since appeared an editorial criticism upon a letter from a farmer in the State of Michigan, in which he advocated as one means of relief for the depressed condition under which farmers everywhere are suffering, that Government should issue its money direct to the people, with farms as security, the same general idea that has within a short time been introduced and ably supported in the United States Senate by Senator Leland Stanford, of California. This agricultural editor says: "It would be unfortunate under our political system if the Government should go into the business of loaning money to the people."

On behalf of thousands of other farmers who think as does that farmer in Michigan, I would like to ask that editor if the Government is not now, and has not been for years, loaning money to one class of its people, and at a charge of only one per cent for its use at that? (with bills now before Congress to loan it to them absolutely free).

Take two men at the close of the war. One buys a farm for \$10,000; the other buys Government bonds for \$10,000. Both are investments; the farm and the bond. Both represent value, and have a buying and selling price. The money in the bonds, without any labor of the holder, has paid a much larger interest, it is true, than has the money in the average farm, with all the hard work of the farmer and his family. Those favored few, the special class "of the people" who own the bonds, can take them to Washington, deposit them in the Treasury (say \$100,000). They are safer there than at home. Those who bought them still own them. The interest on them never stops—it is regularly and promptly paid; and, on those bonds as security, Uncle Sam—the Government—loans this special class "of the people" \$90,000 in money, which they take home and, as middlemen, loan this Government money to the farmers and others "of the people" at 6, 8, 10, 12 or more per cent interest.

Now, why not let the farmer have the same chance with his property?

If the bank loans the money obtained, printed, made and furnished by the Government, to a farmer on his note, and he fails to pay it, don't they take his farm, if necessary?

In my State—New Jersey—for many years past, the State has loaned its school money to farmers, with their farms as security, and with entire success and satisfaction.

In England, a number of years ago, the Government loaned large sums of money on long time, and at very low rates of interest, to farmers for the purpose of tile draining their lands.

How many hundreds of millions of dollars has our Government loaned to another class "of the people" to help them build railroads that are now too often used to oppress the farmer?

It simply makes a difference who is doing it. Senator Stanford's step was in the right direction.

The world moves, and the farmers are awakening and commencing to move with it. New ideas are coming to the front.

"All citizens shall be equal before the law," says our National Constitution, and that means finance laws, tariff laws, and all laws. Let us think on these things.

The National Grange at its annual session in November 1889, in Sacramento, Cal., by a vote of more than three to one adopted the following:

*Resolved*, That we \* \* \* also favor the maintenance in circulation of the paper money of the United States, independent of the National Banks, in sufficient volume to prevent any future contraction, and consequent embarrassment to our prosperity.

The National Grange has always declared itself fairly on the side of the great mass of our people on these important questions. This the farmers are coming to understand more and more with each passing year; and so this great National organization of farmers, now nearly twenty-four years old, grows and prospers at this time better than ever before in its history. Farmers, unite with the nearest Grange, or get one in your neighborhood as soon as possible. Take the wife, and boys and girls above 14 years of age, with you, and let us all work together on these matters that will relieve us of the unfair burdens we are now bearing. The Grange offers to help you. We must unite or go under.

## Joint Installation.

A. T. Dewey, Sec'y State Grange—DEAR SIR AND BRO.: Alhambra, Walnut Creek and Valley Granges will have joint installation Jan. 24th, at Valley Grange hall. Fraternally yours, GEO. P. LOCKES, Master Valley Grange.

Pacheco, Cal., Jan. 7, 1891.

Worthy Master Davis will be present.—EDS.

OWING to our electric motor getting out of order, our last Grange edition was delayed one mail.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

"The art of Agriculture is the parent of all arts." Don't you think you can afford to join the organization that has done much to instruct and assist the farmers in the pursuit of this Parent of Arts? No Order has done more to advance the calling of the farmer than the Grand Old Grange. The Patrons of Husbandry is so well balanced that it is now considered the conservative power of the nation. No class of our citizens is more steady, temperate and reliable than the farmer. In times of sorest distress the farmer is relied on as the safe man. Therefore we want to have the agriculturist well educated, well organized and fully prepared for all positions. This work the Grange has done, is doing and will continue to do. The farmer who wants to keep abreast of the times will join some agricultural organization and there is none better than the Grange.

The Grange is not partisan, yet the principles we teach underlie all politics.—*Declaration of Purposes.*

In our noble Order there is no communism, no agrarianism, no nihilism. We are opposed to such spirit and management of any corporation as tends to oppress the people or rob them of their just profits.—*Declaration of Purposes.*

It is a safe thing, with the new year, to begin to look out for hogs lawyers, doctors, book-agents, patent agents, fraternal society agents, lying circulars, mendicants and politicians. Keep an eye open for persons and promises that are intended to deceive.

Don't criticize too severely, for if you do some one may criticize you!

Plant a rose cutting about now. The spring-time will soon be here, and what more welcome visitor than the queenly rosebud?

Watch the person who has no good word for any of the neighbors! Something wrong somewhere.

How much money ought the present Legislature to appropriate for the exhibit at the World's Fair? Local Granges ought to post the Representatives. This is a live question; one of much importance to the taxpayer. Speak out by resolution in your Grange and send a copy under seal to your representatives at Sacramento.

The Grange is a peacemaker. The Grange believes in arbitration. We think better results can be obtained, with less annoyance and at very much less expense, by referring the disputed question to arbitration than by referring it to a court. So the Grange would adjust National difficulties, when they arise. The Behring sea difficulties are a case in point. While no person wants to see America insulted, wronged or betrayed, yet in this particular case, America can well afford to investigate and fairly and honorably arbitrate. Let the Grange use its influence to prevent a war or a shadow of war. Let the Grange practice what it preaches—"in all things charity."

Which day of the month is "Recruiting Day" in your Grange? An army cannot be kept in order and in fighting trim without recruits. Appoint your Committee on Recruits right away. Let's have a "General Muster" all along the line of the Grange this spring and summer.

Some of the fraternal organizations have employed women on the organizing force. Where is the sister who will organize a Grange? We had hoped for a charter list from a sister before this date. There is abundant opportunity for "Woman's Work," in organizing and reviving Granges.

Have you the new annual word? If not, it is not the fault of the officers of the State Grange. The word has been duly sent. Get it.

There are 115 farmers and only 3 lawyers in the Kansas Legislature. Now let us see what the soil-tillers can do. This is their opportunity. Give the farmers a chance, and wait a time in patience.

Hon. Chauncey M. Depew says "that 50 men in the United States have it within their power to get together and in 24 hours stop every wheel of commerce and of business." There is something wrong when such a condition exists. Fifty millionaires ought not to have more power than 63,000,000 people. There is a wrong, and the Grange wants to correct it.

See that your Representative votes on the Appropriation bill, to keep the State tax levy at or below 50 cents on the hundred dollars.

Have you thought of doing away with a lot of the commissions? Ask your Senator to assist by proposing an amendment to the Constitution. We don't need so many commissions. They are expensive luxuries.

Bro. Wm. Johnston, Worthy Past Master of the State Grange, and Sister Johnston, have

just returned from a trip to Pennsylvania. Bro. Johnston installs the officers of Placer-ville Grange on the 17th inst. A good time is assured all who attend.

Let's have a Road law so drawn that road tax will go to the improvement of roads and not to the pocket of "some fellow."

Bro. W. W. Greer, Worthy Steward of the State Grange, has gone to Southern California in the interests of the Native Sons. He has promised to keep an eye open in the interests of the Grange.

## Work of the National Grange Legislative Committee.

OFFICE OF THE LEGISLATIVE COMMITTEE, }  
WASHINGTON, D. C., Dec. 22, 1890. }

To the Senators and Representatives in the Congress of the United States of America—GENTLEMEN: In the briefest manner possible in order to do justice to the important subjects before us, we herewith present a statement of measures of vital interest to the farmers, and, as in duty bound, call your attention to the fact that the National Grange of the Patrons of Husbandry has been, and is, very emphatic in its indorsement of the subject-matter of this communication. Whether you approve or disapprove, individually, of the proposed measures, we ask, and we think we have a right to ask, that you place them before our highest Legislature for consideration. If you will do this, we will confidently leave the outcome with the American people, millions of whom in their organized capacity as farmers are earnestly and anxiously awaiting legislation that will relieve them from the depressing conditions that surround them. The National Grange, in all the 24 years of its existence, has ever been conservative, yet progressive, in its demands for legislation. The farmers of the country who hold allegiance to this National organization have not asked and do not ask special or class legislation for themselves alone, but, as in the measures herein advocated, they claim that the interests of agriculture are the interests of all other honest industries, for on a prosperous and successful agriculture depend the prosperity and progress of our whole country.

PATRONS OF HUSBANDRY, NATIONAL GRANGE, }  
OFFICE OF LECTURER, }  
WASHINGTON, D. C., Dec. 20, 1890. }

John Trimble, Member of Legislative Committee of the National Grange, P. of H.—DEAR SIR: Complying with the request of your committee, I submit herewith a brief report of the action of the National Grange for several years past, relating to finance, as found recorded in the proceedings of its annual meetings.

The National Grange is on record through all the years of its history in favor of a plentiful supply of money for the use of all the people of our country, and against the control of money by a few special classes who have it in their power to depress the price of land and all its products, and the products of other labor as well.

However much farmers, in their several organizations, and laboring men in theirs, may differ upon other matters, it is a good sign that, without exception, all the farmers, laborers and workingmen's societies in the United States have placed the demand for the free coinage of silver in their national platforms, and have recorded themselves squarely on the side of more money and no middlemen to control its supply. All agree that at least \$50 per capita should be the limit, and that the supply of currency should increase in proportion to the increase in population.

The plan of the Government issuing money at a low rate of interest upon landed security direct to the people, the same as it is now loaned to the National banks with their bonds for security, has rapidly grown in favor, and has been approved by the National Grange after full, fair and free discussion. Respectfully, MORTIMER WHITEHEAD, Lecturer, National Grange, P. of H.

Proceedings, Twenty-first Session, Lansing, Mich., November, 1887, page 148:

That as the constantly increasing surplus in the National Treasury not only contracts the currency and increases the value of money, but decreases the value of land and labor, and is calculated to engender corrupt legislation, it should be used as rapidly as possible to retire the National debt at par, and be so dispensed as to increase the circulating medium and stimulate a healthy state of trade throughout the whole country.—Adopted.

Proceedings, Twenty-third Session, Sacramento, Cal., November, 1889:

WHEREAS, Contraction of the circulating medium of the United States has depressed the prices of farm products to the great injury of the agricultural classes; therefore

*Resolved*, That we favor the free coinage of silver, and also favor the maintenance in circulation of the paper money of the United States, independent of the National Banks, in sufficient volume to prevent any future contraction, and consequent embarrassment to our prosperity.—Adopted.

Proceedings, Twenty-fourth Session, Atlanta, Georgia, November, 1890.

One of the recommendations of the Executive Committee was as follows:

The financial policy of a government has also very much to do in influencing the prices of agricultural products, from the fact that when money is plenty it stimulates business by increasing the ability to consume, as there is scarcely a family that would not consume more by living better if they had the money to expend for the necessary comforts of life.

The best times the farmers ever had, and when they made the most money, was when we had a currency of \$56 per capita, and we are sure other industries were more prosperous. In 1865 we had

\$56 per capita, in 1889 we had only \$17. Perhaps \$56 per capita was more than the best interest of the country required, but \$17 per capita, which is worse, is as much too low. Let Congress fix the volume of currency at not less than \$40 to \$50 per capita; the farmers will take the money and pay their mortgages by the increased prices they would realize for their products, and keep the mills at work by buying better farm implements, cotton, woolen and silk fabrics; make the coinage of silver free, requiring the people who get it coined to take it the same as gold. This would advance silver to a parity with gold in the markets of the world, and place our export agricultural products on an equality with those of other countries. As it is now, gold being the standard of value, making exchanges with foreign countries, compels the sale of our products in competition with the silver standard nations of the world, thus placing Russian and Indian wheat into European markets lower than we can—England making over 33 cents per bushel in making her exchanges, as the difference between gold and silver. Before silver was demonetized, from 1792 to 1873, the values were almost uniformly alike.

Should there not be enough gold and silver to raise the volume of currency to \$40 or \$50 per capita, refund interest-bearing bonds by non-interest-bearing demand notes.

To get the money into circulation, the Government can loan it upon good real estate at, say two per cent per annum, under proper restrictions, limiting the amount to be loaned; also the amount of each loan. The interest would become a source of revenue to the Government, and be the means of reducing taxation, and thus relieve those who cannot, under present conditions, save enough of the small earnings of a lifetime to secure a home that they can justly call their own.

This, or some plan similar to that which is now in vogue for furnishing currency to National banks, or on any sound financial policy that could be devised by Congress to furnish money to the people at a low rate of interest, to relieve the depressed condition of agriculture, would be inestimable in its benefits to those who toil.

Farmers would be glad to take the money at two per cent, which would save them four per cent from present rates of interest, which saving, in 25 years, would pay their entire mortgaged indebtedness without paying a dollar more per annum than they are now paying.

Which was adopted by the National Grange. All of which is respectfully submitted.

J. H. BRIGHTMAN,  
LEONARD RHONE,  
JOHN TRIMBLE,  
Legislative Committee.

## North Butte Grange Installation.

EDITORS PRESS:—Saturday, Jan. 10th, by invitation, I installed the officers of North Butte Grange. Wife and I left home while the frost was on the ground, for a ride of 12 miles to Live Oak. The thermometer stood at 27 degrees. We found a goodly number of Patrons assembled. Grange was called to order and the regular order of business was gone through with. It was reported by the Steward that four sisters and one brother were in waiting for the third and fourth degrees, when Grange closed in the fourth degree and opened in the third, when I was called to the chair to confer the degrees, which I did (with satisfaction to myself). After the degree work was over, we sat down to the Harvest Feast. After ample justice had been done to the good things on the tables, where full 50 good Patrons had assembled for the occasion, we returned to the hall for installation. After Grange was called to order, the Secretary called the names of the newly elected officers. They were all found to be present except the Gate-keeper. They proceeded to elect that officer, after which the Worthy Master introduced me as the installing officer, the duties of which I proceeded to perform to the best of my ability. As each officer was installed, all pledged themselves to do all in their power for the good of the Order and for the good of North Butte Grange. After the installation was over, some short speeches were made by the members of the Grange. Sister Davy read an essay entitled "The Grange." I made a short speech, giving them good advice and encouraging the newly made officers. At 4 o'clock the Grange closed in due form. All went home thinking that it had been a very profitable day to them.

North Butte Grange is going ahead in the good work; it has taken in new members to the number of 25 or 30 in the last six months. Fraternally yours, B. F. FRISBIE, Yuba City Jan 11, 1891. State Deputy.

## Letter Notes.

## Commendable Working.

Petaluma, Jan. 5, 1891.

EDITORS PRESS: \* \* \* You can hardly charge Two Rock Grange with not furnishing its iota to the PRESS. For its size, it is indeed an active Grange. It is increasing its membership continually; our meetings are always interesting and special meetings are held frequently. We work beautifully together; no wrangling or quarreling is ever heard. We understand the principle and purpose of our Order and work accordingly. It is indeed a pleasure to belong to such a Grange, and no wonder it is prospering. Fraternally yours, C. NISSEN.

STOCKTON GRANGE.—Saturday evening, Past Master T. E. Ketchum, assisted by Mrs. Mary F. Merrill, installed the officers of Stockton Grange, No. 70, Patrons of Husbandry.—Stockton Independent, Jan. 6th.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## Judge Blackwood on the Farmers' Alliance.

Following is an able address by Wm. C. Blackwood, P. M. of Eden Grange, Haywards, on the Farmers' Alliance and Patrons of Industry, their aims and purposes, as developed by the resolutions adopted at their recent National Convention at Ocala, Fla. It was intended to be read at the joint installation meeting of Eden and Temescal Granges at Oakland, Jan. 3, 1891, and would have been delivered but for the want of time previous to the necessarily early hour of return of Eden Grange.

**WORTHY MASTER AND PATRONS:**—There has sprung into prominence a new organization, a new social and perhaps a new political organization in the United States, made up in the main of the agricultural classes, but containing quite a sprinkling of the other industrial callings which would seem to be allowable under their name, "Patrons of Industry," being much more comprehensive than "Patrons of Husbandry."

It is but little more than a year since this organization assumed prominence in the body politic. The first and preliminary convention of the Farmers' Alliance was held in October, a year since, in St. Louis. At that convention the general agricultural depression, as well as of other and dependent industries, was strongly set forth, and in a series of resolutions the causes of such depression were pointed out and remedial legislation demanded, and all labor organizations were invited to join the Alliance in the demand for such legislation.

The organization would seem to have had a phenomenal growth, now having, it is said, more than 5,000,000 members. This to my mind is conclusive evidence of the general depression of the agricultural industries in the United States, for intelligent people, such as compose the masses of the agricultural population of our country, do not organize in mass except to

Effect Some Great and Common Purpose, Common to the minds of all. This organization has been effected, then, to remove a general grievance affecting the mass of industrial interests, and to be accomplished only by the General Government ceasing to enact laws favoring certain industries at the expense and to the damage of other industries.

Well, since the organization of the Order in October a year since, and the declaration of its purposes, the Congress of the United States convened and proceeded to enact more offensive class legislation, bearing, in the belief of the Order, more heavily than ever on the general interests of the country and favoring, at the general expense, the great manufacturing corporations.

Well, what happened? A general election for Congressmen came off, and the dominant party controlling governmental affairs was, so to speak, swept out of existence. The cause of this Waterloo defeat is traceable to the Farmers' Alliance.

## Explicit Declaration of Purposes.

At their general National Convention recently held at Ocala, Florida, among their declared purposes, they announced that "Believing in the doctrine of equal rights to all, and special privileges to none, we demand that our national legislation be so framed in the future as not to build up one industry at the expense of another. We further demand the removal of the existing heavy tariff from the necessities of life that the poor of our land must have. We further demand a just and equitable system of graduating tax on incomes. We believe the money of the country should be kept as much as possible among the people, and we demand that all National and State revenues be limited to the necessary expenses of Government, economically and honestly administered."

The principles avowed in the above declaration, if adopted as a rule of governmental action, will do away with most of the evils of misgovernment.

## No Discrimination.

When one man forcibly thrusts his hands into the pockets of another and takes therefrom his purse, we declare it robbery. Now what is wrong individually cannot be made right collectively. No legislative body can have any moral right to enact laws whereby one class in the commonwealth may grow rich at the expense of other classes. Such laws, in their very nature, are despotic and oppressive.

The great Webster, in opposing in Congress the high protective tariff of 1824, said: "That with him it was a fundamental axiom that the great interests of the country were united and inseparable; that agriculture, commerce and manufactures must flourish together or languish together; and that all legislation is dangerous which proposed to benefit one of them without looking to the consequences that might fall upon the others."

The effect upon the general prosperity of the country, since the turmoil of war has ceased in

the land, occasioned by adhering to high tariff, has been such as to paralyze agriculture and commerce, proving the truth of Webster's fundamental axiom, and that the only way out of national embarrassment is, cease to adhere to the policy of class legislation.

## Income Tax.

The Order demands a graduated income tax. By that, I suppose, incomes exceeding a certain amount are to be taxed a certain percentage; and when the income reaches a certain increased amount, it shall be subject to a certain increased percentage, and so upward, the greater the income the greater the percentage. In this manner the necessity of levying heavy duties on importations of foreign goods for revenue purposes would not arise, and the taxes on the consumption of the country would be proportionately lessened. An income tax levied for support of Government would measurably lessen the amount of taxes otherwise required to defray governmental expenditure, and the wealthy would be required to contribute more than they now do, and I think justly too, to maintain government. By the adoption of a justly graduated income tax, the small property-holder would be relieved from much burdensome taxation. The burden of taxation would then fall upon those most able to bear it, and that is where I think it should fall.

## Limitation of Government Expenditures.

That governmental taxation should be limited to necessary governmental expenditures, is a principle which ought to meet the approval of every right-thinking mind. Has the Legislature in making State appropriations always kept this principle in mind? The answer to this query must be, it has not.

There is a widely prevailing idea that the Legislature of this State has power to make appropriations for any purpose it may deem proper. This is not true. "The general appropriation bill shall contain no item or items of appropriation other than such as are required to pay the salaries of the State officers, the expenses of the Government and of the institutions under the exclusive management and control of the State." (Constitution, Art. IV, Sec. 29.) Here we have declared what may be included in the general appropriation bill, excluding therefrom all special appropriations for particular purposes other than as above specified. "Nor shall the Legislature have power to make any gift or authorize the making of any gift of any public money or thing of value to any individual, municipal or other corporation whatever." (Constitution, Art. IV, Sec. 31.)

Thus we see the Constitution has clearly limited the power of the Legislature in the matter of appropriating the public money.

With such constitutional limits to the power to appropriate moneys, I fail to see how the Legislature can vote an appropriation of money to aid California to make a display of her products at the approaching World's Fair in Chicago. I fail to see how the Legislature can pension off superannuated school-teachers—a thing which, I understand, is contemplated in some quarters. Such a pension would be a grant of money to individuals, and is within the inhibited provision of the Constitution. The World's Fair holds its charter from the United States—a corporation over which the

COL. J. S. BARBEE, STATE ORGANIZER FARMERS' ALLIANCE.

State of California has no control whatever. Being such, it also comes within the constitutional inhibition.

Strictly construed, the Constitution inhibits the Legislature from granting appropriations to assist in maintaining county fairs, for they are organized by associations of individuals for their own personal benefit or amusement. From such exhibitions the mass of the taxpayers in the State

## Derive No Benefit Whatever.

It is unjust, therefore, to tax the community for their support. Besides, such laws are special in their character. Some industrial organizations in the State support themselves without State aid. There is no general law on the subject. The Constitution expressly prohibits the passage of special laws when general laws may be enacted. Our Legislatures have in the past acted as though they have unlimited power to levy taxes for any conceivable purpose, treating constitutional inhibition as having no signification or meaning whatever.

How important, then, is the declaration of the Farmers' Alliance that the governmental expenditures, both State and National, shall be prudent and economical in order that taxes shall be kept down to the lowest point consistent with the public safety and welfare. To this end, among others, the Farmers' Alliance is directed.

## God Speed It in Its Good Work.

I see no reason why the Grangers and every honest man should not join in the proposed reforms, or at least most of these proposed reforms.

The organization of the Farmers' Alliance now numbers millions, although, like Jonah's gourd, they seemingly have sprung up in a night. They have already proved themselves such a power in the land that old party veterans stand aghast as they contemplate the exemplification already made by this now powerful organization, and in fear and trepidation they cry out,

## What Next?

Another great blessing is likely to grow out of this National Farmers' Alliance—the meeting of the people North and South in one homogeneous whole. Political animosities and sectional strife will cease. There will be a union of hearts and a union of hands. North and South, East and West, will exist only as geographical divisions, but all inhabited by one united and happy people, with none to molest them or make them afraid.

**COLUSA COUNTY ALLIANCE.**—At the quarterly meeting of this Alliance, at Arbuckle on Jan. 6th, Sec'y Poundstone resigned that office and T. J. Shellhammer was elected to fill the vacancy. The Williams Farmer offered two columns' space, weekly, for the publication of Alliance matters. The offer was accepted and the Farmer made the official organ. It was voted that the next quarterly meeting be held at Williams on Monday, April 6th, at 1 P. M.

**RESIGNATION NOT ACCEPTED.**—At the last meeting of Long Beach (Los Angeles Co.) Alliance, President H. C. Dillon tendered his resignation, but the members, by a unanimous vote, declined to accept the same, and await the decision of the National Alliance on the subject.

## State Farmers' Alliance Executive Committee Meeting.

This body held its first quarterly session at the rooms of the State Board of Horticulture, 220 Sutter street, during Monday, Tuesday and Wednesday of this week, meeting three times a day and giving close attention to business.

There were present members of the Executive Committee:

Jno. S. Dore (Pres.), Fresno; E. M. Wardall, Monrovia, Los Angeles Co. (V. Pres.); Jesse Poundstone, Grimes, Colusa Co. (Sec'y Ex. Com.); Jas. Morgan, Santa Barbara; David Reed, Monterey; also, among Alliance visitors, at different times during session, D. C. Vestal (Delegate to the National Alliance), J. M. Moore (State Agent), J. L. Gilbert (State Lecturer), C. W. Pedlar (Sec'y State Alliance), J. W. Hinee (General Organizer), S. P. Sanders, Frank Dunn and J. C. Drew.

The following condensed items furnish an inkling of the transactions up to the time of our first forms going to press, on Wednesday:

A paper on ramies was read by Professor Shinn of the State University. Specimens of the live plant, together with some of the fabrics manufactured from its fibers, were exhibited.

A motion was adopted permitting the sub-Alliances to purchase their supplies direct from the State Business Agent, where such a course would accrue to their advantage.

A resolution was unanimously passed, providing that each sub Alliance throughout the State shall be allowed to purchase articles required through the State Business Agent direct instead of through county agents appointed by the Alliance. Connected with each County Alliance is an agent who, through the State Agent, secures for members any implement or other article required in farm use at reasonable rates. By dealing direct with the State Agent much time is saved, especially in a large county where a sub-Alliance is situated at some distance from the main body.

J. M. Moore, the State Agent located in this city, gave a satisfactory report in regard to the amount of work done by him of this character.

During the present session of the committee, which it is expected will last two or three days longer, the Legislature now in session will doubtless be called upon to indorse certain measures advocated, notably the Australian Ballot system, having taxes collected twice a year, and also a question in connection with Nicaragua canal. Other subjects of interest to and for the benefit of the farmer will be called to the attention of the Legislature.

The meeting listened to addresses made by I. D. Neilson and Alexander Sutlun, a committee from the Boot and Shoe Makers' White Labor League, explanatory of the grade of goods in which the league deals, showing the difference in the white labor work of this State, the Chinese and the class of goods known as the Eastern. In response to the appeal of the committee that the Alliance should take some action in the matter, a resolution was passed, recommending an early conference with the State business manager with a view of settling the preliminary steps necessary to be taken, and that under his direction the Alliance will use all possible means to aid in extending the work of the league.

The committee also resolved that it should incorporate in order to secure for itself a legal status for the making of contracts and the transaction of such general business as may be deemed necessary for its well-being.

Resolutions were adopted urging the Legislature to pass an Enabling Act for Farmers' Mutual Fire Insurance Companies.

Hon. Thos. McConnell (of the Executive Committee of the State Grange, P. of H.) briefly exchanged views with the Committee on Important Objects of both associations in a fraternal manner.

Resolutions were passed making the PACIFIC RURAL PRESS the official organ of the State Alliance, commending the *Pacific Union* and *Monache Tidings* and *Farm View* for faithful services.

Further proceedings will appear in our Grange edition.

## Col. J. S. Barbee.

We publish this week an engraving of Col. J. S. Barbee, the State Organizer of the Farmers' Alliance and Industrial Union. Col. Barbee is a resident of Santa Barbara county, having arrived in this State in 1872. He was born in 1833, in Virginia, where he remained until his removal to this State. The colonel acquired his title while wearing the "gray" in the great rebellion, and like others who laid down their arms at the close of that conflict, did so with the firm resolution to accept the Union as it was and to strive to make it a union in deed as well as in name.

Col. Barbee is a man of very pleasing appearance, genial, warm-hearted, frank, and a close friend of the toiling masses. Prior to the establishment of the State Alliance, Col. Barbee bore almost the entire work of organizing the different Alliances throughout the State.

Col. Barbee served on important committees at the late National Alliance session at Ocala, Florida, and since his return to Santa Barbara, is again heard from in the work of the Alliance. He seems greatly endeared to its members throughout this and other States, where he has been the leading and pioneer organizer,

## Threnody.

Watching here alone by the fire whereat last year  
Sat with me the friend that a week since yet was  
near,

That a week has borne so far and hid so deep,  
Woe am I that I may not weep,  
May not yearn to behold him here.

Shame were mine, and little the love I bore him  
were,  
Now to mourn that better he fares than love may  
fare,

Which desires and would not have indeed its will,  
Would not love him so worse than ill,  
Would not clothe him again with care,

Yet can love not choose but remember, hearts but  
ache,  
Eyes but darken, only for one vain thought's poor  
sake,  
For the thought that by this hearth's now lonely  
side

Two fast friends, on the day he died,  
Looked once more for his hand to take.

Let thy soul forgive them, and pardon heal the sin,  
Though their hearts be heavy to think what then had  
been,

The delight that never while they live may be—  
Love's communion of speech with thee,  
Soul and speech with the soul therein.

O my friend! O brother! a glory veiled and marred!  
Never love made moan for a life more evil-starred,  
Was it envy, chance or chance-compelling fate,  
Whence thy spirit was bruised so late,  
Bowed so heavily, bound so hard?

Now released, it may be—if only love might  
know—  
Filled and fired with sight, it beholds us blind and  
low,

With a pity keener yet, if that may be,  
Even than ever was this that we  
Felt, when love of thee wrought us woe.

None may tell the depths and the heights of life and  
death,  
What we may give thee: a word that sorrow  
saith,  
And that none will heed save sorrow; scarce a  
song.

All we may, who have loved thee long,  
Take: the best we can give is breath.  
—Algernon Charles Swinburne.

## A Town Day and a Farm Day.

My Letter to Emily Ransome and her  
Reply.

[Contributed to the RURAL PRESS by L. H. S.]

## FOURTH PAPER.

SAN FRANCISCO, September, 1881.

My dear Emily:—I've been such a long time  
answering your last letter; but you can't ex-  
pect anything else, for I hardly have time to  
take up my pen from one week's end to another.  
I have sole charge of the house now, and it is  
an experience for me that teaches me the value  
of time I never have—time for reading, Bible  
study, and good solid talks with good solid  
friends.

Grandmamma in Los Angeles with Uncle  
James has been very poorly, and mamma has  
been down now for six weeks.

Such a time as I have had running this house,  
for it all has to be done just so, you know, to  
suit father and fastidious brother Albert.  
Nora is a faithful servant and we keep her on  
that account, but she cannot do much out of  
the kitchen, and there are many things she can-  
not do in it.

Now to-day is a fair sample of how the time  
gets away with me. As soon as I opened my  
eyes I thought of the fish papa had brought  
home the evening before, and I had forgotten  
to tell Nora what to serve with it. She has no  
French sense of what things go together, and I  
have to watch her constantly. So I drew on  
an old wrapper and hurried down. Nora had  
a headache and was as cross as could be, so to  
avoid trouble I made the toast and set the  
table. I could as well have done it all, but  
you have to keep a servant in town for looks'  
sake, even if she is not much help.

The dining table was covered with books and  
papers from the evening before, and by the  
time I had placed the room in order the muffins  
and omelettes and things were ready, and I  
had to rush upstairs to fix my hair and change  
my wrapper for breakfast. I have an elegant  
tea-gown to wear to breakfast, but it is so long  
behind and so tight in the waist and so loose  
in the sleeves that I can't wear it in the kitchen  
at all. I always have to dress twice mornings.  
Albert was at my door with two buttons off  
his business coat, and I came very near being  
too late to serve the coffee; but I sailed in just  
as papa laid down his paper, and the toast  
was elegant and everything was all right.

After breakfast I had a long discussion with  
Nora about the rice for lunch. I know that  
rice can be cooked delightfully with raisins in  
it, but Nora always objects.

After I had carried my point, I removed my  
tea-gown, cleaned the silver and dusted and

rearranged the sideboard; then came the  
grocer, the ice-man, the butcher, the baker and  
the vegetable Chinaman. They came about five  
minutes apart and I had to go to the back door  
to see each one.

Notwithstanding we have "no peddlers" on  
our front steps, half a dozen nondescript fellows  
called, and, as I have to tend the door fore-  
noons to save Nora, it was lunch-time before  
my morning duties were all over.

Papa and Albert came home to lunch, so I  
had to dress again. Lunch was lovely, thanks  
to my watching of Nora, and I ran upstairs  
after lunch, hoping to have two hours to my-  
self before it was time to go to the W. F. M.  
S. It was a vain hope, for between one and  
three o'clock there were four callers of the ac-  
cidental order, it not being my regular day at  
home.

Old Mrs. Stone was so anxious about grand-  
mamma that she staid nearly an hour. The mis-  
sionary meeting dragged out its slow length  
till five o'clock, and I reached home just in  
time to see that our dinner-table was in order  
before papa came in.

We sat at table till nearly seven, then Char-  
ley Jones happened in with his violin. I knew  
what he wanted. I was doomed to play ac-  
companiments for an hour or so. Albert has  
no patience with my musical friends, so he slid  
off up-stairs. Charley had the goodness to go  
at eight, and papa seemed so lonely I sat down  
to comfort him awhile. In a few minutes the  
bell rang, and there were the Wilson girls,  
who never have any heaur, and have to do  
something to amuse themselves, and they ran  
in unceremoniously to chat and chat and chat  
about nothing in particular. They managed to  
drag themselves away at ten, and I came up to  
my room tired all over, but I was determined  
to write you this note, dear Emily, as I had  
promised, for I know you must be lonely so far  
out of the world; and it must be stupid to  
board with a woman who does her own work.  
But that is all you can expect in the country.  
Keep up your courage and write often. Your  
loving

ROSE.

LOVE TREE DISTRICT,  
FRESNO CO., September, 1881.

Dear Little Rose:—I am truly sorry for you.  
Your history of a day makes me like the coun-  
try better and better. I told Mrs. Granger of  
my agreement with you, and she was willing  
that I should follow her about one Saturday to  
see how she managed her work and spent her  
day, provided that I should not converse with  
her in the kitchen so as to interrupt her meth-  
ods of work. There is usually not much work  
on the farm at this time of year, but Mr.  
Granger, always fore-handed, has one man  
hauling wood from the hills and one hauling  
straw, he himself helping with the straw, so  
that Mrs. Granger has five adults to cook for  
besides Johnnie, nine years old.

I was awakened at six Saturday by the sound  
of the coffee-mill, and I hurried down to begin  
the day with my hostess. I found her in her  
room neatly dressed in washable goods.

"While the stove is heating up," she said,  
"I brush out our bedroom, put the bedclothes  
to air in the window and place the room in or-  
der. It takes but a moment, and it is so sweet  
and fresh to come into after awhile."

We passed out into the kitchen. I noticed  
in the dining-room that the table had been set  
overnight for breakfast and was covered over  
with a drapery of good cheesecloth bound with  
red.

The stove was hot, Mr. Granger having put  
the coffee to simmer on the back of the stove,  
and the potatoes were already in the oven,  
having been put there the night before.

I cannot tell you how swiftly and skillfully  
she prepared the breakfast. When she went  
for the mush-kettle, she brought all the cook-  
ing pans she needed. When the water was  
heating, she brought the milk and cream. She  
seemed to be all hands and not a stroke was  
lost. In twenty minutes breakfast was ready,  
and we sat down, hired men and all. This  
might horrify you, Rose, but it does not me.  
The hired men were perfect strangers to Mr.  
Granger, but they seemed to appreciate re-  
spectable privileges. They ate properly and  
said nothing, and we went on with our light  
table-talk unannoyed. It is the simplest way  
of obviating a difficulty. Some of the hired  
men here are gentlemen and it pays to treat  
them all as gentlemen.

After breakfast, Mrs. Granger piled up the  
dishes and covered them. She put her pantry  
in order, skimmed the milk and set Johnnie  
to burning. I noticed that there was something  
simmering on the stove, "To use up the fire," she  
said. Then in a moment she was off with the  
broom and duster. I found that it was her  
custom to do all her sweeping and dusting  
necessary before finishing the kitchen work.  
She said: "I like to feel that everything is  
neat and in order before I put my hands in the  
dishwater or the flour. It gives me a clear  
head for the after work. It gives me a sense  
of ease and pleasure even when the work is  
hard, and then when the noon meal is over the  
work is done."

This morning the work was all over at nine  
o'clock.

"Now I am going on the warpath—setting  
hens! Won't you come?"

I followed her all through the sheds and the  
great barn full of fragrant hay. We found the  
lazy old hens sitting on fresh eggs, who suffered  
us to carry them away as prisoners; but two  
young Spanish hens flew all over that barn  
with the most hostile demonstrations. She

calmly destroyed the nests, and after a tour  
around the great fresh straw-stacks in search of  
fugitive nests, we came back to the house re-  
freshed by our business outing.

After this, Mrs. Granger retired to her room  
with a book.

"Be my work ever so hard, it pays me," she  
said, "to rest an hour or so with a book each  
day. It is an economy of time and strength,  
because I am twice as active and skillful after  
my rest."

At eleven o'clock a fire was built and dinner  
was served at 12:15 promptly. I noticed by  
watching that Mrs. Granger had a method of  
order and execution peculiarly her own, and  
that it was something I could not learn, nor  
could she impart it to me. Her best secret was  
that she gave her entire attention to her work,  
and by concentrating herself moved out of it  
the more rapidly. Although ease and dexterity  
in housework is an original talent, yet I think  
it might be brought out and taught as a science  
by itself. It certainly is the key to a great  
deal of happiness.

Saturday afternoon on this farm might be  
lonesome for you—not an interruption within  
or without. Mrs. Granger sewed or rested and  
I read aloud from the magazines and papers. At  
five o'clock we tied on our bonnets and took  
another walk after eggs. We had a light sup-  
per, and afterward we all sat out on the porch  
to enjoy the cool dusk and the dawning moon-  
light.

I arose, intending to withdraw and leave the  
family alone together. Mr. Granger called me  
back.

"We would like to have you remain and  
meet some of our friends—just the minister and  
a few neighbors; stay and see what manner of  
men we are anyway."

Just a quiet, informal gathering—several  
farmers and their wives. There was no at-  
tempt at entertainment, no recitations, no solos,  
no essays. Their interests were common and  
there was plenty to talk about—a little politics,  
a little temperance, a dash of gossip, a season-  
ing of religion; they talked about raisins and  
prunes, and olives and the markets of the East,  
and the great open questions of the day, till I  
felt more humble than ever with only my nar-  
row and technical work in the schoolroom. These  
people are unassuming in their deport-  
ment, but they are grand in their ideas.

I think Mrs. Granger lives better than you,  
dear friend, though she is "far out of the  
world" and does her own work.

When your mother comes home, you must  
come down here and enjoy a season of rest and  
profit. Yours faithfully, EMILY RANSOME.

Our Chosen Representative at Flora's  
Court.

The Golden Poppy of California.

[Written for the RURAL PRESS by ISABEL DARLING (LUPA).]

There was questioning and consultation and  
inspection of dainty treasures, to decide what  
one of California's blooming beauties should be  
adopted in the form as it had already been in  
spirit—one peculiar to and characteristic of  
locality and inhabitants. But how needless  
was the delay and doubt, when the favored  
could be no other than the *California Poppy*—  
the flower which, here and nowhere else, riots  
in the moistened soil of the river bank, sits  
complacently on the drier hillside and contends  
with the growling wheat for the possession of  
the field!

It has been called frail. It is not frailty but  
the lavishness of generosity, the indifference to  
oost and sublime faith in the future so essen-  
tially Californian, and in such striking contrast  
to the season-long clinging to one fading blos-  
som of other plants and other men.

Earth smiles with a hint of hidden gold  
through its mounds of fernlike leaves with  
their marvelous length of outline showing, in  
their tracery and infilling, heedlessness as to  
necessities, to material, or to the flight of hours  
in this land where Time himself almost forgets  
the hurrying seasons measured out to other  
olimes, and the beauties of the unseen land  
grow more real as the glow of summer sun-  
shine nestles in these spreading howls.

Roh the plant at nightfall of its golden  
beauty, then sleep the sleep of triumph; but  
again, when the sunbeams dance about its head,  
it will fling to the winds its sheltering caps and  
you will almost listen for its glad huzzas for  
freedom.

Ten to one, it is said, as compared with East-  
ern cities, does "Our Own" toss to the world  
its daily printed pages; so might we fancy  
these open, generous petals to be tablets full  
of messages from the flowers' Wonderland,  
messages which we are yet too blind to see, too  
dull to comprehend, records of that blossom  
life which is the spirit of the mineral, the cap-  
tured soul of this Land of Gold.

"ARE you—?" said the customer, hesitat-  
ingly, to the haughty young woman at the glove  
counter, who kept her eyes fixed on a spot  
three feet above his head.

"Well?" inquired the haughty young  
woman.

"Are you the proprietor of this store?" asked  
the customer.

"No, I'm not," replied the haughty young  
woman.

"Ah," continued the customer, "I thought  
as much. The proprietor would likely try to  
sell me a pair of gloves, perhaps."—*Chicago  
Times.*

## What the Chimney Sang.

Over the chimney the night-wind sang  
And chanted a melody no one knew;  
And the Woman stopped, as her babe she tossed,  
And thought of the one she had long since lost,  
And said, as her teardrops back she forced,  
"I hate the wind in the chimney."

Over the chimney the night-wind sang  
And chanted a melody no one knew;  
And the Children said, as they closer drew,  
"'Tis some witch that is cleaving the black night  
through—  
'Tis a fairy trumpet that just then blew,  
And we fear the wind in the chimney."

Over the chimney the night-wind sang  
And chanted a melody no one knew;  
And the Man, as he sat on his hearth below,  
Said to himself, "It will surely snow,  
And fuel is dear and wages low,  
And I'll stop the leak in the chimney."

Over the chimney the night-wind sang  
And chanted a melody no one knew;  
But the Poet listened and smiled, for he  
Was Man, and Woman, and Child, all three,  
And said, "It is God's own harmony,  
This wind we hear in the chimney."  
—Bret Harte.

## Cookery Continued.

[Written for the RURAL PRESS by MRS. FLORENCE G.  
EMERSON.]

EDITORS PRESS:—I have read with interest  
the discussion in your columns upon cook-  
ery. This is a very important subject—one  
that has a diversity of opinion. Some ladies  
take great pride in the art, while others claim  
they dislike it exceedingly. They think it de-  
grading, together with other kinds of domestic  
labor. They truly need our sympathy for  
their lack of good sense. Do these ladies ever  
think who has been their cook for years but a  
kind, tender and loving mother. How impor-  
tant that they should be taught all the branches  
of domestic labor and learn to be useful, prac-  
tical, self-reliant and independent! Young  
ladies, think of this all-important subject.  
Be kind and helpful to your parents and guard-  
ians, who have done much for you. Be inde-  
pendent and help yourselves. Cooking in my  
opinion is the best and most useful accomplish-  
ment that a woman can possess. Who could  
live without cooks? We are as dependent  
upon them for our existence as we are for the  
air we breathe. We should think it an honor  
to be a first-class cook and take just pride in it.

I fully believe in a thorough knowledge of  
anatomy, physiology and hygiene, also many  
other of the sciences that are brought into  
practical use. Music, too, is almost indis-  
pensable in the home. It is elevating, purify-  
ing and charming to our natures. Painting,  
embroidery and various kinds of fancy-work  
are very pleasant to engage in, but should not  
occupy our time until the more useful branches  
of labor are learned. All kinds of useful labor  
are honorable, and so regarded by every intelli-  
gent mind.

Learn to be a true helpmate, a kind and lov-  
ing companion for some good and noble young  
man. There are many young men at the pres-  
ent day who are meditating upon the subject  
of matrimony. They do not seem to be as en-  
thusiastic upon the subject as our fathers and  
grandfathers were fifty and seventy-five years  
ago. What is the reason? I think I can tell  
you. It is because there are so few young  
ladies who are prepared to be a real helpmate  
to a young man. Ladies, look back 50 years  
and see how your grandmothers commenced  
life. I know of many who were educated in  
all the household duties that are required to  
make a wife a good helpmate as well as a true  
and loving companion. This is the kind of a  
wife that most young men need and want at  
the present day, for but few have ample means  
to support themselves and families without  
labor. What intelligent lady is there who  
would have her husband toil daily, from early  
morn to set of sun, to support her in idleness?  
There should be none. Idleness is a disgrace.  
Industry is honorable and gives us health,  
wealth and happiness, the blessings we most  
desire.

Young ladies, practice domestic duties; en-  
courage young men to abandon saloons and  
cigars, and you will do a worthy and noble  
work.

A LADY of rank consulted Abernethy, in  
great distress, about her daughter, and the doc-  
tor began the investigation of the case by  
asking:

"Why, what ails her?"

"Alas! doctor," replied the mother, "I can-  
not tell; but she has lost her spirits, her beauty  
and her appetite, and seems to be wasting away  
every day, and we are fearing that she cannot  
live."

"Why do you not get her married?" said  
Abernethy.

"Alas! that we would fain do, and have  
offered her as good a match as ever she could  
expect."

"Is there no other that you think she would  
be content to marry?"

"Yes, doctor, that is what troubles us,  
for there is a young gentleman we doubt she  
loves that her father and I can never con-  
sent to."

"Why, look you, madam," replied Aber-  
nethy, gravely, "then your case is this: Your  
daughter would marry one man, and you  
would have her marry another. In all my  
books I find no remedy for such a disease as  
this!"

## Pretty Women.

The woman who is pretty is far too liable to think that that is enough; she will conquer her kingdom by means of it; and when the day of reckoning, the day of fading comes, the kingdom will be already hers by right of possession. Indeed, she does not consider the day of fading; it is something as difficult for her to realize as death itself is to the young; it is far off, vague, all but impossible; how is she ever going to look other than she does now and still be herself? And at any rate, there are always the means to make the repairs of beauty, and sufficient unto the day is the evil thereof. And so, in an average of more than half the instances, she goes dancing off about her pleasure like a fly in the sun, as full of the present, as careless of the future. She makes no preparation for the impending fate which is sure to come to her. If she live long enough; she relies on her fair face, her blushes, her dimples, her radiance, her smiles, her glances, her sweetness. To please, to attract, to marry, to marry well, is the mark she has set before her; and it does not need cultivation of the sterner virtues for that; the sterner virtues are not greatly called into account in this quest, have little opportunity of asserting themselves, or even of being missed.

Nor is great intellectual cultivation in the scheme of our pretty woman's life; according to her plan of action it is entirely unnecessary. Who cares for syllogisms, lectures, instructions? she unconsciously argues from rosy lips. Who will stop to ask if the bright eyes have dulled themselves over dry pages of scholastic lore? Let who will be learned, it is enough for her to be gay and happy.

What, then, has our pretty creature left for the dim passages of middle age, when beauty has fallen away, but there is still left the desire to hold captive what once beauty gained? The time is coming when there will be deep crescents around the mouth whose lovely curves have been dragged down by flaccid muscles, when there will be fine, spider-web lines about the eyes, when there will be hollows in the cheeks, when the red and white of the skin will have become blurred and mottled, or overlaid with yellow sallowness, when perhaps there will be present in the vacuous face only "that divine smile which has lost the two front teeth!"

Let the pretty girl remember that in the darkness of that middle passage the beauty that she had before she entered it will not signify; all faces are in the dark together then, the girl that was plain with the girl that was beautiful. The wreck of beauty signifies then no more than the wreck of what never was beauty. It is the sweet voice, the kindly manner, the burden of what is said, the tender-beativeness of what is done, that tells with any effect then. It will not be long before she arrives at this time, which, in comparison to the blaze of youth, neighbors close on the dark; and she will need then all with which she can have filled her intellect and fed her soul, all that wit and virtue and breeding can have given her, in order to retain anything of that kingdom to which in the early days she felt herself born by right divine.—*Harper's Bazar.*

## Chaff.

THE following written definition of the word bachelor was banded in by a fifth-grade boy: "A bachelor is a man who has no wife nor wants no wife nor can't get no wife."—*Luling Signal.*

"Lor', chill! what you chewin' dat flon-bar! top fur?" "Be still, honey. De Jerns'-lem band has bare annual fair nex' week an' given a prize fur de bes' pie-eater. I'm a practi-in' fur dat 'caslon'."

ART NOTE—Do you want your wife's portrait in oil?

Grocer—Yes, I think that would be the best, particularly if you get the oil at my store. I keep none but the best.—*Siftings.*

JAGWAY—I don't see how a man can get along on only two suits a year.

Travers—Easy enough. For instance, I begin with my winter suit on the 1st of January, and wear it until the middle of March; then I put on my spring suit, and wear it until the 1st of June.

Jagway—Then what do you do?

Travers—I keep right on wearing it.—*Harper's Bazar.*

"Was your husband insured?"

"Yes, \$5000 in a mutual assessment company."

"Did you get the money?"

"I understand that I did. John was the only member in good standing at the time of his death, and the assessment fell on me. But I've got the money."—*Harper's Bazar.*

"That young Miss Newdle, to whom you were paying so much attention last evening, Leon," said his mother, "talks very ungrammatically." "Under!" exclaimed the young man. "She doesn't need to know anything about grammar, mother. She owns a gas well."—*Chicago Tribune.*

ARTIST (showing sketches)—Oh, that sketch is mere nothing; I did it ten years ago. I often laugh when I come across the things I did ten years ago.

She—And perhaps you'll laugh ten years hence over the things you do now. It's wonderful what a difference time makes, isn't it?

## YOUNG FOLKS' COLUMN.

## A Three-Legged Engine.

It was long after supper-time. I am sure of this, because Hannah had cleared off the table and gone into the kitchen to write a letter home, to Sweden; and there was no one in the dining-room excepting a mouse that was lazily picking up crumbs the baby had dropped. Besides all this, I know in another way, too; for the baby was fast asleep in his bed upstairs.

It is perfectly ridiculous for me to call him the baby, because he was really a big boy half-past five years old; but everybody called him that, so I must, I suppose.

Mamma came into the hall; and what do you suppose she saw there the very first thing? It was nothing more nor less than a big iron engine, with a red smokestack and only three wheels. It must have had four wheels one of those days, but now it just got along the best way it could on three. Now, that engine did not belong to the baby at all; and mamma guessed just right when she suspected her boy had taken it that very afternoon when he was over playing with Jim Boggs. I tell you what, mamma did not like that at all; so she started upstairs with all her might.

"Baby!"

But nothing stirred under the bedclothes.

"Ba-by!"

"Ump!"

"Are you awake?"

"Perhaps so: to-morrow."

"No, now."

By this time he was sitting up in bed, trying to rub his eyes open with his eight fingers and two thumbs.

Mamma was standing there with the candle, and looking just as savage as that particular mamma could possibly look.

"Baby, whose engine is that downstairs?"

"Yoc mean, mamma, the one with the red smokestack and only three legs?"

"Yes," said mamma, "that's the very one."

"Well, then," replied the baby, as he settled down into bed again, "that b'longs to Jim."

"Did he say you could have it?"

The baby thought for quite a long time, and then said: "Seems to me he didn't. I expect I just took it."

"Come," said mamma, putting down the candle, "you must get right up and take it back."

"But I haven't got any clothes on," said the baby.

"No difference," said mamma. "You can dress, and I'll stay here to button your shoes."

"Oh dear!"

But he had to do it, I can tell you; and when he came downstairs, there was the engine quite ready to be taken home.

"Have I got to go all alone?" And the little boy opened the front door and looked out. The lights were burning in the street; but, phew! wasn't it dark between them?

"I tell you what," said mamma, as her cold, stony heart softened a little at last; "I'll stay here by the window, and perhaps you can see me all the way over." Well, and so—oh, yes, then the baby clattered down the front steps; and after running straight into the big lilac bush at the corner of the house, and almost going head first over the big stone in the driveway, he looked around, and there was mamma, sure enough, standing and waving good-by.

"Pretty tough!" said the baby to himself; but he tramped on over the hill and down to the fence that ran across Jim's back yard. He crawled through and went on tiptoe up the steps to the door.

"Guess I'll just leave it and run home," said the little boy to himself; but he looked across, and there was mamma still standing in the window. "No, guess I won't," he said; and so he rang the bell. The minute the girl opened the door, he heard Jim crying almost like mad, way upstairs. "Here's Jim's engine, and I stole it; and I guess he's crying for that, and I'm sorry, and I'm going home."

And the next thing they saw was a little boy scurrying across the back yard, through the fence and over the hill. And I tell you another thing, too, that little chap did not stop till he was safe in his mamma's arms again.

"This makes two times that I'm gone to bed in only one night," said the baby. "And, mamma, I'm sorry 'bout that engine."

"That's all right now, my little man, and I don't believe all this will happen again."

"Well, I rather 'spect not."

So mamma leaned over and kissed him softly, for she saw his eyes were almost shut up tight.

"Had only three legs, anyway," said the baby, as he tucked the clothes close up under his chin and so fell asleep.—*New York Tribune.*

## The Little Chopper.

"He's the basffullest little fellow I ever see! And a miniat'ra boy, too; seems as if he'd get used to folks; but he don't."

That was what old Aunt Polly said about Willy Wisp; and everybody else said so, too.

There was to be a quilting at the parsonage one afternoon. The ladies' sewing circle had picked a red and white sunflower quilt for Mrs. Wisp, and were coming to quilt it. Willy heard his mother speak of it in the morning,

and diemay filled his little soul. How could he endure to meet all those ladies?

"Come and have your face washed, and your hair combed, and a clean collar on," said his mother, after dinner.

Willy snubbed, but as soon as his toilet was made, he asked:

"Mayn't I go out into the woods where Peter is chopping?"

"Why, yes; you may, if you won't get hurt."

"Oh, Peter'll take care of me," said Willy, and he slipped gleefully out at the back door, just as an army of ladies with scissors and thimbles came in at the front. When Willy reached the woods Peter was not there, but his ax was sticking in the log, so Willy felt sure he would soon come. He played around awhile, then thought he would try chopping. Climbing on the log, he managed to pull out the ax, swung it as high as he could, and brought it down on to his foot, cutting through shoe and stocking, and splitting his big toe well open.

The blood ran. Willy was scared. "I guess I had better go home," he said to himself. But it seemed an awful long way, and he was so tired he thought he could never take another step long before he got there. His toe hurt so, and he wanted his mother to do it up, but all those ladies were there, so he went softly in at the back door and up the back stairs to his mother's room, crawled into her bed, and weak and faint with loss of blood, went to sleep in a few minutes.

It was a warm afternoon and the quilts were thirsty. "I'll get you all some fresh water from the pump," said Patty Cram, and she started out. What were all those little bloody tracks on the doorstep?

Patty came back and told Mrs. Wisp. The whole company came out in excitement, followed the tracks up-stairs and until they found Willy, fast asleep, with his face almost as white as the pillow he lay on.

"He's dead!" exclaimed Aunt Polly.

"No, he isn't," said Susan Hobbs, putting her hand on his heart.

Patty Cram ran for the doctor, Mrs. Flint ran into the study for Mr. Wisp, somebody else ran for cold water, Mrs. Blossom fanned him with her elegant feather fan, while Mrs. Van Cott held her bartsorn bottle to his nose, and his mother rubbed him with camphor. The bashful little boy would have felt terribly if he had known how many ladies were at work over him.

He was soon better, and came out all right after awhile, but he will always carry a scar on his toe, to remind him of that day's chopping.

—*Portland Transcript.*

## GOOD HEALTH.

## Washing Out the Stomach.

During the past year, says the *Scientific American*, several physicians in New York have tried, with gratifying success, a novel treatment for dyspepsia and cancer of the stomach by washing out that organ. The process is very simple and not dangerous. A long, flexible pipe is passed down the throat until one end is in the stomach. The upper end has a funnel attached, into which hot water is poured until the stomach is filled. The weight of the water in the pipe and funnel gives a hydraulic pressure sufficient to distend the stomach. The pipe has an aperture big enough to hold a lead-pencil. After the stomach has been filled, the funnel end of the pipe is turned down until it is lower than the bottom of the stomach, and the stomach is emptied as a barrel of any fluid is emptied through a siphon. The process may be repeated several times. The result is that the undigested food and mucus are washed out, and the hot water closes the blood-vessels and reduces inflammation. The relief is immediate. The dyspeptic may have his stomach washed out before a meal, so that he can take a fresh start. After the lapse of sufficient time for ordinary digestion, the stomach may be washed out again. This process has been in use at the New York Hospital, we are informed, for some time.

A physician of this city has been trying this washing-out process for cancer in the stomach, but without any success whatever. A cruel and useless blistering process was also employed. Between the two, the patient is well-nigh "used up;" but she will get relief from unnecessary torment, if not from the cancer itself, by the mild treatment she is now receiving from our San Francisco cancer specialist.

HOW TO ESCAPE MALARIA.—"You people who are afraid of malaria—and it is a good complaint to be afraid of—have some strange ideas about the disease," said a physician. "You think that if you climb a mountain and build there, or that if you live on the slope of a hill where the drainage is perfect, you are safe. Then counting on this, you sit around in the evening air with no covering on your head, or you sleep with a window so near the head of your bed that a current of damp air blows over you all night. Finest way in the world to catch malaria. Personally, I believe that if I had only two chances—one living in the center of a salt marsh and the other of living one mile from the edge of the marsh on sloping ground—I should take the marsh every time. I admit, however, that there are very many people who do not agree with this opinion. But to come

back to our first proposition—cover your head when you are out of doors after dark, no matter how mild the air seems. Young girls who at summer resorts rush from a hot hall-room to open verandas, take their lives in their hands. Most of them are so wildly reckless that it is a wonder they live through one season."

CAR SICKNESS AND EYE STRAIN.—Considerable has been said of late in regard to "car sickness." A medical practitioner recently wrote in this connection as follows: I should like to call attention to car sickness in connection with eye strain. I have had eight or nine cases of this kind, all of which were relieved by glasses. One case was that of a gentleman who every journey had car sickness. While he had the mydriatic in his eyes he went to Washington and suffered no inconvenience whatever. Subsequently, after he had glasses, he made a trip to St. Paul without any of the former trouble. Recently I have had two cases—one that of a girl who could not ride a short distance in the street-cars without vomiting. I found a decided degree of hyperopic astigmatism. With the mydriatic in her eyes, she rode home without her usual trouble. A strange thing with reference to eye strain is that it often exists to an exceptional degree without showing any symptoms in the eye. The patient will often say that the eyes are perfectly good and have never caused any irritation. The reflexes seem to have settled in some other place. This is an interesting pathological and physiological question.

NO PUTREFACTION IN DEEP-SEA WATER.—Dr. Regnard has raised the question in one of the medical journals as to whether a corpse which sinks to a very great depth is preserved indefinitely or otherwise from putrefaction. According to his researches, which have been published at some length in the archives of the Biological Society of Paris, putrefaction is not found to take place in decomposable substances submitted to a pressure of 900 to 700 atmospheres; these figures corresponding to a depth of 9000 or 7000 meters at sea. From these experiments it must be concluded, according to Dr. Regnard, that there is a total absence of putrefaction in the greater depths of the sea.

## DOMESTIC ECONOMY.

RIBBON CAKE.—One half cup of butter, one cup of milk or water, two of sugar, three of flour, three eggs, one teaspoonful cream tartar, one-half of soda; beat well. Take one-third of the mixture and one half cup of flour, one egg one large spoon of butter. Beat well, then add one cup raisins, stoned and chopped; one cup currants, one-half nutmeg, one teaspoonful cinnamon, one-half teaspoonful mace, and spice to taste. Put the cake in the middle; bake in jelly-cake tins. If desired, soft frosting may be used between layers; or jelly, just as you prefer. This is not an expensive cake, and will be found very good.

APPLE PIE.—Line a deep plate with plain pastry. Pare acid apples, greenings are best, and cut in thin slices. Allow one cupful of sugar and quarter of a grated nutmeg mixed with it; fill the pie-plate heaping full of the apple, sprinkling the sugar between the layers; it will require no less than six good-sized apples. Wet the edges of the pie with cold water, lay on the cover and press down securely, so that no juice may escape. Bake three-quarters of an hour or a little less, if the apples are very tender. No pie in which the apples are stewed beforehand can compare with this in flavor.

RHODE ISLAND JOHNNY CAKE.—Put one pint of white table meal into a bowl and add gradually one pint boiling water. The meal must be moist, without being wet. While the meal is warm, add two ounces butter, one tablespoonful sugar, one teaspoonful of salt. Now add one pint of cold milk, the yolks of three eggs, well beaten. Stir in one half pint flour, and then the well beaten whites, with one heaping teaspoonful of baking powder. When thoroughly mixed, bake at once on hot griddle.

JELLY TRIFLE.—Cut up into inch cubes, enough sponge cake to make two layers on the bottom of a shallow dish. Soak one-half package gelatine one-half hour in one-half pint of cold water, then add one-half pint of boiling water and stir until dissolved. Add one-half pint sherry or other good wine, sweeten to taste and flavor to suit. When it begins to thicken, pour it over the cake and set in refrigerator to harden. Serve with nutmeg and with cream sauce.

CREAM CAKE.—One cup of sugar, one-half cup of butter, three-fourths cup of milk, two eggs, beaten separately, 1½ cups of flour, 1½ teaspoonful of baking powder. Bake in three layers. Cream for filling: One half pint of milk, one teaspoonful of cornstarch, one egg, one teaspoonful of vanilla, sweeten to taste. Heat milk to scalding, in which cook the cornstarch stirred smooth in a little cold milk, add the eggs last, flavor and spread when cold.

CHICKEN CROQUETTES.—Mince chicken as fine as possible, season with salt and pepper; add a cup of the liquor it was boiled in, three well-beaten eggs, large tablespoon butter or cream. Stir together and take a tablespoonful or more of the mixture and form into any shape; dip in yolk of egg and then in cracker crumbs, roll lightly in your hands and fry in boiling lard.

## The Week.

Light rains, southerly winds, and the promise of a storm are the chief encouraging features in air and sky as we go to press on Wednesday evening. The rule of north winds and frosts has continued long enough. Very short and weakly growth has been the result both in grain-field and pasture, though in the interior vegetation is said to be more forward than in the coast hills and valleys. It has been a good winter for field work, and a great deal of sowing and planting has been done. Now it would be fun to sit under cover and see things grow.

The citrus fair in progress at Marysville exceeds all anticipations in extent and excellence. Our special reporter will be heard from next week. The Legislature is struggling with a greater mass of bills than ever introduced so early in the session before. Senator Stanford has been elected to succeed himself as U. S. Senator. The reports from the scene of the Indian trouble in Dakota promise peace.

## The Wet and Dry Seasons of California.

For half of the year or more, the people of California are apt to pay little attention to the subject of meteorology. They meet and salute each other without making, as at other times, any allusion to the condition or prospects of the weather. The period during which the weather causes such little concernment covers what is here known as the dry season of the year, extending usually from about the middle of April to the middle of November, during which the rainfall hardly ever exceeds an inch or two, it sometimes amounting to less than a single inch.

But if, during these seven months, we so dismiss this weather topic wholly from our thoughts, it does none the less occupy them largely for the other five months of the year, which we designate the wet season. Any rain falling here between the end of May and the middle of October is generally deprecated, as causing more harm than good. On the other hand, any great delay in the commencement of the wet season, or the occurrence of a protracted drought after its advent, is here equally to be dreaded, because of its injurious effects on most of our leading industries. Such condition hurts alike the business of mining and of farming, owing to the water supply being insufficient for their successful prosecution.

But while so much mischief inevitably comes of a winter drought, any great superabundance of rain works at this season equal harm, the flooded rivers sweeping away the miner's mills, dams, ditches and other plant, and so saturating the ground with moisture that plowing and seeding are delayed and the growing crops more or less damaged, they being sometimes wholly drowned out.

And thus the winter or wet term becomes in California a season of constant anxiety and conjecture, every class thinking and talking about it, because all are interested in the way it shapes. About mid-autumn it is the wont of the weather-wise among us to begin speculating as to the probable character of the coming winter, these speculations being based on a variety of facts or supposed facts, such as the movements of the wild fowl and other migratory birds, the habit of the woodpecker and the ground hog, the flow of the springs, etc.

Strangely enough, these weather prophets never agree in their conclusions. Professing to be guided by the same signs, they either see these differently or put upon them a different construction, about one-half of them every year prognosticating a wet and the other half a dry season. Going back only a few weeks, we find these people thus divided in opinion, one set foretelling a wet and the other a dry winter, neither of which predictions has thus far come to pass, the weather having been marked by neither extreme. Up till this time the winter has in fact been an exceptionally favorable one. We have everywhere had enough rain and nowhere too much. The meteorological conditions could hardly have suited us better had they been prepared to order. Though a little tardy, the rains, since they commenced, have been well timed and adequate, the grass and early-planted grain, though retarded by frosts, have started into life, while plowing followed by sowing has everywhere been made possible. The flow of the rivers has been so increased as to improve navigation and afford the miners an abundant supply of water, the rise in the mountain streams having at the same time been so slight as to greatly prolong the working season of the river-bed miners.

But while the present has so far been a model winter, being as yet not half over, there remains, of course, a chance that a damaging drought or a damaging flood may occur before it is ended. As far as it has gone, it tends to discredit the vaticinations of these weather oracles and to such extent impair confidence in their ability to divine the future conditions and movements of the meteorological elements. There seems, in truth, to be no infallible or even tolerably safe rule whereby these things can be foretold.

As regards our summers, it is otherwise. It takes not much of a prophet to foresee what will be the general character of one of these. The wet season over, we have for the next six months the little need for the signal service or that part of the almanac that speaks of meteorological changes. The rubber coat and the gum

boot are now relegated to the lumber-room. The umbrella, the possession of which could before be maintained only by the greatest vigilance, may now be safely left in any exposed place, no other article being so little coveted because no other is so little needed. The street-sprinkler must now work without intermission; not here, as in most other countries, may he remain half the time idle. We dry our green fruits largely in the sun and make salt in the open air, and not, as elsewhere, in vats protected by sliding roofs that may easily be run over when the rain comes on. The farmer stacks his sacked grain in the field and there leaves it till he cares to haul it away or the near approach of the rainy season makes this necessary.

The foregoing, while they include some of the more notable, comprise but a small part of the benefits incident to the calm, rainless summers of California; nor are our mild and open winters without their advantages; outdoor work during this season goes on with little interruption. Planting, plowing and seeding are everywhere successfully prosecuted, mining and lumbering, except in the higher mountains, receive no check, this being, in fact, with most of our leading industries the most busy season of the year.

## Bogus Fertilizers.

Interest and investment in fertilizers for horticultural uses are just beginning in California, and it is exceedingly important that they should start right. Already certain things have transpired which indicate that the use and trade in fertilizers are not opening in this way. There has been complaint from many who have purchased small lots for trial that no satisfactory results have been realized. They have not been able to see that the money they expended in this direction did them any good. Others who have made similar purchases have noticed notable improvement in their trees and fruit and have purchased more and more freely. Of course this difference in experience may be due to several different conditions and may not necessarily indicate that the material applied was worthless, but in some cases this is no doubt the true explanation of the disappointment.

Fertilizers which are really worthless may sometimes be sold through ignorance, not alone of the purchaser but of the seller. We grant this does not often occur, and in most cases worthless stuff is sold with the full knowledge of the manufacturer that he is not giving value for the money he receives. There was an enterprise begun in this State some years ago which ingenuously proposed to sell farmers ground limestone at so much a ton, and a pamphlet was prepared setting forth the many values of lime in the production of crops. This was so simple a delusion that we attributed it to the ignorance of the projector of the enterprise, rather than his intention to perpetrate a swindle. The whole matter was dropped when some one secured a statement from Prof. Hilgard that ground limestone was of no appreciable value as a fertilizer.

Another case has more recently come to light. Some farmer in Southern California sent to the University a sample of a carload of bone fertilizer which had been sent him from some dealer in San Francisco. The stuff was simply disintegrated shells taken probably from some island deposit. This was apparent to the eye, for the shipper had taken no pains to disguise its character. An analysis showed that it was almost totally deficient in available fertilizing matters and that its actual worth was considerably less than the cost of freighting it, not to speak of the dealer's charge for it. It has been known for years that material sold as bonemeal and bone fertilizer by some parties in this city has been largely adulterated with such shell material and thus debased, but this is a case in which the adulteration was sold pure, so to speak. No doubt Prof. Hilgard's reply to the party who sent him the sample will prevent the sale of more of that stuff as a bone manure.

The fact of the matter is, that in fertilizers as in many other things the time has come when we must learn wisdom from the older States. These States have laws governing the sale of fertilizers. They provide that any farmer may take a sample of what is sold him and send it for analysis to the Experiment Sta-

tion or other recognized authority and secure a statement of its value. They also provide that dealers in fertilizers must furnish analyses of the material they offer and provide penalties for selling material not up to these analyses. There are also other provisions which comprise what is known in all the older States as "fertilizer control." This is what we must arrive at in this State, and the first step is the enactment of a fertilizer law and provision for its execution. When this is done we shall hear less of such outrageous things as are now coming to light in the fertilizer business in this State.

## The University and Farmers' Institutes.

At the regular meeting of the Regents of the University held on Tuesday, Jan. 13th, the following communication from the Executive Committee of the State Grange of California was read:

WHEREAS, The Congress of the United States recently passed a law providing for additional funds for the support and maintenance of Agricultural Colleges, to the extent of fifteen thousand dollars (\$15,000) per annum, with \$1000 increase each year for ten years to each Agricultural College in the United States, organized and maintained as provided by Act of Congress under date of July 2, 1862; and

Whereas, The interest of agriculture in this State demands that a thoroughly competent adviser and Lecturer be provided for such service; therefore he it hereby

Resolved, By the Executive Committee of California State Grange, that the Regents of the University of California be and they are hereby petitioned and urged to appoint such adviser and Lecturer for said service, who shall devote his whole time in the field, to the end that the farmers of the State may be educated up to the highest efficiency in their calling.

E. W. DAVIS, Chairman,  
J. V. WEBSTER,  
GEO. P. LOUCKS,  
THOS. MCCONNELL.

A. T. DEWEY, Secretary.

The communication was referred to a special joint committee composed of the chairmen of the standing committees on Agricultural Experiment Stations, on Lands, and on Internal Administration. These chairmen are Regents Houghton, Rodgers and Marye, and from their reputations as men of action and business, we expect that they will prepare their recommendations as rapidly as practicable.

**FRUIT IN ALASKA.**—It is reported in the city that a company of local capitalists is about to try the experiment of fruit-growing in Alaska. It is claimed that the Territory can be made a competitor of Oregon and Washington in the raising of the more hardy fruits, such as apples and cherries. The next steamer sailing for Sitka will carry in her cargo a large consignment of young apple trees. It is said that people in the States do not realize the agricultural and horticultural possibilities of the Territory. Kodiak island, for instance, is larger than some of the New England States, with a climate similar to that of Maryland, and is capable of supporting a large agricultural population.

**THE SOUTHERN CITRUS FAIR.**—Arrangements are progressing for the Southern California Citrus Fair, which will be held in Los Angeles in March. At a recent meeting held in that city the following representatives were present, representing the various counties: N. W. Blanchard, Ventura; Mr. Welner, Fresno; Frank Miller, Riverside; J. G. North, Redlands; Supervisor Cook, Glendora; N. C. Carter, Sierra Madre; and H. K. Snow, Tustin. A premium list was adopted and committees appointed to secure guarantee subscriptions to the amount of \$2500, and to secure a pavilion for holding the fair. We shall have more about this matter in later issues.

**THE IRRIGATION CONVENTION.**—The Convention of Irrigators was held in Sacramento according to announcement published in the RURAL PRESS. Names were decided upon for commendation as members of the Senate and Assembly Committees on Irrigation. Much discussion was held upon amendments to the Wright law, which the Legislature was to be asked to enact. There was also arrangement made to propose the law for a State organization in the irrigation interest. These matters are too long for treatment in this issue of the RURAL, and must be postponed for another week.

## The Orange—"From Seed to Grove."

[By B. M. LELONG, Secretary State Board of Horticulture, ex-officio Horticultural Officer.]

Whence came this delectable fruit, fit for the gods? What was its original history? Was it stolen by some mythological hero from Elysium, like the fire by Prometheus?

The orange (*Citrus aurantium*) belongs to the natural order *Aurantaceae*, and the origin of the different members of this family is extremely doubtful, having been cultivated from a remote period of antiquity, but belongs originally to China and India.

The flowers of the sweet orange are white, the leaves lanceolate or oblong. The petiole is not so marked or winged as in the bitter and sour oranges, but is always present to a greater or less degree. The fruit is generally an oblate sphere, of a golden yellow color; when ripe it is full of delicate pulp and sweet, refreshing juice.

The sour orange (*Citrus bigaradia*) does not grow quite so high as the sweet orange; has a larger leaf, with a highly winged petiole. The flower is larger and more highly perfumed; the fruit is of a red orange color; the skin rugged and porous; pulp, yellow; juice, extremely bitter.

The bitter orange (*Citrus bergamia*) is of a dwarf habit; the flowers are small, white, and highly scented; leaves, elongated, acute—the under side quite pale; the petiole is more or less winged; fruit, pale yellow, pulp, bitter.

There are many varieties of sour and of bitter oranges—some bearing large fruit, the majority of which are worthless, and some bearing small fruit, which is valuable for the manufacture of essence of orange and essential oils. The peel of the bitter orange is used in medicine as an aromatic tonic, and the fruit is also used in making marmalade and preserves. Many of these are grown in Europe for the essential oil they contain, from which is made a substance known as bergamot camphor.

## Propagation.

**THE SEED.**—The seed of the orange has seldom been known to produce fruit equal to that of the parent tree. However, it comes truer to seed than most fruits.

**COLLECTING THE SEED.**—The fruit is piled into heaps or put into barrels to rot. When it has decayed so that it will break into many places when hauled, it is crushed in a tub or barrel and the seed is washed out. A coarse sieve is used; the soft substance of the fruit will pass through the wires, leaving the seed in the sieve. This operation is carried on in a place where water can be used freely, as considerable is required to do the work properly.

**KEEPING THE SEED.**—To insure best results, the seed of the orange should not be allowed to dry after being taken from the fruit. If not ready to plant them, they should be placed in moist sand. In this way they can be kept until everything is prepared.

**HOW TO PUT THE SEED IN SAND.**—Take a shallow box, say five inches deep and not more than thirty inches square; fill it half full of moist sand, then put the seed on top, about two inches deep, and throw on the top of the seed considerable sand and mix it together with the hands. This is done so that the sand will stick to the seeds and prevent them adhering to each other. Then fill up the box with sand and let them remain until they are to be planted. The boxes can be stacked one upon the other.

**TAKING THE SEED OUT OF THE SAND.**—The seed-bed having been prepared, have a coarse sieve and take the top box and dump its contents into the sieve. This must be done with care, so as not to bruise the seed. Then shake the sieve, the sand will pass through, leaving the seed in the sieve.

**THE SEED-BED.**—The seed-bed should be inclosed with boards eighteen or twenty inches wide, set on edge, about four or six feet apart. The bottom should be floored, so as to prevent gophers and ground moles from entering the seed-bed. Laths are nailed on top leaving a space of one-half inch between them, to protect the seed from being scratched up by the birds. A covering of thin muslin is put on top of the laths to protect the young plants from being scorched by the sun. If the weather be cloudy, it is well that the covering be removed to allow the bed to get warm. It is better to plant the seed thickly and broadcast; as all plants are to be removed, it does not matter how thick they come up. The seeds should be covered with fine, rich soil, from one to two inches.

**TIME OF PLANTING THE SEED.**—Planting the seed very early, as in January and February, does not give good results, because it is entirely too early; the seed generally decays, as the time for it to germinate is not till spring. March, April, and even May, are the best

months to plant the seed, as the ground is then warm and all danger of frost is over. The seed-bed should be kept moist but not too wet.

**TRANSPLANTING.**—In one year the plants will be large enough to be transplanted in nursery form. The plants should be sorted; the very small and delicate ones should be planted in shallow boxes by themselves, and kept another

A LOW-TRAINED TREE—  
No Props Required.A HIGH-TRAINED TREE—  
Propped.

year; being so small and delicate, they are generally scorched by the sun when planted in the open ground, and remain small in the nursery.

**DISTANCE OF NURSERY ROWS.**—The rows should be far enough apart to admit a cultivator between them. Grave mistakes are often made in setting them less than four feet apart, as after being budded many buds are knocked off in cultivating by the horse or the traces rubbing against them. Preference is given to rows when set five or six feet apart. This will give ample room for cultivation; and also, when in digging up trees, a small, narrow sled can be run in to haul them to the head of the rows without rubbing against the nursery stock.

**DISTANCE IN NURSERY ROWS.**—Planting close together in the rows will tend to make feeble and slender trees. If it is not intended to sack the trees when they are to be transplanted, then the plants can be set from eight to twelve inches apart, and they will make strong and thrifty stocks; but if it is intended to sack them this is too close. They should be at least eighteen inches apart; this will give the digger enough space to take up trees between others. It also has the advantage that the roots are not cut too short, which is apt to be the case when they are planted close together.

**TRIMMING THE STOCK.**—The plants should be trimmed until at least one year; after planting they should be left to grow at will the first

year. If the plants are trimmed when too young, they will make slender and feeble stock.

In the following spring, as early as possible, say in February, the plants are trimmed, leaving a clear stock. All cuts should be made close, so that they may soon heal over. The brush is then gathered and burned. As the ground becomes packed by the trimmers, it should be loosened by running a cultivator between the rows.

## Budding.

**SPRING BUDDING.**—Generally, in the months of March and April, as soon as the trees begin to put forth and the sap flows freely, it is then the time to bud citrus trees. Everything should be prepared, no time should be lost, as the buds first inserted will sometimes start in less than three weeks with vigor, and by summer will have a large and thrifty top. The buds should be looked over at least ten days after they are inserted, and all those that show signs of dying should be rebudded, in order to give them an early start, and that they may grow more even with those first budded.

**SUMMER BUDDING.**—Summer budding is generally done in June and July. It is not consid-

spring to allow the buds to start, just as soon as the trees begin to show signs of growth. Great care should be used in the cutting of the tops, that it be done at the proper time, and that they be not cut so near the bud as to endanger it. A little brush should be allowed to remain to protect the stock, which is removed after the buds have started.

**STARTING THE BUD.**—When the stocks put forth in the spring the buds generally start also, and the suckers being very tender, are removed by hand (thumb prunng), breaking at the touch. Cutting them with a sharp knife has the advantage that no others will grow where so cut, and the cut being made clean will give the tree a smooth body, and as the tree grows very little suckering will be required. When the suckers become strong and are removed by rubbing with the hand, the trunks generally become rough and the suckering much greater.

## Planting.

**WHEN TO PLANT.**—Citrus trees are transplanted at various seasons, preference being given to one of its dormant periods occurring during the year.

Trees transplanted in the winter, when the ground is cold, will remain until spring without growing; therefore it is better not to transplant citrus trees until the ground begins to get warm. The nearer an orange tree is to starting new growth, the greater its strength and root power, and this is the best time for transplanting; also after they have made their first growth and before starting the second time in spring.

**BALLING SYSTEM.**—A narrow trench is made along the row and within six inches of the tree, the tap-root is cut about eighteen inches or so deep; then with a spade a round, oblong ball is cut, leaving in it the tree. The spade should be very sharp, or in cutting the roots the jar will break the ball. Pruning shears are used in cutting large roots. When trees are taken up with a sound ball of earth the leaves will hardly wilt.

**PUDDLING SYSTEM.**—Puddling is practiced where the soil is so loose that sacking is rendered impossible. Many prefer this system to any other, as it gives the trees larger and more roots; and where all due precautions are taken, puddling is the best system, and considerable expense is saved.

**THE PUDDLE.**—A hole is made in the ground and filled half full of water, then soil is thrown into it and worked with a hoe, which forms the puddle. The puddle should be thin enough, so that when the roots of trees are put into it, it will stick to them, at the same time wetting every part thoroughly. The trees are carefully taken up; the soil is shaken from the roots and they are immediately dipped into the mud, or puddle. They are then placed on wet straw in a wagon. A large canvas, or covering, is placed over the wagon to prevent the sun from drying the roots, as the roots should not be exposed to the sun, even if only for a few minutes. The wagon is then driven to the field where the holes were dug. The driver hands the trees, one at a time, and the planter holds the trees in position while his men fill it up with dirt, first throwing in the moistest; the planter presses the soil very lightly and goes to the next one. The tree having been set, a basin is made around it, and a couple of buckets of water poured into the basin; this will settle the soil and keep the tree fresh until water can be run down the rows in furrows.

**EXTENDING THE ROOTS.**—It is a common practice among growers to place the tree in the hole, fill it up with soil, and then tramp it. As the roots are covered with thick mud they will stick together, and if the tree grows it will not do as well as when the roots are extended with care. This is very simple. The hole is half filled with earth so as to form a mound; the shovel handle is driven down in the center, and on being withdrawn a deep hole is left, sufficiently large and deep to admit the tap-root of the tree; then the lateral roots are spread over the mound, as shown in the illustration (Fig. 1), and the soil is lightly pressed. Heavy tramping is not necessary, as the water settles the dirt and keeps the roots in place. As soon as the water in the basin has disappeared, the basin is covered with loose soil; this will prevent evaporation, and also the tree from leaning over. Trees planted with these precautions make the best growth and become the most thrifty.

**TOPPING THE TREES.**—When the tree is taken from the nursery the tops should be cut back; the branches should be so cut that in starting they will form a fine-shaped head. This is done because evaporation from the leaves is rapid, and in many cases where the tops are left on, causes the circulation of the trees to dry, and also the bark will shrivel before the roots have assumed their natural functions.

## Planting Systems and Soil.

The planting systems most common in use are the square, triangular, and quincunx. The square system is most generally adopted, being the most simple. In this the orchard is laid off in lines crossing each other at right angles, with equal intervals of space, and a tree planted at each crossing of the lines.

**SOIL FOR ORANGE TREES.**—An orange tree should never be planted on heavy, low ground, or on low, damp ground where water can be reached within a few feet of the surface, and never on black, adobe soil; they will always be troubled with gum disease, and will also be nipped by frosts every year. A rich, deep, porous soil is absolutely necessary to give the trees a vigorous growth. Trees on heavy

ered as good as early spring budding, because the buds do not start even; and as the greater portion of them start late, their growth is so tender by the time winter sets in that, if they pass through it, they become prematurely hardened by the cold weather, which sometimes causes the tree to become stunted.

**FALL BUDDING.**—Fall budding is generally performed during the months of September, October, and sometimes as late as November. After the strings have been removed they are left to pass the winter in dormant bud, to be started in the spring.

## Starting and Training the Buds.

**CUTTING OFF THE TOPS.**—In the spring, as the nursery trees swell very fast, three weeks is long enough for the struts to remain on them; but the tops should not be cut off then. The strings should be removed, the nursery irrigated and cultivated. This will force new growth, and the tops should then be cut back from four to eight inches above the bud. After the bud has grown about six inches or more it is tied to the stock. When the bud has become stocky and able to support itself, what remains of the top is then cut away. The cut should be made smooth and paluted with rubber paint. This helps the wound in healing over, and protects the stock from the action of the atmosphere. Those that have been left to lie dormant through the winter should be cut back in the

adobe or poor soil become stunted and will not produce fine fruit, and never become profitable bearers.

**PREPARATION OF THE SOIL.**—The land should be thoroughly worked through the winter and prepared to be planted in the spring, when it becomes warm; also, all weeds and stubble plowed under will be decomposed and serve as a fertilizer to the orchard. The thorough working of the soil liberates ornde gases and changes the nutritive principles to a form more readily assimilated by the tree.

#### Varieties.

The most profitable varieties grown in this State are the following, and their prominence is about in the order named:

**WASHINGTON NAVEL.**—Fruit large, solid and heavy; skin smooth and of a very fine texture; very juicy, highly flavored, with melting pulp; seedless; tree a good and prolific bearer, medium thorny, a rapid grower, although it does not attain a very large size; commences to bear as early as one year old from the bud; ripens early. Imported from Bahia, Brazil.

**VALENCIA LATE.**—This orange has proved itself one of the most profitable to grow. It ripens in May and June, when other varieties are out of the market. Fruit large, thin skin, pale yellow, firm, oblong, and heavy, very few seeds. An excellent shipper; tree large and prolific bearer. Imported from England.

**JOPPA.**—This is a remarkable orange, as it can be marketed early and yet able to remain on the trees till July, without deterioration in quality, and for this reason is suitable for all sections. Fruit large (see illustration), firm, nearly seedless, thin rind, pulp very fine, sweet and juicy and of very deep red color; tree thornless, upright and vigorous grower, suitable for standard purposes. Imported from Palestine.

**MEDITERRANEAN SWEET.**—Fruit medium to large, pulp and skin of very fine texture, very solid and few seeds; color deep orange; ripens late; tree thornless, of a dwarf habit, inclined to overbear. Imported from the Mediterranean.

**MALTESE BLOOD.**—Fruit medium, oval, texture and flavor very fine, pulp marked vinous red, very few seeds; fruit shows red color on surface, tree dwarf, thornless. Imported from Mediterranean.

**PAPER RIND ST. MICHAEL.**—Fruit small, round, very firm and juicy; pale thin skin; grows very uniform, ripens late, and keeps well on the tree; does not drop when mature; tree dwarf, medium, thorny, a good and prolific bearer. Imported from the Azores.

**AZOREAN ST. MICHAEL.**—Fruit medium to large, and solid; pulp fine and melting; medium thin rind; flattened, few seeds; ripens early, and keeps well on the tree; a rapid grower and a prolific bearer; is a large tree and is recommended for standard purposes. Imported from the Azores.

**WOLFSKILL'S BEST.**—Fruit of excellent quality, somewhat flattened, color deep orange red, fine grain and pulp; ripens early. This orange is of home origin. The advantage it has over foreign varieties is that the tree is very hardy, and can be planted in localities where the temperature gets so low as to prevent them from thriving; it will also make a larger tree.

**KONAH.**—A California seedling raised from seed grown on Konah island; fruit large; rough and thick skin; tree very thorny; ripens early.

**RIO.**—Fruit and tree resemble the Mediterranean sweet, but the fruit is much larger, has a thicker skin; ripens late; very seldom can the entire crop be picked from the tree, as it does not ripen even, green oranges are found on the trees throughout the summer; tree thornless, of a dwarf habit. Imported from the Mediterranean.

**TANGERINE OR KID GLOVE.**—Fruit deep red, small, very sweet, and aromatic; when ripe the rind is very easily detached; tree dwarf; very uniform in shape, of a weeping habit.

**KING.**—A late orange ripening in May and June; averages below medium in size; very rough rind; segments cleave when fully ripe; very highly flavored. Imported from China.

**SATSUMA.**—Fruit small, flattened; rind very easily detached; of exceedingly fine texture, sweet and seedless; tree dwarf and very hardy. Best suited for gardens.

**KUMQUAT.**—Fruit is edible whole (rind and all), very small, oblong or olive shaped; rind thick, yellow, smooth, sweet-scented; very little pulp, and contains many seeds; tree a bush and very prolific. Best suited for gardens or home plots.

#### Ornamental.

**MANDARIN.**—Tree very ornamental; fruit very red, flattened at the poles, having an outgrowth at the blossom end.

**POMELO (syn. grape fruit).**—A variety of shaddock; fruit very large, from two to five pounds each, pale yellow, resembling the citron; skin smooth; pulp sub-acid.

**SHADDOCK.**—Tree inclined to be dwarf; fruit very large, with smooth skin, pale yellow and very glossy; the rind is very thick and spongy, and very bitter; ornamental only.

**BOUQUET.**—Fruit very bitter. The flowers have a commercial value, as they are very large and fragrant.

**BERGAMOT.**—Ornamental only; fruit large and very rough, flattened. Is grown for the bloom.

**MYRTLE LEAF.**—Ornamental only; tree very dwarf; foliage densely packed together; small leaf the shape of the myrtle; fruit bright red and very bitter.

**VARIATED ORANGE.**—Ornamental only; tree dwarf; leaf variegated, with white margin and green center; very glossy; stem white and green; fruit striped with white and very bitter.

In pruning a tree, especially when allowed to grow for several years without it, considerable work and skill is required. The hot sun should not be allowed to enter and scorch the bark, which would also cause the fine brush to die and a diseased tree is sure to be the result. The advice so often given, "that the tree be opened so as to allow plenty of air and sun heat to enter," does not hold good with the orange. Fig. 2 shows how a tree is left after the brush that protects the trunk and branches is removed. The trunk and inside growth is left exposed to the sun.

I have often seen trees with one side of the trunk scorched and the bark dead after the brush that protected it from the sun had been removed.

Fig. 3 illustrates a high-trained tree of the same age.

In this the lower limbs have been removed, leaving a clean stock, so as to allow the horse in cultivating to pass under its branches and the cultivator to work the ground close to the trunk.

Fig. 4 illustrates a low-trained tree of the same age as Figs. 2 and 3. In this the lower limbs have been allowed to remain to protect its trunk and inner growth.

The inside of the tree is kept clear of all dead wood, and the growth on the outside is allowed to become uniform. The lower foliage supports that above it, and so supports its fruit without the aid of props.

When trees are trained low the shade of the branches keeps the ground moist, and in case of excessive heat, or scarcity of water, will not suffer; whereas the heat causes the leaves of high-trained trees to curl, and if not watered at the proper time the growth of the fruit becomes checked. Low-trained trees become better balanced, vigorous, healthy and more productive than when trained high, and the fruit is much more easily and cheaply gathered.

#### The Orange Crop, Gathering, Etc.

**PICKING.**—The tree should never be picked clean; only the ripe fruit should first be picked, thus-lightening up the trees. The clean, bright colored, smooth, fine skin, firm oranges will always command the best prices. Fruit should be handled with care. It is better to (clp) stem cut than to pull the orange, as in pulling there is danger of tearing the skin. The fruit should not be packed fresh from the tree, as when packed it will heat and sweat in the boxes at an ordinary temperature, and, as the entire contents in the box become damp, there is a great danger from rot and decay. The fruit should be picked in boxes and left in the packing-houses three or four days to allow the rind of the fruit to shrivel and to lose the surplus moisture in the rind. Unless the weather is very cool they go through a natural sweat, in which the surplus moisture escapes and the rind becomes tough and pliable; many unseen imperfections, such as slight bruises, etc., will develop into spots, necessitating a more careful selection of the perfect fruit for market.

The standard size of an orange-box is 12 inches by 12 by 26½, outside measurement, with a partition in the middle.

#### Fertilizers.

Barnyard and sheep manure are the fertilizers mostly employed in the orange orchards in California. They have, to a certain extent, all the essential elements for plant food, but lacking in proportions according to conditions. In fertilizers bulk is not what is necessary, but instead, the proper elements as fertilizers in a concentrated form. Fertilizers in some form can be made to last, like barnyard and sheep manure, and feed several successive crops with a single application. For instance, in ashes and bone we have all the elements for a complete fertilizer, when all that is required is to apply an extra quantity of ashes and a portion of the bone in a coarse state. Ashes are always enduring in their effect, and the coarse bone will be several years in decaying and setting free nitrogen and phosphoric acid. One of the three elements, nitrogen, potash, or phosphoric acid, of which the soil has the least, will always be the measure of the crop. A hundred pounds of potash applied would not give a larger yield than five pounds (and so of the other two elements) if there is not a proportionate increase of the other elements. The right way is to make the most and best manure that is practicable upon the orchard, and piece out with such commercial fertilizers as experience and experiment prove profitable. Artificial fertilizers are, of course, much more cheaply transported, and, unlike barnyard or sheep manure, do not carry with them seeds of weeds into the soil, and as they contain the fertilizing elements in so condensed a form, the whole handling of them becomes much cheaper.

Artificial fertilizers should be applied a little at a time and often. Nitrogen tends to promote leaf growth, and if the bone in the soil does not all decompose in the first year, the nitrogen contained in it goes over with it and is not lost. If but one of the elements be used, it should by all means be bone, and the finer the bone and the finer and drier the fertilizer, the more valuable it is. When the animal matter in bone decays, the phosphoric acid in the bone is in a reversed condition.

#### Diseases.

**GUM DISEASE ("MAL DE GOMA").**—This disease is first detected on the trunk close to the ground, and is a yellow, gum-like substance which forms on the outside of the bark. It is an exudation of the sap of the tree, which breaks through the bark and forms a gum. The disease is under the bark and also penetrates into the inner bark and into the wood.

**REMEDY.**—There is but one effectual remedy, i. e., cutting away the bark from where the gum oozes, and the infected parts gonged out. If, on the following day, the gum is still running, more of the wood must be gonged out until every particle of the disease is removed. Then the wound is covered with rubber paint, or grafting wax, to prevent the action of the atmosphere from cracking the wood left exposed.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**EXCHANGING VIEWS.**—Oroville Register, Jan. 5: The fruit growers at Palermo are forging ahead in a manner that is greatly to their credit. They have established a fruit-growers' association and will have monthly meetings. At these meetings samples of fruit will be shown and essays read, hearing upon the production of various fruits. Discussions will follow and each member will give his experience, thus helping all who are present.

**ALMOND CULTURE.**—Middletown Independent, Jan. 10: We are informed that J. W. Everington intends to plant quite a number of almond trees on his place in the near future. We believe there is much of our hill land that would grow almonds to perfection. Mr. Kiep has planted almonds on his place north of Gueeno, and they are doing finely. Our opinion is, that nuts and fruits of almost any kind can be raised in this vicinity with profit, and that the planting of nut and fruit trees will hasten the building of the much-desired and long-wished-for railroad.

#### Mendocino.

**HOP CONTRACTS.**—Cor. Ukiah Dispatch and Democrat, Jan. 9: I beg to admonish the hop-growers of our county and State that there are speculators abroad in the land trying to make contracts for the growers to sell them their crops for a term of years at very low prices. The speculators are cunning—they do not ask to engage the entire crop. Their object is to engage enough to carry the business through the first half-year after picking, knowing that if they can engage a sufficient quantity of hops at low prices to run the breweries half the year, the producers will not hold the remaining hops until the first purchase is exhausted. It must be apparent to any man that the low prices at which speculators are trying to engage hops (and with some success) fix the price of hops not so engaged. It will be observed they hardly ever try to engage an entire crop, knowing that those engaged fix the price for the rest.

#### San Benito.

**ANOTHER IRRIGATION COMPANY.**—Hollister Advance, Jan. 9: The Panoche Grande is the name of another irrigation company formed in this county. The leading spirits therein are Messrs. Webb and Collins, extensive land-holders in the Panoche valley. They propose to utilize the waters of Panoche creek and render the whole of the northern half of the valley fruitful and productive. Surveys are now being made to this end. Two companies are operating in Panoche valley.

#### San Bernardino.

**SAN BERNARDINO COUNTY'S PRODUCTS FOR 1890.**—The Courier gives an estimate "made by men in a position to know," as follows:

Oranges, boxes.....	415,393
Lemons and limes, boxes.....	6,370
Raisins, boxes.....	450,000
Dried grapes, tons.....	190
Dried fruit (deciduous), pounds.....	1,800,000
Canned fruit, cases.....	30,000
Wine, gallons.....	300,000
Brandy, gallons.....	150,000
Extracted honey, pounds.....	350,000
Walnuts and almonds, pounds.....	100,000
Oranges, acres.....	138,222
Lemons, acres.....	5,333

Banning put up 85,005 sacks of barley; Yncalpe, 45,000 sacks; all other sections about 10,000 sacks. The wheat crop for 1890 is as follows: Banning, 12,500 sacks; Yncalpe, 6750; all other sections, 1000. This is a large increase over the preceding year. Nothing is said of corn, and it is certain that at least 400 tons were grown on the Chino Ranch this year.

#### Santa Barbara.

**GROWING INTEREST IN FRUIT.**—Santa Maria Times, Jan. 10: J. F. Goodwin, who is well posted as to the acreage of fruit trees in the valley, says, that to take Mr. Miller's orchard as a basis on which to figure, in three years' time there will be over 3000 acres of fruit trees that will come into bearing, and that it will require much outside help to take care of the fruit. As fruit-tree planting has just merely begun in this section, the amount of fruit we will have to handle each additional year after the coming three will simply be enormous. Canneries, then, will become a necessity, and fruit-growers will not hesitate to take stock in anything that will work up the fruit in a hurry in order to keep it from spoiling.

#### Santa Cruz.

**BEEF CONTRACTS.**—Watsonville Rustler, Jan. 9: The Western Beef Sugar Company this year has prepared a contract agreeing to pay a fixed price of \$5 per ton for beets, with the proviso that said beets must not weigh over four pounds each. Those who prefer the old system of polarization can sign contracts fixing the minimum price for beets at \$4 per ton, with an additional 50 cents per ton for each per cent of saccharine matter above 14 per cent.

**SUGAR-BEET SEED RECEIVED.**—Watsonville Pajaronian, Jan. 9: Three carloads of beet seed were received at the sugar factory last Saturday, and will be distributed to beet-growers for the coming season. The seed was imported from Germany.

#### Shasta.

**FAVORABLE CROP WEATHER.**—Anderson Enterprise, Jan. 8: The rains last week have

been of lasting benefit to the farmer. Sufficient water has now fallen to make plowing easy in the toughest soils, and the rain has come at such intervals and in such quantities as to make the outlook for crops of all descriptions the most favorable. The precipitation to date has been in the neighborhood of four inches, which, from the manner in which it has appeared, we consider of far greater benefit than five times as much given to us in flood lots. Should we be favored with such weather during the season, we may reasonably expect the best crops in '91 that have been harvested for years.

#### Solano.

**SOLANO CROP OUTLOOK.**—Vallejo Chronicle, Jan. 8: The farmers intend planting many acres of almond and pear trees this season. The outlook for the apricot crop is bad, as most of the buds have been blighted in many localities. Agents are already offering as high as 3½ cents for the plum crop and not a bud on the trees.

#### Sonoma.

**RAMIE PLANTING.**—Sonoma Index-Times, Jan. 10: The attention of Capt. H. E. Boyes of Agna Rica farm, having been called to ramie, he has decided to introduce its cultivation in Sonoma valley this season. He has already prepared 10 acres of land, and will commence planting as soon as the ramie roots are received.

#### Sutter.

**MAMMOTH TURNIPS.**—Yuba City Independent, Jan. 9: On Monday of this week, J. B. Pool of this county brought to this office two sample turnips which for size and perfection of form surpass anything we have yet seen in that line. They are of the German Red-top variety. One of them measures 24½ inches in circumference and 11½ inches in perpendicular length; its weight is 8½ pounds. The other specimen is 25 inches in circumference, but not quite so long. The seed from which these turnips grew was planted Sept. 1, 1890—three months ago. One acre was planted and the yield will be between 30 and 40 tons. Mr. Pool's farm, upon which these turnips grew, lies along the Sacramento river, below Knights Landing, in Sutter county. We know from personal observation that no richer land lies under the sun.

**ALMONDS AND GRAPES.**—Yuba City, Jan. 9: Henry Everett and son will soon begin setting out a ten-acre orchard of almonds and grapes near the Buttes. The trees will be planted 24 feet apart, and between the rows the vines will be planted. The grapes are of the Tokay variety and will undoubtedly do well in that locality, as fruit and grapes generally mature several weeks earlier near the hills than in other localities in the county.

**PECAN NUTS.**—Marysville Appeal, Jan. 9: C. N. Tharsing brought us a quantity of pecan nuts from the grounds of the Sutter County Orchard Co. They are of fine quality. Mr. Tharsing says he has six trees. They are large, resembling oaks, and are from 40 to 50 feet high. They stood for five months in water six feet deep, and were not affected in the least. This shows their adaptability for low lands. The trees are from 15 to 20 years old, and have borne heavily as far back as Mr. Tharsing knows. They are of rapid growth and are true bearers. The yield from these trees is one grain-sack of shelled nuts to the tree, and they are worth about 15 cents a pound. An acre will accommodate some 40 trees. Very little labor is required in picking the crop.

**RAISING BUCKWHEAT.**—Yuba City, Jan. 9: The acreage planted to buckwheat in Sutter county, although small, adds much to the wealth of the county. Where the soil is rich and moist, this grain makes a very profitable yield. The farmers of Southwest Sutter have found this to be true and are now raising it extensively. The cost of seeding, harvesting, etc., is no more than that of wheat, while the selling price is from 75 cents to \$1 per cental more, the price at present being \$1.90 per cental. District No. 70 contains several thousand acres well adapted to the cultivation of buckwheat, and more of it should be planted.

**INCREASED ACREAGE SEEDED TO WHEAT.**—Yuba City Farmer, Jan. 9: The long fall and open winter have given our farmers every opportunity to prepare and sow their lands, and although the acreage now sown is large, still many thousands of acres will be yet put in during the present month and in February. It is a noticeable fact that on summer-fallowed land, grain has not made the growth as is generally the case at this season of the year, owing to the coldness of the ground for the past two months. This, however, is by no means detrimental to its proper maturing, but, on the contrary, a favorable indication of a larger yield, as the grain, in its spring development, will not grow so heavily to straw, but bear larger and better filled heads and prevent all chance of lodging. The cold weather coming on as a large portion of the grain sown was coming up, the rapid growth was checked and the process of stooling aided, thus increasing the prospective yield to a large extent. The early-sown grain is of a good color and stands thick on the ground. Winter-sown land is also in good condition and bids fair to make a heavy yield.

#### Tulare.

**FRUIT NOTES.**—Visalia Delta, Jan. 8: I. H. Thomas of this city thinks there will be from 5000 to 6000 acres of land in Tulare county planted in fruit this season. Charles Spier, the well-known nurseryman, goes Mr. Thomas 4000 acres better and says that the acreage will

he nearly 10,000. B. M. Baird, who lives near Cottonwood, will plant 80 acres to vines. Edward Sadler and William Brown have leased 80 acres of the T. B. Wheaton ranch, near town, for five years, and they will plant it to fruit. Arthur Crowley owns a mountain ranch and he will plant 20 acres of it to apples this winter. Edwin Van Valer will plant ten acres to pears on his ranch this winter. One hundred and forty acres of the Flynn tract were sold to a local syndicate at \$100 per acre. The syndicate has organized the Land & Raisin Company of Visalia, divided into 280 shares of the par value of \$200 per share, making the capital stock \$56,000. The land cost \$14,000. The land is well adapted for raisin culture, and about 45 acres of grapes and five acres of prunes will be planted this winter.

**DAIRY INTEREST.**—Hanford *Sentinel*, Jan. 1: Two years ago a cheese factory was built and equipped at Hanford. The business of making cheese from the milk of cows pastured on alfalfa was an experiment, as was also the curing of cheese during our hottest months. The factory was built and the business opened by a stock company with J. G. Cohoe, an old New York cheese-maker, as manager of the business. A short trial demonstrated that alfalfa milk was excellent for cheese-making, and Hanford cheese from the first became popular throughout the State wherever it became known. Mr. Cohoe, who understands the business, was himself surprised at the splendid results of the experiment. The factory has been in successful operation since it was started, and finds a ready sale for its products at good figures, and milk is now being contracted for at the factory at \$1 per 100 pounds. The manufacture of cheese here has improved the quality of butter in the market, for many poor butter-makers are selling their milk, and those who are capable of making a good article find a better market for their butter, and consequently are able to devote more attention to the business. The Lakeside district, south of Hanford, is now taking the lead in the patronage of our cheese factory. In the Excelsior district, north of Hanford, what is known as the Excelsior Factory, managed by E. F. Hauert, has been in operation over two years, and although not so extensive in its business, has met with good success. Another factory began operations at Visalia last summer—a stock concern, superintended by Mr. Cohoe of Hanford. It is also a success.

**PROFIT IN ALKALI LAND.**—*Sentinel*, Jan. 1: There is a large amount of alkali land in Tulare county, and Samuel Page has one of these alkali ranches three miles northeast of Hanford. He is a careful farmer and keeps account of everything. The ranch contains 140 acres and abounds in alkali and salt grass. Here are his figures for 1890, to which he will make affidavit if necessary:

Spring wool sold.....	\$ 371 00
First lot of lambs.....	147 75
Second lot sheep and lambs.....	200 00
Third lot sheep and lambs.....	451 00
Two bucks.....	8 00
Two tons of hay.....	8 00
October lambs for Christmas.....	20 00
Pasturing sold.....	36 75
Growth of three colts.....	60 00
Sucking colts.....	60 00
9 bales of wool, 2715 lbs., @ 11½ cents.....	312 25
Total.....	\$1,963 75

## EXPENSES.

Shearing, dipping and sacks.....	\$120 00
Haying help.....	50 00
Breeding two mares.....	20 00—190 00

Profit balance.....\$1,773 75

Mr. Page settled here in 1882. After closing the year's business with the above result, he had left on hand as a principal or capital stock for the next year's production, 600 sheep, two brood mares, two work horses, and hay enough to winter the same. He had the crop of six acres of orchard and a one acre vineyard, the production of which was not taken into account.

## Ventura.

**LARGE SHIPMENT OF LIMA BEANS.**—Los Angeles *Herald*, Jan. 10: A notable shipment of California produce passed through this city from Ventura en route to Columbus, Ohio. It was a solid train of 11 cars, containing 4800 sacks of straight Lima beans. The consignment goes forward over the Sunset route, as a special, running regular Sunset special time, which will bring it to Columbus in ten days. This is the largest single purchase of Lima beans ever made in the State, and one of the largest of any sort of California produce on record.

## Yolo.

**WOOL GROWERS' ASSOCIATION.**—Esparto, Jan. 4: The Yolo Co. Wool-Growers' Association met yesterday. A bounty on seven coyote scalps was ordered paid. It was decided at the meeting to ask Colusa, Napa, Solano, Lake and Sacramento counties to join the association. The Board of Supervisors will be petitioned to raise the bounty from \$5 to \$10 on each scalp.

**RAISIN PACK.**—Woodland, Jan. 8: The season has been remarkably good for the growth of the raisin grape, and fully 300,000 boxes of raisins, in addition to a large amount of dried grapes, have been and are about to be marketed. The wine product is less on account of the low price of wines and the increased price of dried wine grapes.

**FRUIT INDUSTRY.**—Woodland *Mail*, Jan. 8: Several enterprises have been inaugurated during the last decade, but the most notable has

been the cutting up of large ranches into small fruit farms. Thousands of acres have been planted to the vine and various kinds of fruits, and the profits have been so large on raisins, prunes, apricots, figs and olives that a large number of persons are contemplating the entrance of these valuable productions. It is estimated by fruitmen that there will be planted in this county during the next season from 3000 to 4000 acres in vines and fruit, and the most of this is small holdings of from 10 to 20 acres each. A syndicate consisting of D. M. Burns, E. J. Depue, C. H. Waterhouse, Sam Jones, A. T. Hatch, Frank McMullen and C. S. Givens has purchased 400 acres of the richest and best land in the county, near Woodland, for \$125 per acre, for the express purpose of planting the entire tract to fruit-bearing trees and the raisin grape. They style themselves the Yolo Orchard Company, and will commence work immediately. Some of the townspeople and county officers have purchased small parcels on the installment plan for the same purpose. In Capay valley, great preparations are being made for tree-planting, and an area of 1000 acres will be planted in the valley this season. This certainly speaks well for the county, and those who will break away from the old rut of grain-growing will not regret their action in a few years, when these orchards and vineyards come into full bearing. The apricot has been largely cultivated and mostly dried and shipped at prices far above that of last year. From \$300 to \$350 per acre has been realized this year on that industry. But the most valuable crop from the experience of the few engaged in the business has proved to be the prune. The French prune grafted on the Myroholan stock has netted as high in some instances as \$500 and \$600 per acre, and a ten-acre prune orchard, when in full bearing, would make a good living for an industrious man.

## Yuba.

**CROP PROSPECT.**—Marysville *Appeal*, Jan. 9: At no time in the history of Yuba and Sutter counties has the prospect for an abundant wheat yield been better than for this summer. The acreage is unusually large. Farmers have had ample time to properly seed their land, and there has been just enough rain to cause the ground to work to perfection. Many who usually summer-fallow their land have this year winter-sown, as the short crop last year exhausted the ground but very little, and there was no necessity for letting it lie idle this year. Much of the wheat is already up and shows a fine stand. Late rains are what bring out the grain, and with an ordinary spring the yield will be enormous.

## ARIZONA.

**CATTLE INDUSTRY.**—Phoenix *Republican*, Jan. 8: A stockman who was in Phoenix a few days ago made an observation upon the state of the cattle market that is a digest of the situation. He said: "Good cattle are in good demand at good prices; poor cattle are in poor demand at poor prices." He continued: "The day of the Texas and Mexican steer has long since passed in Arizona, and indeed anywhere else in the Union. It will not pay to ship even fat Texas cattle to the markets, for when brought into comparison with the graded Herefords and Durhams that are now so freely offered, the native stock outs but a sorry appearance, and is the last to be purchased. About as strong an argument as I know for the breeding of only good stock came in this morning's *Republican*. It was that portion of the Chicago live-stock market showing prime steers to be worth \$5.35 a hundred, while Texans were selling at only \$1.15. Now, of course the latter price will hardly pay back the shipping and stockyard charges, though the first-named price is as royal a figure as a cattleman could yearn for." The fact of the matter is, the cattle business of Arizona is vastly changed from what it once was. But a small percentage of the Territory's beef product is now consumed at home, the greater portions being shipped direct to the great cities. One-half of the Arizona heaves are of more than a medium grade, and the remainder are small "rough and common." The sires on many ranges are, for sake of economy, selected entirely from range calves, and the result is, the succeeding generations are far from satisfactory. Nearly all the ranges of Maricopa, Yavapai and Gila counties have now large numbers of good grade bulls of the Durham, Hereford or Murphy stock, and the steer crop each year is improving in quality. It costs no more to raise a good, large steer than it does a sorrel, and the weather of Arizona is not of sufficient severity to constitute the basis of an argument for the growing of the tougher breeds of native cattle.

The great popularity of Ayer's Pills as a cathartic is due no less to their promptness and efficacy than to their coating of sugar and freedom from any injurious effects. Children take them readily. See Ayer's Almanac for this year, just out.

## A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alterative,

## Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

## Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Gaya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Neb.

## Ayer's Sarsaparilla

# THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR  
COMPANY prepared from GUANO and rendered soluble by the application  
of acids.

This manure is an ENRICHER of the soil and not, like others, a  
STIMULANT only; It will do for the land what no other can in rendering it  
PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; Its work is immediate and effective, and for  
results we point with confidence to the ORCHARDS of RIVERSIDE, where  
it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion  
may require. It is rich in PHOSPHORIC ACID, and can be made as rich in  
NITROGEN as the most deficient soil may exact.

## WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

## H. M. NEWHALL & CO.,

AGENTS.

## 'Planet Jr.'

Improved Farm and Garden  
Tools for 1891.

BETTER, Both Horse & Hand, THAN EVER;  
better and more money saving. We cannot describe them  
here, but our new and handsome catalogue is free and in-  
teresting. A goodly number of new tools will meet your eye  
there. Among these, Gardener's Harrow, Cultiva-  
tor & Pulverizer, combined, adjustable teeth; Market  
Gardener's & Beet Grower's Special Horse Hoe  
with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potatoe Horse  
Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator  
and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have  
ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER  
WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor  
have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Gar-  
den Flows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are  
adopted by us without actual and exhaustive tests in the field. We therefore guar-  
antee everything exactly as represented. Send for Catalogues now. **S. L. ALLEN & CO.,** 1107 Market St., Philadelphia, Pa.

## BEET SUGAR FACTORIES

## E. H. DYER & CO.,

Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar,  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the  
details of German and French methods of manufacturing sugar from beets, and also at works of the leading manu-  
factories of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in Cali-  
fornia, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlim-  
ited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to  
furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this  
country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical  
skill to operate the works successfully when completed. Will make personal examination of localities with regard  
to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results  
guaranteed when the conditions are considered favorable.

DO YOU WANT A  
Profitable Business?

Do you wish to SUCCEED

### Stahl's Excelsior Knapsack Sprayer.

For applying insecticides or fungicides, spraying pumps with specially constructed nozzles are necessary. The Excelsior Sprayer, fitted with the improved Vermoral nozzle, answers the purpose admirably. With this machine (of which the engraving below is an exact representation), which is carried on the back, knapsack fashion, a man can spray from five to six acres of vines per day, and the cost of treating an acre in an average season, using the

Bordeaux mixture as indicated above, need not exceed \$8. In all cases where the Bordeaux mixture is employed it will be best to use the Improved Vermoral Nozzles, for the reason they are especially constructed to prevent clogging. Heretofore we have had to rely mainly upon machines imported from France. The average fruit-grower cannot afford to send to France for a machine that will cost him from \$18 to \$25, this price being entirely beyond the reach of the average farmer, gardener and fruit-grower. The Excelsior Knapsack Sprayer is guaranteed to do the work satisfactorily and is sold with complete outfit for \$14. See advertisement in this paper.

**A BARBED-WIRE COMBINE.**—It is telegraphed from Chicago that the outlook for a combination of barbed-wire manufacturers in this country is good. They met two weeks ago in Pittsburg, formed a plan of consolidation, and that session is now being continued in Chicago. The Columbia Wire Company has been incorporated under the favorable laws of Kentucky, stock-hooks opened, and substantially all the manufacturers, except the Washburn-Moen Company, are, or will be, subscribers. The new company will control all patents, contracts, etc., issue new licenses and establish prices.

### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

H. KELLEY—Modoc and Lassen Cos.  
GEO. WILSON—Sacramento Co.

H. C. HENKLE—Capay Valley.

**"THE GREAT WATER PROBLEM."**—Col. L. F. Moulton of Colusa has just published an important pamphlet on the improvement of the Sacramento river, so as to avert floods and the great injuries and damages resulting therefrom. He has studied this subject since 1852 and has made many surveys, and has, in fact, been in constant observation and contemplation of the subject. His pamphlet is accompanied by a map showing the proposed West-Side drainage canal. Parties interested should apply to Col. Moulton for a copy of his publication.

**ORANGE SELLING.**—There seems to be a general movement on the part of the Southern orange-growers to reject the terms on which the orange-buyers proposed to operate this year as described in last week's RURAL. Growers do not propose to sign the contracts which provide for grading, so as to throw a lot of culls back upon their hands. It looks very much as though the buyers' contracts would have to be modified or the growers will seek other means of disposing of their fruit.

**A Remarkable Case.**—Mr. Walter Wheeler, of the Washington Mills, Lawrence, Mass., for two years afflicted with varicose veins, accompanied by a troublesome eruption, was completely cured after taking only eight bottles of Ayer's Sarsaparilla.

### NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

### Please Remit.

The beginning of a new year is a good time to settle up the debts of the old ones. We are obliged to remind those who owe the PRESS on subscription account, that it will be a great convenience to us if they will soon remit what is due. Those who can also pay in advance will also do us timely and well-appreciated favor. We are doing our best to present a very valuable paper, representing carefully, earnestly and conscientiously the welfare of its intelligent readers and the best interests of the arts, sciences and mining and mechanical industries of the Pacific States.

To do this we deprive ourselves of some of the most lucrative lines of patronage available to the average newspaper.

By paying as promptly as possible, friends, you will greatly encourage us in our sincere efforts to favor you and the best interests of your calling.

### List of U. S. Patents for Pacific Coast Inventors.

The following brief list by telegraph, for Jan. '14 will appear more complete on receipt of mail advices:

California—Clarence V. Greenamyer, bench clamp for pipe tongs and wrenches; also, adjustable pipe wrench; Lionel Heynemoll, cable street railway; Peter S. Jackson, lengthening metallic beams; Jose Jardine, steering apparatus; Edward G. King, compass attachment for field glasses; Edward M. Knight, hiter; Patrick Noble, cable railway; George A. William, coffee-pot; all of San Francisco. Daniel B. Baker, sadiron, San Jacinto; Daniel M. Baldwin, seedling machine, Florence; Loris P. Carl, tether pin, Ferris; Alfred Dugden, knife sharpener, Santa Barbara; Willis D. Eitel, train fare punch, San Jose; John J. Coker, whiffletree coupler, Los Angeles; James Lyman, globe, San Jose; James R. Phelps, spreader for galting horses, Sacramento.

Oregon—Horace T. Curre, rail-cleaning and lubricating attachment for locomotive, Albina; Albert M. Grubbs, railway switch, Forest Grove.

Washington—David H. McFall, carpet-stretcher, Ellensburg.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

SAN FRANCISCO, CAL.

Office, No. 138 Montgomery St., under Occident Hotel.

**CALIFORNIA NURSERY COMPANY.**—Our nurserymen are making more effort than usual to render their announcements attractive this year, and it is a very praiseworthy thing to do. The advertisement of the California Nursery Company is an illustration of this fact. The catalogues of this establishment, which we have received, show how wide their resources are, both in economic and ornamental lines. The catalogue of ornamental trees and plants last issued should be read by all horticulturists. If it does not contribute largely to the advance of tree-planting and garden work on this coast we shall be very much mistaken. The descriptions are excellent and prepared with great care.

### A Common Sense Calendar.

The calendars that come in the fall are as numerous as the flowers that bloom in the spring. Many further resemble the flowers in that they come without being sent for, and fade after a very brief existence.

The most sensible and business-like Calendar that we have seen comes to us from N. W. Ayer & Son, Newspaper Advertising Agents, Philadelphia, and bears their "Keeping everlasting at it" imprint. It is so large and clear that its dates can be easily distinguished across an office, and is printed in a manner to reconcile the most fastidious to its company for a year. It is sent to any address, postpaid, on receipt of 25 cents.

### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

### Irrigated Lands to Rent.

A nice shaded homestead, with flowing artesian well, and 160 acres of improved land, to rent for a moderate share of the crops, or small cash rental. Over 20 acres of alfalfa and 7 of bearing orchard; also, 320 acres adjoining, without water; within seven minutes of Tulare City. Apply to E. M. Dewey, Porterville, or A. T. Dewey, 220 Market St., S. F.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSES. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
**FRANK H. BURKE,**  
Breeder of Registered Holsteins and Berkshires.

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 14, 1891.  
General trade in farm products is quiet, partly due to fewer lines to be dealt in, but largely due to the uncertain feeling of operators. The unsettled condition of the Behring sea question, and fears entertained that the situation may become more strained, cause farm products to suffer, owing to England being our largest customer. The silver question is another disturbing factor which will not be settled until we have free coinage, which will be in the interest of wheat-growers. The money market is still easing. The foreign wheat markets have held strong throughout the week. The following is to-day's cablegram:

LIVERPOOL, Jan. 14.—Wheat—Steady. California spot lots, 7s 6d to 7s 9½d; cargoes off coast, 38s 9d; just shipped, 38s 6d; nearly due, 38s 9d; cargoes off coast, firmer; on passage, improving; Mark Lane wheat, firmer; English country markets very firm; wheat and flour in Paris, firm; weather in England, colder.

## Foreign Grain Review.

LONDON, Jan. 12.—The *Mark Lane Express*, in its review of the British grain trade, says: English wheat is held at 1s. advance; 6d. is obtained. Foreign wheat is firm. Oats are dull. At to-day's market full prices were paid for spot corn, and the inquiry for forward delivery improved.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday.....	78½d	78½d	79½d	79½d	78½d	78½d
Friday.....	78½d	78½d	79½d	79½d	78½d	78½d
Saturday.....	78½d	78½d	79½d	79½d	78½d	78½d
Sunday.....	78½d	78½d	79½d	79½d	78½d	78½d
Monday.....	78½d	78½d	79½d	79½d	78½d	78½d
Tuesday.....	78½d	78½d	79½d	79½d	78½d	78½d

The following are the prices for California cargoes or off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38½d	38½d	38½d	Firm.
Friday.....	38½d	38½d	38½d	Strong.
Saturday.....	38½d	38½d	38½d	Strong.
Sunday.....	38½d	38½d	38½d	Firm.
Monday.....	38½d	38½d	38½d	Quiet.
Tuesday.....	38½d	38½d	38½d	Quiet.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Jan.	Feb.	Mar.	Apr.	May.	July.
Thursday.....	103½	104½	105½	105½	104½	104½
Friday.....	103½	104½	105½	105½	104½	104½
Saturday.....	103½	104½	105½	105½	104½	104½
Sunday.....	103½	104½	105½	105½	104½	104½
Monday.....	103½	104½	105½	105½	104½	104½
Tuesday.....	103½	104½	105½	105½	104½	104½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Jan.	Feb.	Mar.	Apr.	May.	July.
Thursday.....	97½	97½	97½	97½	97½	97½
Friday.....	97½	97½	97½	97½	97½	97½
Saturday.....	97½	97½	97½	97½	97½	97½
Sunday.....	97½	97½	97½	97½	97½	97½
Monday.....	97½	97½	97½	97½	97½	97½
Tuesday.....	97½	97½	97½	97½	97½	97½

NEW YORK, Jan. 14.—Wheat—\$1.05½ for January, \$1.05 for February, \$1.06½ for March, \$1.05 for May, \$1.03 for June, and 98½c for July.

CHICAGO, Jan. 14.—Wheat—97½ for May.

## Visible.

NEW YORK, Jan. 12.—The visible supply of grain on Saturday, Jan. 10th, as compiled by the New York Produce Exchange, was as follows: Wheat, 25,518,000 bushels, a decrease of 328,000; corn, 2,815,000 bushels, an increase of 57,000; oats, 3,771,000 bushels, a decrease of 25,000; barley, 3,811,111 bushels, a decrease of 248,000.

## Eastern Wool Markets.

NEW YORK, Jan. 12.—There is a good run of trade in wool here; combing grades are all cleared out. All holders speak hopefully of the spring market and are not disputed by any of the mill firms of weight. Desirable fleeces have been certainly stronger in the last 10 days, and a large movement in Texas wools leaves them stiffly quoted. It is expected that the favorable winter will work off the surplus of old woolen goods and that manufacturers will promptly produce attractive styles, so there is no giving way in lines that must come into play.

Boston reports show a continued activity, with strong prices for fleeces and Territory in grease. Sales, 376,000 lbs foreign, 2,147,000 lbs domestic. California spring and fall show the full last figures.

The Philadelphia market is waking up with a fair volume of business, and the strong tone of prices has been responded to. The supply is moderate.

## Miscellaneous.

NEW YORK, Jan. 12.—Hops quiet and brewers' wants moderate. No foreign orders are noted. Sellers oppose all attempts to materially break down the nominal rates of last week. Exports the past week aggregate 752 bales.

Hides have had a good trading in common early in the week, with liberal sales of better grades at the close, chiefly at private terms. Tanners bid 12½c for best, with offerings free at 13c.

The easy prices of raisins tend to call out more trade. The qualities are now comprehensively sorted, which gives buyers confidence, particularly in the grocery grades. Fine layers in boxes range as before. Three Crown sell at \$1.60 to \$1.75; bagged, 6½ to 7c per lb. The stock is heavy, but flooding arrivals have ceased. A recent Western assertion that grapes have been packed here in cartons as raisins meets only ridicule.

Apricots steady, with sales at 18c in bags and 19c in boxes. Grapes and pears from cold storage show a moderate trade.

Honey is stiff at 7 to 7½c for amber and white. All that is here will be wanted. Dried grapes, spot, sell at 4½c and are slow. Common raisins are too cheap for their promised introduction.

Prunes, four sizes, 11c; divided continue unchanged.

BAGS—The market is heavy for standard-size at 6½ to 6¾c. The farmers in Washington are agitating for a jute-mill by the State at the penitentiary.

BARLEY—The market is fairly strong under moderate supplies and a good demand. In futures, trading on Call has been light. The following are to-day's Call Board sales:

Morning Session: Buyer season—400 tons, \$1.53; 100, \$1.52½. No. 1 Brewing, buyer season—100 tons, \$1.58 ½ cwt. Afternoon Session: Buyer season—400 tons, \$1.51½ cwt.

BUTTER—The market is easy, under freer receipts and local supplies increasing which lessens the buying demand. From up north there is only a fair inquiry, as the shipments from the Central States are quite large.

CHEESE—Receipts show a slight increase, but as stocks are exhausted all coming in is readily absorbed.

EGGS—The market is easy. The supply of Californian is increasing. The trade confines purchases as much as possible.

FLOUR—The market is fairly steady for leading brands. The offerings of outside brands are quite free.

WHEAT—The sample market is firm. Considerable Oregon and Washington from east of the Cascades is coming to hand. This wheat, or at least the bulk, is preferred by exporters to France, but with English exporters it is not in much favor. Puget Sound advices report about 35,000 tons in the warehouses. This was put out for bear purposes up north, so as to get holders to sacrifice their grain. In futures, trading on Call has been light. The following are to-day's Call Board sales:

Morning Session: Buyer 1891—100 tons, \$1.47½; 300, \$1.47½. Buyer season—100 tons, \$1.42½; 500, \$1.42½; 900, \$1.42½ cwt. Afternoon Session: Buyer 1891—600 tons, \$1.47. Buyer season—1000 tons, \$1.41½; 100, \$1.41½ cwt.

## Cereals.

The *Mark Lane Express* of Dec. 22 reports as follows: The fall of snow which has occurred during the past week has been very welcome, forming a protective covering to the autumn sowings, and removing fears of injury from the penetrative effects of continued frosts. Live-stock are doing well, the air being healthy for them so long as they are well fed. To barn and byre, stockyard and stackyard the farmers' attention is now restricted. Nothing is doing beyond the steading, and the labor bill is reduced to a minimum. Market deliveries remained fairly liberal up to Wednesday, but since that date the fresh fall of snow has made road transit difficult, while the dark days, often foggy as well, have delayed railway traffic very considerably. On the Thames, and other rivers, navigation is already difficult, owing to floating masses of ice. The same wintry impediments are announced from France, and most of the Dutch rivers and canals are given over, for the time being, to the skaters. Thaw, however, is reported from parts of the lower Danube. The London average shows threepence improvement. To the Government estimates of this year's harvest it may be briefly mentioned that the influence of the report is encouraging to wheat holders, who are assured that the crop does not exceed 73,354,484 bushels against 73,202,773 bushels last year. This is a yield of 30.74 bushels to the acre, and effectively combats the undue optimism against which we have ourselves contended. With respect to barley, which is reckoned a yield of 73,933,801 bushels, the deliveries since harvest will hardly be proved to indorse so liberal a view.

The local wheat market has held to fairly strong prices. The strength of the market is due to strong holding, prospective silver legislation and a freer supply of tonnage in the near future. Buyers state that the strength of the market is largely based on higher prices abroad, which are due to lessened shipments from Russia, and as soon as the ice embargo is raised in the Black Sea, free shipments will follow. While the latter may result, yet the fact is ignored that English farmers are small holders, having been free sellers, and with smaller available home supplies the wheat market will not break, but, on the contrary, may advance slightly. Receipts from up north are lessening. The money market is growing easier. Advances from the agricultural districts continue favorable. The cold weather is generally accepted to be of advantage to the seeded lands. Where the plant has made a start, the cold checks its upward growth and causes its growth to go into the roots, which is calculated not only to make the plant stronger but to cause it to stool out.

The Tacoma *Ledger*, January 11, gives the list of

wheat vessels as follows at the following ports: Tacoma—ship Marion, ship Senator, ship Honolulu, ship Milverton, ship Constance. Portland—British ship Cornuvia, American ship Solitaire, ship City of Philadelphia for charter, British ship Annesley.

Barley is strong at full figures. Brewers have been taking fair quantities. One sale of nearly 3000 sacks was made the past week at \$1.55. The grade is nearly gilt-edge. This parcel goes into immediate consumption. There is a good demand for seed. From all obtainable information we feel justified in stating that the acreage to be seeded will be up to if not exceeding the largest recorded.

Oats are strong at a slight advance. The demand is chiefly for immediate use. Cold, frosty weather causes more feeding of grain. The available supply up north is said to be light. There is a good demand for seed.

Corn shows more strength. It is claimed that the supply in this State will barely meet the requirements of feeders and others before the new-crop season.

Rye is steady with a firm tone.

## Feedstuff.

Ground feed is firm with a good demand ruling. Continued cold weather compels feeding in many localities where it would not be necessary with warm growing weather.

Hay is strong with \$19 obtainable in a small way for the more choice grades. The feeding is large in this State and also up north. Continued cold weather keeps grass back and also points to a later season for new-crop hay.

## Live-stock.

Bullocks are steady. Mutton sheep are higher under a growing scarcity. Hogs are fetching a slight advance. Small calves are lower owing to more offering. Milch cows and horses are essentially unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stalled-one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4¼ to 4½ cwt lb; dressed, 7 to 8½ cwt lb; heavy, 4 to 4½ cwt lb; dressed, 6½ to 7½ cwt lb. Stock bogs, 3½ to 4 cwt lb.

BEEF—Stall fed, 7 to 8 cwt lb; grass fed, extra, 6½ to 7 cwt lb; first quality, 5½ to 6 cwt lb; second quality 4½ to 5 cwt lb; third quality, 3½ to 4 cwt lb; bulls and thin cows, 2 to 3 cwt lb.

VEAL—Small, 6 to 7 cwt lb; large, 5 to 6 cwt lb.

MUTTON—Wethers, 8 to 9 cwt lb; ewes, 7½ to 8½ cwt lb; lamb, 9 to 10 cwt lb; spring lamb, 15c.

## Fruits.

Apples are still in liberal supply; only the more choice gilt-edge fetch top prices. Oregon, Washington and the northern counties of this State are sending in liberal supplies. Any selling pressure is met by lower bids from buyers.

Los Angeles is still sending in strawberries. The last consignment had to be closed out at prices barely covering freight charges.

Oranges are in good supply and as the weather is cold, sellers find some difficulty in placing consignments. Concessions are necessary to close out a large consignment. The East continues to draw freely. Up north the demand is only fair.

Dried fruits are fairly firm. Holders evince more confidence in the future. The stock is not large, and as it is fairly concentrated, many look for an improvement.

Raisins are slightly more inquired after. The low prices at the East brought in large buyers who appear to be concentrating, and as the market cleans up a stronger tone is noticeable.

## The Orange Crop.

The Sacramento *Bee*, Jan. 12, says: E. Platt has returned from Southern California where he has been for some time. He reports a heavy increase in the yield of California oranges. The California crop this season will reach 4000 carloads or 1,200,000 boxes of the average weight of 65 pounds net. The enormous gain over last year, when the crop was about 750,000 boxes, is 450,000. The crop is only beginning to be moved in Southern California, where the shipments so far have not been much over 50 carloads. A great many new orange groves are being planted this year, and the demand for trees compelled the importation of great numbers from Florida. These figures make an interesting comparison with the returns from Florida and show that California is increasing her yield of oranges much more rapidly than the land of the everglades. Last year Florida produced about 2,000,000 boxes while this year the product aggregated half a million boxes more. These figures show that California is making far greater progress proportionately in this direction than Florida. About 2000 carloads of the Florida crop has been moved already.

## Vegetables.

Heavy frosts the past week caused considerable damage to the more tender spring vegetation. The southern counties continue to send us early vegetables.

Onions are barely steady. Free receipts are against holders. There is a better supply of table onions. Heavy receipts of potatoes with large supplies stored handy for shipping, cause a weak market. Buyers do not appear disposed to anticipate their wants. New while in fair supply, do not come in freely enough to warrant quoting. Sweet potatoes are in light receipt.

## Miscellaneous.

The market is about bare of Eastern poultry, which causes a better feeling for California stock. Broilers, friers and turkeys are higher.

Beans show a fair degree of strength. The receipts are light while the demand is fair.

Honey is strong under light obtainable supplies and a good demand.

Hops are scarce and hard to get even at top prices. Contracting for this year's crop is reported in this State, Oregon and Washington, but the prices we are unable to get.

Wool is still dull, but it is claimed that the situation is favorable to growers.

For seeds the quotations are unchanged. The demand is fair.

Exports by sea the past week aggregate as follows: Wheat cts, Havre, 64,199, Cork, 48,027; Central America, 1000. Flour bbls, China, 14,402; Japan, 776, Guayquil, 100; Panama, 610; Central America, 3011. Corn cts, Central America, 1569. Wine

gals, New York, 321,921; Japan, 1562; Mexico, 1579; Philadelphia, 553; Washington, 206; Brooklyn, 558. Raisins boxes, Auckland, 210. Dried fruits lbs, Japan, 1220. Beans lbs, Panama, 1000; New York, 18,363. Barley cts, New York, 4908.

From the *Commercial News* of Jan. 14th the following summary of tonnage movement is compiled: On the way to 1891. 1890. San Francisco..... 283,171 181,443 San Diego..... 15,475 11,121 San Pedro..... 7,478 3,840 Oregon..... 36,615 26,157 Puget Sound..... 12,247 17,170

or small. Write to-day for our New Guide, FREE. THE DINGEE & CONARD CO. WEST GROVE, PA.

# STEAM VERSUS MULES---MAMMOTH AND PRACTICAL HAULING.

THE ACCOMPANYING CUT  
Is from a photograph taken while at work.

**It is Cheaper and More  
Expeditions.**

One Traction Engine will do the  
work of 60 mules.

Best's Traction Engines have been  
in practical use for over two years,  
hauling coal, lumber, gravel and  
grain, one of which is now hauling  
cans in the Sandwich Islands.

**It will do the work of  
100 Horses.**

Plowing reduced to a minimum  
cost, and from 35 to 45 acres plowed  
each day at an expense of 50 cents  
to 60 cents an acre.

Three sizes built, 30, 40 and 50-  
horse power, and

**24 Best Traction Engines  
at Work Now.**

It hauls the Gang Plow and Har-  
row, propels the Best Combined  
Steam Harvester and moves along  
majestically with a train of wagons  
loaded with grain for the warehouse.

**GOLD MEDAL**

Awarded the Best Traction Engine  
by the State Agricultural Society at  
Sacramento, 1890.

BEST'S TRACTION ENGINE HAULING GRAVEL IN SACRAMENTO.

## BEST'S TRACTION ENGINE

IS "THE BOSS OF THE ROAD" AND "THE MONARCH OF THE FIELD."

## THE PACIFIC GAS OR GASOLINE ENGINE.

Patented June 17, 1890 - Nos. 430,504, 430,505, 430,506 - also in Great Britain and Other Foreign Countries.

**Starts Instantly Without the Necessity of Boiler, Fire  
or Experienced Engineer.**

**OVER 150 IN ACTUAL OPERATION.**

The Engine uses from 20 to 25 feet of Coal Gas, or  
about one-eighth of a gallon of Gasoline, per hour per  
horse-power. Is now in use for Pumping Purposes, run-  
ning Printing Presses, Small Factories, Elevators, Jewel-  
ers' Lathes, Polishers, Dairymen's, Agricultural, Mining  
and Wood-working Machinery, Well Boring and all other  
purposes requiring cheap and convenient power. Persons  
having but little space will find this the most suitable of  
all Motors.

**USE IN BOATS.**

The Company makes a Specialty of  
ENGINES FOR SMALL BOATS AND LAUNCHES.

**PACIFIC GAS ENGINE CO.,**

230 FREMONT STREET, - - - SAN FRANCISCO, CAL.

Send for Circular and Price List.

## SPRAY PUMPS!

Star Spray Pump.

The Goult's Spray Pump.

WITH BAMBOO EXTENSION ALL FITTED UP, COMPLETE WITH HOSE, BARREL AND SPRAY NOZZLE.  
These cuts show in faithful operation our Goult's and Star Spray Pumps. They are utilized for spraying Fruit Trees,  
Orange Groves, Vines, and in fact, all trees or shrubbery infested with the destructive insects which infest and do so much  
injury to Orchards, Vineyards, Orange Groves, etc. They are made entirely of brass, with the exception of frame and  
handle, and are strong and heavy; the valves being made entirely of metal or rubber, and will not be affected by the corrosive  
solutions such as Caustic Soda Acids, Lye, or any other solution that may be used to kill the destructive insect. Send for  
Special Circular and Prices of Spray Pumps. **NOTICE.** - OSGERTY'S LIQUID TREE PROTECTOR is the best  
Spray for killing Red Scale, Black Scale, White Cushion Cottony Scale, San Jose Scale, or any other insect. Send for  
Special Circular.

**WOODIN & LITTLE,**

312 & 314 Market Street, junction of Bush,

SAN FRANCISCO, CAL.

## "P. & B." PATENT IDEAL ROOFING & PRESERVATIVE COMPOUND.

Cheapest, Most Durable and Fire-Resisting Roofing in the market.

PRESERVATIVE COMPOUNDS FOR WOOD, IRON OR METAL.  
Acid and Alkali-Proof.

"P. & B." COATED BUILDING PAPERS.  
Water-Proof and Odorless. No Dearer than Common Sheathing.

**PARAFFINE PAINT COMPANY,**

116 BATTERY STREET, SAN FRANCISCO.

Price \$7, with Three Rollers.

18,000 NOW IN USE ON THE PACIFIC COAST  
And Still Booming.

**THE ROLLER ORGANS**

Have no equal and the price is in reach of all. Saves its cost in one  
night for dance music. Any one can play them. Plays sacred and  
popular songs and dance music.

We sell all kinds of musical instruments at bedrock prices. Cir-  
cular free on application. All goods sent C. O. D., subject to ex-  
amination before paying.

**HAMMOND'S MUSIC STORE,**

2257 Mission Street, near Nineteenth, San Fran-  
cisco, Cal.

Vol. XLI.—No. 4.

SAN FRANCISCO, SATURDAY, JANUARY 24, 1891.

Office, 220 Market St.

#### Death of the Hawaiian Sovereign.

On the afternoon of Thursday, Dec. 4th, the U. S. warship Charleston arrived in the Bay of San Francisco hearing David Kalakaua, King of Hawaii, as a visitor to California, and on Thursday afternoon, Jan. 22d, the same vessel will depart, bearing his body to Honolulu. He came an invalid seeking recreation and hoping to find also restoration. He was received with marked hospitality, and, so far as his strength allowed, accepted and enjoyed the welcome extended to him as the representative of our neighbor nation in the Pacific. But his malady was evidently too deep-seated for cure; he became worse instead of better, and died on Tuesday afternoon, Jan. 20th.

The portrait upon this page gives a representation of this distinguished personage. He was the seventh ruler of what is now known as the Kingdom of Hawaii. He was a little over fifty-five years of age, having been born November 16, 1836. He was a son of Kapaakea

and Keohokale. February 12, 1874, he was elected king.

King Kalakaua was brought more prominently before the people of the United States by his visit to this country in 1876, when he was well received by President Grant and by citizens generally. The object of this visit was to promote friendly relations with the United States and to secure the ratification of a Treaty of Reciprocity by the United States Senate, in which he was successful. In 1881 King Kalakaua undertook a tour of the world, for the purpose of establishing pleasant relations with foreign Governments and to secure their consent to the emigration of their subjects to the Hawaiian Islands. This aim was also accomplished, the result being that a great immigration of Asiatic peoples occurred, and many subjects of Portugal were also introduced. During some years the Hawaiian kingdom developed under King Kalakaua's administration. The latter years of his reign were less peaceful than the earlier.

THE LATE DAVID KALAKAUA, KING OF HAWAII.

MAJOR-GENERAL NELSON A. MILES, U. S. A.

#### Major-General Miles.

Many readers of the RURAL will be pleased to look upon the noble countenance of Gen. Miles, which we reproduce upon this page from a recent photograph by Taher. The Western country has had many reasons to think well of Gen. Miles, and his recent achievement, the almost bloodless extinction of what it was feared would be one of the most formidable Indian uprisings of recent years, will add greatly to his credit as a soldier and as a man.

General Nelson A. Miles was born at Westminster, Mass., on the 8th of August, 1839. Receiving a common-school training, he became a clerk in a store, and was engaged in business when the Civil War began. He joined the 22d Massachusetts volunteers as a second lieutenant in September, 1861. He was promoted to a captaincy, and in May, 1862, was made Lieutenant-Colonel of the 61st New York Volunteers for gallantry on the field, and ordered to the front at Richmond. He played a conspicuous part all through the Civil War,

and at its close was brevet Major-General in the regular army and Major-General of Volunteers.

In 1875 he subjugated the Comanches and Kiowas in their memorable onthreak in the Staked Plains country, and in 1876 drove Sitting Bull and his warriors from Montana and quelled the rebellious Sioux. In the same year he captured the hostile Nez Percés, under Chief Joseph, and two years later subdued the Banacks in the National Park.

At the close of 1880 he received the rank of Brigadier-General, and for five years commanded the Department of the Columbia. In 1886, after a year's command of the Department of the Missouri, he relieved Crook in Arizona, and his campaign against the Apaches was crowned with the same success that attended his previous expeditions against the hostiles of the Northwest. After the thorough suppression of the troubles and the imprisonment of the leading chiefs, the General was appointed to the command of the Division of the Pacific, which position he retained after his promotion to be Major-General, April 5th, last year.

## HORTICULTURE.

### In Favor of the Redding Picholine Olive

EDITORS PRESS:—There probably never was a valuable fruit tree so much abused as has been our so-called Redding Picholine olive. It commenced when Mr. Lelong detected that the variety of Redding's introduction was not the French Picholine, and stated further: "The tops of the imported trees, supposed to be the Picholine, died down below the graft, and they put forth many shoots from which this little olive originated. It is no doubt a wild species." W. G. Klee gave then careful and exact measurements that looked quite disastrous for the Picholine, the pit of which was credited with a third of its whole weight. At that time only one pressing was known, that of L. A. Gould, who from 2500 pounds of olives made 24 gallons of oil. With regard to these facts, a third, one of our most prominent agriculturists, said to me two years ago: "I would not take a Picholine orchard if it was given to me." If our Coryphees spoke thus it was not to be wondered at when the *inferiores gentes* cried about the "Humbug olive," and sighed: "May a similar mistake to that committed in introducing the Picholine olive, be spared to California!"

A few years ago I claimed in the *RURAL* that the Picholine is a more equal and prolific bearer than the Mission, and ripens more than five weeks earlier than that one. But when it was said that the Picholine yields only half as much oil as any other variety, I had no facts to contradict this and consequently had to keep quiet. This year, however, I am able to give some facts.

On my own ranch, for the first time, I made a little oil from six-year-old trees; the berries had about the same measures given by Mr. Klee, and from 380 pounds I did not get much more than five gallons. Entirely different it was on another Auburn ranch, formerly owned by the above-mentioned L. A. Gould, and now by Mrs. E. Roberson. There the trees are ten years old and a mere glance at the berries shows that they are considerably larger than they are represented in any picture so far issued in California. I regret that I omitted weighing and measuring them; but laying them beside berries of the highly praised Rubra, one could hardly see the difference.

Mrs. Roberson gathered in 1890, 3800 pounds of Picholine olives which yielded 66 gallons of oil, or one gallon to 57 pounds, a better result than Elwood Cooper ever reported from Mission olives. One special pressing yielded even as much as one gallon to 49 pounds, which favorable result could not be accounted for. I, however, think that it is proved beyond doubt that the berries of the Picholine olive will grow larger when the trees grow larger, and that the larger berries yield a better percentage of oil. That favorable result probably was received from specially large trees.

Speaking now of the quality of the oil, nobody ever doubted that the Redding Picholine yielded a good oil. W. G. Klee says it produced oil of good quality; Mr. Lelong says it makes very good oil. We, here in Auburn, compared Mission and Picholine oil and claim that the latter has a more transparent greenish color, and is decidedly lighter and has not the fat, greasy taste of the Mission oil. From San Francisco dealers, Lebenbaum Bros., I heard that the greatest fault with California olive oil is, that it will not keep. Mr. Cooper, and especially Mr. Kimball, could tell a good deal about that. Those dealers of course referred to Mission oil, having no experience with Picholine. Two days before I met Mr. E. A. Pearson, a prominent lumberman of Sacramento, who told me that three or four years ago he got a bottle of oil from Mr. Gould, when that gentleman made his first oil; he used a part of the bottle and put the rest away to see how it would keep, and he assured me that now this oil looks as clear, smells as sweet and tastes as fine as ever.

One of the greatest advantages of the Picholine is its early and even ripening. It ripens in the first part of November, and how much value is in that, Mrs. Roberson experienced last year, her first year in the olive business. She commenced picking in November and gathered from one nine-year-old tree 163 pounds of olives. But in December an uncommonly heavy snow fell and brought in its snite myriads of robins, which have an equal relish for Picholine and other olives and got away with most of the crop. If, however, they will call again in another year, they will be disappointed not to find any Picholine left, but must be satisfied with the later-ripening varieties. Snow or rain alone will shake off and spoil many berries.

Still the Picholine is a small olive and therefore one might be afraid the gathering would cost considerably more. The berries here are gathered with a comb, and one man could pick this year (1890), which was an off year, 190 pounds, while Mr. Cooper says a man gathers 300 pounds of Mission per day. This raises the cost of a gallon of oil for the Picholine 12-13 cents, which I am confident will be considerably diminished when a tree bears like last year four or even more times as much.

Considering these facts, we all in Auburn who have any interest and experience in olives know that of the 16 varieties now bearing on the Roberson ranch, so far, none has proved

(though it may be) better than the Picholine; and consequently we, whenever and wherever we can, plant out the Redding Picholine olive, because, to sum up its advantages, it is a fast-growing olive tree of good shape, bears equally and prolifically, ripens as early or earlier than any other variety and yields much oil of a good and keeping quality. F. CLOSS.  
Quisiana, Auburn, Cal.

### The Kieffer Pear and Its Originator.

There is much difference of opinion in this State concerning the Kieffer pear, and really much difference in quality in the variety as grown in different parts of the State; still the following article, which Thomas Meehan of Philadelphia writes for the *London Gardeners' Chronicle*, will be read with much interest:

Peter Kieffer was the originator of the Kieffer pear. All over the world of gardening probably the Kieffer pear is known. Certainly in the United States, hundreds of thousands have been planted and hundreds of thousands of dollars realized from its sale. The owner of the tree, a near neighbor of mine, received probably but a few hundred, if that much. It seems that the great circle that has derived so much pleasure and profit from his work should at least know something of the man, who died on Nov. 7th, at his home in the suburbs of Philadelphia. He was a Frenchman, born in Alsace June 29, 1812. He arrived in New York December, 1834. Failing in employment there, he walked through snow two feet deep to Philadelphia, 100 miles, and obtained a situation as gardener to the famous agriculturist James Gowen, of Mount Alry, near here, where he married and finally bought a few acres and started a little market garden and small nursery.

All around Philadelphia are numerous rare trees and plants, the history of which no one knows, and the mystery is usually finally settled by the remark, "probably something introduced by Peter Kieffer." The Sand pear of Japan, so far as relates to the older trees growing in this section of America, if not in other parts, he certainly introduced. Numerous trees were fruiting here between 30 and 40 years ago—the fruit regarded as of no or little culinary value, but much esteemed for its delightful perfume. Mr. Kieffer raised seedlings from his tree, which were sold yearly from his little nursery. His tree grew close to a Bartlett (your Williams' Bon Chretien), and the branches of the two interlaced. Some slight difference in one seedling was noted, and it was preserved from sale. This proved what is, from the above facts, reasonably believed to be a true hybrid, the Kieffer pear. The fine red cheek, and some general appearance to the Flemish Beauty, has caused the statement to appear in our pomological works that it is a hybrid with the Flemish Beauty. Mr. K. grafted and sold a few here and there for five dollars each; but though he distributed among his few horticultural friends annually fruit that would make the most cold-blooded epicure leap with joy, no effort was made by any one to place it properly on the market. At length the great Centennial Exhibition came. Mr. Kieffer had some on exhibition; these excelled in size, beauty, flavor—everything, indeed, for which any pear could possibly be esteemed. The writer, who was secretary to the jury, can truly say that he remembers eating no pear like them. They had a medal and a strong report in their favor; and Mr. Wm. Parry, a well-known introducer of new fruits, made an arrangement with Mr. Kieffer for grafts. In this way the variety got regularly into commerce. It may be said that gardening is no longer an art here as it was in Mr. Kieffer's day. A fruit has to be "hardy" and "first-class," just as Nature gives it to you. You plant the tree, but, to a very great extent, it must forever after be able to take care of itself. Mr. Kieffer knew how to gather and how to cure his pears; year by year, since 1868, when the Kieffer pear first fruited, you could go to his house, and out of his cellar he would bring you fruits the like of which you might not find elsewhere. Few, if any, can get Kieffer pears as Kieffer had them, and the art has died with him. In our fruit lists it is simply classed as "valuable for market purposes," and the fruit chapters tell us it is "a very variable kind." Philadelphia is being fast covered with buildings over its vast area of 120 square miles. The original Kieffer pear tree is still standing in Mr. Kieffer's grounds, but it will probably not be many years before the march of improvement will bid it begone.

### California Figs.

W. C. Emmett, United States Consul at Smyrna, has furnished the following report concerning the cultivation of the fig at Smyrna. It will be read with interest by the fig-growers of California. He says:

In 1886 a party from California, apparently well posted, came here in the summer, went to the fig district and inspected the different varieties. He made his selection and marked the trees from which he desired cuttings. When the crop was gathered he obtained 30,000 female and 3000 cuttings from male trees and packed and shipped the same about the end of October. I have been informed that great success rewarded his enterprise. A box of figs grown and packed in California reached here this autumn (1889) and was inspected and universally praised by many dealers. In some instances it was impossible to persuade the

parties that said figs were grown outside the Aidin district; in fact some went so far as to designate the orchard. Those who grasped the full importance of this American enterprise predicted that Turkey's supremacy in the fig trade was waning. Some console themselves with the opinion that the American fig will not continue to be good. As the trees (grown from Smyrna cuttings) grow older, the fruit will have thick skins and become tough—in fact become native American figs. This deterioration of the fruit is very common here and has been well known for a long time. The transplanting of trees from their own orchards, even for a short distance, makes them give fruit of an entirely different flavor and nature. It has been suggested to me that if some grower will grow seedlings from the fruit of young trees grown from Smyrna cuttings, the chances of American fig-growers will be greatly enhanced and perhaps in time eclipse one of the staple articles of this country.

## POULTRY YARD.

### The Los Angeles Poultry Show.

EDITORS PRESS:—I send you a copy of the *Orange News*, giving the awards at the Los Angeles County Poultry Show, with perhaps a better account of it than I could write from the fact it is written up by Mr. Fullerton, the judge at the show, who is also a newspaper man and poultryman of long standing.

I will give you a few breeding-pen scores, that you may see that we had some good birds at the show:

Breed.	Owned by.	Score.
B. Leghorns, W. W. Thurston, L. A.	187½	
W. F. B. Spanish, R. Rowan, Pasadena.	186¾	
G. Wyandottes, S. Tyler, Pasadena.	183	
S. Wyandottes, S. Tyler, Pasadena.	182½	
W. Wyandottes, E. C. Clapp, Pasadena.	182	
R. C. B. Leghorns, W. H. Dwight, Pasadena.	179¾	
B. Pym. Rocks, C. T. Paul, L. A.	177	
Redcaps, E. C. Thurber, Alhambra.	177	
Houdans, Geo. Bacon, L. A.	176¾	
Black Minorcas, J. S. Myers, L. A.	169¾	
L. Brahmas, I. Keen, Pasadena.	168¾	

We indeed had a fine show of fine birds. We are not ashamed of it. E. C. CLAPP.  
Pasadena.

### Mr. Fullerton's Report.

From the report sent us we take the following notes of the representation of the different breeds:

The Wyandottes, silver, golden and white, were good classes, and the improvement over last year's exhibit was very marked. The Wyandotte is a good general-purpose fowl, producing eggs freely and dressing well for the market. It is an American variety and has many admirers.

The Plymouth Rock class was one of the strongest in the show, and prizes fell to excellent birds. The competition for first place in cockerels was close, and the result of scoring was watched with interest. This is a well-known general-purpose variety. A fair pen of White Plymouth Rocks was shown, but the barred seemed to have the call in public estimation.

The display of Light Brahmas was not very large, but there were several very finely marked specimens in competition. The weight class was particularly hard on this variety, lowering the scores so that the birds did not attain to the value their symmetry and markings seemed to warrant. The application of the weight class, which takes effect in the case of chickens after December 1st, was nearly fatal to the success of the whole exhibit in this class. The Dark Brahma class was represented by a beautiful cock and hen only. The hen was very fine in color and penciling, but being under weight had to be disqualified.

A well-built but rather unevenly colored cockerel had the honor of representing the Buff Cochins alone. Partridge Cochins and Langshans classes did not show up as well as we expected they would.

The display of Brown Leghorns was large and good. The first-prize cock, hen and cockerel were striking birds and were much admired. This variety is well bred here, and if an effort is made to secure greater size and better color in wings, no odds need be asked in strongest competition anywhere. The Whites made a fair display, but were not up to the Browns in quality. The first prize-cock bird was very fine in style, color and quality of feather, and had fine lober, but they were marred from fighting probably. Size can be given these with advantage also. The rose-combed Browns were fair. There were several Black Leghorns shown, good in comb, earlobes, etc., but deficiency in leg color was fatal to their success.

White-faced Black Spanish was a good class. The first-prize cockerel was excellent in shape and showed up well in face among a class that was very good in this particular.

The Polish class was represented by two little silver hens of good marking.

The Hamburg class was also weak in numbers, but the specimens shown were good. Two silver-spangled hens and a black hen and cockerel were all that appeared. The cockerel was a very stylish little fellow and would not fail to attract attention at any exhibition.

A breeding pen of Redcaps, a variety very popular in England and gaining in popu-

larity on this side of the pond on account of their great laying qualities, attracted a great deal of attention. Their immense rose combs seemed to catch the eye and their beautifully spangled plumage seemed to hold it.

The entry of black red Games was small, but of good quality.

There was a large and fine display of that new, popular and beautiful variety, Cornish Indian Games. They are not yet admitted to the American Standard, but are well worthy of a place in it. No variety on exhibition showed such distinctive form, and few greater beauty of plumage. We have never seen fowls show greater solidity of body and hardness of feather.

Pit Games were out in force. As the merits of this variety are judged by its ability to give and take punishment in battle, we do not understand why it should be placed in competition in the peaceful exhibition pen. The birds here shown were rather pretty, but their merits were not tested.

In the bantam classes, a pair of Duckwings were the only birds worthy of particular mention. A nice pen of Golden Sebrights disappeared before the judge had a chance to examine them.

The exhibit of turkeys, geese and ducks was small. The markings were generally good, but the weight penalty was very hard on them.

The pigeon display was very small. There was a nice display of pets, but a brooder, placed in one of the windows, filled with lively chicks about a week old, was one of the greatest drawing cards.

### Judging by Standard.

As many of the readers interested in poultry may not be aware of what is meant by judging by scoring, a brief explanation may be in place here. "The American Standard of Perfection," a book issued by the American Poultry Association, is the recognized authority in judging in the United States and Canada. It describes a perfect specimen of every variety of fowls and gives the value of each part in points, perfection being rated at 100 points—so much for beak, comb, wattler, etc., following down to the toes. Each part is considered separately, and such per centum for defects as may be apparent from the full value of a perfect bird deducted, and the same is marked upon a card, called the score-card, which corresponds with the scale of points as given in the Standard. Symmetry, or a harmony of the several parts and proportions, is first considered before the bird is handled, so that it may not be marred by exciting the subject or ruffling its plumage. Weight bears an important part in the larger breeds and is determined by the scales. Fowls under standard weights are punished at the rate of two points for each pound lacking; turkeys, geese and ducks, three points. In the smaller varieties, where smallness is desired, the rule is reversed, with difference in the penalty. The penalties for defects are added together, and when deducted from the value of the perfect specimen, give the value of the bird in points. Size in some of the medium varieties is decided by comparison. The Standard fixes a disqualifying weight, and when the specimen falls below or goes above this weight, as the case may be, it is said to be disqualified and is thrown out of competition. There are also several other defects in each variety which disqualify. The score-card is placed upon the coop of the specimen it represents, and when combed should plainly show the reason for the judge's award. When judging is done by comparison, the novice frequently cannot see why one specimen is preferred to another—and frequently experienced fanciers are in the same position. The score-card puts the judge's work on record and calls the exhibitor's attention to serious faults that he may before have thought trivial.

### Hens for Profit.

Madison Avenue writes for the *Pasadena Star* as follows: In the opinion of the writer, hens may be made to pay. Starting about two years ago—a novice in the business—with a dozen fowls for the purpose of securing a few fresh eggs for home use, to-day my flock numbers 24, including two roosters, and while my neighbors and friends are complaining very generally of their hens not laying scarcely any eggs, mine are averaging nearly ten a day right along. For curiosity, a record was kept for the month of November just passed, the product of which amounted to 280 eggs, and still the good work goes on. It is undoubtedly more profitable for a family to keep a few hens and take good care of them than to have a large number and allow them to shift for themselves. The matter of feed is of the greatest importance and after experimenting with the various kinds, I have settled down to the following combination as possessing a large amount of egg-producing elements, all of which the dealer thoroughly mixes when purchased, viz.: Rolled barley 25 pounds, cracked corn 20 pounds, bran 25 pounds, whole wheat 10 pounds, shorts 15 pounds, oilmeal 5 pounds, making 100 pounds in all. Of the above mixture I give my number of hens two quarts, wet up with scalding hot water in the morning, and toward night they get a full pint of wheat. They are shut up until middle of afternoon, when they have access to green grass, clover, etc., while before them in their corral is always a supply of cracked bone, fine gravel and fresh water. I would here state that for variety of fowl, I have a mixture of Wyandotte, Plymouth Rock and Light Brahma, and the eggs for size are not excelled.

## FLORIST AND GARDENER.

### Work of the State Floral Society.

[Report of EMORY E. SMITH, Secretary of the State Floral Society.]

The State Floral Society was organized two years and three months ago. Since that time the question has often been asked: "What has the society done to advance floriculture on the Pacific Coast?" To get at the facts, we will go back a little. This is the pioneer floral society on the Pacific Coast, and had, like other pioneer societies of this kind, to fight against factional and personal jealousy, narrow-minded policy, inexperience, indifference and other vicissitudes with which such ventures are always attended; but through all of this the society has stood unshaken and has steadily grown in numbers, interest and power, having drawn to itself more than 150 ladies and gentlemen, whose names stand high on California's roll of honor, and of whom any society could feel proud. No appeal for financial aid has been made either to the State or to the public, and, after having made all just settlements, there is now over \$200 in the treasury to the society's credit.

Four flower shows have been held and many thousands of people have gazed in admiration upon California's floral glory and wondered at the perfection of the gardener's skill. The public taste has been gradually molded under the fostering influence of these exhibitions, and the increasing superiority in quality of the floral exhibits has been remarkable. There are many more beautiful gardens in California than there ever were before; the public demands more perfect and choicer cut flowers, more beautiful shrubbery and a larger and choicer variety of blooming and ornamental plants. To the liberality of the press we owe much of the success attained. The leading papers have uniformly published full reports of the monthly meetings of the society and of the semi-annual flower shows. Through this way alone vast numbers of people have experienced an awakened interest in floriculture. Many strangers have visited our monthly meetings. The papers read at these monthly meetings have been of great merit and have been widely disseminated by the press, conveying accurate and valuable information to the remotest parts of the State.

Two communities have been encouraged to organize floral societies, which have held several successful exhibitions, and other communities are contemplating similar organizations. The members of the society have contributed both time and money to the National Plant Registration and Protection to Plantmen scheme, which bids fair to place horticulture in the United States on a firmer basis and higher plane than it can possibly otherwise attain. Correct floral statistics of California have been compiled and forwarded to the Census Bureau at Washington. One of our most beautiful native flowers has been added to the emblems of our State. Much other valuable work has been accomplished of which time forbids mention. There remains much for the California State Floral Society to accomplish, for floriculture is a progressive science and California is a great State, embracing many diversified climates. The society having passed the experimental point, it now devolves upon it to pursue its work in a systematic manner. The individual members should take a much greater interest in the work; each one should contribute something, either ideas or exhibits, or should influence others to contribute.

Perhaps the most important committee is that of Subjects and Papers. In the future this committee must do its work more perfectly and efficiently, and the interest of the society will suffer. It will require earnest work to make our society an exemplary and lasting success, and every member should, in the interest of floriculture, be willing to share the burden. All of the papers read should be published in pamphlet form at the end of the year. Advertisements could be secured sufficient to at least partially cover the expense. This would give those in search of practical knowledge a ready source from which to draw. An effort should be made to elevate the standard of our shows, thus encouraging the production of that which is truly meritorious. A systematic effort should be made to organize local floral societies throughout the State to work as auxiliaries to or independent of the State Society. The expense of sending a member or officer of the State Society to organize these auxiliaries at near-by points would not be great, and the floral people at more distant points would no doubt contribute part or all of the attending expense.

A Press Committee should be appointed, whose duty it should be to furnish the daily papers with accurate information regarding the proceedings of the society. A Labeling Committee should be appointed, whose duty it should be to see that all exhibits, at both monthly meetings and shows, are accurately and plainly labeled. The leading papers throughout the State should from time to time be informed of any important action taken by the society. A popular love for wild flowers should be in every possible way fostered. A register might be established in which could be entered, under the head of counties, all of the desirable varieties of flowers and ornamental plants which thrive in the various localities in the open air with or without irrigation. A

library should be started at once, the books to be loaned for limited periods to the members of the society. There might be suggested many other things that the society can do to foster love for floriculture in California, but sufficient has been said to give us food for reflection. Now, at the beginning of the New Year, let us resolve to be more zealous in the cause of our loved flowers, God's beautiful gift! Let us live nearer to the possibilities of nature and endeavor to woo the gaze and thought of the heedless world, for at least a time, from the sordid things of life to the pure, the good and the sweet, which is ever to be found at Flora's shrine!

### Fern Exhibit in Edinburgh.

[By LORENZO G. YATES, F. L. S., before the State Floral Society.]

In a communication to the *Northern Gardener*, Mr. J. Birkenhead writes of the ferns exhibited at the Royal Caledonian Society's Show:

Whatever may be thought about ferns in some parts of the kingdom, it is very evident that in Edinburgh they are highly esteemed. At the large show just held in the Waverly Market they formed a very conspicuous feature of the exhibition. "Oh, what lovely ferns! How beautiful the ferns are!" were the remarks heard in relation to them. One lady remarked: "Flowers last only a short time, but ferns are always pretty." The society offered prizes for 13 different classes of ferns, which brought out 53 lots in competition, comprising 253 plants, of which some 60 or 70 were not less than three feet and many were six feet, while some were eight feet or more in diameter.

Mr. P. Neill Fraser, who by the way received four first prizes, exhibited a remarkable plant of *Trichomanes trichodeum*, a mass of 18 inches across. The fronds of this species are cut so fine as to appear like hair, the whole presenting the appearance of a mass of green seaweed from every frond of which hung drops of moisture like innumerable diamonds. The Killarney fern (*Trichomanes radicans*) and *Hymenophyllum demissum* were in 12-inch pans. The next most remarkable fern by the same exhibitor was a *Polypodium subauriculatum* with fronds 9 feet in length and 15 or 16 inches wide, a perfect mass of foliage five feet through, hanging from a basket. In the same lot a *Microlepia hirta cristata* and *Polypodium aureum* eight feet across, with *Davallia dissecta* and *Polypodium glaucochrysum* five feet in diameter. In the class of adiantums, 24 of the plants exhibited were four feet or more across. There were also fine exhibits of British ferns. For the exhibition of 1891 \$6000 in prizes will be offered by the society, which will doubtless result in a still finer exhibition of plants and fruits.

## SHEEP AND WOOL.

### Hair of the Common Goat and Camel and the Tariff.

EDITORS PRESS:—The many tariff changes which have taken place recently, and the numerous interpretations of the same law by different authorities, have led to some very amusing and ridiculous decisions, especially on goat hair. For instance, the law of 1883 made common goat hair imported into this country free of duty under Section 1132 of the revised statute. Since that year the vexed question has been "see-sawing" first on one side, then on the other.

One recently appointed Secretary of the Treasury has decided that in his opinion all goat hair, regardless of its character, quality and the uses to which it is to be put, should pay a duty of 12 cents per pound. This is his interpretation of it as framed in the recent tariff bill.

The law intended to make a distinction between the hair on the common goat (as a late Secretary of the Treasury said, "those that feed on tin cans, brown paper and posted bills") and the hooded animals like the Angora, Vionna, Alpaca or Cashmere and Llama. There is as much difference between the above as between a "hooded horse and a burro."

Some grades of the common goat hair are only suitable for plastering purposes, and can be imported for 1½ pence or 3 cents a pound. With this duty of 12 cents added, you will see that the percentage is enormous. It is our opinion that the former tariff making common goat hair free, was wise and proper, as this particular class does not interfere with our wool interest, as it is only used for building purposes and very cheap blankets. We have no doubt that this decision will be reversed at an early day.

The recent tariff has also added camels hair to the list of dutiable articles entered in two classes; that from Russia being coarse, is placed under Class 3 with carpet wools, and that from China under Class 2 with combing wools.

Heretofore, camel-hair has been imported under the free list. We raise none except occasional specimens in our Zoological Gardens, yet the amount mixed with wool is from 15 to 25% and is used in manufacturing underwear and ladies' dresses good, and this percentage takes the place of so much wool, and it is wise and proper that both classes should pay tribute to Uncle Sam's revenue.

The feasibility of combining camels-hair with silk and velvet is more and more seen, and it is quite fashionable this season. Camels-hair by itself is slippery, and has not the harsh on its fiber that wool has, and authority says "it requires a percentage of the latter mixed with it in order to spin satisfactorily." We are sure that all these protections thrown around our American growers, must work to advantage for all concerned.

## THE VETERINARIAN.

### Flukes in Cattle and Sheep.

EDITORS PRESS:—A disease has appeared among the dairy cows hereabout, \* \* \* The cows appear well and in good order, but lie down and become too weak to rise again, and after a few hours—sometimes a day or two—they die. Upon opening one of them recently, the gall was enlarged to nearly three times its proper size; the insides seemed to be in a high state of inflammation, and from the outside of the intestines the inclosed parasites were detached. The specimens were originally an inch long and resembled diminutive flatfish. They were the color of the animal's flesh, and each one was attached to it by a little sucker end. When detached from the intestine, they curled up and struggled. In its body could be distinctly seen globules of blood, and there were thousands of parasites in the animal. There is no doubt that they were the cause of death. Can you give any information that may lead to the prevention of the spread of this malignant disease?—READER, Marin county.

Response by Dr. Cooper Curtice, Veterinarian, Dept. of Agriculture.

EDITORS PRESS:—The writer quite clearly describes a disease and its cause which has hitherto attracted but little attention in this country. Previous notices of it have been confined to the statements of veterinarians, who have found the flukes—the cause—either in the liver or in the lungs. The animals in which the flukes have been found have been either Texan or Californian cattle.

The writer, an employe of the Bureau of Animal Industry, was, during the last summer, directed by the Secretary of Agriculture, Hon. J. M. Rusk, to investigate the diseases of cattle caused by animal parasites on the Pacific Coast and in Texas, and, while pursuing these duties, found the flukes in various localities, but not in sufficient force at that season to cause serious disease. He also learned that Dr. M. Francis of College Station, Texas, had investigated, during the previous winter, an outbreak of the disease in Southern Texas, in which the loss ran up into hundreds of cattle.

The disease is caused by a flat (solelike) worm, which is swallowed by the cattle when eating or drinking, is a small, round, microscopic body, usually attached to the grass in the vicinity of ponds, swales or marshy ranges. I could not say without investigation whether cattle grazing on the tule lands were more affected with the disease than others or not, but *a priori* should think that they would be.

The parasites are not usually all taken in at once but through days and weeks. After they reach the stomach, they usually find their way into the liver, and sometimes into the abdomen where your correspondent found them. When in the liver, their presence may be detected by cutting into the enlarged and thickened white gall-ducts or into the black, rotten-looking masses which they sometimes make there or in the enlarged gall-bladder.

The flukes which your correspondent found had invaded the animal from two to three months earlier, for it is said that it takes about this time for them to reach such a size. During this time, the suckers had been constantly removing blood from the cow and causing her to be more and more bloodless. In addition to the *anemia* thus produced, an intense inflammation of the lining membrane of the inside cavity of the cow was set up by the irritation they produced, which was really the cause of the animal's death. This peritonitis has, I believe, been noticed earlier in Europe but not in this country.

For the disease taken at the stage when your correspondent wrote, no medicinal remedy will serve to cure the patients. Tonics, as gentian, sulphate of iron and ginger, and the best possible nutritive feeding, may serve to carry the cattle through the disease if they are not too badly invaded. The remedial treatment should have been begun about three months earlier, as in August or September. This would consist in removing the cattle from the marsh lands to the drier pastures, especially if the season happens to be a wet one. I realize the difficulty of carrying out this precaution by the majority of cattlemen. It is given as a practical precaution for a few who can carry it out and a necessary precaution for all who would avoid the disease. Provide, if possible, drinking water from running water or from tanks or troughs. The disease usually lasts from five to six months, but this depends upon the removal from or continued exposure to the invading hosts.

The loss falls upon the producer, for not only is the disease fatal, but when not fatal it reduces the flesh and the milk of those affected. If the meat is sold, it is not dangerous to the consumer unless the animal is slaughtered when in an acute fever, but it is less nutritious and worth less per pound as an article of food.

If the cattle are kept in fenced lands, the land may be treated by scattering lime and

salt on it to kill the snails and fluke embryos that there may be on it. The snail is a bearer of the fluke embryos in its young stages. It must be borne in mind that cattle diseased by flukes constantly drop eggs with their manure and scatter them broadcast. It is not best, therefore, to pasture invaded cattle with the healthy ones at any time. The disease is not a contagious one in any sense the word is usually used. Cattle which do not feed or drink alongside the sick will not be diseased unless they feed in another lot under similar conditions.

In Europe, sheep-owners are seriously affected by the fluke disease. I have found less in this country than could be expected. If any of the flock-masters are interested in the disease, they are referred to the late publication of the Department of Agriculture on "The Animal Parasites of Sheep," which treats of this parasite and many others at length and gives quite full illustrations of each. This work is of use also to cattlemen, for the methods of prevention to be pursued in warding off the cattle parasites are those that are given for sheep. The doses of remedies prescribed are of course too small for cattle, but they can easily be enlarged. The book is distributed free by the Secretary of Agriculture.

COOPER CURTICE,  
Veterinarian, Dept. of Agr.  
Washington, D. C.

## THE FIELD.

### Esparecet in Colorado.

EDITORS PRESS:—Noticing inquiry about esparecet in your edition of Jan. 3d, we mail one of our catalogues to your address. On page 76 we give a little of our experience in Colorado, if of any interest to you.—BARTELDSE & CO., Seedsmen, Denver.

The following is the description of sainfoin or esparecet to which our correspondents allude. It seems more favorable than the plant has earned in this State—at least so far as reported up to this time:

This is a leguminous plant, with many stems from two to three feet long, straggling, tapering, smooth; leaves in pairs of pointed oblong leaflets, slightly hairy on the underside; flower stalks higher than the leaves, ending in a spike of crimson of variegated leaves, succeeded by flat, hard pods, toothed on the edges and prickly on the sides; roots perennial, and hard and woody; flowers in July. It belongs to the same family as the alfalfa, well known to all our Western people. It is adapted for light, chalky soil, sands, gravels and barren regions, where the rainfall is not plenty and irrigation not obtainable. It is not as long-lived a plant as alfalfa, but will last from 10 to 12 years, according to nature of the soil; by judicious top dressing of manure in the fall, the duration may be extended a few years. It is an excellent forage plant, and improves the quality and increases the quantity of milk when fed to milk cows. Sow 40 to 45 pounds per acre.

Report from the State Agricultural College, Ft. Collins, Colo.

Messrs. Barteldes & Co.:—The seed you sent us in the spring of 1889 was sown May 20th in two separate plats. One plat was sown two inches deep, the other about one-half inch, or merely covered; the former plat gave us a good stand, the plants soon taking possession of the soil, making a vigorous growth about 18 inches that season without irrigation, while the latter was almost a total failure. We would advise early and heavy seeding, and the firming of the soil after planting with a roller. It is our candid opinion that esparecet is the coming forage plant for our region, and should be given a thorough trial by every intelligent farmer or stockman.

Mr. Chas. T. Limberg, general manager of the Arkansas Valley Smelting Company of Leadville, says: Two years ago I sowed some esparecet above our ditches, and the same has done nicely.

### Mixing Phosphorus for Squirrels.

EDITORS PRESS:—A farmer of experience sends the following recipe for mixing phosphorus to poison squirrels. We have found it to be a very safe and sure means of ridding the farm of the above-mentioned pest:

First, put a gallon of wheat into a bake-pan and place it in the oven until well warmed through; then put a half a pint of syrup into an old milkpan and place it on the stove; now take half a stick of phosphorus and put into the syrup; stir constantly with an old spoon (being careful to keep the phosphorus under the syrup as much as possible to keep it from blazing). When all is dissolved, place it over a tub of boiling water, then stir in the warmed wheat. When it is well mixed, sift over it flour and mix until each kernel of wheat contained in the mass separates and each grain is thoroughly coated with the flour. After allowing it to cool, put into tight cans until needed for use.

Some farmers like to flavor the wheat with a few drops of oil of rhodium or anise seed. Twenty drops of either will be enough for this amount of poison.

Phosphorus, if mixed carefully according to directions given above, will keep good for a long time and may be put out in the heat of summer without danger of setting fire, as it will not blaze if a burning match be held to it.

FARMER.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### Wanamaker's Wickedness.

EDITORS PRESS:—In the issue of your paper under date of the 10th inst., I get a round slogging from one "Kate L. Squire."

Had you published the resolutions adopted at the recent meeting of the Executive Committee, as indicated in your foot-note, I might have been saved the troubles of this communication.

If I really thought this correspondent was a genuine woman, as indicated in the subscription, I should feel disposed to let the matter pass without comment; but there are some etiolatres and presumptive assertions in the communication that smack so strongly of

Beard and Ashline Omniscience

That I feel constrained to answer, as if John Smith were the oracle of so much wisdom.

Your correspondent starts out with the sweeping expression:

I hope the PRESS does not indorse the communication of J. V. Webster in your issue of Nov. 29th, wherein he extols the merits of Mr. Wanamaker's postal-telegraph scheme. It seems strange that a gentleman of his seeming clear-sightedness does not see that government control without government ownership will simply mean to subsidize the already bloated corporations.

As to indorsement, I presume the editors of the RURAL judge of a communication by its merits, without regard to the advice or protest of any one; so I am content on that score.

It may "seem strange" to the writer because I "do not see that government control without government ownership will simply mean to subsidize the already bloated corporations." In answer to this sage conclusion, I will simply say that if we were all omniscient, as your correspondent assumes to be, we would have no excuse for making further mistakes during our natural lives; but unfortunately

I Am Not of that Class.

Consequently, have to plod along in this dull, cold world, guided by the very few rays of light which are given me. If Secretary Wanamaker or myself ever conceived "the idea of our Government paying a rental upon a valuation of 80 millions of dollars for existing lines which could be replaced by government construction for from 20 to 25 millions," as suggested by K. L. S., we ought to be imprisoned, without the aid of judge or jury, for the remainder of our natural lives, and never be allowed to read anything but the learned disquisitions from the pen of your San Jose correspondent.

What Mr. Wanamaker did propose was, simply that the Government should lease, for a period not to exceed ten years, a sufficient number of existing telegraph lines to communicate with all the free delivery postoffices in the United States, which includes only towns of 3000 inhabitants or over. To do this would not take more than

Ten Per Cent of Existing Lines.

Morover, it will require an Act of Congress to grant this authority to Mr. Wanamaker, wherein safeguards and restrictions will manifestly be imposed, to the end that the interest of the Government may be guarded and protected.

I think time will prove the Wanamaker scheme to be thoroughly in the interests of the money power, and that it is an attempt to longer perpetuate the power which they are fearful will slip from their grasp; and if they can blind the people, they may well laugh in their sleeves at the docility of the farmer. I hope the Grange as a body will protest against such a measure, either that compromise or any half-way measures with the railroads.

Here is expressed a belief that Mr. Wanamaker is deceitful and dishonest in his advocacy of postal telegraphy; that the President of the United States, who has indorsed Mr. Wanamaker's proposition, is fraudulently endeavoring to sell out the honor and prosperity of the nation, that greedy corporations may glut their thirst for gold. The legislative branches of the nation are, by inference, placed under the same ban of contempt and suspicion. When this point is reached in the mind of any one, what amount of patriotism is left in the heart?

To distrust and censure those in high places who have never intentionally violated any trust imposed, is to

Weaken and Discourage Well-Doing.

We have manifestly a great efficiency of known thieves and robbers, without indiscriminately charging that every department of the Government is corrupt and unreliable.

As a finishing stroke to a bundle of incoherencies, K. L. S. says:

Senator Chas. A. Sumner's bill for postal telegraph is the only system that has been proposed in the interest of the people, and the monopolists put that out of sight as they would this (Wanamaker's) if it were not in their favor.

From this statement, in conjunction with the language previously quoted, it would appear that your San Jose correspondent has read neither Mr. Wanamaker's proposition nor the "Sumner bill," as introduced in the House of Representatives; for while Section 1 of said proposed Act declares in favor of authorizing the Postmaster-General to construct or cause to

be constructed such lines as the system proposed would require, this section is so modified by Section 14 that the material difference between the Wanamaker scheme and that of the Sumner bill is between the

Purchase and the Leasing of Existing Lines.

The latter portion of said section declares:

The Postmaster-General is hereby authorized and empowered to accept as a part of the postal telegraph of the people of the United States, any section of 50 miles or more along the lines of the routes designated by him, constructed subsequent to the passage and approval of this Act: *Provided*, that the material used in said construction, and the character of the work performed in the building and maintenance, shall be in conformity to the terms prescribed in Section 4 of this Act: And *provided* further, that the amount asked and paid for a perfect and complete title to such sections of telegraph construction shall not exceed the lowest price at which the Postmaster-General could procure material and construction of a precisely similar or equally excellent section of telegraph lines on this prescribed route of the postal telegraph.

As to the security and protection of the interests of the Government, they are in either case about equal. If the "bloated monopolies" could manipulate the leasing of the proposed lines under the Wanamaker plan, they would with equal facility manipulate and control the price to be paid for such lines, as provided in the Sumner bill. There is no escaping this conclusion. But I am not so uncharitable and suspicious as to believe that the whole machinery of the Government is disposed or could be induced to enter into a

Gigantic Scheme to Rob Itself!

If the lines should be bought as provided in the Sumner bill, they would first be appraised by trusted servants of the Government. If leased, as proposed by Mr. Wanamaker, the present actual valuation of the needed line would be first ascertained, and then a rental allowed which would yield the owners a fair rate of interest on that valuation. In the event of not being able to lease such lines by paying interest on a fair valuation thereof, the Congressional enactment would certainly provide for the purchase, condemnation or construction of the plants. Anything short of such provisions being incorporated in the bill would be unparliamentary and futile; hence the explicit points contained in the resolutions recently adopted by the Executive Committee of California State Grange, which I had the honor of introducing. [Published in the RURAL (Grange Edition) of Jan. 10th.—EDS.]

K. L. S.'s infatuation with the Sumner bill, which is stated to be "the only system that has been proposed in the interest of the people," has manifestly prevented a close

Examination of its Provisions.

In order to pay for the proposed purchase or construction of the lines, Sec. 10 of said bill provides "That the Secretary of the Treasury is authorized and instructed to issue bonds of the United States, in amounts not exceeding fifty dollars each, and not exceeding in the aggregate value twenty-five million dollars, redeemable in lawful money of the United States, within twenty years, and payable within thirty years from the day of issue, bearing interest at the rate of three per centum per annum, payable in lawful money of the United States."

Now it has been the cry of the country for the last ten years, and of the Alliance people ever since the organization had an existence, that our circulating medium

Is Altogether too Small;

That instead of twenty dollars per capita, we should have at least thirty-five. Bond-issuing does not increase this circulation, and further issue is against the protest of every taxpayer, and unnecessarily adds to the expenses of the Government to at least the amount of interest paid on such bonds. Why burden the people with this needless expenditure? Instead, why not issue legal-tender notes which will pay the cost of such telegraph lines, and at the same time increase our circulating medium to the extent of twenty-five or thirty millions of dollars, as proposed in the late Executive Committee resolutions?

Taking these great questions all together, and after a full and fair investigation of all the facts and circumstances connected therewith, I think it possible to convince K. L. S. that there may be something of fact or logical conclusion relating to the business and financial world yet unknown in San Jose.

J. V. WEBSTER.

SACRAMENTO COUNTY EXHIBIT. — Bro. E. Greer and A. A. Krull pleased us with a call on Tuesday. They had just completed their task of setting up the new Sacramento county exhibit at the State Board of Trade, and were returning home. The new exhibit is a fine one and a great credit to the county. Of its features we will speak at another time. It was provided by the County Supervisors, of whom Bro. Greer is one, and acted as the representative of the board in this enterprise. Bro. Krull, as Secretary of the County Pomona Grange, assisted in the work. Some of the material was donated by the Pomona Grange and the balance by other enterprising people. It has the reputation already of being the best county exhibit ever set up at the State Board of Trade.

PICNICS.—Bro. Shoemaker, W. M., Tulare Grange, writes that their last meeting was well attended. He is in favor of local as well as interstate picnics; thinks we can and should hold a State picnic.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Two and one-half dollars will get you a splendid Grange, Home and Farm paper for one year. Every thoughtful farmer needs just such a visitor once a week. Then send for the PACIFIC RURAL PRESS, and send the money without delay.

It is said of Ben Franklin, when he had attained his 21st birthday, that he organized the society known as the "Leather Apron Club." To this club no one was admitted who did not place his hand on his heart and solemnly say: "I love mankind; I think no man should be harmed because of his opinions; I love truth, will seek it diligently, and, when found, make it known to others."

Let duty be your twin brother; then pay strict attention to your brother's advice and you will not be far from safety at any time.

Strive to be prompt at your Grange. Don't you know how unpleasant it is to have some one come in late, and thus interrupt the proceedings? Let others be late, you be on time.

The farmers of California ask for practical legislation and reduced taxation in the interests of Agriculture, which is now so sorely depressed. Make the agricultural community thrive and prosper, and all lines of business will soon feel an impetus. Give us this aid now. Next year may be too late. Nourishment after death does no good. Nourishment in one's lifetime is of service.

In 1850 the farmers of the United States owned about 70 per cent of the wealth of the Republic. In 1890 they owned about 25 per cent of the wealth of the nation. If their mortgages were paid, they might now own about 20 per cent of the wealth. What's the cause? Has the farmer been indolent, or is there something wrong in another direction? How about legislation?

"The birds always pick the best cherries." There are enemies everywhere. Even the cherry has its enemy. The Grange, like the cherry tree, is useful and ornamental, and like the cherry tree, the Grange has an open enemy in the person of the politician. As the fruit grower, with gun in hand, watches the cherry tree, so the Patron, with vigilance, must watch the politician.

The Grange will celebrate its Silver Anniversary during the year 1891. We hope to see the Free Coinage Act passed before the year is much farther advanced. Perhaps that will assist the farmers to buy a suitable present, or perchance it will enable some on the farm to join the Grange.

Having been asked many times if a subordinate Grange could not select a man to full membership on the payment of one dollar, and a woman on the payment of fifty cents, it may be well to say, once again, that such action is not yet legal in California. The fee for membership still remains, for men, \$3; for women, \$1. Here is the law. Read carefully and cut out and paste it in your copy of the Constitution of the National Granges:

Article VII. Constitution National Grange.— "The minimum fee for membership in a subordinate Grange shall be, for men, three dollars, and for women one dollar for the four degrees."

To which this amendment is added:

"Provided, That State Granges shall have the power to reduce the fees within their respective jurisdictions to any sum not less than one dollar for men and fifty cents for women."

The State Grange of California has not yet reduced the fees; hence it is \$3 for men and \$1 for women.

Who is the man in the Legislature to take the lead in doing away with a whole lot of ornamental "boards and commissions"? Some Constitutional amendments may be required—submit them to the people. The people of this State will abolish several "boards" if they can have the opportunity. Legislators, do your constituents the favor of abolishing a score of useless, extravagant offices!

The Journal of Proceedings of the 24th Annual Session of the National Grange, Patrons of Husbandry, held at Atlanta, Ga., November, 1890, is at hand. While the writer had heard every word therein recorded when it was spoken, yet it affords new and pleasant thought and instruction to read the Journal. Each Grange in California will, in due time, receive a copy of the Proceedings. Keep the book. Let the Lecturer read from it from time to time. There is instruction on many pages, and it costs you nothing. Come to your Grange and purchase thought without money and without price.

The pupils of the Grange schools vary in age from 14 to 90 years. They are apt and industrious students. It is a pleasure to see how much some of them have learned in the Grange school during the past decade. Do you know that many of the best parliamentarians in the United States have been drilled and skilled in the school-room of the Grange? Do you know that some of the best speakers of the day are

scholars of the Grange class in oratory? If you are a farmer, or a farmer's wife, son, or daughter, and not a Patron of Husbandry, it seems to me you had better join the Grange, else you will get behind in the race for power; for knowledge is power, and the Grange is dispensing plenty of knowledge.

That cool, careful, honest man and brother, J. H. Brigham, the Worthy Master of the National Grange, has sent a most timely and proper letter under date of December 20, 1890. It is addressed to every Patron in the United States. He cautions us to keep out of partisan alliances, and to work for the Grange. Read the letter.

Farmers, as a class, are independent in action, honest of thought, fearless of public sentiment and opposed to all sorts of extravaganzas. The farmers of California must be on the alert, or the Legislature will (if it does as other Legislatures have done) soon give away more than the State can produce in the next two years. Fellow-farmers, have you seen the bills, now ready, to get at the public money? There is a host of them. They are coming "like the wolf on the fold." Tell your Assemblyman "No" on all these new-fangled "Commissions and Boards."

## Another Good One for Watsonville.

DEAR RURAL:—Well, I may as well tell it, because if I don't some one else will, you know, and it's so pleasant to get in the little family news just a little ahead of everybody. The day "arriv," and Watsonville Grange turned out till it seemed it must nearly all be there. After a busy morning session the Grange formed in line at 12:30 o'clock, headed by the Master, Sister Roache, Bro. Bowman and the old officers, the officers-elect being next, while the members brought up the rear. The long line filed down the stairs and forming in double columns on the street with colors flying and in full regalia marched in splendid order to the Watsonville House, where mine host Jaesen and his estimable wife (who by the way are Patrons in good standing) had prepared a dinner which—But all I can say is "Oh ye shades of Epicurus." All that was good and beautiful was on those eight long tables and nothing that was bad—not even "One Wine" among all that varied store. After a full hour spent in the anatomical dissection of chicken pie and cake, the march was again taken up for headquarters. The gates were now thrown open and everybody admitted to a public installation and one of the best programs it has ever been our good fortune to listen to.

Our Lecturer, Sister Bowman, always entertaining and companionable, far exceeded every former effort in this her last program.

The Grange orchestra did its best, and though lacking one of its principal members, Dr. Cargil, the Representative-elect of San Benito county, who is attending the session of the Legislature, enthused all with their lively music, while Money Musk, Virginia Rael and the Lancers were only quietly enjoyed, because the hall was too crowded to admit of livelier demonstrations.

Sister Roache installed the officers in her usual impressive manner, ably assisted by Bro. G. W. Sill. If any one doubted the spirit of loyalty and progression which ever animates this Grange, he should have heard the ringing speeches from men and women who practice what they preach. It would convince all that it would be as impossible to kill this great Grange principle as to wash away the rock of Gibraltar with a thunder-shower. These doth truth become eternal. A. P. R.

## Visits by Oregon's Master.

Bro. H. E. Hayes, W. M. of Oregon State Grange, will arrive in California about Jan. 29th, and probably speak in public on that date at Auburn (or for some Grange above there), as Bro. Still may announce in the local papers.

It is proposed that he speak at the following places also, provided the Granges interested will make the necessary arrangements and announce the same in their local papers, notifying the undersigned by mail or telegraph as early as possible:

In Sacramento, Saturday, Jan. 31st.

Stockton, Monday, Feb. 21.

In Contra Costa county, Tuesday, Feb. 23.

Sonoma county, Thursday, Feb. 25th, and

Friday, Feb. 6th.

Yuba City, Saturday, Feb. 7th.

Farmers should gather in from all adjacent places.

His services perhaps could be had at Newcastle, Roseville or Wheatland on Friday, Jan. 30th, and possibly at places in Colusa and other counties later, if applied for.

All farmers and others interested in the needed reforms of the day should unite in making his appointments known and give Bro. Hayes a rousing greeting. He is a capable and bold speaker and will no doubt have much of fresh interest to report from the various States he has recently visited, and also the National Grange.

Let us hear from the Master of each Grange that desires his visitation.

A. T. DEWEY,

S. F., Jan. 21, 1891. Sec. State Grange.

P. S.—We hope to give positive notices of all dates and places of speaking.—EDS.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## State and District Fairs.

What Must be Done to Improve Them—  
An F. A. and I. U. Opinion.

EDITORS PRESS:—I have been thinking that California fairs are not altogether what they should be. Too much racing, too many tugs, too many saloons, too much gambling, too much money given in prizes for racing and too little given for the products of the farm and household.

The attendance is made up too largely of the worst elements of society, and too small a proportion of the best elements of our population from both city and country take any interest, in fact, in our State and District fairs. How often are hoodlums, gamblers and thugs found not only running the fairs, but the towns and cities wherein the fairs are held as well.

The money gathered in taxes from the hard earnings of the people is appropriated by the State to aid these fairs, and what is the good resulting? How many California boys have tried the first vile cigarette, the first glass of beer or whisky and taken their first lessons in gambling at our California fairs. What shall the remedy be?

First, let the State provide, as is the case in some Eastern States, that no appropriation of money shall be paid to State or district fair managers till an affidavit of the president and secretary of the fair is filed with the Secretary of State showing by the oaths of these officers that during the continuance of their fair no intoxicating liquors were sold upon the fair grounds or on premises adjacent thereto.

This will remove the worst evil that clings around the fair grounds.

Then let farmers take more interest in the fairs and help make them what they should be. Many a business man of the town or city neglects his business and works vigorously and well to help make a creditable exhibition of the fair, and quite often with little help or encouragement from the farmer. If farmers would take hold and help, their assistance and advice would no doubt be gladly accepted, in most cases at least, and then the fair will become an educator for good instead of tending toward a school of vice and crime.

The saloon men work for their business; the horse jockeys do the same. The farmer follows the band-wagon with his hands in his pockets, and really I guess he is the one mostly to blame for the present condition of California fairs. No State in the Union can boast of a better or cleaner or purer or higher toned agricultural paper than California has in the RURAL PRESS. Why cannot our fairs be made the same kind of an educator?

Tell us about these things, Mr. Editor, and point the way to speedily remedy the existing evils. Yours for the right, "FRESNO."

[We have repeatedly referred our readers to the abuses heralded in the name of agriculture and are glad that "Fresno" has so well stated the necessity of something being done in self-defense of that name by farmers.—EDS.]

## A Cheering Letter from Bro. Rigdon.

Five New Alliances in San Benito County.

EDITORS PRESS:—I have been at work in San Benito county with the following result:

Saturday, Jan. 3d, organized at Tres Pinos. President, A. Jones; Sec'y, J. W. Lawson. Membership—9 males, 4 females.

Hollister, Jan. 6.—Pres., A. Cowden; Sec'y, A. Dnnlap. Membership—7 males, 5 females.

Union, Jan. 6.—Pres., R. M. Chappel; Sec'y, C. D. Barbrie. Membership—8 males, 4 females. (Hollister P. O.)

Attended San Jose County Alliance on the 7th, and San Benito County Alliance on the 8th; found both in a flourishing condition, with fast increasing membership.

Organized Mulberry Jan. 12.—Pres., E. Myle; Sec'y, Wm. E. Hasbrouck. Membership—10 males, 7 females.

Cienega, Jan. 13. (Hollister P. O.)—J. M. Thorp, Pres., J. S. Libby, Sec'y. Membership—7 males, 2 females.

This makes a total of ten sub-Alliances in San Benito county, with good prospects for several more in the near future.

I am now going to Alameda county to finish my labor. Bro. C. W. Pedlar, our State Secretary, is crowded with work and laboring under great difficulties; but I find him prompt and courteous at all times.

I visited San Ysidro Alliance last evening; had an enjoyable and profitable session. How could it be otherwise with the many zealous and hard-working brothers present?

I desire to congratulate the RURAL PRESS on its selection as the official organ of the Alliance, and consider the choice a wise one. Yours for the work, J. B. RIGDON.  
Gilroy, Jan. 18 1891.

SAN BENITO COUNTY.—A good report of the County Alliance comes from County Secretary A. T. Haines just too late for this week's issue. The next County Alliance is to be held at Patolnes, Saturday, April 4th.

## The Farmer in Congress.

[F. BENJAMIN in San Andreas Citizen.]

Never before in the history of this country has the farmer occupied so prominent a position with reference to industrial and political issues. The results of the recent elections have turned the eyes of legislators, business men and the public generally, on the "granger," and his condition, needs and demands are the topic of the day in the halls of Congress and on the streets of the commercial and political centers. Though the farmer, as a Congressman, does not cut a wide swath until the next (the 52d) Congress, the Farmers' Alliance movement is having effect on the legislation of the last session of this Congress, though few members of the present House are willing to admit it. The following measures of more or less importance to the agricultural interests of the country were left over from last session:

House Bill No. 53, introduced by Mr. Whitney of Michigan, authorizing the Secretary of Agriculture to furnish copies of monthly cereal crop reports to newspapers, signal offices and postmasters, to be printed and posted up conspicuously in signal stations and postoffices throughout the country. It is estimated that this service will cost \$40,000 per annum.

House Bill No. 137, introduced by Mr. Morrow of California, creating a division of silk culture in the Department of Agriculture, for the purpose of encouraging the culture of silk by establishing experimental silk-culture stations in the States having suitable climatic and hothouse conditions. Provision is made for the purchase by the Government of mulberry seeds and cuttings and silkworm eggs, for distribution to the farmers calling for such supplies.

House Bill 11,568, which is generally known as the Pure Lard Bill, and has been modeled from several lard bills introduced in the House. This bill provides that the word "lard" shall be understood to mean the product made exclusively from "the fresh fat of slaughtered swine." All other products made in imitation of lard, and not composed exclusively of hog fat, shall be known as "lard compound," and can be manufactured only after a license shall be obtained from the Commissioner of Internal Revenue. The applicant for license must state of what ingredients he proposes to make the compound lard, and if none of them are injurious to health, the license shall be issued upon payment of the following fees: \$96 for manufacturers and \$24 for retail dealers. All packages containing the imitation shall be plainly stamped "Compound Lard," and have the revenue stamp affixed. This bill passed the House Aug. 28, 1890, most of the Democrats voting against it. It has been reported to the Senate by Senator Paddock, without recommendation by the Senate Committee on Agriculture. The Southern planters interested in cotton-seed oil, and the pork-packers of the West, are arrayed against this measure and will probably be able to defeat it in the Senate.

Mr. Butterworth of Ohio introduced a bill to impose special taxes on dealers in options and futures in farm products. It is thought by many lawyers that such legislation will not be effective, but Mr. Butterworth thinks an effort should be made in the direction outlined in his bill.

Bill 9224, introduced by Mr. Featherston, of Arkansas, provides for Government loans to farmers, at two per cent interest, upon mortgages on the land. This bill embodies, in part, the ideas of the Grange and Farmers' Alliance. It is objected to by some on the ground that it fosters paternalism in the relations of the Government to the people, and others say it is impractical. It is safe to predict that no such measure will be adopted by this Congress.

In the Senate, the bill of Mr. Paddock, to provide for Government inspection, grading and storage of grain shipped or intended for shipment from one State to another, will probably not pass at this session. Senator Ingalls' similar measure will also be allowed to die, because of the pressure of other business. Senator Pierce's bill to create an agricultural commission to investigate the causes of the present depressed condition of the agricultural interests, was introduced in February, 1890. Since then agricultural interests have improved, and it is not likely that final action will be taken on this measure.

There are other bills affecting the farmers' interests that will be pushed at this session, but if the fight is prolonged over the Federal Elections bill, there will be no time to reach much of this proposed legislation. The Alliance element in the next Congress will have a great deal to work for, but it will be interesting to note this winter the efforts that will be made on both sides of the present Congress to keep solid with the farmers who have not joined the Alliance movement.

I will keep you advised this winter as to the inside workings of Congress with special reference to the farmers' interests.

## Yolo County Alliance.

EDITORS PRESS:—I am glad to find a page in the PRESS devoted to the Alliance. Our County Alliance will meet at Yolo the second Tuesday in January. Peter Roth is President and Frank Hulbert, Secretary.

C. W. HATCHER.

It is quite likely that the Fresno County Alliance will build a raisin-packing house.

## At the Northern Citrus Fair.

[Written for the RURAL PRESS by N. E. BOYD.]

We were happy in getting our first glimpse of the Northern Citrus Fair on the third evening of the exhibition, when everything was in order, and under the brilliancy of 200 incandescent lights.

The main hall of the pavilion is 160x72 feet, and the roof rises from a height of 14 feet at the sides to 30 feet at the ridgepole. The entrance is in the middle of the south side.

Passing through a vestibule ceiled with sprays of fragrant fir and cedar, from which hung festoons of oranges—like strings of golden beads from Broddingnag—between walls adorned with palm-leaves and a cornice of yellow squashes, we stepped within the door of the great pavilion, and lo! a gleaming vision of gold and greenery! enchanted palaces and dreams of fairy-land materialized! Right in front of us across the hall, like the mist-veiled sun, rising above a thicket of handsome plants, glowed the radiant yellow draperies of the speakers' stand. A little to the left stood a grand battlemented gateway, sheathed with high 9000 Butte County oranges—a gateway which the report of the Committee on Awards changed into that county's Arch of Triumph. Still farther to the left, over an intervening stack of oranges, showed the graceful lines of Oroville's triple-roofed pagoda; and behind that, at the far west end of the pavilion, the revolving vanes of Yuba County's huge Holland windmill kept flashing into view and vanishing again. To the right, most prominent near the central sunburst, shone Smartsville's Moorish Castle (a structure about 18x20 feet—big enough to live in), orange-clad, verdure-trimmed, with O. G. roof; next, the lofty model of the S. F. Chronicle building; beyond that, the rampart of Sutter's Fort, and then a mingling crowd of exhibits and designs—in all which the prevailing orange hue was more or less broken by lines and sprays of green.

The whole interior of the pavilion was decked elaborately and tastefully with evergreens, oranges, Toyon berries and little red apples. A mile of evergreen rope, it is said, was used in the wreaths, festoons and scroll-work. The effect of the apples in fancy lettering was remarkably pretty. The various novel and ingenious decorations—both of the hall at large and of many special exhibits—tempted one to write a good deal about them; yet we must be content to say that the adorning, though done generously, was not overdone, but marked throughout by grace and delicacy. This happy result was brought about through the united sentiment and action of a community where the prominent ladies of wealth and refinement made common cause, and the work of hundreds of deft and willing hands was given for days and nights as a freewill offering.

## Displays at Close Quarters.

As one coming straight into the hall took a few steps forward from the door and paused under the front of the small gallery, on the edge of the open space before the speaker's platform, he naturally spent some minutes in scanning the larger designs and taking a general impression of the scene. Then, looking about more narrowly, he found close at his left hand a sort of pyramid, which rose from a nearly triangular base, some 20 feet across, to the height of his head. This pyramid was covered with Butte county fruit, mostly oranges, the inner and broader face being composed wholly of D. N. Friesleben's Mediterranean Sweets, Malta Bloods and Washington Navels, with 200 or 300 of the largest and fairest of the last variety within a heart-shaped cordon of club mosses and labeled, "Heart of the Northern Citrus Belt, Oroville." (This took first premium in Class 3, i. e., the \$50 offered for best exhibit of W. N. oranges outside those competing with "not less than 2000.")

Here I. R. Ketchum showed a number of oranges from the famous old tree at Bidwell's Bar; E. O. Rollins, fine grape fruit; E. Tucker, Oroville, a lot of shaddockes and pumalos that won the first premium in Class 10. (Mr. Tucker avers that the juice of the pumalo makes excellent "lemonade.") There were also pomegranates and several varieties of pears from South Table Mountain, near Thermalito; nice-looking White Adriatic figs from Oroville; raisins from Mesilla Valley, and ripe olives, prunes, dried fruit, almonds and chest-nuts.

Next westward was a stand thickly strewn with ripe Mission olives from Judge John C. Gray's "Mt. Ida" grove, seven miles east of Oroville. A placard stated that

The trees were set out in March, 1886, being then one year old. This is the first crop. About 500 trees had olives on them, ranging from a pint to a gallon of berries to the tree. The trees are on red, gravelly foothill land and not irrigated. . . . all they need is cultivation.

A terraced shaft in the center of the stand held four tiers of bottles full of nice-looking oil. The judge has about 90 acres in olives and is much pleased with this year's earnest of their doing.

The varied collection of oranges displayed by Thos. B. Hutches of Central House was especially interesting from the fact that his orchard lies out in the open valley, a dozen miles south of Oroville, and eight miles west of the hills. Of the varieties he showed, "Asher's Best" and St. Michael ripen next after Navels; then

the Mediterranean Sweet and the Rio, some of which were still tinged with green. Mr. H. says that foothill redland oranges do get a higher color than those grown out in the valleys, but we did not understand him to admit that their flavor or sweetness exceeds the latter.

## Under the Oroville Pagoda.

A singularly tasty structure, which the committee wisely pronounced the "most artistic display," although large enough for a country railroad station, Mrs. A. F. Jones had a handsome wedge-shaped stand with seedling oranges on one side, Mediterranean Sweets the other, and pumalos along the ridge. (She also had other fruit, which was laid with the Thermalito exhibit and won premiums, as will be seen in the list of awards.) Mrs. S. S. Boynton had some beautiful Navel oranges, Sicily lemons and snapper Japanese persimmons (two varieties) which looked "just right to eat" and captured a 1st prize. E. B. Ward showed Homasassa and Joppa oranges, besides Malta Blood, Med. Sweets and elegant Washington Navels; Dr. R. Parker, very large pomegranates—best in the fair; and Jo. Gardella, who "shipped last month the first carload of oranges ever shipped by an individual grower in Northern California," exhibited oranges, pumalos and shaddockes.

## Palermo.

Beyond the pagoda and close to the north wall, beside heaps of Homosassa, Med. Sweet and Malta Blood, Palermo showed a church (with steeple 20 feet high) patterned after the actual house of worship in that colony, covered with 8500 oranges and spruce-trimmed. On its steps was J. C. Boyle's dozen of splendid Washington Navels which stood so near the head in Class 5.

## Sutter County Orchard Company.

Between Palermo and the stage the Sutter County Orchard Co. had a snug retreat, fern-thatched, and furnished with rustic seats. By one of its corners stood a tall Marysville banana tree, whose leaves reached to the roof, and around the hoth the company's superintendent, C. N. Tharsing, had arranged many glazed boxes of dried fruit and prunes, whose packing was a marvel of tasteful neatness, and took the first premiums in their respective classes. (This lot comprised three varieties of apricot, six of peach, four of plum, five of prune, one of nectarine, Black Tartarian cherries, Bartlett pears and Bellflower apples.) Close to the stage, at the foot of Butte's massive arch, was his display of nuts in 25 glass jars. There were California black and English walnuts, pecans and Paper-Shell and Languedoc almonds, with peanuts thrown in; and they, too, won first prize (Class 22). The goodly company of flowering and foliage plants which graced the floor directly in front of the speakers and musicians, was also brought in by Manager Tharsing.

## Thermalito.

West of Palermo's church, on a broad slope facing the spectator and marked at either end by citrus, olive and other growing nursery stock in boxes, lay the great exhibit of 2300 fine Washington Navels, two deep, from the orchard of the Oroville Citrus Association at Thermalito—easy winner of the \$200 prize in Class 2. The pleasing effect was enhanced by small seedling orange-trees, say 50 in number, which were set at every corner between the boxes, and lifted their leafy tips a foot or more above the warm-hued expanse.

Two of the choicest boxes in this peerless output were to be forwarded, after the close of the fair, to President Harrison and Governor Markham, "with compliments of Thermalito Colony Co."

In addition to these Washington Navels, the above-named association displayed boxes of fine-looking Malta Blood, St. Michael, Med. Sweet, Homosassa and Parson Brown oranges, with several specimens of other less common varieties and a box of sweet limes.

Alongside of them S. J. Brutton, Supt of the county hospital, showed sundry boxes of large, finely colored Wash. Navels and other oranges and good-looking lemons, raised on a knoll near the colony.

All the north wall behind and above Thermalito's output was clad in fern-fronds and palm-leaves, dotted here and there with orange-clusters, and amid the verdure there was depicted an enormous State Seal, California's cap, staff and shield being made of oranges, while the bear at her feet and the "Eureka" overhead were of black figs.

## Yuba's Windmill.

At the west end of the hall Yuba county had a very taking design—an old-fashioned Holland windmill, with four vanes which almost grazed the ceiling as they turned around. It was built in the middle of an inclosure about 30x20 feet, begirt with a rustic fence, filled knee-high with earth and set with a number of semi-tropical plants. The base of the mill was covered with evergreen and a sprinkling of red berries; its tapering tower was shingled with oranges, paneled with lemons and pierced with windows whose sashes were red with apples; its dome was slated with purple figs, and its sails wrought of string peanuts and seamed with raisins. Beside it a spring of water seemed gushing from a pile of rocks, but the secret of whirling vanes and babbling stream was a little engine and pump hidden within the tower!

(To be Continued.)

## Reflections.

[Written for the RURAL PRESS by ISABEL DARLING (LUTA).]

Idly toward the western window  
Turned my scarcely seeing eyes,  
Where, in dull and sullen languor,  
Slow clouds sulked across the skies.

Midway of the scenic curtain,  
Stood, or hung, dark pictured forms,  
Like the shrunken ghosts of forests  
That had perished in the storms.

Doubled showed the shadowy vision,  
One above and one below,  
And around a glassy brightness  
Pale as moonlight over snow.

Then I thought of signs in heaven,  
Prophecies of coming change;  
Thought of armies, swords and crosses  
Seen by those who seek the strange.

While I gazed the mystic wonder,  
At the opening of a door,  
Flashed and quivered at the closing,  
Settled, doubled, as before.

On the parted cloud of evening,  
No—that sign of teary rain  
Was a background for the picture,  
Made a mirror of the pane,

Where a friendly grove reflected.  
Multiplied by break and line,  
All its shaggy outlines softened,  
Formed the ghostly, mystic sign.

Such, I thought, are often visions  
Spread before celestial skies,  
But reflections on the window,  
Earthly scenes unrecognized,

Mirrored on the minds around us,  
Held by sullen, earthly air,  
Doubled as the cares are doubled,  
Yet more dear for being there.

Though eternal space invite us  
Far beyond the shifting cloud,  
Though a grand eternal always  
Pause not by the bier and shroud;

Still we love the smaller distance,  
Love to count the hours that pass,  
Love to puzzle o'er the pictures  
Thrown by mirrors on the glass.

## Daniel Dean.

Mr. Benjamin Dean, on the morning of a day in June, 1887, sat down to the breakfast table with a portentious frown upon his brow.

"What has become of the boys, Mary?" he exclaimed, "that they are not at the table at this hour? Plotting and planning more mischief, I'll be bound. I saw them at daybreak out in the wood shed, grumbling and shaking their heads. I suppose Daniel did not like the whipping he got last night, but he deserved it, the little hound."

"Oh, father, don't call him names. He is a good boy."

But the loving mother was silenced with: "Your softness has pretty near spoiled that boy; but as often as you put nonsense into his head, I've got to heat it out; that's all. You think he's perfect, but I know better—'spare the rod, spoil the child.' He's my own flesh and blood and I have the right, thank heaven, to do it."

"I suppose so," said the heart broken mother, the tears running down her cheeks; "but you never punish Harold so severely, and he, too, such a lazy, dreamy boy, that neither likes to study nor work."

"Ah, Mary; that is a horse of another color. Didn't we pick Harold up a mere baby, when the Sam Price went to pieces on the rocks? True, we brought him up as our own, but he may have parents somewhere, and anyhow, in justice, and you know justice, Mrs. Dean, is my hobby, anyhow, I've not the right to give him the lesson I gave Dan last night, no matter what he does."

"What has Daniel done to anger you, father?"

"Stolen money from me! A good, round sum, too, if you, the mother that bore him, must know. I missed it, yesterday."

"No, no, father; I never will believe it!" said the weeping mother. "I know my boy better than that. I know his principles. He would rather die than do such a thing!"

"But I caught him in the barn, counting it over, dollar by dollar. As it happened, he did not see me when I entered. After he had counted it over carefully, he placed it in the crown of his hat, under the lining, putting a pin in to keep it safe."

Mrs. Dean arose, wiped away the tears, and going to the dining-room door, called Moses, the man-of-all-work. She was stern, for the honor of her boy was at stake—her darling, her only child.

"Moses, call the boys to breakfast; tell them to come without delay."

"I can't find 'em nowhere, missus; I been a-lookin' for 'em all the mornin' upstairs, down cellar and out in the barn." And Moses trem-

bled like a leaf, and his face, black as it was, had an ashen hue. "I was goin' to look in the well, but I so scared I darsent."

"What is the matter with you, Moses? What has frightened you so?" said Mrs. Dean.

"I heard master scolding in the dining-room about Master Daniel, and I thought maybe he was a-goin to trounce him ag'in, marm, and I'd rather he'd trounce me instead, if he would. I love that boy so. He's been awful good to old Mose, Master Dan has." And the negro's lips trembled with emotion.

"But, Moses, you must find them, or their father will be very angry. Take the dinner-horn and go out into the woods and call them. If they don't answer, take Rover and go down to the village and come back across Brown's pasture, past the old mill, where they often play ball; and mind, Moses, don't come home without them."

Moses prepared to obey his mistress, literally. He went up to his little room in the loft, gathered his few clothes together, tied them in a bundle, crept downstairs softly, and made his way to the woods, and thence to the village. He took Rover along but sent him home again with his master's letters, after he had been to the post-office.

Moses had told his mistress a lie to shield the boys. Well he knew they were many miles from home by this time, he having put them into a farmer's wagon at six o'clock that morning, on their way to the next town, thence to go to a neighboring city.

In vain did the breakfast wait! In vain did the angry father scold and the mother weep. The boys were gone; the Dean household desolate. Even the familiar black face of old Mose was seen no more, he having gone to seek his fortune elsewhere.

One week after that eventful morning, two letters came to Mrs. Dean. The first was from Daniel, and the fond mother kissed it and covered the boyish sentences with tears. It ran thus:

DEAR MOTHER: Forgive me for running away. You believe in me, but father does not; so I thought, as I am fourteen years old, I would come to the city and get a place in a store. Harold would not let me come alone; so we put the money we have earned in doing chores together, and here we are. Believe me when I say I did not take father's money. But I know who did. It was not Harold. You will find it in the upper drawer of my bureau, where I put it for safe-keeping after the penitent thief had placed it in my hands. Harold and I expect to go to work to-morrow. I will write soon again. Your loving son, DANIEL DEAN.

The other letter Mrs. Dean opened indifferently, but soon her attention was arrested; it ran thus:

MISSSES DENE: I wonder the good Lord didn't send lightnin' to strike this nigger when he gone and stole money from old Master Dene, I never stole any befo'. Sometimes, when I seen a little lonesome chicken goin' my way, I took it up and put it under my coat to keep it warm, but never took any money befo', and I'll never do it any mo'. God bless you, Misses Dene; you've been good to old Mose and so has the master. Master Dan't talked to me till he made the tears run out of my old eyes. He did mo' than the parson could.

Good-by. MOSES.

Mr. Dean went post-haste to the city and hunted up his boys. They gladly went home with him. Scarcely a word was spoken on the journey; but ever after the father's justice was tempered with mercy.—Mrs. Kidder in N. Y. Ledger.

## Personal Equations.

A Machine that Corrects Errors that Humanity Can't Help But Make.

The St. Paul Pioneer-Press states that Carleton College Observatory has just secured a curious instrument invented by a scientist at Washington and called a "personal equation machine."

The object of the instrument is to harmonize the observations of different persons who are working together, at different times or at the same time. Astronomers well know that no two persons see exactly alike, by which is meant, for example, no two persons will say that a star passes a wire in a telescope at exactly the same instant. One will record its apparent passage slow on true time, while another will almost uniformly put its time fast. Observe unconsciously form a habit of seeing objects fast or slow on true time, and the better the observers are the more steady this error is as compared with true time. This error the astronomer calls the personal equation of the observer. In amount the personal equation varies from 0.02 of a second of time to something more than half a second for different observers, either fast or slow on true time. Such errors as these cannot be tolerated at all in astronomical observations for fundamental or original work of a nice kind, but must be in some way eliminated before final reduction can be attempted.

To accomplish this, in one way, an ingenious machine has been constructed which sets in motion an artificial star, quite like the appearance of a real star in the telescope. As this artificial star passes wires in the machine, the observer records his observations, and the instrument automatically records the exact time of the real passage of the star over the same wires. Now both records are made by the electric current, and consequently are perfectly true. These records are taken automatically in ink or by an instrument called a chronometer, and hence their differences can be measured with the utmost accuracy, and in this way the errors of

the observer on true time are satisfactorily known.

The machine is in use every night that observers work either together or singly, so that changes in individual personal equations may be detected, as well as the differences that may exist between observers. The instrument, therefore, furnishes an unvarying standard for accurate observation.

## California Odds and Ends.

[Written for the RURAL PRESS by LAURA J. DARIN.]

It pleases me to see our PACIFIC RURAL PRESS quoted by the New York Tribune and other newspapers. I like to see it bowed to as equal to any in the land and watch it stepping out with other California publications claiming a good place in the march of progress, and not only claiming it, but keeping it. I am proud of them when they make a good, honest, straight mark in the world, because they are a part of our State and I like to see some real good come out of California as well as real Western grit and gold.

When I first came to this State, I had no idea I should ever care for anything published within its borders; for, like many others, I had left my heart in the East and thought it had the best of all literature.

Thousands of impatient pioneers waited with eager longing for "Steamer Day" with its mail-bags plethora with Eastern magazines and weeklies. Harper, Godey, Arthur, Peterson and Frank Leslie profited more than a little from the lonesome Californian's pangs in those times. But how far back in the history of our State those dear old "Steamer Days" seem to lie now that the shriek of engines and thrill of overland trains echo along the Rocky mountains and the Sierras. What changes have occurred since the "golden spike" was driven. Our thoughts are no longer concentrated on two days in the month, but any day letters from our old-home friends may be dropped at our door.

A new generation has grown up that knows no other home but California. "Native Sons and Daughters of the Golden West" are beginning to take an active interest in the advancement of their Golden State. Be in earnest, good sons and daughters, make yourselves as near perfect in thought and habit, speech and work as you can be, and so much more perfect will your State be. You don't want the sons and daughters of the Eastern States to look down upon you as wanting in refinement. The truest ladies do not make a habit of chewing gum or using slang. The truest gentlemen are not addicted to the use of tobacco, cigarettes, whisky or wine. And no one should be afraid to work.

God has given you a beautiful State, wonderful in products, scenery and climate. Just stop to think of it and be worthy of it. Where in this world will you find its equal? From the plains, where the first settlers thought nothing would grow, for years has come wheat for the millions. Foothills, mountains and valleys give us fruit for the millions. Study the "tricks and the manners" of its growing; look into the secrets of nature, and may your days be long in the land your Lord God giveth you."

All the air is full of a glad New Year. Quail call to each other from the underbrush. Blue-jays scold in the treetops, California canaries and bluebirds sing in the sunshine, roses, verbenas, geraniums, sweet elysium and chrysanthemums blossom in our gardens, and grain is showing green in our fields this 10th day of January, 1891.

Oh, what a State is this, my countrymen! When the Eastern idler is getting its full growth, the trees bending under snow wreaths, the roads ready for the snow-plows and mercury in the "Valley of Despond" way down below zero, here the pruner with his shears is the biggest bird in our fruit trees; thinking of future crops, he nips and slashes with judicious care, and his whistle is heard in the land. The grapes have not long been gathered from our vines, yet they are mustering up their strength for a new effort. The soil of this State rested and gathered richness for so many years, there is no repressing it now. If it is not guided into producing its right royal fruits it will send up something not royal. In this part of the country, if cleared land is left to itself, in a few years it will be covered with a dense growth of lilac; so you see California is really irrepressible, and should be a guide for the public good. How many hands are ready for the pick and plow and pruning shears?

Soquel.

[We are glad to welcome our tried and true contributor back to her old seat in the Home Circle.—EDS. PRESS.]

SOME people are too literal for any use. A young countryman gave a graphic description of a narrow escape that he had recently from an enraged bull. "I seized him by the tail!" he exclaimed, "an' there I was. I was afraid to hold on an' I darsent let go." "Between the horns of a dilemma, as it were," ventured a young lady, very much interested. "No, ma'am," replied the countryman; "I wasn't between the horns at all, an' besides he wasn't a dilemma, he was a Jersey."

"Is Mr. ROBINSON a single man?" "No; he has a twin brother."

## "Geoffrey Chaucer and his Times."

[A Lecture by MRS. M. H. FIELD.]

The father of English poetry lived before the days of the printing press, and not a line of his own handwriting has survived the wreck of time. We are, first, indebted to the copyists of the fifteenth century, who diligently and lovingly wrote and re-wrote every valuable manuscript; and, secondly, to William Caxton, who, having worn out his pen and dimmed his eyes in the tedious profession of copying, went across the sea to Flanders, learned to print, and returned in 1496 with the printing press.

We owe to Caxton the first printed copy of the poems of the great hard whom all subsequent English writing poets hold in reverence as their master.

Tennyson says:

Dan Chaucer, the first warbler whose sweet breath Preluded those melodious bursts that fill The spacious times of great Elizabeth With sounds that echo still.

Let us turn our lenses backward and look down the long vista of five hundred years, at the gray dawn of English literature, and scan the simple but grand figure of the old poet.

Chaucer, whose youth was spent in London, was familiar with all the pageantry of the court of Edward III., in the middle of the fifteenth century, for his family, if not of noble birth, was closely connected with the court. This was a time of discontent and uprising among the people, when the Commons were demanding larger liberty, and in Parliament were ceded stronger powers, even that of impeaching royalty; so the boy caught breathes of liberty in his brave youth, and grew up with no blind reverence for church or king.

These were the days of Wyckliffe and his translation of the Bible, so our author had this grand compendium of literature, the English Bible, to study the broadening influences of its principles to release him from ecclesiastical bondage, and its wealth of philological treasure to help him as a founder and former of the English language. Small and meager was the list of English books. "The Vision of Piers' Ploughman," that quaint old poem without rhyme or meter, was most popular, aside from the Scriptures, and we can well believe that young Chaucer found it a congenial comrade.

"Froissart's Chronicles," a "Boke of Courtesey" and one of travels, with oodes of hymns, ballads and political songs, must have completed the list. But there were numerous translations from the Latin, Romance (or Roman-derived) and French, which latter was the favorite tongue of the court and better classes. Though the Norman had banished the Saxon from polite society, it was still spoken in the lowly homes of the common people—was dear to the loyal Anglo-Saxon heart and needed but the courageous forming hand, the wisely discriminating choice, and grammatical, philological and poetical skill of Chaucer to decide its fate and bid it become the strong and enduring sub-stratum of the English tongue. The time had come. The people demanded religious teaching in their own language; Saxon and Norman, despite the rancorous hatred which followed the oppression of the early days of conquest, had begun to blend and assimilate.

"There was almost a Babylonish confusion of speech," says Marsh, "but from this Chaucer did more to rescue his native tongue than any other man of his generation."

"Chaucer did not introduce words, but of those already received he invested the better portion with the rights of citizenship and stamped them with the mint-mark of English coinage." He appeared at just the time when such a prince of language was needed, and the two great dialects, English and French, were ready for his use, and nobly did he exercise his privilege. "In the hands of Chaucer," says Marsh, "the English language advanced at one bound to that superiority which it has ever since maintained as a medium for the expression of poetical imagery and thought."

Space forbids but the merest mention of the lecturer's pleasing description of the common life and manners of the day in which Chaucer lived. She spoke of the vast, motley and barbarous horde, from whom our venerable ancestors descended, exclaiming: "How one's best blue blood turns a common dull red as we gaze at them!" described the morning call, with their "facilities for travel, which were doubtless confined to their very substantial and oposable bare feet." The homes of the humble and wealthy were passed in review—"the serf or villen at his plow," whose deep blue eyes held sullen fire as he sang:

"When Adam delved and Eve span,  
Who was then the gentleman?"

But turning from the olden customs of five hundred years ago, the lecturer quoted largely from Chaucer's poems, and finely illustrated his different styles.

"Chaucer was at one time in the king's army, once a prisoner of the French, and after that a member of the royal household. His literary genius was early recognized, and he was a man of affairs, a courtier, a soldier and a traveler. \* \* \* Hallam classes together Petrarch, Dante and Chaucer as the great Triumvirate of Poets who flourished in the Dark Ages. His later years were spent in retirement and elegant leisure in a fine home given him by the king. \* \* \* He loved nature and was a close observer of the beautiful, and yet he was a student and lover of hu-

man nature. \* \* \* The old poet seems to have had firm faith in the goodness of God, the immortality of the soul and the joys of heaven. Let us hope that he taught others out of his own experience, and that he found Life's latest sands to be sands of gold. He died in 1400, and was interred in Westminster Abbey, the first of the long line of poets whose ashes lie in this most fitting resting-place."

### An Interesting "Find."

[Written for the RURAL PRESS by MAUDE S. PEASLEE of California.]

A correspondent in the *Journalist* of Nov. 29th contributes a most interesting item on the oldest printing press in America—perhaps the most ancient one in existence. If it had the power of speech, what a tale of interest the old relic could relate! Stored away in the attic of the capitol at Montpelier, Vermont, it has lain many years in the dust.

The freeman's oath, used in the State of Massachusetts, was first printed on it. This was the first thing ever printed in this country.

The noted Bay Psalm-book, the first book in the land, was also printed on this press. It was used in Massachusetts, Connecticut and Vermont for printing laws, great quantities of paper money, and other things of much historical value. Since 1781 it has seen much of Vermont's most important legal work. It must have been quite beautiful in its best days, for it is made of English oak and shows signs of having been highly polished. It has been broken and repaired in a good many places. How fallen from its lofty estate was it when its last use was to print a cheap novel!

After passing through the hands of the State Press Association, it became the property of the State Historical Society. Although for a time its existence was forgotten, the society has brought it forth and set up the interesting relic in the great hall, where it may be seen by all curiosity lovers. It should have a place in the World's Fair at Chicago.

I am reminded of the boast made by the Cherokee Indians of their early work on newspapers. It was a great surprise to me to be told that they claim their ancestors printed a newspaper in 1492, when Columbus landed in America. Of course they "printed" it in rude symbols or characters such as even the more civilized Indians used, but it seems it was really a sort of bulletin of local affairs as they occurred.

Viewed in this light, it might be called a newspaper, I suppose, although no paper was used, and it was certainly very primitive. However, the idea was the same and the spirit and energy must have been present. Think of a newspaper on bark!

### Chaff.

HE (rapturously)—I love the very ground which is trod by your fairy feet. She (innocently)—Are you aware that this land does not belong to my father?

KIND OLD LADY.—And so you are blind, my poor man. Poor Man.—Yesum. I was born blind. Kind Old Lady (shocked).—Born blind! Is it possible? How you must feel the loss of your eyesight.

NOTHING TOO GOOD FOR THE CHERUB.—Mrs. Belgrave (on the Bermuda boat).—Are you one of the stewards? Bill Rolling.—No, marm. I'm cap'n o' th' top. Mrs. Belgrave.—How nice. Bring it and spin it for little Chauncey, won't you? He's almost bored to death.

A NOM DE PLUME.—"Ostrich."

A THANKSGIVING PARADOX.—"It's very strange," observed the Boston woman in Washington Market, "that undressed turkeys are invariably clothed with a pennate growth, while the dressed are absolutely nude."

PROUD FATHER (showing off his boy before company).—My son, which would you rather be, Shakespeare or Edison? Little Son (after meditation).—I'd rather be Edison. "Why?" "Cause he ain't dead."

HE (lightly rude).—I called because I thought you were out. She (sweetly).—Well, do you know I thought I was out, too. The maid must have mistaken you for some one else.

ELEPHANT'S HIDE.—The tanning of elephant's hide is comparatively a new industry. The method employed is practically the same as in the tanning of cow hides, except that a stronger combination of the tannic ingredients is required, and a greater length of time, about six months, is necessary to perform the work. When the hide is taken out of the vat, it is about 1½ inches thick. Articles made of elephant's hide are expensive luxuries. A small pocket-book made of elephant leather, without any silver or gold ornamentation, costs about \$40. A small satchel made of the same leather costs anywhere from \$300 to \$400. Cigar cases, card cases and similar articles vary from \$52 to \$100. Floor rugs are also made out of the leather. In finishing the hide no attempt is made to glaze or polish it. Everything is done to preserve its natural color and appearance. It is a very durable leather, several years' wear having but little effect on it. The scarcity of elephants and the great expense entailed in the tanning of their hides precludes the possibility of elephant leather ever becoming a thing of popular and general use.

## YOUNG FOLKS' COLUMN.

### Five Little Chickens.

Said the first little chicken,  
With a queer little squirm,  
"Oh, I wish I could find  
A fat little worm!"

Said the next little chicken,  
With an odd little shrug,  
"Oh, I wish I could find  
A fat little bug!"

Said the third little chicken,  
With a sharp little squeal,  
"Oh, I wish I could find  
Some nice yellow meal!"

Said the fourth little chicken,  
With a small sigh of grief,  
"Oh, I wish I could find  
A green little leaf!"

Said the fifth little chicken,  
With a faint little moan,  
"Oh, I wish I could find  
A wee gravel stone!"

"Now, see here," said the mother,  
From the green garden patch,  
"If you want any breakfast,  
You just come and scratch!"

### A Rainy Day and What Came of It.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

"What a forlorn day!" said Allie Catherwood as she gazed out of the window of the library into the street below.

Forlorn indeed! The rain fell in torrents, the gutters were all rivers, and the few individuals that ventured to brave the weather were quite at the mercy of the storm, as it was impossible to use an umbrella in so fierce a wind. Most of the wayfarers would, no doubt, have envied Allie her beautiful home and comfortable fireside and have been contented to spend a day in so pleasant a room as the library, but the little girl thought it a great hardship to be detained indoors on this particular afternoon, which she had promised to pass with her friend Grace Miller.

"It always does rain at the wrong time," she muttered; "there's no sense in such nasty weather, anyway," and then she remembered what Miss Nottingham, her Sunday-school teacher, had said in class last Sabbath:

"There is no day so gloomy but that it may be brightened by an act of kindness. Try to make some one near you a little happier and see what a wonderful effect it will have upon the atmosphere."

Allie had not attended Sunday-school until very recently. Her mother was a fashionable, worldly woman, though she was pleased to have Allie join Miss Nottingham's class at Mrs. Miller's suggestion, for Grace belonged to it, and she was a lovely child with whom Mrs. Catherwood was glad to have her own daughter associated.

"There is nobody near to be kind to," mused Allie disconsolately. "Mamma is ill with a headache and wants to be quiet; she won't let me talk to the servants, and Mrs. Simpkins—well, Mrs. Simpkins is rather a hopeless case, but perhaps she'll do, only I don't know how to begin, and I am sure she would rather I didn't."

Mrs. Simpkins was the seamstress—a tall, pale-faced woman with a hard manner and an habitual frown. She rarely spoke to any one, and Mrs. Catherwood knew nothing of her—had never thought to inquire, beyond the fact that she did her work neatly and came and went regularly.

"She is not an attractive person, certainly," Mrs. C. had once remarked to an acquaintance, "but then she answers my purposes."

Allie crossed the hall of the great house and opened the door of the sewing-room, which was usually occupied by the pale seamstress. There sat Mrs. Simpkins as stiff and unsympathetic as a marble statue and as motionless, except that the needle flew in and out of her busy fingers.

"You look cold, Mrs. Simpkins," said Allie very gently. "Why has no one lighted the fire for you?"

The woman raised her eyelids in some surprise at the tone. It was the first time in her experience at the Catherwoods that any one had thought it necessary to consider her comfort, but as she did not care to explain that one of the servants had been grumbling about the trouble, it was "allns to be making fires for that stuck-up sewing woman," she merely shrugged her shoulders and said nothing.

"You have bad manners, Mrs. S.," thought Allie, feeling somewhat discouraged, "but I'll try again, having first lighted the fire."

A bright blaze was soon dancing here and there between the iron bars of the grate. Allie drew a footstool up and seated herself on it.

"Come nearer, Mrs. Simpkins," she said, in a kind little voice. "I'm lonely this afternoon, and I dare say you are. Let's talk. Do you live all by yourself at home?"

Mrs. Simpkins cleared her throat and answered rather ungraciously:

"No, not quite."

"Have you, perhaps, a little girl like me?" persisted Allie.

"No, not like you, child," said the strange woman, and Allie would have thought her very cross indeed if she had not seen her eyes glitter for a moment as if there were tears in

them. "My girl's a cripple," the seamstress added after a pause.

"Oh, I'm so sorry!" cried Allie with real feeling. "Why didn't you tell us about her before?" and then she blushed, for she remembered that neither her mother nor herself had ever seemed to care to know. How could they guess that the reticent seamstress was a devoted and self-sacrificing mother and that that deep furrow between her eyebrows was not the result of ill-temper but of anxiety.

Gradually Allie drew the whole story from her—the patient little sufferer, the long, lonely hours day after day spent in waiting for her mother's return in the evening; the struggles, the poverty; Mrs. Simpkins' own hope that she would one day be able to procure the necessary medical aid for her daughter, and the despair of repeated disappointment.

No one would have recognized the reserved seamstress in Mrs. Simpkins as she concluded her account. Her face was flushed and her hands trembled.

"Bless your kind eyes, child," she said; "it does a body good to talk to you."

Allie sat still for a long time lost in thought. "I'll ask papa," she exclaimed finally, as if to herself; "mamma might say it was all nonsense, but papa will let me do anything."

When Mr. Catherwood returned from his law office that evening, his little daughter met him at the front door and told him the history of her day.

"Dear papa," she pleaded, "they say you are rich. I am sure you must be, for we live in such a pretty house and I have more pocket money than most little girls. Won't you send the doctor to see Mrs. Simpkins' Mabel? Think what it would be if I were ill like that, and you could do nothing for me!"

There was a suspicion of tears in papa's own eyes as he raised his precious girl in his arms and kissed her.

"Yes, yes, my darling; if it is as you say, we'll see what can be done." And Allie thanked him with a hug, for she knew his word was as good as given.

I have no time to tell you of the comfort and relief which this rainy day was the means of bringing to Mrs. Simpkins and her invalid daughter, but Allie thought it all over before she went to bed that night.

"I've been sad to-day," she said, "but on the whole I'm happier than I ever was before;" and so it is that kindness invariably brings its own reward.

## DOMESTIC ECONOMY

### Hints for Dairymaids.

EDITORS PRESS:—During the cold weather, cream is often very difficult to churn.

1. If the cream is placed in a warm room for several hours previous to being churned, the task of churning will be made much lighter. If the cream is too sweet to churn quickly, put into it a teaspoonful of cream of tartar, and if it is too sour, a teaspoonful of baking soda or salt will help to separate the crumbs of butter.

2. When skimming milk, wet the skimmer in cold water to keep the cream from sticking to it.

3. When molding butter in warm weather, you can keep the rolls in much better shape if you place them on a piece of pine board, covered with a wet towel when taking them from the mold.

### To Pickle Olives.

EDITORS PRESS:—To three gallons of water, one can of lye or potash (no more water or less than three gallons to one of lye), I prefer potash, because it is easier dissolved. Take one gallon of water to boil it in, leaving two gallons of cold water to add to it. Ascertain the quantity of water it will require to just cover the olives by putting them into the barrel intended for them. Make a hole in the bottom and whittle an old broom-handle for the plug. It is not necessary to stir the olives in the lye bath, and the same barrel will do to freshen and salt them in.

Flourin.

COFFEE CAKE.—One-half cup of sugar, one-half cup of butter, one half cup of molasses, one-half cup of coffee, one teaspoonful of all kinds of spice, one cup of chopped raisins, one-half teaspoonful of soda. Flour to thicken.

FRIED APPLES.—These are an excellent breakfast dish. Wash, quarter and core good tart apples. Put into a frying-pan with a little water added, boil until nearly tender; then add sugar and butter and cook until tender and brown.

ROLL JELLY CAKE.—Three eggs and one cup each of sugar and flour; add sugar, two tablespoonfuls of water and a pinch of salt; lastly, very gradually stir in the flour, in which has been sifted a heaping teaspoonful of baking powder. Light brown sugar is best for roll cake.

CREAM CAKE.—One cup sugar, two eggs, two tablespoonfuls softened butter and four of milk, beat all well together, add a cup of flour in which has been mixed one teaspoonful of cream tartar and one-half teaspoonful of soda, and bake in a small dripping-pan. When cake is cold, have ready a pint of sweet cream, whip to a stiff froth, sweeten to taste, flavor, and pile on the cake. The cream will whip easier if set on ice first. Eat fresh.

## GOOD HEALTH.

HEALTH OF THE STATE.—From the circular issued by the State Board of Health for the month of December, 1890, just to hand, it is learned that the number of deaths in the State was 1196 out of an estimated population of 744,169. Of these deaths, 169 are attributed to consumption, 140 to pneumonia, 28 to bronchitis, 63 to diphtheria, 3 to smallpox, 31 to typhoid fever, 84 to heart diseases, 34 to cancer and 28 to alcoholism. The monthly percentage of deaths was 1.67 per thousand, or an annual mortality of 20.04, which is a higher death rate than that of the preceding month, and the highest death rate the State has had since January of last year, when influenza was epidemic. The increased death rate, the report says, was owing to the increase and fatality of diseases of the respiratory organs, including diphtheria and croup. The three deaths from smallpox all occurred in this city. In concluding its report, the State Board of Health says: We desire this month to call the attention of every health officer to the necessity of having all premises containing or having contained cases of infectious disease properly fumigated and disinfected under their supervision, and to discourage or, if possible, forbid the holding of a public funeral in every case of scarlet fever or diphtheria. Day by day we are called upon to record cases of disease contracted in this way. A general law should be passed making it a penal offense to fail to notify the public, by some distinctive flag or notice, of the presence of communicative disease, and any one holding a public funeral where the cause of death is infective should be severely punished.

HOW TO AVOID CHOKING.—Death by the clogging of the windpipe is an accident liable to happen to hungry persons eating hastily or to children, and calls for the greatest self-control and presence of mind on the part of those who are present. The substance which causes the choking may either be at the top of the throat, at the entrance to the gullet, or lower down. If at the upper part of the throat, prompt action will often remove it, either by thrusting the finger and thumb into the mouth and pulling the obstruction away, or, if it cannot be reached so as to pull it away, a piece of whalebone, a quill or even a penholder—anything at hand—should be seized and pushed down as a probang, so as to force the substance down the gullet. Ticking the back of the mouth with a feather, so as to produce violent retching, will sometimes dislodge it, or a sudden splashing of cold water in the face, which causes involuntary gasping. Should the patient become insensible before relief can be afforded, it must not be assumed for certain that death has taken place, and such remedies as dashing cold water in the face and on the chest and applying ammonia to the nostrils should be continued till medical aid arrives.—*Chicago Herald.*

ACIDITY OF THE STOMACH.—This condition is due to germs, and the cure lies in getting rid of the germs. Germs of fermentation in the stomach produce, first, alcohol, then carbonic acid, and then acetic acid. A person troubled with this form of dyspepsia should be careful to take only such articles of food as do not favor the development of germs, and thus starve them out. Another thing to do is to wash the germs out of the stomach by drinking freely of hot water before meals. If food is put into a stomach already sour, of course fermentation will be set up immediately. Some persons notice that as soon as they eat, their stomachs become sour. The third important thing to do is to stimulate the stomach to make more gastric juice, which is a natural antiseptic, and prevents fermentation, and also hastens absorption. The glands may be stimulated by applying hot fomentations to the stomach for half an hour immediately after the close of a meal, or, easier still, by wearing a rubber bag filled with hot water directly over the stomach for half an hour or an hour. Heat is a natural stimulant, and there are no possible ill effects from its use in this way.—*Good Health.*

PRECAUTIONS AGAINST CONSUMPTION.—In a circular on precautions against consumption, published by the State Board of Health of Pennsylvania, the following advice is given: The duster, and especially that potent distributor of germs, the feather duster, should never be used in a room habitually occupied by a consumptive. The floor, woodwork, and furniture should be wiped with a damp cloth. The patient's clothing should be kept by itself, and thoroughly boiled when washed. It need hardly be said that the room should be ventilated as thoroughly as is consistent with the maintenance of a proper temperature.

INTELLECTUAL WORK.—"It is not intellectual work that injures the brain," says the *London Hospital*, "but emotional excitement. Most men can stand the severest thought and study of which their brains are capable, and he none the worse for it, for neither thought nor study interferes with the recuperative influence of sleep. It is ambition, anxiety, and disappointment, the hopes and fears, the loves and hates of our lives, that wear out our nervous system and endanger the balance of the brain."

## The Week.

The promise of a general rain as we went to press a week ago proved illusive, and there has been a continuation of most delightful days along the coast with alternating strong north winds and fogs in the interior and delightful weather in Southern California. It is proving a perfect winter from a tourist's point of view and from the field-worker's point of view too, for hardly a day has been lost. There has been a vast area sown and much planting done. Moderate rains, if seasonable, will bring forward things magnificently.

The Legislature is still hard at work and the genius of economy still seems to hold sway. Strong opposition is being developed to any

extravagant expenditure for the World's Fair, and certainly the people are not disposed to cramp themselves with taxes to provide gorgeous apparitions for the products which will speak for themselves. California should make a good display, but extravagance should not be allowed.

## Silk in California.

The fifth annual report of the Ladies' Silk Culture Society of California has just been issued and is a document of very great local interest and importance, as it shows the accomplishment of many significant things. In the introductory portion of his report as president, Mr. W. B. Ewer points out clearly the amount of work which has been done with the limited funds intrusted to the board, and argues strongly against a disposition to underrate the accomplishment because, owing to the length of time required to establish a silk station and bring a mulberry grove up to the yield of large quantities of leaves, there have not been large results attained immediately. But Mr. Ewer proceeds to show, and in fact does show incidentally all through his argument, that there has been a vast amount of valuable work done, although the society has been constantly under the cloud of insufficient means to realize its plans and purposes. The item of this showing we have not space to set forth and must refer the student of the progress of silk-culture efforts to the perusal of the report itself. As it now stands, unless Congress shall take special action and restore the item for the Pacific Coast work to the appropriation bill, the Ladies' Society will be thrown again upon its own resources. The injustice of such refusal of Government aid is shown in this forcible paragraph in the report:

The women of this, our Golden State, joined hands with their sisters in the East, and through wise management and slow but sure progress have demonstrated, beyond the possibility of a doubt, that the United States can produce silk of a quality not excelled by any other nation on the globe. The efforts on both sides of the continent have secured more or less aid from the Government. Their united efforts have reached results in ten years which took the Government of France fully one hundred years of time, and more than ten, probably twenty, times the amount of money that our own Government has expended. A careful and candid observation of the progress which has been made on this coast, we are fully persuaded, will not suffer in any way by comparison with what has been done at the East, even at a much larger expenditure, than has been appropriated for the work in California. All we ask is a slight advance on previous appropriations to carry out our work in full, as already outlined in this report. It is to be hoped that Congress will see the impropriety of withholding appropriations from the women of this State while continuing them to their sisters in the East.

The report of the secretary, Mrs. L. E. Pratt, is also a strong showing for the efficacy of the society's work. Incidentally there is given a little glimpse at the desk of the secretary, which shows that it has not been tenantless. We quote:

Early in the season I was instructed to notify producers that the society would purchase cocoons at prices heretofore paid, receiving them unstuffed and remitting amounts due within 30 days thereafter. This stimulated correspondence, upward of 800 letters having been received and answered during the year, 25 counties being represented in the list of correspondents. \* \* \* I have personally supervised the weighing of all cocoons and report 600 pounds purchased, mostly in an unstuffed condition. The quantity would have been largely in excess of the previous year but for the lack of suitable buildings for increased work, and the disease so generally reported among worms from seed last distributed. I am pleased to note the generally improved quality as compared with those of previous years from the same locality. The amount disbursed for the purchase of cocoons appended below has been paid out in sums varying from 73 45-100 dollars to 25 cents.

But though these matters show work and progress, we find in the report of the Experimental Committee an achievement which seems to be beyond parallel and of great local significance.

The experiment for 1890 was begun at the Piedmont station April 29th, and was made with the seed of the most select variety of silk worms, viz.: the *Frutulari* produced at the station the previous year under the careful supervision of Prof. J. J. Rivera. The hatching was most successful, fully 97 per cent completing the hatch by the fourth day, a result which we believe is without precedent. There being a sufficient supply of the *Mulicaulis*, all were fed on this variety until the third molting, when they were separated into three divisions. First

division, consisting of the best specimens of the first and second days hatch, were fed entirely on *Mulicaulis*, until the time of spinning. The second division, composed of those a little less in size, were fed on the *M. Albi* and *M. Rosa* from the third molt to the time of spinning. The third division, comprising about 1400, the least in size of all, were placed in charge of a lady 81 years of age, and were fed on *M. Albi* alternating with *Nagasaki*, with the result that the second and third divisions made a most remarkable growth, and although a little later in spinning, their cocoons were so nearly the same as to size, weight, etc., of those first spun, as to be indistinguishable, if by accident they were exchanged.

The result of the experiment fully establishes the superiority of the *M. Albi*, *M. Rosa* and *Nagasaki* for later feeding, and I doubt not if a portion of the most robust worms had been fed on these varieties from the third molting, those cocoons would have excelled the others, but want of room prevented the experiment.

There were no signs of disease as viewed under the microscope or otherwise, there being less than 25 sluggish worms in the whole brood, which were destroyed, each one of the remainder completing a cocoon within 35 days from the time of hatching.

The result of the experiment proves the superiority of acclimated seed over that of imported, in that about 97 per cent successfully hatched, whereas 80 per cent is a good average from imported seed.

The silkworms from seed produced here were much more vigorous and healthy than those from imported seed; consequently, the loss sustained by disease was very slight, whereas a loss of 20 per cent must be counted on from imported seed.

This record shows that California silkworm eggs have an exceptionally high percentage of life and strength and are vastly superior to the imported. It seems to revive again the hope enjoyed a score of years ago that California might be the supply region of strong, healthy eggs for the silk producers of less favored regions. There is certainly found in the report of the society for the last year abundant evidence that its work should not only be continued but should be extended.

## The Fruit Union.

The stockholders of the California Fruit Union had a harmonious meeting in this city on Wednesday of this week, President Anderson in the chair. Owing to the lateness of the hour we are unable to present in this issue the report of the trustees as presented by the secretary, H. A. Fairbank. It contained many interesting facts and will be found in full in next week's *RURAL*. The books show a business conducted amounting to nearly a million and three-quarters dollars for the seven shipping months, requiring handling of nearly 1400 cars of fruit, with 600 or more forwarded by various members, making a grand total but few short of 2000 out of about 3300 shipped by the entire State. The trustees, without contradiction, lay claim to the distinction of having forwarded nearly two-thirds of the entire green deciduous fruit shipments of the State. The 1373 carloads shipped East went from 31 shipping points in the State as follows: There were 322 shippers the past season, compared to 173 in 1889.

Financially the union was never more prosperous. With all debts paid and nothing outstanding there is in the treasury \$34,000 as the result of the season's work. The directors have voted a dividend of 6 per cent and a rebate of 2.10 per cent on gross sales of shipping members.

The expenses were as follows: Office, \$1614; profit and loss, \$12,657; salary, \$6460; traveling expenses, \$1468; office fixtures, \$660; telephone, \$365; freight, \$250; telegraph, \$2881; taxes, \$31.

On motion, all present trustees were re-elected, as follows: R. D. Stephens, S. Gerson, Sacramento; W. B. Parker, L. W. Buck, Vacaville; Webster Treat, Davisville; J. C. Boggs, Newcastle; H. W. Meek, San Lorenzo; A. Block, Santa Clara; J. Z. Anderson, San Jose.

**ILLNESS OF W. G. KLEE.**—Readers of the *RURAL PRESS* who regretted to hear that W. G. Klee was obliged to lay aside his University work because of ill-health will be pained to know that he is still suffering from severe indisposition at his ranch near Santa Cruz. He is suffering with a serious malady of the lungs. His reputation for careful work and his quiet, unostentatious manner made him a most acceptable acquaintance, and he was esteemed in all parts of the State. A favorable turn of the disease would be hailed with general satisfaction.

## The Orange-Growers Combine.

Last week we stated briefly that the orange-growers of the South were quite out of patience with the combined action of the orange-buyers, who declared themselves as ready to buy fruit only upon a contract and a scheme of grading and rejection of culls which is exceedingly objectionable to growers. Local meetings were held last week at various producing points, and as we go to press telegraphed reports come of a general assemblage of delegates from the various localities at Los Angeles. It is stated that at the meeting every orange-producing locality in this section of the State is represented. The general tenor of the discussion indicated that the growers had arrived at the conclusion that the middlemen had been squeezing them for years, until they proposed to stand it no longer. Numerous instances of where shippers had imposed upon growers were recited. All favored an immediate organization, which it was decided to form. A Committee on Organization was appointed and reported to form an Orange-Growers' Union.

The committee recommended that the union should incorporate and that a subscription list be opened with shares fixed at \$5; that the object of the association should be to buy and sell oranges, lemons, fresh and dried fruits, and other articles of general merchandise; to own and sell real estate necessary to its business. The recommendations were adopted and 400 shares were immediately subscribed.

Other meetings of the association were provided for, of which we shall have reports later.

## The Fair at Marysville.

The State Citrus Fair for Northern and Central California, held last week at Marysville, proved a thorough and glad success. The widespread interest it had aroused all up and down the Sacramento valley was attested by displays representative of many places, ranging northward from the Capital to Red Bluff and even to Siskiyou. Tehama and all the counties shuttling on Sutter took part; and the people of the immediate neighborhood entered into the work of preparation and aided the efficient managers in carrying the affair through, with an all-conquering alliance of unanimity, enthusiasm, judgment and energy.

The exhibition was superb, the skies propitious, the attendance overwhelming, the receipts abundant, the lessons at once cheering and suggestive, the pleasure and satisfaction general.

We give on pages 69 and 81 the first installment of an account by the *RURAL*'s special reporter and the list of premiums awarded, and have a good deal more to follow in later issues.

## Our Annual Review.

It has been our custom for years to "take stock," as the mercantile phrase goes, of California's industrial deeds and progress in the agricultural line. Our review, which occupies large space in this issue, is unusually full and interesting and constitutes an epitomized history of the year 1890, which in some respects was the greatest of the 40 years of California's life as an American commonwealth. This review is not useful alone for casual reading and for present information, but should be preserved for reference, as its data will serve to enforce many an argument in favor of California's resources and industries and give the ground-work for many a glowing paragraph in essay or oration. The compilation and discussion involved in the preparation of the review has cost much time and labor and we trust will prove acceptable to our readers.

**HONORS TO A CALIFORNIAN.**—We are glad to see that the American Forestry Association has elected Hon. Wm. Alvord of San Francisco as its president. Mr. Alvord is well known to Californians as a devoted lover of Nature's work in tree and shrub and flower and as a patron and promoter of all honorable undertakings in the interest of forestry and floriculture. He served with high acceptability as one of the Commissioners of Golden Gate Park and set in motion many measures for the improvement of the park of which the public is now reaping the benefit. We are especially pleased that the presidency of the National Forestry Association should be awarded to a Californian and so well placed individually as with Mr. Alvord.

Our advices from Oregon and Washington also indicate a large crop this year. The only present drawback to this coast appears to be the prospective scarcity of tonnage. The higher duties charged on foreign goods will necessitate ships either taking inward cargoes for less money or else coming in ballast; but in either event the ships will charge more for wheat-loading. This comes out of the farmers. But when the latter, who appeared tolerably well accustomed to being made a foothill, are organizing to see if they cannot, by legislation, get some of the cream that is going. Farmers on this coast want lower freights. Those who

grow grain want lower rates by ships, and the others lower rates by rail. As soon as the higher tariff went into effect, the overland railroads increased their freight rates, thus getting away and all prospective advantages that might have accrued to farmers.

#### Wheat Prices Since 1864.

We are indebted to Albert Montpelier, Manager of the Grangers' Bank, for the following very important table showing the

PRICE OF WHEAT IN THE SAN FRANCISCO WHEAT MARKET FOR 26 YEARS FROM JUNE, 1864, TO DEC. 15, 1890.

Year	Highest	Lowest	Difference	Average
1864-65	\$5.30	\$2.30	\$3.00	\$4.15
1865-66	2.15	1.60	.45	1.97
1866-67	2.22	1.25	.97	1.76
1867-68	3.10	1.50	1.60	2.31
1868-69	2.50	1.17	1.33	1.71
1869-70	1.95	1.05	.90	1.70
1870-71	3.15	1.55	1.60	2.25
1871-72	2.85	1.52	1.33	2.29
1872-73	2.16	1.25	.91	1.95
1873-74	2.37	1.60	.77	2.02
1874-75	1.85	1.30	.55	1.60
1875-76	2.32	1.65	.67	1.96
1876-77	3.00	1.45	1.55	1.93
1877-78	2.45	1.82	.63	2.10
1878-79	1.77	1.57	.20	1.67
1879-80	1.67	1.45	.22	1.81
1880-81	1.75	1.25	.50	1.62
1881-82	1.75	1.60	.15	1.73
1882-83	2.05	1.60	.45	1.73
1883-84	1.87	1.42	.45	1.64
1884-85	1.50	1.17	.33	1.33
1885-86	1.50	1.25	.25	1.36
1886-87	2.10	1.22	.88	1.52
1887-88	2.12	1.22	.90	1.37
1888-89	1.63	1.25	.38	1.43
1889-90	1.30	1.25	.05	1.29
Crop 1890	1.40	1.27	.13	1.33

\*Wheat collapsed.

#### Flour.

The flour trade in 1890 was fairly satisfactory. The output of the mills was larger, while the home consumption was fully 20 per cent over that of 1889. The increased consumption was due to a larger population and also to the very high prices ruling for vegetables the first four months in the year. While the output of flour shows an increase over that of 1889, that of 1891 promises to be much larger, owing to more new mills coming into operation. A local paper, noticing the prospective increase, says that two or three new mills are about ready to start in business, the principal ones being that of Starr & Co. at Port Costa, the Farmers' Union Mill at Stockton, and a small one at Red Bluff. These will add considerably to our milling capacity, but as the principal (Starr's) is already needed to supply an increased European demand, it is not expected that local competition will be much increased.

Oregon and Washington have been fair contributors to our market. Receipts from these two sources aggregate during the year \$4,600 bbls. The exports in 1890 were as follows:

To	Barrels	To	Barrels
United Kingdom	432,936	British Columbia	3,238
China	417,546	France	1,375
Central America	160,286	Sumatra Islands	395
Hawaiian Islands	57,294	Brazil	275
Australia	685	Marquesas Islands	182
Ecuador	32,067	Marshall Islands	117
Japan	43,309	Gilbert Islands	25
Panama	11,007	Peru	160
Society Islands	13,166	Singapore	125
Asiatic Russia	15,482	Hervy Islands	50
Philippine Islands	11,200	East Indies	125
Mexico	5,680	Corea	2

Total.....1,207,607

The above shipments were valued at \$4,925,778. The exports aggregated in 1889 1,130,950 bbls., valued at \$4,754,589; in 1888, 824,655; in 1887, 797,232.

#### Barley.

For three years preceding 1890, the barley market went from bad to worse, with the lowest prices (52½ to 62½ for feed) touched in 1889 ever before known. The above low range was brought about by large quantities of weevil barley thrown on the market, breaking prices, which caused large holdings of hypotheated barley to be sold by those who had advanced the money. Of necessity, farmers became discouraged and consequently there was no increase in the acreage seeded to the grain, while the consumption for feeding has increased. With the opening up of vineyards and orchards, and a steady increase in the number of farmers who believe in small farms, each year calls for the use of more farm animals. The number of horses in the State is placed at 300,000, and mules at 84,000. Say that 75 per cent are fed the year round, it will be seen that the quantity of barley fed out is very large, which, added to that fed out by dairymen and others when ground or rolled, makes the quantity very large. By reference to the following comparison table of acreage seeded by counties in 1889 and 1890, it will be seen that there was a decided falling off in the latter year:

Counties	1889.	1890.
Alameda	20,967	20,415
Alpine	460	400
Amador	12,515	10,950
Butte	24,619	19,721

Yuba	11,060	4,850

Totals.....1,167,627 86,270

The decreased acreage was due to a great extent to almost continuous rains in the months best adapted to barley seeding.

The course of the market in 1890 is an interesting study. The year opened for feed strong at 75 to 85, advanced slightly, then fell back to 73½ to 83½ cents, and rallied again, closing the month of January weak at 75 to 87½ cents.

The month of February was generally dull, with the market fluctuating. At one time sales for the best grade of feed were made at 80 cents a cental. In March, feed declined to 75 to 77½, but again improved to 85 to 87½ for No. 1. Brewing advanced too, and was quotable as a range 90 to \$1.02½. April saw feed advance to 90 to 95c and brewing to \$1.05 to \$1.15. Feed again went up on the 21st of April to 95 to \$1 and brewing to \$1.05 to \$1.17½. The market closed weak at 95 to 96½c for feed and \$1.02½ to \$1.12½ for brewing. Early in May feed advanced to \$1 to \$1.05 and brewing to \$1.07½ to \$1.20; but on the 6th a reduction of 6½ took place in the former and 2½ in the latter. The next week was a week of fluctuation; feed No. 1, however, advancing to \$1.02½ to \$1.05 and brewing to \$1.07½ to \$1.20. Before the close of the month feed went down to 97½ to \$1.01½ and brewing to \$1.05 to \$1.17½. New barley put in its appearance early in June, some selling at \$1.06½ for feed. No. 1 feed opened at 97½c. It soon went up to \$1 to \$1.03½.

July opened steady but strong. By the middle of the month, sales were readily made at a range of \$1.07½ to \$1.17½ for feed. The market continued throughout the month on its up course, closing strong at a range of \$1.17½ to \$1.23½ per cental for feed, with brewing correspondingly higher.

In August the market was strong and excited at times, causing fluctuating prices. The month closed strong at \$1.26½ to \$1.33½ per cental.

The market in September opened weak and slightly lower, but soon recovered, with sales made before the 10th as high as \$1.40 for the best feed. A weaker feeling set in about the 12th, causing a gradual shading in prices until the range had dropped to \$1.27½ to \$1.33½, at which the month closed steady but very strong.

October opened to stronger and higher prices. Before the end of the first week, the range was \$1.33½ to \$1.40 per cental; by the 22d it was 2½ cents higher; and before the end of the month, \$1.40 to \$1.50 was quoted. The month closed steady but strong.

In November the market opened steady but strong, and advanced by degrees up to \$1.47½ to \$1.57½ by the 19th, after which prices began to shade off.

The market opened in December weak at \$1.40 to \$1.48½, but soon rallied 5 cents, after which it began to shade off, closing the year at \$1.42½ to \$1.50.

The receipts of barley in 1890 aggregated 1,162,266 centals by railroad and river, and 576,933 centals by railroad and river, and 576,933 centals by coast vessels. Total, 1,729,199, against 2,208,003 in 1889 and 2,867,796 in 1888. The exports by sea in 1889 and 1890 compare as follows:

To	1889.	1890.
England	332,962	44,811
New York	295,424	90,536
Hawaiian Islands	138,253	165,568
Australia	30,934	14,504

1885	185,297	92,760	278,057

Although high prices during the year interfered with a free movement of barley onward, yet the stock in the State on Dec. 1, 1890, was the lightest since 1885.

The first receipts of new-crop barley and prices received since 1870 are as follows:

Year.	Month.	Price.	Year.	Month.	Price.
1870	June 19	\$1.20	1881	June 21	90
1871	June 12	57½	1882	June 12	1.65
1872	June 6	1.40	1883	June 25	95

1879	June 30	75	1890	May 31	1.06½
1880	June 24	64½			

#### Oats.

The consumption of oats in this State continues to steadily enlarge, calling each year for larger quantities. The growing attention given to thoroughbred horses and an enlarging use of roadsters and fast-driving animals in general, demand more oats for feed. To those who have not kept informed upon the movements of oats so as to form a correct opinion in regard to our source of supply in this State, a comparison of acreage seeded to oats in 1889 and 1890 will be of unusual interest, while the acreage by counties will be of value to agriculturists and dealers alike. The following table of comparison is compiled from County Assessors' returns:

Counties	1889.	1890.
Alameda	175	210
Alpine	630	670
Amador	75	50
Colusa	215	68
Contra Costa	1,500	1,600

Trinity	500	500
Tulare	375	580
Tuolumne	800	700
Ventura	1,271	805
Yuba	.....	.....

Totals.....115,601 60,197

In several counties there are no returns of oats being seeded. The falling off in the acreage seeded in 1890 in comparison with that seeded in 1889 is quite marked. The receipts in 1890 aggregated at San Francisco 137,423 centals of Californian, and 401,304 centals of Oregon and Washington. Total 584,570 centals. In 1888 the receipts aggregated 552,258; in 1887, 351,705; in 1886, 402,025; and in 1885, 589,403. While the aggregate receipts at this port show an increase, the lessened acreage is a sure index that many interior points had a lessened supply.

The year opened on a firm market at \$1.20 to \$1.30 per cental for fair to choice feed. The receipts were light and demand good. Under an increasing call, the range was advanced 2½ cents, at which point it held fairly steady to the end of the month.

February opened to a stronger market with the range marked up to \$1.25 to \$1.33½ per cental. With continued light receipts and a free inquiry, the market advanced until the range reached \$1.30 to \$1.42½ by the middle of the month. The higher prices brought in freer supplies, causing an easier tone to prevail.

March entered upon a weak market, with the range quoted for fair to choice at \$1.28½ to \$1.37½ per cental. This decline was due to free supplies and buyers holding off. The market continued to shade off until by the 17th the range had fallen to \$1.22½ to \$1.30, at which it remained steady until near the close, when it began to strengthen.

In April the market began to exhibit more life at rapidly advancing figures, closing the month at \$1.60 to \$1.75 for fair to choice feed. At this high range the market held strong the first week in May, after which it began to ease off under freer prospective receipts and buyers bidding down. Prices went down quite fast the latter part of the month, when the highest range quoted was \$1.51 to \$1.62½.

The market in June opened weak at \$1.50 to \$1.60, and held steady until the close. Throughout the month of July no change was quoted either by buyers or sellers.

August opened to a stronger market, with a higher range setting in. There was a steady increase in prices, until by the 26th the range was \$1.55 to \$1.71½ per cental. These higher prices brought in free receipts, which caused prices to break back 10 cents per cental, but under strong buying and firmer holding the

range soon ran up to \$1.60 to \$1.70. The month closed very strong.

November opened to a strong and higher market, the range by the 5th being \$1.65 to \$1.75, by the 12th it was \$1.70 to \$1.80, and by the 19th the range was up to \$1.70 to \$2. With more offering, the month went out on a weaker market.

The market came in in December weak at \$1.70 to \$1.96½, and sank by the 17th to \$1.70 to \$1.92½, at which range it closed the month and year strong. There have been unusually heavy purchases of oats for seeding. Black oats fed sold at over \$2.25 toward the close of the year.

The exports by sea in 1890 were 27,711 centals, as follows:

To	Centals.
Hawaiian Islands	26,807
China	398
Central America	170
Japan	119
Panama	111
Elsewhere	106

Total.....27,711

In 1889 the exports were 53,080 centals. Australia took, in 1889, 31,167 cts, and Hawaiian Islands 24,001.

#### Corn.

The acreage seeded to corn in 1889 aggregated 75,382 acres, and in 1890, 80,602. In Los Angeles and Sonoma counties the acreage aggregated 28,717 acres in 1889, and a little over 30,000 in 1890.

The year opened on a dull but steady market at \$1.05 to \$1.15 per cental for white and 95 cents to \$1.02½ for yellow. The market soon shaded off 5 cents per cental for white, but held steady for yellow, closing the month at unchanged quotations.

The market opened weak in February, but began to strengthen about the 5th, making an advance by the 12th of 5 cents a cental for both kinds. At the advance the market held steady the remainder of the month, throughout March and well into April. The latter month closed strong at \$1.05 to \$1.12½ for white and \$1.10 to \$1.17½ for yellow.

into consideration the almost prohibitory tariff on foreign wools, the market was far from satisfactory. The high tariff allows the railroads to get the lion's share of the duties by charging high freights. Between the high duties and labor unions the wool manufacturing industry of this coast—particularly of this city—has been paralyzed, consequently very little wool is consumed here and about all is sent to the East for a market. Any manufacturing industry, in order to thrive, must have either cheap labor or else cheap raw material. When the woolen-mills were prohibited by labor unions from employing Chinamen, they had to shut down or else restrict their production, because to get the right kind of foreign wools for mixing brought the cost of certain lines of woolen goods to too high figures for competition with the goods brought to this coast. Out of a total production of about 60,000,000 lbs. of wool on this coast, not more than one-tenth is consumed here. There are now in this State in operation the Golden Gate Mill of this city, the San Jose, Santa Rosa, Marysville, Merced, Napa, Petaluma and Los Angeles Woolen-Mills, and several in Oregon and other parts of the coast. The bulk of the cloths and cassimeres manufactured by these woolen-mills is made into clothing by the several companies which manufacture the cloth, and the market is, besides this State, the entire northwest territory. Still, this is a very limited population, and the tariff on Australian wools prevents much of that being used at the present time in the manufacture of the cloths. This Australian wool is needed to mix with the domestic wools in the manufacture of fine cloths, as it has a finer and stronger fiber and increases the strength and durability of the article.

The market prices the past year did not show any material change from those current in 1889, while the increased duties under the McKinley tariff have not stimulated values, and this too in the face of small stocks throughout the country.

The Boston Commercial Bulletin, a usually well-informed journal on the wool industry, reports the grand total of domestic wool unsold in the country as follows, compared with preceding years:

Year.	Pounds.
1891.....	73,928,331
1890.....	85,000,000
1889.....	65,000,000
1888.....	110,000,000

The foreign wools held, compare as follows: On Jan. 1, 1890, 11,250,750 pounds; 1891, 8,311,510. The grade of foreign is chiefly carpet, being fully one-half of the grand total.

The production of California wools compares as follows:

Year.	Pounds.	Year.	Pounds.
1890.....	34,917,320	1885.....	36,561,390
1889.....	33,591,720	1884.....	37,415,330
1888.....	32,569,979	1883.....	40,848,690
1887.....	31,564,221	1882.....	40,529,119
1886.....	38,509,160	1881.....	45,076,639

While California shows a slight increase, the production of Oregon and Nevada fell off. The falling off in the latter State is due to heavy losses of sheep in the winter of 1889-90, owing to heavy rains and severe weather.

A contemporary states that in condition the spring clip was rather above the average, being well grown and sound in staple, and with the exception of a few more scabby fleeces in the northern wools, the shrinkage was lighter than usual. The fall clip did not vary much from average years. The mountain wools were well grown, but with the usual fall amount of dust, while the wools from the valleys showed the usual amount of seed and hurr. The Oregon wools, on account of the low condition of the flocks during the severe winter, were not well grown, the product being tender in staple and at the same time no lighter in shrinkage. As has been the case for some years past, a large portion of the Oregon and Nevada wool—nearly all the fall clip and some of the dustier spring wools—have been scored here before being sent East. The quantity scored during the past year aggregates nearly 20,000,000 lbs. of grease wool, making a scored product of about 6,000,000 lbs. of clean wool ready for the cards. Experience has shown this to be the best way to handle all dusty wools and wools of heavy shrinkage or of defective grade.

Hops.

The year 1890 entered on a small stock of hops on this coast, yet for the first four months prices did not vary any. Toward the close of May and running into June, there was a better tone, with buyers showing more anxiety to contract. Under freer competitive buying, prices gradually strengthened for new-crop delivery. Their anxiety was heightened by confirmed advices that the crop in Europe and also at the East would be short. As early as August 1st, it was admitted that England could not harvest to exceed 160,000, old duty, equivalent to 200,000 bales American, from about 54,000 acres, against a consumptive home demand variously estimated at from 450,000 to 650,000 bales, the higher estimate being that of Charles Whitehead. Germany was credited with a shortage of 50,000 bales and America 60,000 bales. Allowing about 150,000 of "Olds," there promised a shortage in the world's supply of from 150,000 to 200,000 bales, and the movement of crops thus far seems to have verified it. On this coast, the crop was, taken as a whole, large and of a good average quality. While Oregon and Washington increased their output, California fell off slightly. The falling off in this State was due to heavy rains and

floods in some localities. The crop as harvested shows the following yield in bales: Washington, 43,000; Oregon, 17,550; California, 33,300. Total, 93,850 bales. The movements were quite rapid, reducing supplies in a brief space of time, so that by the end of the year the stocks in growers' and dealers' hands are estimated to have been as follows in bales: Washington, 4000; Oregon, 1500; California, 4329. Total, 9829 bales.

Since July 1, 1890, the beginning of the new season, market values were continuously on the upgrade until the end of October, when top prices were touched. The range of values for the season closely followed the crop indications, though influenced at the close by money stringency in all countries: July, from 17 to 20 cents; August, from 20 to 30; September, from 30 to 35; October, from 32½ to 40; November, from 40 to 35; December, 35 to 30 cents. Although 35 cents in December was quoted as the highest price by dealers, yet for gilt-edged 40 cents was readily obtainable.

A contemporary states that Pacific Coast farmers have their future in their own hands. The "hop louse" can be disposed of by energetic measures. Neither shade trees nor cultivated or wild plum trees should be allowed close to a hop garden. Hop vines after harvest should be immediately burned. Every farmer should be prepared to wash and spray his vines. Our climatic conditions are more favorable than other hop-producing countries. With careful management from the planting to the baling, we need not fear the skylight comparisons of the experts of the London borage.

Honey.

The wet winter of 1889-90, with favorable spring weather, caused an abundance of flower which was taken advantage of by the bees to lay in a large stock of honey. The output in 1890 was fully 25 per cent over that of 1889, while the grade averaged better. In 1889 there was a large percentage of dark, but in 1890 the percentage was quite small. The season of 1890 opened at 10 to 11 cents for select 1-lb. comb, 9 to 10 cents for 2 lb., 5½ to 5½ cents for best extracted, and 4½ to 5 cents for common to medium. The market held at about the above ranges until August, when there was a hardening of fully one-half of a cent in comb and one-quarter of a cent in extracted. In September values were again moved upward, choice to select comb going at 11 to 12 cents and best extracted selling up to 6½ cents. Prices continued to improve in October, best comb being marked up to 13 cents wholesale, and choice extracted commanding 6½ cents. During the last month of the year, sales of white comb in 1-lb. frames were effected at 14 cents, but transfers at this figure were confined mainly to jobbing operations. Choice extracted same month sold up to 7 cents, but this was also more of a jobbing than a wholesale rate. The year opens with rather small stocks in the hands of local jobbers. The shipping demand has been exceptionally good for both comb and extracted most of the season, in comb honey 1-lb. frames receiving the decided preference.

The movements of honey last year showed a decided increase to foreign ports direct. There was a total shipment from the State of over 23,000 cases. Of this quantity, nearly 20,000 cases were of the new crop. The shipments by sea included 2900 cases to England, 2013 to Germany, 200 to France, and several hundred to Australia. The largest single shipment was to Germany in September, 1131 cases per bark G. N. Wilcox, the same vessel taking a small lot of 50 cases for England. The next largest shipment of the year was also destined for Germany, being 775 cases in June per bark Deanfield for Hamburg. Seven ships destined for Liverpool took honey as part cargo, the invoices ranging from 76 cases to 700, and aggregating 2424 cases. The two largest amounts for Liverpool were by the Desdemona in November and the Armeda in October, the former vessel taking 700 and the latter 631 cases. Two shipments went to London direct, one of 125 cases in October and the other of 300 cases last month. The initial shipment of 1891, worthy of special mention, was cleared on Jan. 4th, for Liverpool, being 177 cases per ship California.

BUTTER.—Most excellent pasturage for the first six months of the year put the cows in the best of condition, causing large milkings and more cream to the pan. With an increased number of milch cows there was a liberal supply of butter, and notwithstanding more or less trouble in keeping the overland railroads open in January, the market drifted to lower figures and kept down well into the summer months. The grade of butter showed a decided improvement over former seasons. The number of cows in the State, according to county assessors' returns, compare as follows for the years 1889 and 1890:

	1889.	1890.
Thoroughbred.....	1,861	2,005
American.....	154,882	187,956
Graded.....	93,842	63,729
Common.....	8,339	8,880
Totals.....	258,915	262,570

Owing to the close competition with the creameries in the Central States, our dairymen are adopting all improved methods for bettering their products, and also to enable them to turn it out cheaper. Creameries have been established in several localities with unqualified success. These will, undoubtedly, be followed by the establishment of creameries in other parts of the State. It is found that farmers owning from two to ten cows, have better returns from creameries than where they make their own butter. Creameries are being established in Oregon and Washington with marked success.

The butter market opened the year fairly steady at a range of 12½ to 24 cents per pound for fair to gilt-edged. An easier feeling set in about the middle of January, closing the month at a range of 8 to 20 cents for fair to gilt-edged. In February, under free receipts, gilt-edged shaded off 1 cent a pound. The stock being large and heavy supplies to draw from, dealers were forced to seek outside outlets to work off the surplus. March witnessed still lower figures. The lowest scale of gilt-edged ever recorded in this market was made about the middle of the month. The consignment noticed was closed out at 14 cents. Owing to the low prices of dairy products and the high price of hocks in good condition, many dairymen were liberal sellers of cows. The low price of butter induced free packing, which created a firmer market, bringing about a slight advance in April. The range in this month was 8 to 16½ cents for fair to gilt-edged. The market in May hung around about April prices. It was kept down by forced sales, owing to bot weather and also to Central States creamery butter coming in. In June, packers and dealers bought quite heavily, cleaning up the market on several occasions, yet prices did not appreciate much. The market the forepart of July was weak, but began to strengthen about the 15th, closing the month quite strong at advancing figures. From this on there was a steady advance. The range soon went up to 15 to 30 cents, and before the end of the fall months a still higher range was established. By the end of the year, gilt-edged sold at over 40 cents a pound. The consumption in this State showed a large increase in 1890, while a light output in the Central States, causing higher prices, did away with the active low-priced competition witnessed in 1889. The year closed with comparatively light stocks.

CHEESE.—The market opened the year firm for mild at 11 to 12½ cents for choice. The market moved similar to butter, only the decline was not so rapid, yet it shaded off steadily. The lowest prices were touched the fore part of June, when the range for mild was 5½ to 7½ cents for good to gilt-edged. Toward the close of the month a stronger feeling set in, bringing about an advance in July. From this on, the market held strong, at slowly advancing figures, with only a few concessions noted at times. December saw stocks reduced to a lower point than for a long time past. This, of necessity, brought about higher prices—the range for mild being from 12 to 14½ cents for good to gilt-edged. More cheese was brought in from the Central States, but the higher market there necessitated an advance price for the cheese here, which helped to maintain the market for Californian. State creamery cheese has made

a decidedly favorable impression, consequently it finds a quick market with us.

EGGS.—Owing to snow blockades and bad inland roads, eggs advanced from 32½ to 42½ cents a dozen at the opening of the year to 37½ to 47½ cents for good to selected Californian. With the blockade raised by the 15th of January, prices broke 10 cents. The month went out on a weak market at 27½ to 35 cents. In February there were heavy receipts overland, which, combined with free supplies of Californian, caused the market to go down with a rush, for by Feb. 5th the range was 15 to 20 cents. In March a still lower range was reported; sales were made at 14 to 17 cents. The market fluctuated between this range and 17 to 20 cents up to July, when a better feeling set in, resulting in higher prices. From this on the market began to grow, but naturally it had at times setbacks. Overland receipts are an important factor in our market and do no little in regulating values, for no sooner do prices for Californian advance sufficient to warrant drawing from Utah, Kansas and Nebraska than buyers order by telegraph for carload shipments. The consumption in this State is increasing, and a fair to good market is always assured. Take the year 1890, for the first five months after January the price did not go above 20 cents, yet from July to January it did not fall below 27½ cents for choice, while several times eggs sold up to and even above 40 cents. It is safe to calculate on an average, the year round, on the basis of 25 to 30 cents a dozen.

Vegetables.

GARDEN TRUCK.—With better railroad facilities and smaller farms, gardening is enlarging. Many new gardens are being brought under cultivation, owing to the profits when properly managed. The East is a large consumer of our garden truck in the early spring months. The heavy rains and flooded condition of the ground in the winter months of 1889, combined with cold, frosty weather up to the spring months, kept vegetation backward, and it was well into May before garden truck began to offer freely. Previous to this, our main reliance for early vegetables was upon the southern counties. Green corn came to hand in January from E. J. Baldwin's ranch in Los Angeles county.

ONIONS.—The market was weak the fore part of January at from 60 cents to \$1.25 per 100 lbs.; but with lessening supplies and a fair demand, prices began to strengthen, resulting in a marked advance, being quoted at \$1.25 to \$2.75. With freer supplies, the market shaded off 25 cents a hundred the first week in February, but soon recovered, with quite an advance by the end of the month, when the range was \$1.25 to \$3.15. The market came in strong in March, with several sharp advances reported. By the middle of the month, choice good keepers sold at over \$5.25, or 5½ cents a pound. The high prices brought in freer supplies, which caused the market to shade off. In the first week in April, sales were made as low as 4 cents for extra choice; by the 15th they sold at 8 cents. In this month, consignments from Australia came to hand and were placed at 3 to 6 cents per lb. The month went out on a strong market, with 12 cents paid in a small way for the best selected good keepers. May came in on a strong market, with Australia sending us free shipments—all being readily placed. About the middle of the month, new came in on the market and were placed at 2 to 3 cents. From this on, new began to come in more freely, and owing to their relative cheapness, the trade gave them preference. The prices gradually settled until the normal ranges were reached in the summer months, from which time the market showed no material change until December. In this month, supplies began to lessen and the market strengthened. The year closed on a strong market, ranging from 1½ to 2½ cents.

POTATOES.—Large numbers of farmers, relying upon California's average winter weather, did not dig their potatoes, and as the rains set in early (October, 1889,) and continued with only short intervals of clear weather well into March and April, the majority lost fully one-half of their crop. Many who secured their crop were unable to make deliveries, owing to the almost impassable roads. These adverse influences were not confined to this State alone, for Oregon farmers suffered from bad weather. For the first three months of 1890 the market steadily but slowly appreciated until as high as 3½ cents per pound was paid for consignment parcels of extra choice on the wharf. The high prices here caused heavy shipments to us from the Central States—the first time for many years. In March and April the receipts from this source assumed large proportions, aggregating 36,813 sacks in March and 80,917 in April. In May they aggregated only 17,798 sacks, and with June they ceased entirely. High waters prevented early planting on lowlands, while on uplands the planting was delayed. In the southern part of the State there was large planting. With April and May, the receipts of new potatoes became an important factor, and as the receipts increased and sizes grew larger, prices began to set back; but at no time during the year did they fall to as low figures as the lowest ranges in either 1888 or 1889. This was due to a very large fall demand overland—the shipments Eastward aggregating larger than during any preceding year. In December the market began to show more strength, resulting in a slight advance, causing the year to go out on a strong market. Although the supplies in the State are large, they

are held for higher prices. In the southern part of the State digging of potatoes is being successfully and economically done with machinery. Receipts last year aggregate as follows: California, 1,071,183 sacks; Oregon, 88,797; Eastern, 149,044. Total, 1,308,024 sacks, against 1,326,202 in 1889.

**BEANS.**—The small stock carried over from 1889 was barely enough to meet requirements up to the new-crop season. This caused a strong and fairly steady market at good prices. The new crop was large and of good average grades. The East and Central States having light crops, afforded us a good market, to take advantage of which, heavy shipments were made. Trainloads were the order. There was one trainload (11 cars) of Lima beans alone—the first in the history of the State. The stock at the close of the year is light, hardly enough to meet trade requirements before the new-crop season. The year went out on a strong market for all kinds.

#### Deciduous Fruits.

The crop of 1890 was mixed, being from barely an average yield to the tree in apricots and prunes to a large yield in apples. The cherry crop was short, as was that of peaches; but that of plums was an average. Early in the year buyers began contracting for fruits, and as the season drew near, competition grew more pronounced. The buying was stimulated by confirmed reports of light crops at the East, particularly that of peaches. The competition in buying came from shippers, driers and canners. This (and also the range of prices) was enlarged on in a review of the industry published in the RURAL PRESS last November, to which our patrons are respectfully referred. According to the returns made by county assessors, the number of fruit trees in the State in March, 1890, was about 16,000,000—being an increase of over 20 per cent on the number returned one year before, yet this large increase did not yield enough fruits to meet the increased demand. The high prices received for fruits have stimulated tree and vine planting to an enormous extent. So large a proportion has the planting assumed, that many are seriously debating the question if it is not being overdone. Conservative growers and dealers think not. They argue that our peculiar diversified climate and soil are well adapted to the growing of the choicer kinds of each and every variety of fruit, and there is always a ready market for the best. While prices may not in the future yield so large profits, yet they will give the careful orchardist a good annual income.

#### Citrus Fruits.

The season of 1889-90 to growers was, taken as a whole, very profitable, although the consumption of oranges on this coast the first three months of the year was quite light and prices averaged low. This was due to cold weather and continued heavy rains causing more or less distress among laboring classes, owing to their being unable to work outdoors. With the worst of the winter past, the consumption began to enlarge, which was followed by better prices. The shipments overland to distributive points on this coast were very large, aggregating for the season about 3200 carloads. For the present season, the better informed place the shipments at a little over 4000 carloads. A very notable feature of the present season is the fact that the first carload shipments from the State were made during the last month from Oroville. Hitherto the crop of that section has been marketed in small lots, but this season several full cars have been sent East and more will follow. During the past five years there has been a large acreage of oranges planted in Butte, Placer, Yuba and the neighboring counties, and the young trees are now commencing to bear. There are also many small orchards of mature trees, which are heavily fruited and are supplying the carload shipments now being made. These shipments set at rest forever a great deal that has been said of a skeptical character with regard to the practicability of producing oranges on a commercial scale in the central or northern part of the State. Facts are stubborn things, and as the carloads of oranges from Oroville and elsewhere go rolling East, they afford an object-lesson of the most convincing kind to every unprejudiced person. More attention given by growers to cultivating and caring for the trees is having a healthy, stimulating effect upon the quality of the fruit. This speaks well for the future, for without its continuance the product would deteriorate and be hard to place.

Lemon culture is attracting more attention, now that orchardists have mastered the situation of properly gathering and curing the fruit. The profits are large.

Olive culture is making remarkable progress. The market for the fruit and its products is enlarging. The oil is second to none and is far superior to the large bulk of imported. Of course this applies to the oil produced by those who have given close attention to the proper methods for its manufacture.

#### Raisins.

The predictions made by the RURAL PRESS are being verified, that the raisin industry would steadily increase in importance and would eventually not only drive the foreign from the markets of this country, but will compete successfully for the better foreign distributive markets. Of necessity, packers must give close attention to the curing, selecting and packing of the fruit, so that the different

grades will be uniform in color, size and quality. There was a large increase in the number of vines that came into bearing in 1890 while the weather was favorable to the growing crop. The output of the vines was large and generally of excellent quality. The curing and packing was extended well into the year; the second crop, when not extended too long, was of uniform good quality; but the cupidity of several packers caused them to grasp all in sight and by packing too late, their last packing is said to have been poor. The pack in 1888 aggregated 1,104,000 boxes; in 1889, 1,237,500; and in 1890, taking returns from actual shipments and estimating from best obtainable sources—the stock still held, the pack aggregated as follows:

Counties.	Boxes.
Fresno.....	1,050,000
San Bernardino.....	510,000
Yolo.....	275,000
San Diego.....	175,000
Los Angeles.....	40,000
Sutter.....	17,000
Shasta.....	6,000
Yacoville.....	14,000
Marysville.....	17,550
Santa Clara.....	40,000
Sonoma.....	15,000
Merced.....	17,000
Ventura.....	10,000
Colusa, Tehama, etc.....	10,000
Total.....	2,197,493

Growers and curers who sold their product as soon as matured realized as a rule good figures fully up to those of former season, 5@6¢ per pound being paid for raisins of desirable quality in the sweat-boxes. That portion of the crop which was marketed from second hands early in the season (and most of the yield was then disposed of) brought moderately firm figures, close to those of the previous year, London layers (fancy packs about 250 a box above outside prices) going mostly within range of \$1.75@2 for whole boxes, with loose Muscatel selling up to \$1.75 per box for select, while prior to December there were few sales of loose Muscatel of most common grade under \$1.25 per box. During the last month of the year the market developed considerable weakness, partly owing to the season being well advanced, but to a very large degree due to the late depressed condition of the money market in the East and in Europe. There are more raisins on hand than at the corresponding date last year. The stock of well-known and favorite brands is not particularly heavy, and such will probably clean up at figures near to those established when the season opened, but the outlook for common sorts is not encouraging to the holding interest, as these have been lately going at decidedly irregular and in the main rather low prices, although at the close the stock appears to be cleaning up. The above remarks are for the most part concerning layer raisins and loose Muscatel. Seedless Sultanas were in exceedingly light supply this season and brought firm rates, sales being mainly at 7@8¢, and in some instances higher prices were realized. There were few California seedless raisins of any sort thrown on the market the past year. In the season of 1889, Sultanas were in more than ample supply and some had to be disposed of at figures which were not satisfactory.

#### Dried Fruits.

Dried fruits this season met with a good market at satisfactory, and in some kinds, high prices. The output was large and of a good average quality. The short crop of green fruits at the East brought to this coast strong buyers who, in their competition to secure dried fruits, ran prices well up.

**PRUNES.**—The yield to the tree was below an average, but the quality was better. The product of California prunes for 1890 is estimated from 600 to 900 cars. There are still some on hand, more than dealers generally care to see after the midwinter holidays. The market the past season started in at 6@7¢ while the prunes were still on the trees, and prices moved steadily upward until 10¢ was realized for the four sizes, and extra large were placed at 12½@13¢ in a small way.

**PEACHES.**—A short crop at the East, and high water in this State killing many trees, caused an early and active demand. Bleached in 1889 sold within 11@15 cents for unpeeled and 25@30 cents for peeled, the range on common sun-dried being 7@10 cents. This season the market opened at 15@17¢ for bleached unpeeled and rapidly advanced to 21 cents, with common sun-dried held up to 15¢. But the market soon receded from the above high figures, and lately has been lower than at the opening, with unpeeled bleached hardly quotable at 13@14 cents wholesale. Peeled peaches did not fluctuate correspondingly, selling early in this season, as in 1889, at 25@30 cents for bleached, but for the past month or more 25 cents has been about the utmost obtainable wholesale, although there are few remaining and there were not many of this sort on the market at any time. There were probably not to exceed 2400 tons of California dried peaches of all sorts in 1890, fully 2000 tons of which were unpeeled bleached, and it is doubtful if there were much over 100 tons of peeled.

**APRICOTS.**—The output to the tree did not average that of 1889, yet the increased number of trees bearing caused a slightly larger quantity. The 1890 output is estimated at a little over 3000 tons. Prices were better than for 1889, evaporated the current season selling from 13 cents in sacks up to 20 cents in boxes, and sun-dried going at 10@14 cents, while previous year 12½@15 cents and 8@10 cents were

the ranges respectively for evaporated and sun-dried.

**PLUMS.**—Pitted plums brought high prices under a light output, commanding 10@13 cents during a great portion of the season, as against 5@7 cents in 1889. There are few now offering and very few wanted, even at decided concessions from figures which were lately current. Unpitted plums were very little sought after, either the past or previous year, but ruled higher the past season than the preceding one, being quotable at 3@4 cents as against 1½@2½ cents in 1889. Less than 250 tons of dried plums were turned out of last crop, over two-thirds of which were pitted.

**NECTARINES.**—The crop was light and the quantity dried was below that of 1889, being only about 200 tons. White sold well at 10@13 cents, while red dragged at 7@9 cents. The former year, white went at 8@10 cents and red at 6@8 cents. This fruit is slowly growing in favor.

**APPLES.**—The low prices of 1889 caused less to be cured in 1890. The good prices ruling for the green fruit caused larger selling in that state. The quantity dried is estimated at 400 tons. Evaporated have sold from 10@12½¢, and sun-dried mainly at 6½@7½¢. During the preceding season, prices were 8@9¢ for evaporated and 3½@4½¢ for ordinary. Pears were not dried extensively, the entire quantity probably not being in excess of 100 tons. The demand was limited and prices were irregular, some common quartered dragging at 5@6¢, while sales of sliced and evaporated in boxes up to 12½¢ were rather exceptional.

**FIGS.**—The quantity and quality are steadily gaining. Well-known brands are not only readily placed, but are growing in favor wherever introduced. The pack is estimated at 100 tons. While some brands fetched higher figures, average white of good to choice quality sold at 8@10¢, but black did not meet with active request, going at 2½@3½¢ in sacks and 4@6¢ in boxes, as to grade and other conditions.

**DRIED GRAPES.**—This industry is enlarging and the products growing in favor. The quantity produced in 1890 is believed to be not less than 4000 tons. There was extensive business within range of 3½@3¾¢, and in some instances, to cover urgent needs, 4@4½¢ was paid, but 3½¢ has been lately the extreme of the wholesale market. In 1889 the top figure was 3 cents.

#### Nuts.

More attention is being given to the cultivation of nuts, and all the best improved varieties are being successfully cultivated. The crop of 1890 was of excellent quality, there being very few complaints of poor nuts. The crop of walnuts in 1890 was much superior in quality to that of 1889. Prices have ranged from 8@9¢ for small nut and hard-shell up to 12@13¢ for large and select paper-shell. All walnuts of the last crop are well matured and have white meat. The almond crop was not a heavy one, and prices were on a rather high plane, with quotable rates from first hands 15@16¢ for paper-shell, 13@14¢ for soft, and 5@6¢ for hard-shell. The market has not been hardened with offerings at the above figures, especially of paper and soft-shell. Peanuts have never been produced in larger quantity in this State than during the past season. Over 7000 sacks have been received at this center, and stocks at producing points are not exhausted. Prices have been rather favorable to the growing interest. Early sales were effected as high as 7¢, and some few transfers were made down as low as 4¢ for common quality, but the market for several weeks past has been moderately firm at 5 to 6¢ for good to choice. Shipments of all sorts of nuts outwardly by rail over the Southern Pacific railroad aggregated for the year 1,500,000 pounds, fully 75 per cent of the entire amount going from the southern part of the State.

#### Canned Fruits.

No statistics are obtainable for 1890, but the pack was in excess of any previous season. The following covers the situation as gleaned from Col. Outler, president of the Canning Packing Co.:

"The fruit season here begins in May and ends in November. Stocks carried over last spring were rather large; more so than usual, and prices were the lowest known for a great number of years. Prospects then were not very good. Travelers, however, made a great many sales in the East, but at very low prices, based on those ruling during the preceding winter and during the last half of 1889. The Eastern crop of fruit at that time, and up to July 1st of 1890, promised fairly. There was no occasion for any feeling that there would be an advance in values, either of California green or canned fruit. In July, however, it became apparent that the Eastern fruit crop was a failure, and from that time till October the prices of California fruit of every variety, that is to say, green, dried and canned, appreciated in value from 50 to 200 per cent. Under these circumstances the shipments of fruit were of course larger than had been expected, particularly those of green fruit. As a consequence the values of all three of these preparations of California fruit increased very heavily. Unfortunately, this did not assist canners very much, for they had sold largely in advance before the rise in green fruit was known, and as they had failed to contract for their green fruit, of course they had to pay high prices without reaping any benefit from the advance in the manufactured article. Consequently the season

as a whole has not been a prosperous one for canners. The amount of fruit used and the volume of the pack is probably larger than in any year since 1887. The prospects for next year are that the Eastern crop will resume its normal condition and be a large and good one, also that the prices of the California product will be raised for all kinds of fruits in whatever shape they are put on the Eastern market. The ordinary stock of canned fruits is very large, both here and throughout the State, but in view of the Eastern crops for another year the prices will not sympathize with the scarcity. The domestic trade at present is very dull, and will continue so till February, if not March. The foreign trade for California fruits has been very good during the entire season, and the prospects are that the demand will continue good. If the quality is better than Eastern fruit, and the article is nicely prepared, it goes to the foreign consumer at fair prices and in considerable quantity."

#### Hay.

The rains in the winter of 1889-90 gave most excellent pasturage well into the summer months. They also were productive of a larger yield of hay. Although the crop was large, yet it went into consumption at high prices. The range of values throughout 1890 was remarkably steady. Gilt-edged wheat in this city did not go above \$18.50 when the scarest, and did not fall below \$17.50 when most plentiful, if we except some forced sales in the early part of the season. The increasing attention given to horticulture is causing a large yearly feeding of hay. More attention is being given to the growing of alfalfa. The sales of the seed this year were very large, which is a true index of a larger acreage seeded. The outlook for the crop this year is promising. Many more fields have been seeded to grain to be cut for hay.

#### Live-Stock.

The severe winter of 1889-90 in this State and also in Nevada killed large numbers of cattle and sheep. In the latter State the loss was fully 40 per cent. The high price of feed and fears of losing stock caused a large selling pressure, yet at times prices were advanced to good figures owing to bad roads and the suspension of railway travel by floods and snow. Arizona sent us large supplies of bullocks, when dealers advanced prices in January and February. With these liberal receipts and supplies to draw from, the market in March and April shaded off at slightly fluctuating prices. In the summer and fall months, bullocks ruled at low prices, but sheep held strong, corn advancing owing to warm weather causing butchers to run on them. With the winter months, bullocks strengthened, as did sheep. The latter advanced quite rapidly under a strong buying in the interior by farmers who wish to keep a few head on their places, the same as is done by farmers at the East. Of course they will breed chiefly for the carcasses. Hogs ruled high and strong throughout the spring months. With warm weather, large hogs were slow and hard to place, but light hogs for the block were wanted. The prices ranged from ½ to ¾ cent below spring prices. In the fall months the market began to strengthen, and toward the close of the year the spring prices were realized by sellers. The establishing of a large packing establishment in Contra Costa county by a moneyed corporation will do no little in placing the cattle, sheep and hog industry of this coast on a healthy footing.

Don't experiment with your health. You may be sure of the quality of your medicine, even if you have to take much of your food upon trust. Ask your druggist for Ayer's Sarsaparilla, and no other. It is the standard blood-purifier, the most effective and economical.

#### SORGHUM

Now that Sorghum is again attracting the attention of farmers throughout the country, it is well to know that the Sorghum Hand-Book, a valuable treatise on the cultivation and manufacture of Sorghum, may be had free of charge on application to the Blymyer Iron Works Co., Cincinnati, O.

Northrup, Braslan & Goodwin Co.'s Catalogue of Northern Grown Tested Seeds, in addition to being a handsome specimen of the lithographer's and engraver's art, is a notable one in that EVERY VARIETY OFFERED IS ILLUSTRATED TRUE TO NATURE. This is a new departure that should be appreciated by every purchaser of seeds. Mailed free on application to Northrup, Braslan & Goodwin Co., Minneapolis, Minn.

# THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

## WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

For Sale in Lots to Suit by

**H. M. NEWHALL & CO.,**

AGENTS.

309 & 311 SANSOME STREET, SAN FRANCISCO, CAL.

N. B.—By courtesy of the Southern Pacific Company we have low rates on this Fertilizer to all parts of the State.

## BEET SUGAR FACTORIES

**E. H. DYER & CO.,**  
Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar.  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufacturers of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**RAISE IN RATES.**—Livermore *Herald*, Jan. 17: The Southern Pacific Company has issued a new hay schedule which practically raises rates twenty per cent. The twenty-eight foot car, which has been rated at ten tons, minimum, is now placed at eight tons. The rate on such car from Livermore to San Francisco is \$14.40. The rate per ton has therefore been \$1.44. It is now really \$1.80, and all weight over eight tons is charged at that rate. Larger cars are rated in proportion. This is a straight raise in rates of 36 cents per ton. Our warehousemen are merely charging the difference to San Francisco buyers, at present. What they will do next summer, when they become buyers, remains to be seen; but the farmers will be called upon to make up the difference. At present, hay is in active demand at very high rates, and the consumers must stand the raise.

## Butte.

**A NEGLECTED FRUIT.**—Marysville *Appeal*, Jan. 15: When Col. Irish was making the rounds of the fair the other day he called attention to the merits of the pumalo, a fruit of the citrus family. In Florida it is known as the grape fruit, and is largely consumed. It is esteemed for its refreshing and bigly flavored acid juice. With the addition of a little sugar to counteract the excessive acidity, most persons find the pulp of this fruit very grateful. The juice may be employed as lemonade. Here no use is made of the pumalo, but it will probably come into favor when people learn how to use it. In the South it is esteemed valuable in fevers and as a preventive of malarial disorders.

**THE BIG BEND CANAL.**—Palermo *Progress*, Jan. 16: We learn that a company is being formed, of which Dr. R. V. Pierce is president, for the purpose of building this canal along the foothills from the Feather river to Honcut. This canal will be of untold benefit to all the foothill land in the neighborhood of Wyandotte that can be irrigated by it, and to the land around Honcut, which is the ultimate destination of the canal. This company has about 10,000 acres of fine land which will be subdivided and placed on the market and will furnish homes to thousands of families who are interested in fruit-growing. Nearly the whole of Eastern Butte county south of the Feather river will be amply provided with water. Palermo already having a great abundance stored in three or four large reservoirs and the above canal supplying the county south of us, we shall soon be one of the great fruit-growing sections in the State. We wish our neighboring towns success, as these enterprises benefit not only their immediate vicinity but the entire country surrounding it.

## Fresno.

**WHEAT SHIPMENTS.**—Fresno *Expositor*: The shipments of wheat from Fresno City during the season of 1890 were as follows: To Port Costa, 31,643 575 pounds; to Stockton, 1, 604, 140; to Los Angeles, 6,788,215; to San Francisco, 150,550; to Sacramento, 44,000; to Oakland, 274,270; to local points, 455,690. Total, 40,956,457. Of barley, to all points, 1,665,455. Total grain shipments, 42,269,121 pounds.

**THE WOOL CLIP.**—*Expositor*, Jan. 14: The herds of sheep that at one time ranged over the Fresno plains have been gradually decreasing in number since the advent of what may be termed the new era in the development of the resources of the soil. Notwithstanding the large decrease, this county still takes rank among the first in the production of wool. The clip of 1890 was almost equal to that of 1889, and the price a shade better. So far as the most reliable statistics that can be gathered from dealers in this county, and from the railroad agents, it was about 5,000,000 pounds.

**A MEDAL FOR RAISIN DISPLAY.**—Fresno *Republican*, Jan. 16: The Fresno Fair Association at its fall exhibition, 1890, awarded to Ben R. Woodworth a gold medal for the display of raisins. They had a medal engraved and have presented the same to Mr. Woodworth. It measures about three inches in diameter and is handsomely engraved. On one side is a reproduction of Mr. Woodworth's fine vineyard and home, with the inscription, "Las Palmas Vineyard, Ben R. Woodworth." On the reverse side is the following: "Awarded by the Fresno Fair Association for the best Exhibit of Raisins, October, 1890."

## Humboldt.

**EDITORS PRESS:**—So far, we have had a delightful winter, and stockmen are beginning to recover from the effects of last winter. Stock is in excellent condition with every indication of a light loss. Owing to the large number of dairy calves that were bought up in the valleys a year ago and taken to the hills (nearly all of which died last winter) but few were driven out of the valleys this last fall, but those which were taken out are in such good flesh that they will surely be able to endure any reasonable amount of exposure for the next two or three months. A person buying these calves at from \$5 to \$7 can more than double this money the first year, if they succeed in saving all of them. The Alder Point bridge, across Eel river, has just been completed at a cost of \$35,000, and is a substantial structure. There is talk of a wagon-road being extended from Bridgeville,

on the overland road, to Hay Fork, Trinity county, to open a through road to Red Bluff and the Sacramento valley.—ALERT.

## Kern.

**CROP PROSPECTS.**—Delano *Courier*: If the season's rainfall is sufficient (and it is very promising now) there will be an enormous amount of grain reaped from the plains along the foothills to the eastward. Extending from White river to Deer creek, the level plains will be one vast grainfield, and south from White river to Poso thousands of acres have been turned over and put to crop.

## Los Angeles.

**HARVESTING ORANGES.**—Downing *Champion*, Jan. 17: Mr. Sresovich has contracted for the greater portion of the orange crop in this immediate vicinity, and is now busy with his crew relieving the orchards of their ripest fruit, and making shipments of the same. Six carloads have already gone forward, mostly to the San Francisco market, to be followed by a carload every second day during the season. Mr. S. assures us that the crop is the finest in quality that he has ever seen in this vicinity, being perfectly bright and clean and good sizes. He is at present taking from the trees the ripest fruit. By his method of gathering, the trees are immensely benefited, as by being relieved of the bulk of the fruit early in the season the trees are in better condition to blossom for another season's crop. Mr. S. is of the opinion that the early market will realize the best prices.

## Merced.

**A BUCHACH PLANTATION.**—Merced *Star*: The work of gathering and drying the buhach blossoms is in full blast at the buhach plantation. About one hundred men are scattered through the fields picking the blossoms. As fast as they are picked they are stowed away, about two inches deep, in wooden boxes, which are two and a half feet square. Wagons are employed in hauling the boxes to the drying-house. The sun's rays come down within the inclosure of big poplar trees with a force that makes it pleasant to stand from under. The trays are allowed to lie there, the blossoms being stirred up by a force of men until they (the blossoms) are fairly oiled. Afterward they are placed on a large platform about sixty feet square, where they remain until dry, and then are sent to the reduction works, where they are ground into dust. This is done by men who are proof against sneezing, otherwise it could not be done at all.

## Monterey.

**THE SEASON.**—Editors *Press*:—We had a fine shower on the 4th inst. Farmers say the ground is in good condition to work. There will be a large acreage sown, but we will need much more rain to mature the crop, as the rainfall has been very light to date. We are having clear, frosty nights, and warm, bright days.—L., Soledad.

## Plumas.

**FARMERS PLOWING.**—Crescent Mills, Jan. 10: Our farmers have been plowing and seeding, and will keep at it as long as the weather permits.

## San Benito.

**VEGETABLES AND FRUIT.**—Hollister *Free Lance*, Jan. 15: San Benito county contains very rich, moist land just suitable for growing vegetables. There are several small farms in the county, owned principally by Italians, who pay particular attention to this industry, and who are reaping very profitable returns from their labor. Yet these vegetable ranches are totally unable to supply even the local demand at Hollister for vegetables and small fruits. There is an excellent opening here for a number of men to locate who understand the culture of choice vegetables, strawberries, raspberries, currants, etc.

**DAIRYING.**—Hollister, Jan. 15: The San Justo dairy, the property of Flint, Bxby & Co., employs a large force of men the year round, and sends to the city immense shipments of cheese which commands the biggest market-price. There are also other dairies at San Felipe, San Juan and Quen Sabe, besides many smaller ones throughout the southern portion of the county. The business is not conducted on such a large scale as it should be, and with the facilities that we have in the Hollister valley for raising alfalfa and other green feed the year round, a large amount of capital can still be profitably invested here in the dairy business.

## Santa Clara.

**FRENCH PRUNES IN SARATOGA.**—Gilroy *Gazette*, Jan. 13: A *Gazette* reporter has been making a trip around the Saratoga fruit district and reports orchards there as looking very finely. A very large amount of land is being converted from grain and pasturage to fruit and vines. The principal planting is of prunes of the French variety. The best-informed orchardists state that in moist land the Myrobian root is preferable, but if the land is tolerably dry and free from overflow, the almond root is far the best. From 275 trees on the latter, Mr. Russell gathered 20 tons of green prunes, which he sold at \$45 per ton, a result for a little over two acres of \$900. This gentleman, finding that his trees overlapped their branches and broke them from the tree trunk from the weight of the fruit, has adopted a novel but perfectly satisfactory device for the prevention of such mishaps, by boring at the point where the limb branches from the trunk a five-eighths inch hole and placing therein an iron bolt fastened by a nut. This is covered

in two years by the growth of the tree. His trees so treated have not sustained any further breakage of limbs or trunk, although the former have been laden heavily with fruit.

## San Diego.

**LARGE OLIVE YIELD.**—S. D. *Union*, Jan. 15: A big portion of this region's olive crop has been purchased for the Frank Kimball olive-oil mill at National City, including those from the orchards of Major Chase, the Cowles, Flynn, Geeler and Ames places, all in Cajon valley. Mr. Kimball says that they are all Mission olives, excepting some Picholines in the Cowles crop. These have a large pit and a small amount of flesh, and consequently less oil than the other variety. He has also purchased R. C. Allen's crop from the Upper Sweetwater. The trees Mr. Kimball sold him in March, 1888, and they were then less than two years from the cuttings. The best of these are now yielding a barrel of olives to the tree. The bottle order for the factory last year was 12,000, and now 48,000 bottles have been contracted for. Crushing is in progress, and to-day filtering for sample bottles will be begun, chemical paper being used to enable them to be ready soon. The filters will not be in use for at least 50 days.

**FARM NOTES.**—Bernardo *Cor. San Diego*, Jan. 13: O. Oaks has about 450 acres sowed to wheat. Win Smith is making arrangements for putting out a 25-acre vineyard and several hundred fruit trees. John Haessler is getting ready to put out 1500 fig cuttings, 100 prune trees and several hundred other trees.

## San Joaquin.

**TREE AND VINE PLANTING.**—Lodi *Sentinel*, Jan. 17: Cecil D. Walter has been kept busy the past two months planting and making preparations to plant for different parties large acreages of orchards and vineyards in the vicinity of Lodi. From Mr. Walter the following planting news was gleaned: H. B. Barkis, foreman in Sperry's mill of Stockton, is planting 30 acres on the Tillmudge tract, two miles from Lodi, to assorted fruits. Edwin F. Smith, Secretary of the State Agricultural Society, who two years ago planted 40 acres of apricots adjoining the Langford colony, is this year planting 40 additional acres to prunes. Leroy Pope is putting out 40 acres in the Elliott tract two miles east of Lodi. John Theden, who purchased 10 acres of T. W. Boalt in the Gersten tract a few days ago, has bought 10 acres adjoining and is making arrangements to plant 20 acres to vines. A Mr. Holland, recently from Kansas, has purchased 10 acres on the Tom Pope place, and will set it out in assorted trees this spring. Many more are planting or contemplating planting this season, which, together with the large acreage that will be planted in Langford colony, will make a good showing at the end of the season.

## San Luis Obispo.

**GOOD PRICES FOR STALLIONS.**—San Miguel *Courier*, Jan. 15: G. W. Fowler and J. N. Watson have sold a 3-year-old Clydesdale stallion to Webb & Van Gordan at Cambria, for \$1700. They sold a 2-year-old Clydesdale stallion to Roes & Labman at San Lucas, for \$1500. Mr. Fowler will keep one of the Percheron stallions at San Miguel.

**WHEAT-SEEDING.**—Adelade *Cor. San Miguel Messenger*, Jan. 16: Farmers are getting along very well, though seed wheat seems to be rather scarce in this neighborhood. If some large wheat-owner could only be induced to loan the small farmer wheat for seed and take his pay for it on shares, we feel sure that there would be a large harvest this year. I have just returned from a short visit to Dry Creek, Paso Robles and vicinity. Every farmer I met seemed determined to seed all his land in wheat. Some farmers are renting all the land that they can work. In passing over the country of Dry Creek, Estrella and Huer Huero, I find that in 10 or 12 miles square there are about 100 men who will seed from 100 to 2000 acres each. Jos. Moody will seed about 2000 acres, with several others doing the same.

## Sutter.

**PLANTING WILLOWS FOR LEVEE PROTECTION.**—Yuba City *Farmer*, Jan. 16: The commissioners of Levee District No. 1 have been planting willows along the levee near the Bunce place, below town, to protect the levee from the heavy wash of the water. Four rows about half a mile in length have been planted, which in time will form a good bulwark to the embankment.

**FLEMING CANAL.**—Biggs *Argus*: A full corps of surveyors is now at work on what has hitherto been known as the Fleming canal, and we may expect active work on the canal from now on until the ditch is completed. This canal, which will divert a large body of water from the Feather river at a point about four miles south of Oroville, will work a grand development in the southern part of Butte county. Thousands of acres of land hitherto used for cereal-growing purposes will be made to grow the finest of alfalfa and all the fruits that can be grown in any other portion of the State. All that land for miles in extent to the Buttes in Sutter county will soon be under irrigation and enhanced in value millions of dollars.

## Tulare.

**FIRST ORANGES GROWN.**—Traver *Advocate*, Jan. 15: The first orange tree in bearing in this vicinity that we have seen is on Mr. Richardson's colony tract, about a mile north of Traver. The tree is young and small, but the fruit is of average size and presents an attractive appearance, it being ripe and surrounded by dark-green leaves. The tree stands out in front of Mr. R.'s residence and is unprotected from frost, but it does not show the least signs of frost blight. A young orange tree in C. H. Williams' garden, in Vina colony, also had one orange on this year.

**WILD GEESSE AND GRAIN-FIELDS.**—Tulare City, Jan. 14: Wild geese are so destructive in the wheat-fields in the Buzzard Roost country, west of Tulare City, that some of the farmers there hire men to do nothing else but shoot them. E. W. Kay has hired a man for that purpose for several weeks, as the geese were getting away with the seed on 900 acres.

**GRAIN SHIPMENTS.**—Traver *Advocate*, Jan. 15: From this place 14,349,080 pounds of wheat and 754,980 pounds of barley were shipped during the year. This, with 35,000 sacks of the cereals remaining in H. Brownstone's warehouse, 1500 in the 76 warehouse and 20,000 in the Traver warehouse, makes a total of 23,014,000 pounds of grain as the cereal product of this vicinity for the year 1890.

**EXTENDING THE DITCHES.**—Traver, Jan. 15: At a meeting of the Alta District directors, surveys were ordered made for an extension of the Reed ditch from its present end near the county line, west, to cover 3000 acres of the Clarke land north of what is known as the old Clarke ditch. Another survey was also ordered for a ditch to branch off from the Traver branch of the 76 canal, west of the railroad track, to cover 12 or 14 sections of land west of Traver and in the southwest corner of the district. The necessary size of the ditches is to be estimated by the survey.

## Yuba.

**AN ORANGE-GROWER'S EXPERIENCE.**—Marysville *Appeal*, Jan. 18: Mr. Hutchins is a strong advocate of budded fruit and recommends its extensive planting. It begins to bear the first year, and in five years is in good bearing. He says few men care to wait the six years required for seedlings to bear. "Of course," said he, "the budded fruit is not so hardy as seedlings, but it will stand any ordinary winter. During the last 30 years we have had only one cold spell which would injure the trees, and then large trees did not suffer. My experience leads me to believe that the budded fruit is the kind to plant." Mr. Hutchins also advocates wrapping. He would wrap trees till they are two years old. He believes the trees would be as hardy or more so, and there is little danger of injury from cold weather. During the cold spell of three years ago, some of his budded trees suffered. He says if he had wrapped them he believes they would have come out all right. His young orange orchard has made an excellent growth and is in fine condition.

## NEVADA.

**REDUCTION IN HAY FREIGHTS.**—Reno *Gazette*, Jan. 15: The Southern Pacific Company has given Reno and Lovelock a still further reduction on hay to San Francisco. The rate now on a 28-foot carload is \$24; the old rate was \$30; and on a 34 foot car it is \$30; the old rate was \$37.50. This is a rate of about \$3 per ton, and if our people cannot ship hay at a profit now, it is certainly not the fault of the railroad company, for they have tried hard to please the people in the matter, and are deserving the thanks of this community. The new rate goes into effect to-morrow.

## CHILDREN

Are always liable to sudden and severe colds, to croup, sore throat, lung fever, etc. Remedies, to be effective, must be administered without delay. Nothing is better adapted for such emergencies than Ayer's Cherry Pectoral. It soothes the inflamed membrane, promotes expectoration, relieves coughing, and induces sleep. The prompt use of this medicine has saved innumerable lives, both of young and old.

"One of my children had croup. The case was attended by our physician, and was supposed to be well under control. One night I was startled by the child's hard breathing, and on going to it found it

## Strangling.

It had nearly ceased to breathe. Realizing that the child's alarming condition had become possible in spite of the medicine it had taken, I reasoned that such remedies would be of no avail. Having a part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses, at short intervals, and anxiously waited results. From the moment the Pectoral was given, the child's breathing grew easier, and in a short time it was sleeping quietly and breathing naturally. The child is alive and well to-day, and I do not hesitate to say that Ayer's Cherry Pectoral saved its life."—C. J. Wooldridge, Wortham, Texas.

For colds, coughs, bronchitis, asthma, and the early stages of consumption, take

**Ayer's Cherry Pectoral,**

221 Front Street, - - San Francisco, Cal.

## THE PACIFIC GAS OR GASOLINE ENGINE.

Patented June 17, 1890 - Nos. 430,504, 430,505, 430,506—also in Great Britain and Other Foreign Countries.

Starts Instantly Without the Necessity of Boiler, Fire  
or Experienced Engineer.

OVER 150 IN ACTUAL OPERATION.

The Engine uses from 20 to 25 feet of Coal Gas, or  
about one-eighth of a gallon of Gasoline, per hour per  
horse-power. Is now in use for Pumping Purposes, run-  
ning Printing Presses, Small Factories, Elevators, Jewe-  
lers' Lathes, Polishers, Dairyman's, Agricultural, Mining  
and Wood-working Machinery, Well Boring and all other  
purposes requiring cheap and convenient power. Persons  
having but little space will find this the most suitable of  
all Motors.

## USE IN BOATS.

The Company makes a Specialty of  
ENGINES FOR SMALL BOATS AND LAUNCHES.

Cohn, Marysville, Banana tree; John Guill, five varieties winter pears; Mrs. Andrew Binney, Marysville, marmalade and orange jelly; R. Hector, Placer county, Parson Brown seedless oranges.

[From our issue of Jan. 3  
Please Remit.

The beginning of a new year is a good time to settle up the debts of the old ones. We are obliged to remind those who owe the PRESS on subscription account, that it will be a great convenience to us if they will soon remit what is due. Those who can also pay in advance will also do us timely and well-appreciated favor. We are doing our best to present a very valuable paper, representing carefully, earnestly and conscientiously the welfare of its intelligent readers and the best interests of the arts, sciences and mining and mechanical industries of the Pacific States.

To do this we deprive ourselves of some of the most lucrative lines of patronage available to the average newspaper.

By paying as promptly as possible, friends, you will greatly encourage us in our sincere efforts to favor you and the best interests of your calling.

Cal. With an "If."

EDITORS PRESS:—I see that Abbot Kinney takes exceptions to "Calif." as against "Cal." as the abbreviation for California. If he will examine the U. S. Postal Guide through the year 1885, he will see that Cleveland's Postmaster-General—Wm. F. Vilas, I believe it was—made an imperative order that the abbreviation for California should be changed from "Cal." to "Calif." This order is now disregarded even by the postal department. But it was mandatory long enough to make "Calif." an authorized abbreviation.

Sanders P. O., Cal. W. A. SANDERS.

HOLDING HONEY FOR BETTER PRICES.—It may interest our bee-keepers to know that a subscriber of the Rural in Cuba, West Indies, has now 45,000 pounds of honey, which he is holding for better prices, and he expects to have as much more by March 1st. This will make a big bunch of honey, and we trust he will realize well for holding it.

That beautiful glossy sheen, so much admired in hair, can be secured by the use of Ayer's Hair Vigor. There is nothing better than this preparation for strengthening the scalp and keeping it free from dandruff and itching eruptions.

Our Agents,

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

ELMER JENKINS—Del Norte Co.  
H. C. HENKLE—Capay Valley.

A Book for Every Woman.

The wonderful sale of the book "Tokology," by Alice B. Stockham, M. D., has been the best commendation it has ever received. Everywhere it is finding its place in the home, guiding, relieving, advising and saving with its good sense and practical truths. It is not a common book, but every page of it is stamped with the worthy words of a woman who combines science and experience in a thorough and high-minded manner for the relief of her sex.—Exchange.

Price, prepaid, \$2.75. Very best terms to agents. See advertisement.

Price's Field Locomotive.

The item below from the Haywards Journal relative to steam plowing in Alameda county refers to the Jacob Price Field Locomotive exhibited at the last State Fair. This engine has now been plowing steadily for almost four months without a breakage, and at present is demonstrating that the smaller farms of our valleys can be advantageously cultivated by steam as well as the large ones.

Truman, Hooker & Co. will soon have a supply of these machines.

STEAM PLOWING AND SEEDING.—Haywards Journal, Jan. 2: A steam plow is in operation on a number of the fields of Irvington, and is attracting a good deal of attention. It does its work very speedily and effectively; but some of our old-time farmers think it looks rather uncanny walking over the fields.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Artesian

IRRIGATED FARM  
TO RENT.

Over 100 acres of improved land, good 7-room farmhouse, barn, etc., plenty of shade trees, 7 acres of bearing orchard, 20 acres of alfalfa, to rent on shares or low for cash. Within 7 miles of Tulare city. A good offering for a dry season. Also 320 acres of volunteer grain or hay adjoining. Address E. M. Dewey, Porterville, or A. T. Dewey, 220 Market St., San Francisco.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THE "TRIUMPH"  
— ALL METAL —  
SPADING HARROW.

The Best Pulverizer in the World!  
JUST THE THING FOR WORKING SUMMER FALLOW LAND.  
Specially Adapted for Orchards and Vineyards.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading Harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other Harrow in the world. THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

TESTIMONIAL:

HAYWARDS, CAL., JAN. 15, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal. DEAR SIR:—Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearying or exhausting on the team. Yours truly,  
WILLIAM C. BLACKWOOD.

**H.C. SHAW PLOW WORKS**  
STOCKTON, CAL.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

Yours truly, **JOSEPH MELVIN.**

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

**THE SPALDING HUMANE WIRE FENCE** is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.,** 195 La Salle St., Chicago.

**PURE**

**TRUMBULL, STREAN & ALLEN  
SEED CO.,**

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSEURS, H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 21, 1891.

General trade in farm products has been freer, with a strengthening in all lines. The weather continues dry, which causes among dealers some uneasiness, particularly after the hot norther on last Monday. The wind did not do any particular damage, owing to its short duration. All kinds of cereals are stronger and higher. In England, wheat moved down, but at the East it advanced. The following is to-day's cablegram:

LIVERPOOL, Jan. 21.—Wheat—California spot lots, 75 5/8 d to 75 9d; cargoes off coast, 38s 6d; just shipped, 38s 3d; nearly due, 38s 6d; cargoes off coast, quiet but steady; on passage, very little inquiry; Mark Lane wheat, slow; English country markets, quiet; French, stiff; wheat in Paris, quiet, flour steady; weather in England, colder.

## Foreign Grain Review.

LONDON, Jan. 19.—The *Mark Lane Express*, in its review of the British grain trade, says: English wheats are 6d dearer; foreign are firm. Flour is firm. At Liverpool corn advanced 1d 1/2 c, and at Leeds rose 6d 1/2 q. Barley is 6d higher and oats are 6d lower.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday.....	78 3/4	79 1/4	78 3/4	78 3/4	78 3/4	78 3/4
Friday.....	78 3/4	79 1/4	78 3/4	78 3/4	78 3/4	78 3/4
Saturday.....	78 3/4	79 1/4	78 3/4	78 3/4	78 3/4	78 3/4
Sunday.....	78 3/4	79 1/4	78 3/4	78 3/4	78 3/4	78 3/4
Tuesday.....	78 3/4	79 1/4	78 3/4	78 3/4	78 3/4	78 3/4

The following are the prices for California cargoes off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38s 6d	38s 6d	38s 6d	Firm.
Friday.....	38s 6d	38s 6d	38s 6d	Quiet.
Saturday.....	38s 6d	38s 6d	38s 6d	Quiet.
Sunday.....	38s 6d	38s 6d	38s 6d	Steady.
Tuesday.....	38s 6d	38s 6d	38s 6d	Steady.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday.....	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2
Friday.....	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2
Saturday.....	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2
Sunday.....	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2
Tuesday.....	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2	105 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Jan.	Feb.	Mar.	Apr.	May.	June.
Thursday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2
Friday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2
Saturday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2
Sunday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2
Tuesday.....	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2	98 1/2

NEW YORK, Jan. 21.—Wheat—\$1.05 1/2 for March, \$1.03 1/2 for May, \$1.01 1/2 for June, and 97 1/2 c for July.

CHICAGO, Jan. 21.—Wheat—94 1/2 c for May.

## Dried Fruits.

NEW YORK, Jan. 17.—Sales of three-crown loose Muscatel California raisins are reported at \$1.60 1/2 box, 10c below the general quotations.

A prime quality of evaporated California peaches is selling at 15¢ to 15 1/2¢ lb; fancy stock, 17¢ to 17 1/2¢.

NEW YORK, Jan. 18.—California obtains a fair share of January's dull business. The situation of dried fruits points to a better selling development, with a free display of upper quality raisins, and some bending to buyers' estimation. Of the grades boxed raisins have been coaxed along with considerable supply, reducing the effect. Choice faced three-crown, \$1.70 to \$1.75; layers, \$2.20 to \$2.25. Best established brands, bagged, range from 6 1/2¢ to 7¢. Useful to best inferior are slow and unsettled. Prunes are quite steady at 11c for four sizes. There was a brief inquiry for peaches, but no movement followed. There is no call for samples here or west. Apricots are firm and the last figures on the stock favor holders. Pitted plums, 16c; dried grapes, 4 1/2¢, extreme.

## Eastern Wool Markets.

NEW YORK, Jan. 16.—Bradstreet's says: Increased activity is noted in the wool market. Prices have not changed, but dealers consider them firmer and liable to advance should the present strong demand continue. All grades of wool are moving freely. Advice just received from Melbourne state that the upward tendency in prices is strong and firm, and a request for all grades of wool prevails. It is believed that such a condition in the Australian market insures high values at the opening of the London wool sales. The largest sales reported during the week have been made in Territories. The demand for pulled wools shows a steady increase. Ohio and Michigan fleeces and Texas and carpet wools are less active than a week ago. Holders are not making concessions in order to force sales, as all good wool is considered excellent property and will be in demand before the close of winter. Some large lots of Australian wool have been moved. Arrivals from the late Melbourne sales are in better condition than was expected, and manufacturers are securing a full supply of them, as it is believed that the lots in transit will be held higher.

NEW YORK, Jan. 18.—New York wool is in sympathy with strong current of New England trading. Business mainly Texas and pulled. Sales prompt at strong late prices. Stocks at seaboard gone out fast enough to almost insure for futures figures. Prospects of an extended cold season favor fabrics; unusual severe weather abroad will, to some degree, prevent the additions of clothing wool to our supply. Boston, active demand for all grades. Selling market no higher, but in the rush many lots quoted at the limit of value found buyers. Sales aggregate 4,332,000 lbs, of which about 650,000 lbs is foreign. Philadelphia expresses full former buoyancy of condition.

## Miscellaneous.

NEW YORK, Jan. 18.—Honey is scarce and strong; 7c for light amber.

Lima beans advanced to \$2.90. The new price is regarded as temporary by the trade, as the recent incident of filling liberal orders for Philadelphia for the moment cuts down the supply.

Hops show a better trade than for many weeks past; several hundred States, new, 32¢ to 36¢, the lat-

ter for nearly choice; State range from 32c to 38c for common to best; 1500 changed hands; 6c is now bid for the rest. Good olds, Oregon and Pacific range 30¢ to 37¢; fair sold at 32 1/2¢. Exports to date about equal to last year.

Enterprise and experience have made a marked improvement in California wines this season, which calls out applauding comments from many points of consumption.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	152 1/2	152 1/2	152 1/2
Friday.....	152 1/2	152 1/2	152 1/2
Saturday.....	152 1/2	152 1/2	152 1/2
Sunday.....	152 1/2	152 1/2	152 1/2
Tuesday.....	152 1/2	152 1/2	152 1/2

\*After August. †For the year.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	147 1/2	147 1/2	147 1/2
Friday.....	147 1/2	147 1/2	147 1/2
Saturday.....	147 1/2	147 1/2	147 1/2
Sunday.....	147 1/2	147 1/2	147 1/2
Tuesday.....	147 1/2	147 1/2	147 1/2

BAGS—The market is quiet, but there appears to be a stronger undertone at 6 1/2¢ to 6 3/4¢.

BARLEY—The sample market is strong, with a good demand and light supplies reported. In futures, trading continues light. The following are the reported sales made on to-day's call:

Morning Session: Seller 1891—100 tons, \$1.11 1/2; 200, \$1.11 1/2 1/2 c. Afternoon Session: Buyer 1891—100 tons, \$1.53 1/2. Seller 1891—100 tons, \$1.11 1/2; 100, \$1.12. Buyer season—100 tons, \$1.52 1/2 1/2 c.

BUTTER—The market is reported to be shaping itself for better figures, owing to stocks being nearly cleaned up and receipts light. While this may be the case, yet with rains dealers will want to buy for less money, and unless they get it will hold off.

CHEESE—The market is stiff, with an advance obtainable over our quotations. Receipts and stock are light.

EGGS—The market is steadier and firmer, due to the absence of supplies from Utah and farther East. Dealers have now to depend upon California.

FLOUR—The market is fairly steady at unchanged quotations.

WHEAT—The sample market is stronger at the close. In futures, trading is said to be quiet. The following are to-day's Call Board sales:

Morning Session: Buyer 1891—100 tons, \$1.49; 100, \$1.49 1/2; 500, \$1.49 1/2; 200, \$1.49 1/2. Buyer season—200 tons, \$1.43 1/2; 100, \$1.43 1/2; 100, \$1.43 1/2 1/2 c. Afternoon Session: Buyer 1891—200 tons, \$1.49 1/2; 400, \$1.49 1/2. Buyer season—800 tons, \$1.43 1/2; 400, \$1.43 1/2 1/2 c.

## Cereals.

The local wheat market has held to strong prices throughout the week with a slightly higher range toward the close. The strength of the market is claimed to be due to dry weather, and while speculators are using this as a lever to manipulate prices in futures on the Call Board, there is not, as yet, any valid ground upon which to base a dry-weather scare. The number of acres seeded to wheat is nearly 4,000,000, and even with a loss of 25 per cent, which is not at all likely to occur, it would still equal that of 1889 and be largely ahead of last year's. The ground contains more moisture than for several seasons past and it will only require light but well-distributed rains in the month of February and March, with fairly cool weather in May, to make the largest crop on record. In raising a dry-weather scare or a light-crop scare the ship ring, which is composed largely of the members of a wheat ring, can prevent ships coming here in ballast or otherwise for early loading in next season, and in doing this, outward charters can be raised and a good round profit secured by the ring. This is the tactics they used last year and with good success too, for wheat charters nearly doubled by December. Many farmers help the ring by croaking too soon, under the delusion that it will cause buyers to pay more for wheat now, forgetting that it operates against them next season. That the price of wheat is too low does not admit of a doubt, and anything calculated to advance it is the correct thing, but it should not be done at the expense of next season's crop. Farmers are small holders now, the bulk being held by speculators and the ring, but next season farmers will own all and the ring very little. Some gilt-edged Walla Walla or Eastern Washington wheat has been placed at \$1.37 1/2 per cental on the wharf, but the general run goes at \$1.32 1/2 to 1.35. Eastern Oregon runs at about like prices. Willamette valley, or as generally called valley wheat, sells at a slight advance, 1 1/2¢ to 3 1/2¢ per cental, on the above quotations.

The barley market is strong at a slight advance. The supply is light and demand is good. Eastern Oregon and Eastern Washington are sending us more liberal supplies. The bulk of that received from up north is of excellent quality and finds ready

buyers. It is generally conceded that the stock in this State will be nearly exhausted by next June, but the acreage seeded and to be seeded to barley is very heavy.

Oats are strong. The supply in the State is very light, while from up north the surplus is being exhausted quite rapidly. There will be an increased acreage seeded both in this State and in Oregon.

Rye and huckwheat are steady. The receipts of the former show an increase.

Corn is steady, notwithstanding an attempt is made to shade off prices. The stock in the State is light, while higher overland freights will prevent free shipments to this coast unless prices with us advance still higher.

## Feedstuff.

Ground feed is strong, with a good demand ruling. The receipts, while showing a slight increase, are not up to present requirements. With rains soon, prices will shade off again.

The light supply of hay in this State is making itself felt in a strong and higher market. The scarcity of green feed causes more feeding of hay; besides this, a dry-weather scare is causing stronger holding. It is very generally claimed that more fields seeded to grain will be cut this year for hay than has been the case for three years past.

## Fruits.

Apples continue to come in freely. The bulk of receipts come from up north and are generally of good quality, yet the liberal supplies force consignments to be placed at only fair prices.

Oranges are coming in more freely, causing a shading in prices, particularly for the rough, thick-skinned kind. As a rule they are of inferior quality. Smooth, thin-skinned are given preference by dealers and consumers, but hucksters take the cheaper and inferior kinds, for they are better to peddle in certain quarters of the city. Shipments to the East are quite heavy.

Lemons are fairly steady.

Raisins are in good inquiry. There has been more quiet buying than for some time past. This is accounted for in two ways, one to take advantage of present freights before the advance goes into effect, and the other the low prices at the East and on this coast; and the high prices for other dried fruits have stimulated the consumption and consequently the stock at distributive points is comparatively light.

In dried fruits the market is exhibiting more life, but in a quiet way as if the purpose is not to excite sellers. Apricots, peaches and apples have been the more freely dealt in. The supply here of all kinds is quite light, while the spring trade has not opened as yet.

Choice to gilt-edged Spitzenberg apples are scarce and wanted. Sales were made to-day as high as \$2, although \$2.25 is quoted as top. Yellow Newtown gilt-edged sold readily to-day at \$1.75.

The supply of oranges was heavy to-day (Wednesday), and we doubt if the very best Riverside Navels would fetch over \$1 a box, yet we retain our outside quotations, for as soon as receipts slacken the market will recover. Other kinds are also weak and we doubt if the top quotations could be had.

## Vegetables.

In garden truck Los Angeles continues to send us peas, beans and tomatoes. Last week a consignment consisting of nearly 400 sacks of green corn came to hand from Los Angeles. Asparagus is lower under freer receipts.

Freer supplies of onions have caused the market to shade off some. The market closed weak.

New potatoes are coming in more freely. The size and quality show a decided improvement. In old potatoes the market shows a weaker tone. The supply in the State is very heavy. Several dealers in this city who bought last year for a big advance have been selling out while advising large holders in the interior not to sell. They were assisted by two of the daily papers.

Beans are strong and higher under heavy shipments overland to take advantage of the present freight before an advance is established on next Sunday (January 25th.) The dry weather is also having its influence, but the most favorable influences are a scarcity of supplies at the East and the stock in this State nearly exhausted.

## Live-stock.

So far as we are able to learn, no changes have been made in quotations. Arizona is still a large contributor of bullocks. The condition of the largest percentage is good, but some received were poor. Nevada is sending us less than heretofore. Mutton sheep are still scarce and high. Hogs are in fair supply, but outside of the block the demand is slow. For milch cows there is only a fair inquiry. Horses are reported to be about the same as heretofore quoted.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4 1/4¢ to 4 1/2¢ lb; dressed, 7 1/2¢ to 8 1/2¢ lb; heavy, 4 1/4¢ to 4 1/2¢ lb; dressed, 6 1/2¢ to 7 1/2¢ lb. Stock hogs, 3 1/2¢ to 4 1/2¢ lb.

BEEF—Stall fed, 7 1/2¢ to 8 1/2¢ lb; grass fed, extra, 6 1/2¢ to 7 1/2¢ lb; first quality, 5 1/2¢ to 6 1/2¢ lb; second quality 4 1/2¢ to 5 1/2¢ lb; third quality, 3 1/2¢ to 4 1/2¢ lb; bulls and thin cows, 2 1/2¢ to 3 1/2¢ lb.

VEAL—Small, 6 1/2¢ to 7 1/2¢ lb; large, 5 1/2¢ to 6 1/2¢ lb.

MUTTON—Wethers, 8 1/2¢ to 9 1/2¢ lb; ewes, 7 1/2¢ to 8 1/2¢ lb; spring lamb, 15¢ to 16¢ lb.

## Miscellaneous.

Free receipts of poultry by overland rail keep the market in more or less of a demoralized condition, which is in no way improved by liberal receipts of game. The Chinese are buying ducks for their New Year's feast, which takes place soon.

Hops are about all cleaned up. Shipments have been made quite freely.

In wool there is absolutely nothing new to report, outside of that covered by the remarks contained in the Annual Review published in this issue of the PRESS.

Exports by sea the past week aggregate as follows: Flour bbls, Sligo, 22,300. Wheat cts, Sligo, 10,605; St. Vincent, 91,198; Cork, 41,884; Hull, 42,806; Liverpool, 71,141. Bran sks, Honolulu, 33,12. Hay bales, Honolulu, 1555. Barley cts, rolled, 697, in grain, 1472. Sugar lbs, Victoria, 32,822; Honolulu, 3500.

To our list of game we add the Sea Brant geese. They are hunted in Humboldt county, and owing to their juicy, delicious flavor they are destined to

command the highest prices. To introduce the Sea Brant, C. Nauman & Co., to whom they are consigned, sell them for the present at \$2 a dozen.

Honey is very strong with a slight advance obtainable over our outside quotations.

From the *Commercial News* of Jan. 21st the following summary of tonnage movement is compiled:

	1891.	1890.
San Francisco.....	280,504	183,615
San Diego.....	15,475	12,401
San Pedro.....	4,981	3,840
Oregon.....	36,472	24,193
Puget Sound.....	18,746	15,875

Totals.....356,178 239,924

In port at San Francisco, disengaged..... 77 219 27,757

" engaged for wheat..... 42 912 70,858

San Diego..... 15,475 12,401

San Pedro..... 4,981 3,840

Columbia River..... 14,142 3,510

Puget Sound..... 18,746 15,875

Totals.....64,273 95,125

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to Dec. 31, 1890, the following are the exports from this port: 1890. 1889.

Wheat, cts.....5,859 269 6,233,523

Flour, hbls.....507,116 546,302

Barley.....176,369 815,865

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

BEANS AND PEAS.

Barley, cts..... 3 1/2 to 3 3/4 Softshell..... 14 to 15

Butter..... 2 1/2 to 3 1/2 Butter shell..... 15 to 16

Colmena Colony.

The fruit colony established by Mr. Abbott, an extensive fruit-grower of Sutter county, and Dr. Smith of Iowa, as principal owners, three years ago, and known as Colmena Colony, was well represented at the Marysville Citrus Fair in oranges, raisins and dried deciduous fruit.

The portion set out with orange trees is adjacent to the railroad, about eight miles below Marysville. During the week of the fair a company was formed to purchase 100 acres of this tract to plant in olive trees and Muscat grapes. We have several times noted the progress of this colony in the columns of the RURAL PRESS, and now, after an experimental period of three years, are pleased to learn that the promoters and settlers in this section have more than realized their expectation in the growth and adaptability of this section for citrus fruits and the raisin grape.

PACIFIC COAST WEATHER FOR THE WEEK.

Our Stock has been carefully and well grown, WITHOUT IRRIGATION, FREE FROM INSECTS, and is UNSUR-  
PASSED IN QUALITY. PRICES MODERATE. CORRESPONDENCE SOLICITED. Catalogues on application.

**TRUMBULL & BEEBE,**  
NURSERY AND SEEDSMEN, 419 & 421 SANSOME STREET, SAN FRANCISCO.

## MAY'S NORTHERN GROWN SEEDS. EARLIEST, HARDEST, MOST PRODUCTIVE.

THIS ENTIRE COLLECTION OF SEEDS ONLY 10 CTS.  
**OFFER NO. 2. SURE HEAD CABBAGE.** The surest heading variety, large size, firm and fine  
texture. W. K. Mum of Kokomo, Ind., says: "Sure head crossed with thing I ever saw in the cab-  
bage line. Out of some 400 plants not one failed to make a fine solid head." **CHRISTMAS WATERMELON.**  
The finest keeping variety combined with the richest flavor of any melon grown. C. Weaver of Rendville, Ohio,  
says: "Christmas Melon is the finest producing melon I ever grew. I had 22 large melons from four vines, and had  
them after Christmas." **LENTZ BEET.** A splendid sort, dark red color, will produce a crop in six weeks, a fine  
keeper. H. Miller of Goshute, Ind., says: "Lentz beet takes the lead in our market. They  
sell like hot cakes and are the cropers." **Test Northern Crown Seeds** and  
be convinced they are superior to all others. To introduce  
our seeds, we will send one package each of  
the above cabbage, melon and beet to any  
address on receipt of 10 cts. and our finely illus-  
trated catalogue which is indispensable to any  
one interested in Plants, Seeds or Bulbs, being  
the most complete manual ever published.  
Contains over 300 illustrations and a colored  
plate of the famous Bladen roses. For Every  
Person sending silver and mentioning this  
paper will receive extra a package of the  
famous Extra Early Carline Beets. Mention  
number of offer. **L. L. MAY & CO.,**  
Seedsmen and Florists, St. Paul, Minn.

May's Catalogue acknowledged the finest and most complete ever published.

**IPOMEA PANDURATA HARDY DAY**  
**MOONFLOWER.** Grows from bulbs. Lives out all  
winter. Increases in size and beauty each year. Blooms  
night and day; flowers 6 inches across; very fragrant.  
**RED RIDING HOOD PANSY.** Most beautiful  
of this popular flower. Large size, deep red color.  
Hazel eye, edged with shining gold. **Z. HAAGEANA**  
H. pl. (Golden Cloth) A beautiful shrubby plant  
2 ft. high. Mass of bright golden flowers June to Dec'r.  
**WILSON'S SEED & PLANT CATALOGUE**  
and **LIVESTOCK ANNUAL FOR 1891.**  
116 pages, 200 fine engravings, handsome colored  
plates, full of useful information. Unquestionably  
the most reliable catalogue published. All the above  
sent by **20c.** in postage stamps or money. The  
mail for **20c.** BEST and CHEAPEST COL-  
LECTION OF BULBS and SEEDS ever offered.

Address **SAMUEL WILSON, MECHANICSVILLE, PA.**

## VAUGHAN'S Seeds & Plants

SEEDS for your Garden, and how to plant them.  
PLANTS for your Lawn and Window.  
Where to get the BEST SEEDS and fresh ones?  
Where to get the NEW PLANTS and good ones?

These questions must be decided. Which of the new  
and famous are worthy, and which of the old are bet-  
ter, you should know. We print an *Illustrated Catalogue*  
with *Photos, Engravings, Colored Photos*, and  
reasonable descriptions. As to its completeness, we  
say *It tells the whole story for the Garden, Lawn and*  
*Farm, FREE.* Before you buy, please write for this  
book.

**VAUGHAN'S SEED STORE**  
P. O. Box 658, State Street,  
**CHICAGO.**

P.S.—We make our Catalogue on the theory that  
the public does not want to be humbugged.

## FIELD AND GARDEN SEEDS.

OUR ILLUSTRATED CATALOGUE SENT FREE.

Send 4c in stamps and we will send a packet of the great novelty, THE PERSIAN MONARCH  
MUSKMELON, the finest flavored melon grown.

Box B.

**BOUK & HUPERT, Greenwood, Neb.**

(Mention this paper.)

## MISSOURI NURSERY CO., Louisiana, Mo.

Salesmen wanted; special aids; magnificent outfit free.  
**STARK NURSERIES,** Co., Louisiana, Mo.  
Founded 1855. Oldest in the West. Largest in the  
World. BEST of everything. Nearly 800 salesmen sell our  
stock in almost every State and Territory; volume of annual  
sales now exceeds that of any other Nursery. We sell direct  
through our own salesmen, without the aid of tree dealers or  
middlemen, and deliver stock, freight and all charges paid.

## NO TREES

Like whole root trees; or like plum, prune and apricot trees  
on *Mariana*, the best plant stock grown. *Idaho* and other  
New & Old Fruits (by mail); ornamentals, root grafts—  
everything. No larger stock in U.S. No better. No cheaper.

## T. V. MUNSON, DENISON, TEXAS,

Introducer of the Great **PARKER EARLE**  
**STRAWBERRY**, now begins the introduction of a  
few of his thousands of wonderful *Grape Hybrids*.  
This season he offers four varieties, viz:

**BRILLIANT**, early red; **CAMPBELL**, early  
golden; **ROMMEL**, early white (promising for North  
and South); and **HERMANN JAEGER**, late purple;  
larger cluster and berry than *Herbemont*, suitable for  
south of Cincinnati and St. Louis, all equal to best for-  
eign in quality. Descriptive circular and terms on ap-  
plication.

Seeds, Plants, Etc.

PACIFIC NURSERY,

Established 1871,  
OFFERS FOR SALE THIS SEASON

100,000 OLIVE TREES.

Made Wholly of  
Steel and Malleable Iron,

Giving Great Strength and Little Weight.

Don't purchase until you have ex-  
amined into the merits of the

BRADLEY.

It is perfect in construction, strong,  
and for lightness of draft is  
unexcelled or unequaled by  
any other Gang Plow  
in the world.

WRITE FOR PRICES.

WILL SAVE THE PRICE OF ITSELF EVERY 1000 ACRES.

YUBA, Cal., Sept. 7th.

Messrs. TRUMAN, HOOKER &amp; Co., San Francisco, Cal.

Gentlemen:—I think the Gale Harrow and Seeder the best I have ever used or seen used. A farmer can get a better start with less seed with the Gale than with either the Gorham, Gem or Cahoon, and sows more regular. It will save the price of itself every 1000 acres. I have sown altogether about 3000 acres.

Yours very truly,

J. C. WILKINS.

THE GALE DOES ITS WORK PERFECTLY.

SONOMA, September 6th.

Messrs. TRUMAN, HOOKER &amp; Co., San Francisco, Cal.

Gentlemen:—I purchased a Gale Harrow and Seeder in 1883, and have sown about 75 acres each year with it. It works well. I use three horses on my seeder and harrow and sow about 12 acres per day. It does good work. I can't make any suggestion for any improvements on it.

Yours very truly,

H. ELPHICK.

WILL SEED AND COVER 40 ACRES PER DAY.

Two No. 4's or No. 8's coupled together on three wheels, will produce a machine that adjusts itself to uneven ground.

LARGE DISCOUNTS FOR CASH OR SOLD ON TIME TO GOOD FARMERS.

WE ARE AGENTS FOR

The Jacob Price Field Locomotive.

THE GREATEST TRACTION ENGINE IN THE WORLD.

Lightest by far, strongest, most durable, simplest, and in every particular without an equal. Three sizes—5x5, 6x6, 8x8.

VIEWS IN THE VICINITY OF PORTERVILLE, TULARE COUNTY, CAL.

## Development of the Upper San Joaquin Valley.

During the last two or three years there has been wonderful progress made in the settlement and development of the counties lying at the southern end of the great San Joaquin valley. Of course there has been excellent work in progress there for decades, but it is only recently that the earlier achievements began to exert their full influence, and now there are advancement and development than which probably no region of the State can show greater. New railway lines have given free access to new sections, irrigation from river and flowing well has reclaimed vast arid areas, and the success and profit in various productive

enterprises have attracted hosts of people to local investment and industry.

A hint of such progress is given in the engraving on this page, which is the first of several which we shall present to our readers. It is a group of scenes in the vicinity of Porterville, a comparatively new town situated on the east side of Tulare county and located in a smaller valley which opens into the vast valley of the San Joaquin. Porterville valley is described as surrounded on three sides by low hills, behind which tower the high Sierra. To the southwest the valley is open and connects with the San Joaquin plains. Around the town of Porterville there are said to be 100,000 acres of excellent land, which is being rapidly brought into cultivation by means of irrigation.

In the suburbs of the town there are already attractive residences surrounded by gardens, orange groves and fruit orchards. The climate and soil favor the growth of semi-tropical products, and oranges of the highest quality have been produced in the vicinity.

One of the agencies by which the Porterville lands are being developed and made available to settlers in small tracts is the Pioneer Land Co., organized by prominent San Francisco capitalists. They are doing much to make the resources and adaptations of the region better known. As we have said, the engravings on this page give a hint of some of these resources. The artist began by throwing a branch of a fig tree, with its ripening fruit, across his plate as a symbol of the success of this fruit in the

region. In the center, as expressive of the agency by which growth is accomplished, is a portion of an irrigation canal with sluices at intervals to check the too rapid flow of the water. Upon the left above is a view from the porch of a newly erected residence, over a plantation of orange trees newly planted, with a glimpse of the outskirts of the town in the background. Above, to the right, is a grove of bearing orange trees, showing their thrift and vigor. Below, on the right, is one of the grand oaks with which the valley is dotted, and on the left is a scene on a village street—chosen rather for its picturesque quality than for significance, for Porterville is well supplied with brick blocks and other marks of municipal progress.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Napa County Notes — The Farmers' Cause.

EDITORS PRESS:—Five inches of rain to date, this season, twenty inches and more to even date last year, is the way the record for this portion of Napa county reads. Seldom have we had so light a rainfall as this season, at this date. Not sufficient water has fallen to fill the ditches as yet. It is a saying we frequently hear some pioneer farmers repeat that no matter how dry any season may be, the open ditches must be filled and running some time during the winter. Six or eight years ago there was very little rain until many persons thought the rainy season was about over; then came in April one of the greatest freshets we ever had.

All the rains this season have been light ones and neither succeeded nor accompanied by high winds. There never was a season more propitious for the farmer. A large acreage of land has been seeded to wheat and barley, and the grain was placed in the ground in excellent condition. Never had we more favorable prospects, and unless something unusual happens, this county will harvest a fine crop next fall.

Nor are the favorable prospects limited to the grain farmer alone. Vineyardists and orchardists are likewise favored, thousands of fruit trees are being planted, and nurserymen are doing a driving business. May the farmer have a very prosperous year. He not only deserves it, he needs it.

But there are poor prospects for good pasturage. Young grass grows slowly, if, in fact, it grows at all, and our hillsides are hardly green. Stook requires considerable feeding, and will for some weeks. There was not a surplus of hay in any part of the county last fall, consequently, pasturage being so poor to date, the price of hay, barley and corn is higher now than for many years. Those farmers who stored their hay last fall will dispose of it at good figures.

Fortunately we have excellent roads this winter. That is greatly owing to the small rainfall, and partly to the fact that considerable work was done on the highways last summer and fall. Last winter our roads were, in many localities, simply wretched. Then it was, when, with much difficulty, we waded through the mud from farm to town, that the farmer, as well as many other classes of our citizens, wondered where all the thousands of dollars that had been expended on our roads during the last decade had gone; what permanent good had been done. It made some of us just about sick. The taxes of our farmers are grinding, as they all say; are enormously high. To see many of their hard-earned dollars expended for naught was enough to make them complain.

The fact is, as is now generally acknowledged in every county in the State, our road laws are far, far from being perfect. If we could see good done, commensurate with the enormous outlay, we would not complain. We often blame our numerous road-masters, overlooking the faults in the law under which they work. What we want, what we demand, is a radical change in the laws regarding our roads, soon; this winter. The various road laws that have been passed by our Legislature during the last two decades have not met the expectations of the public.

This seems a difficult problem, not only in all portions of our State, but in almost every State in the Union. We hope our present Legislature will give us a perfect road law.

If the farmers in this State were united as they are in many States eastward, the pressure they could bring to bear on our lawmakers, on matters like the above and many others of vital interest to them, would accomplish much. We are slow to unite in this State, but indications are that the time is not far distant when there will be more unity of action.

The fact is, our farmers are beginning to see more clearly than ever before what a tremendous influence they can wield if they agree upon concerted action. The results accomplished by their brethren in the East show them this.

## Farmers and Taxes.

In his speech, nominating our esteemed fellow-townsmen, Hon. F. L. Coombs, for Speaker of the Assembly, J. C. Brunsie said, among other things: "The taxpayers of this State have become suspicious of their Legislatures. There must be some foundation for this distrust."

Go where one may, in any part of this country, he will find, upon investigation, that among farmers this is a general complaint, and has been for a long time, and that by reason of not very abundant crops, and low prices received for produce, they demand that their burden of taxation be lessened.

In commenting upon the movement among farmers in the East, Hon. J. M. Rusk, Secretary of Agriculture, lately said: "The farmer knows that the burden of taxation is not equally divided; that he bears more than his share. He is dissatisfied with our financial system. In a general way he argues, and justly enough, that it does not matter whether he is better off than his father was, or better off than he himself was years ago, so long as he is

not as well off as he might be if differently ordered.

"In the matter of domestic taxation, the farmer must necessarily look for relief from State legislation."

On the subject of currency, the same writer says: "As to the currency question, unquestionably one lesson of the farmers' movement is, that an increase in the circulating medium is demanded, and with this demand, so far as it can be granted consistently with the preservation of sound currency, I am heartily in sympathy. The true fiscal policy is to provide a circulating medium ample to meet all the requirements of business, established on a basis so sure as to avoid all danger of depreciation and yet so elastic as to permit of ready expansion to meet the growing wants of the country. The solution of this question may be difficult, but it is a question that must be met and I believe can be wisely solved."

On the same line, Hon. W. H. Hatch, for a long time chairman of the Committee of Agriculture in the House of Representatives, says: "The gradual and steady decline of farm products began with the demonetization of silver. I confidently believe that its restoration to a perfect equality with gold as to coinage, bullion and certificates, based upon the ratio fixed by our laws, will be greatly beneficial in restoring prices of farm products to an average that will be remunerative, if not profitable, to the producers."

"Boycotts, lockouts, riots, and the growth of anarchy and socialism—the only expressions of popular discontent at that time—all pointed toward the violent overthrow of our Government. But the introduction and growth of the Farmers' Alliance has forced all these expressions of discontent to the background, and awakened a hope in the breast of every friend of humanity that the problems of the closing years of the nineteenth century will be so solved as not only to preserve the present form of Government, but to establish it more successfully and permanently."

Among the signs of the times is this: The farmer of the future—immediate or not far extended—will wield a much greater influence in State and National government than during the past history of our nation. May he act wisely. May he accomplish much for the good of our beloved country, for the lasting welfare of our prosperous State.

Napa, Jan. 15, 1891.

## Semi-Annual Payment of Taxes.

EDITORS PRESS:—During the four years I have been in California I have noticed a great depression of business and scarcity of money about January 1st. If our taxes could be divided and paid semi-annually, half this depression would be overcome. This is the time of the year in this State that people need money most, as the weather is cool and nice for building and making all kinds of improvements, buying trees and planting them, and if this is not done now it is postponed for a year. It is very important that the farmers should have five or six millions in their hands now instead of having it in the banks. I know it is a turkey for the banks but it is crow for us. The semi-annual system was adopted in Iowa several years ago, and it is greatly appreciated.—MILO GILBERT, Colton.

[This subject is now before the Legislature, and is apparently being considered with much care. We trust some relief for the present holiday depression may be secured by this winter's enactments.—EDS. PRESS.]

## From Placer.

EDITORS PRESS:—Crop prospects in the foothills of Placer county are about an average. The rains of the winter have been scanty but have come in good shape, but the hedrock is not soaked as it should be at this time, but is entirely dry, so that the hay crop is absolutely dependent on the spring rains. Many thousand trees have been planted, so that the nurseries are about sold out. I believe French prunes to be the best-paying fruit for this region. It is too soon yet to say whether olives will pay as well as expected. The seasons are too late for raisins. They are caught in the early rain too often. But prunes and plums, and in many places peaches, are sure and profitable. New irrigation ditches are being constructed in many places.

Auburn.

## THE APIARY.

## Questions Answered.

EDITORS PRESS:—A Santa Cruz county bee-keeper asks the following questions:

I have six swarms of bees, all of them in movable frame hives with plenty of honey. These swarms have, however, very little brood, there being only a small patch of brood on one or two frames in each hive.

What I want to know is this: How can I increase the amount of brood in each hive without uniting some of the swarms? Just now the weather is warm, yet the bees will not work a foundation; and as I have no empty combs I do not know what to do. Then there is another thing; I can never find any queens. I have looked over all the frames trying to find the queens, but I always fail. I can only ascertain that the queens are alive by fresh eggs, which I find in the frames of each hive. Can you

tell me any good rule to find queens? I saw your name in the PACIFIC RURAL PRESS. Hope it will not be too much trouble for you to answer my questions.—J. I., Glenwood, Santa Cruz.

Your bees are all right. At this season of the year bees have very little brood and in some colonies none at all.

If you contemplate queen rearing and want to raise early drones and queens, feed your bees thinned honey; it is cheaper than sugar for stimulating brood rearing; use an atmospheric feeder or any kind of a feeder that bees are not liable to get drowned in; place the feeder in the upper story of the hive. If you notice your bees carrying in pollen, you may place your feeder out in the open air at a distance from the hives, and I do not think you will be troubled by robbing; if no pollen is coming in, be sure and feed inside the hive, because if you do not, it may excite them to robbing. All things considered, it is best for the bees to be packing pollen before you feed them, because brood rearing is then carried along more rapidly and safely. If you do not desire to raise queens, do not bother your bees. In a few weeks they will commence to breed rapidly in your location anyway. No, your bees will not work on foundation until there is plenty of honey coming in. At present they have no need of surplus combs and will not work on the foundation given them until the fruit trees are well in bloom, and when they can obtain plenty of honey from the fields.

In regard to finding queens there is not any given rule. I sometimes find them one way, sometimes another. The way I generally proceed to find queens is this: I open the hive gently and blow a few puffs of smoke over the frames, and then remove one of the side frames. I examine this carefully, and if I do not find the queen, I place the frame in an empty hive I have near at hand, and take out another frame, and thus search until I find the queen. Another good plan is this: Take out each frame separately and shake all the bees on a white cloth in front of the hive, and as you see the queen running in, pick her up. With black bees it is sometimes very difficult to find the queens, because they so much resemble the bees themselves in color and size; with Italian, Cyprian and Carniolan bees, it is comparatively easy to find the queens, because of their large size and bright color.

If you wish to remove a queen, catch her by the wing and place her in a queen-cage. If you are a beginner, never catch a queen by the head, because the chances are that you will surely kill her in trying to hold her. If you wish to keep the queen in a cage any length of time, you should have at least a dozen attendant bees.

In capturing these bees to put in the cage, catch them by the back of the neck, as the saying is, and they will not have much of a chance to sting you. In caging queens, I have sometimes picked up over a hundred bees in less than half an hour, and placed them in a cage, and never received a single sting. For beginners and others who are timid about picking up queens, I would advise them to get a Klimitz queen-catcher; they may be obtained from any extensive dealer in apian supplies.

## Queen-Cages.

The best cage that I know of at the present day for shipping and introducing queens is the Peet cage. With this kind of cages, queens can be mailed and safely sent across the continent. I have received a great many queens from Eastern dealers, the queens in all kinds and styles of cages, and 19 out of 20 queens sent in Peet cages were all right and in good order, while in the other kinds fully one-half were dead, and sometimes all of the attendant bees.

The Benton cage is said to be superior to the Peet cage, but in my experience with it I have not found it so.

## Clipping Queen's Wings.

Beginners in bee culture are generally under the impression that by clipping the queen's wings it will prevent swarming; such, however, is not the case. The clipping is only done to prevent the loss of a swarm—to keep them from emigrating to other parts.

I do not believe in clipping the queen's wings. I think it has more disadvantages than advantages, taking all things into consideration.

Beginners must be especially careful about clipping queen's wings; be sure and do not clip the wings of a virgin queen, for if you do she is as good as lost. All queens are mated high in the air, and if a queen cannot fly, she will never get mated. It seems almost incredible, but such is the case.

Queens are only mated once in a lifetime, and if an Italian queen mates with a black drone her progeny will be hybrids always afterward.

A great many contrivances have been tried in order to secure the fertilization of queen bees in confinement, but so far all have signally failed.

Confining queens in the hives to prevent swarming will not work; it is not the queen that urges swarming, but rather the bees themselves, for when the swarming desire is upon them they will swarm, queen or no queen. If you have not time to watch your bees, and are afraid of losing them, place one of Alley's combined drone and queen traps over the entrance of the colony that you think is going to swarm. If they happen to swarm during your absence, the queen is caught and the swarm is saved.

S. L. WATKINS.

Grizzly Flats, Cal.

## HORTICULTURE.

## The Prune Industry of France.

Readers will remember the map of the prune district of France which appeared in our issue of Nov. 15th, page 415. If they will refer to that map as they read the following interesting article given below, they will find both entertainment and instruction. The December issue of the *Kew Bulletin of Miscellaneous Information* contains an article on the prune production of France by M. W. Colchester-Wemyss, from which we quote. It contains allusions to many things frequently discussed in this State:

"About 60 miles above Bordeaux there falls into the Garonne a fine river which, taking its rise among the mountains of Cevennes, follows a course of some 150 miles until its junction with the Garonne. This river is called the Lot, and the two rivers together confer the name on the department known as Lot and Garonne. For several miles along the lower reaches of the Lot, and in the country immediately adjacent to the spot where it enters the Garonne, is produced the fruit known, when it has been specially prepared, as 'French plums.' For over 100 years the industry has been fixed in this locality, and still, with the sole exception of a valley in Servia, there is no other place where the same trees are cultivated. The tree is called 'Prunier d'Ente.' 'Enter' is an old French word meaning to graft, and it is simply so called because this particular species was formerly the only plum in this district that ever was grafted. Now there are, practically, no plums other than the 'Prunes d'Ente' grown in the neighborhood. Higher up the Garonne, round the old town of Agen and in other parts of Southern France, another plum—the 'Prunier Commun'—is largely grown, and its fruit treated similarly to that of the 'Prunier d'Ente,' but the produce is very inferior and only suitable for stewing; but I believe that nowhere except in the Servian valley is the true 'Prune d'Ente' at present grown, and though many experiments have been made with other varieties, no others have yet been discovered that will yield the established qualities of the 'French plums.' It is rather capricious in its growth, for its area of cultivation does not extend very far from the riverbank. It appears to delight in a rich alluvial soil of a rather sandy nature, but which contains a sufficiency of clay to make it very retentive of moisture. The center of the 'French plum' district may be said to be at Clairac, a quaint little old-fashioned town built on a steep hillside overlooking the Lot, almost more Spanish-looking than French, its houses shaded from the fierce southern sun with wide outspreading eaves and flower-clad balconies.

"In this and the neighboring communes the metayer system is in full operation, and it appears to work well and harmoniously. The owner of the land engages the metayer and supplies all the implements and stock required for the holding; he also keeps the buildings in repair, including the houses used by the metayer. The latter finds the whole of the labor, except such extra labor as is needed during harvest-time. The metayer, during the year, has entire control of the farm, and buys and sells, subject, if required, to the consent of the owner. He renders account of all produce from the holding consumed by himself and family, and at the end of the year the balance of profit is divided equally between the owner and the metayer. During the last few years the metayers have fared badly, for the phylloxera has devastated the vineyards, and said it is to see acres and acres of land excellent for the growth of grapes, but fit for little else, now deprived of those crops which formerly so well repaid the cost of cultivation. The holdings vary in extent from 10 acres to sometimes 50 and 60, and on every holding in the lowlands are to be seen rows of the 'Prunier d'Ente.' The rows are separated from each other by long strips of cultivated land where the mild fawn-colored oxen lazily drag the most old-fashioned and primitive implements over the easily broken soil. The plums are long-shaped, the end to which the stalk is attached being very much the more pointed; color red, deepening into a rich violet as the plum ripens. The skin is extremely tough, without being very thick or hard; the flesh very firm, containing a large amount of saccharine; the specific gravity much less than that of several varieties of English plums with which I made comparison.

"The tree is a very slow grower, requiring ten years to bring it into full bearing, though I saw some trees six years old, very favorably situated, with a fair crop of fruit on them. The fruit also matures very slowly, and is not ripe till all other fruits in the district, apricots, green gages and peaches, have ripened. The plums are picked when just ripe, before the flesh has begun to soften; they are placed on 'clais,' or trays, one layer of plums on each 'clais.' The 'clais' are made either of strips of wood or of wicker-work, and are either triangular or round. They are a little deeper than the thickness of a plum, so that when not in the ovens they can be safely placed upon each other. The 'clais' when filled are arranged upon the bottom of the 'fours' or inside the 'etuves,' and the operation commences. Each homestead has a building in which are placed the 'fours,' and also the 'etuve,' if the metayer possesses one. The 'fours' are sim-

ply like very large ordinary bread-ovens. They are usually built in pairs, each one about ten feet long and four feet wide; they are heated by burning wood inside them; the ashes are cleared out and the 'clales' placed inside. The 'etuves' are closets of variable dimensions, with different appliances for holding the 'clales'. They have a small furnace with pipes underneath the floor for heating. There seems to be a preference for the 'fours,' though the 'etuves' are simpler and more convenient in every way.

"When the fresh fruit is put in, the temperature should be about 100 degrees Fahrenheit. When the plums have been inside for about a couple of hours, they assume a peculiar puffy appearance. The 'clales' are then withdrawn, the fruit turned by holding an empty 'clale' upside down close over a full one, and then turning them both over. After cooling, the 'clales' are again put into the 'four,' this time at a temperature of about 135 degrees; again withdrawn, turned, cooled, and put in at a temperature of about 170 degrees; and this operation is continued until the plums have been dried. Some dry more rapidly than others, and they are picked out as they are ready. The more slowly the operation is performed, and the oftener the plums are put into the 'four,' the better will be the result.

"When they are ready the plums are sorted out into various grades, according to the number (30, 35, 40, 45, 50, 55, or more, up to about 130), that it will take to make up the French pound, for obviously enough the old French measure is adhered to. They are put into sacks and carried to the markets. Here the merchants come and buy, paying prices varying according to the number of plums required to weigh a pound. Thirty to the pound would be worth about 120 francs the 100 pounds; 40 to the pound, about 100 francs, and so on down to the very lowest grades, which are not worth more than 15 francs. The merchants convey the fruit to large, cool, airy warehouses, where it is thrown into bins, and women at long tables are employed sorting over again much more carefully than before. The various grades are then packed separately into casks, and are sent to Bordeaux, where the finer qualities are packed carefully in bottles or boxes; the inferior are simply exported in bulk.

"About Agen and in the other districts another tree is cultivated, the 'Prunier commun.' This is a round, violet plum, grown on its own stock. The fruit is prepared in a similar manner to the 'Prune d'Ente,' but is very inferior and is only fit for stewing. Enormous quantities are consumed by the peasants in the north and east of France."

### Wood and Coal Ashes.

EDITORS PRESS:—Is wood ashes good to manure grapes and other fruit trees in Tulare county?—GARDENER, Visalia.

EDITORS PRESS:—Wood ashes, as well as plant ashes of all kinds, is intrinsically an excellent fertilizer, since it contains the soil ingredients required by all plants, even though in different proportions. The value of ash varies materially in accordance with the degree of heat to which it has been subjected when made. In general, the hotter the fire, the less active will be the ash as a fertilizer, and if it has been actually melted, as in the vitrified ash that comes from the straw-burning engines, its present value becomes almost null.

In the use of ash it is very essential to see that (particularly when fresh) it does not come into immediate contact with the trunks, stalks or roots. Fresh wood ashes, when leached with water, yield largely an intensely caustic lye, which will promptly attack and corrode the bark or root-crown, much more rapidly than does the blackest of alkali. The lye becomes milder as the ash grows older; and in clay soils, as well as in those containing much vegetable matter (humus), there is much less risk of damage at any time than in open, sandy, or silty soils poor in humus.

In general, ashes should be spread broadcast over the surface of the ground and allowed to be washed in by rains or irrigation, and not placed around the trunks of trees or over the stools of perennials, as is too often done. If plowed in shallow with stubble or weeds, the latter decompose very quickly, and the effect of both is thus improved and quickened.

When ash has been used too freely or too near the trunks of trees, damage may be prevented just as it is in the case of black alkali, that is, by placing land plaster around the tree or wherever the ash appears to be doing damage. Manure also may be used to advantage, but not as effectively as the plaster.

The question of the money value of wood ashes—the price that a farmer can afford to pay—is so frequently asked that it may as well be answered here. The chemical composition of ashes varies considerably, according to the plants, or parts of plants, from which it has been derived; the smaller the wood, or the more of weeds or other herbaceous material there was in it, the more valuable the ash; but paking a broad average, a bushel (say 48 pounds) of wood ashes would, according to the ordinary valuation of the ingredients, be worth about 25 to 30 cents—that is, the valuable ingredients could be bought at wholesale for that amount of money. This does not mean that such will be the value to each individual farmer, for he who does not need the fertilizer will get no return for the time being, while he who needs it badly will get good interest on his investment. Potash and phosphoric acid are

the two substances that one would pay for in ashes. Now potash is rarely wanted in our soils as yet, so the chief value would be in the phosphoric acid, which we need badly and the value of which in average ash may be put at about two per cent, thus making the ash on that score worth about six cents per bushel; ten cents may be taken as the minimum aggregate value for this State, under the usual conditions.

As for coal ash, it is ordinarily not worth transporting to the ground, unless when, in very tenacious adobe, it may serve to render the soil less refractory. E. W. HILGARD.

### California Fruits in Guatemala.

Senor Narcial de los Santos Nieto, the special commissioner appointed by the Republic of Guatemala to visit this State for the purpose of securing grapevines, fruit trees and olive sprigs for transplanting in the Government reserve lately established near the city of Guatemala, arrived here recently, after an extended tour through the State.

The commissioner, speaking to a *Chronicle* reporter on the subject of his mission, said: "The Government of Guatemala has determined to establish an experimental plantation for the purpose of transplanting California products. A grant of 150 acres of highly fertile land about seven miles from the capital city has been set aside for the purpose, together with a money grant of \$10,000 to defray the necessary expenses for procuring the proper specimens. I have been in this State two months, and have secured transplanting sprigs of all the fruits grown here, as well as of wine grapes, raisin grapes and the olive.

"The place selected by the Government for the experimental farm is in the most prolific district in the republic, and is worth at the present market value of property in the capital at least \$50,000. I am perfectly satisfied that the venture will prove not only a successful one, but will be productive of great gain to the people. The sprigs that I shall plant will begin to bear fruit in about seven years from the time of planting, and the total money product of the plantation when in bearing will, according to the average California rates, amount to \$6,149,369.

"I have also great hopes for olive production. The soil at Guatemala is specially adapted to its growth. From my observations I greatly prefer the California olive to the French. I have compared both, and pronounce the California olive oil the purer and better oil of the two.

"The expense of the importation of the graftings will be borne entirely by the Government, and I am confident that great results will follow the experiment."

## THE VINEYARD.

### The Future of the Grape Interest.

EDITORS PRESS:—In your issue of Jan. 3d, I find a paper by J. C. Wood of Ontario, San Bernardino county, which, I think, represents the matter from an erroneous standpoint in both aspects of the case, viz.: Wine production of the southern counties, and also in considering the temperance question generally. Will you allow one of the oldest grape-growers in the country, who planted a vineyard in 1846, and made wine in 1849, to give his views on both sides of the question? I have followed grape-growing and wine-making ever since, in Missouri until 1880, here since 1881. I have tried to look at it justly and impartially, believing it honestly to be the best movement for true temperance which could be made, and during a period of 44 years have seen nothing to shake that belief but a great deal to confirm it.

The commercial and geographical standpoint, if I was located in any of the southern counties, and planting grapes there, I would very likely only plant the best raisin and table grapes. Why? Because in all my travels through the southern counties I have seen but few wines made there that could be classed as fine, light table wines. Let me not be misunderstood. I have seen plenty of so-called wines, Port, Angelica, Sherry and Sweet Muscatel. But I do not call these wines proper, as they contain, by the addition of spirits, from 20 to 24 per cent of alcohol instead of the 10 to 12 per cent in pure dry wine, the fermented juice of the grape, pure and simple, such as our northern counties produce—wines that are light, healthy stimulants, instead of the fiery sweet wines, where the alcohol is disguised under the sweet taste, which are about as heady and intoxicating as brandy or whisky, and perhaps more so, because they are the unwary than these. Instead of assisting digestion, enlivening and invigorating the system, like all true wines should and do, they intoxicate and enervate, fly to the head and leave the system depressed by headache and nausea. If, therefore, I was located in any of the southern counties and determined to cultivate grapes, I would, without hesitation, plant varieties for raisins and table only. There may be locations where fine wines can be made, in some of the foothills; but I confess I have not seen them yet, and I believe the home of the true wine grape to be in the northern counties, where as fine, light, dry wines can be made as anywhere on the globe.

I have no hesitancy in saying that they can be found already in Napa, Sonoma, Santa Clara and other counties; and that as a general thing, our wines, when made with anything like skill and close attention, are much better than the wines of France and Germany, if we except a few of the choicest brands. We are furnishing better and purer wines to-day, and at a much lower price than they. That prices are depressed is a natural consequence of the hasty and ill-advised plantings formerly, and improper handling. We cannot, as a nation, be expected to jump from crude beginnings into perfection at once.

I remember the time, and it is only a few years ago, when our raisin industry was fully as much depressed as the wine industry is now, and when California raisins were a drug on the market. Now all this is changed, better methods of packing and grading have been adopted, and California raisins are driving the imported from the market. Wine-making may be more complicated and require even closer attention, while it takes longer to age and handle the crop. But it will have the same outcome, and the wines of California will acquire even a higher and wider fame than her raisins.

That the phylloxera is making terrible inroads upon our vineyards, as well as the Anaheim disease at the south, we know but too well. But we have the remedy for the former in resistant stocks, and there is not one of our fruits which has not had something to contend with. I cannot see that the grape is more seriously threatened than the citrus industry was before the introduction of the vedalia cardinalis. Both our raisin and wine industries are reviving. Let those who prefer the former make all the progress they can; let the wine-men do the same, and we may be sure of fair returns in the future. It is my firm belief that the grape will always be one of the leading fruits of our State, because it seems to have found its natural home here.

As to the improved varieties for raisins, we have already an improvement over the Sultana in Thompson's Seedling. It seems to be a better bearer and will make better and more even raisins than the Sultana, and also has a better foliage. Mr. J. P. Onstott of Yuba City, Cal., has produced an average of 74½ pounds to the vine for four years, of which 3½ dried make a pound of raisins, making fully 20 pounds of raisins to the vine. I think it is also a good wine grape and shall test it for that purpose next fall. The raisins were awarded a medal at the Paris Exposition. There is also another candidate which may prove valuable, imported by Mr. G. P. Rixford. It is a seedling grape, much larger in berry than the Sultana or Thompson's Seedling, but as only a few vines of it have fruited, its bearing qualities have not yet been ascertained.

The Other Side of the Question—Wine as a Temperance Agent.

There can certainly not be a more zealous advocate of true temperance in the State than the writer. I look upon drunkenness as a crime and think it should be punished as such. In this respect I go farther than even the W. C. T. Union, but I do not believe that they are on the right road if they insist upon total abstinence, nor do I call this true temperance. Temperance in the true sense of the word is not total abstinence. In the truly temperate sense of its meaning we are certainly and should be allowed to use wine, pure juice of the grape, moderately, as the most healthy, the most invigorating and enlivening of all stimulants. If this was not the case, would our Lord, in whose footsteps we all try to follow (and the W. C. T. Union especially, if they intend to be true to their name) have changed water into wine at the wedding of Cana, as a promoter of innocent hilarity; and last, and most sacred of all, instituted it as one of the sacraments to consecrate His memory?

Why should we, then, who can at the most but humbly follow in His footsteps, throw up our noses in contempt at one of the best gifts ever bestowed on mankind? If it was good enough for Him, it ought to be good enough for us, for the best of even the lady members of the W. C. T. Union, I hope, do not pretend to be better than the Savior of all mankind. So from a scriptural standpoint, I think we, who use wine moderately, as it ought to be used, "a little wine for the stomach's sake and for our oft infirmities," have the argument on our side.

But I claim that we have it also in the practical workings. It is a fact, acknowledged by all authorities, that those nations where light wine is the daily drink, instead of distilled liquors, are more temperate, and drunkenness is comparatively more rare with them than in the latter. See the practical workings of the prohibition laws in this country, wherever they have been attempted. See the practical lessons of the last elections in the Eastern States. The Republican party has leaned toward the prohibition side since the last 20 years, and see the admonitory vote it received in November. Ask yourself the question, whether it is right, that I and my neighbor who use wine as it ought to be used, moderately, and as one of the best gifts of God, which should never be abused or taken in excess, should be deprived of its use, because our other neighbor drinks whiskey and other vile stuff to excess, and thereby makes a beast of himself. It is an infringement on personal liberty, unconstitutional, and therefore it will never become the general law of the nation, nor should it be, as long as this country guarantees equal rights to all.

The writer had occasion in the winter of 1880 to '80, to see the practical workings of prohibitory laws in Kansas. The joint meeting of the Missouri and Kansas Horticultural Society was held in Kansas City that winter, just after the prohibition law was passed in Kansas. Kansas City, as every one knows, is in Missouri; while the town of Wyandotte, only seven miles from there, is in Kansas, but connected with Kansas City by a line of street cars. Never before had the saloons at Kansas City and the connecting car lines done so prosperous a business as that winter; and never had the town of Wyandotte had so many cases of drunkenness as then. People would come over from Wyandotte, pay their car-fare, get, as they called it, gloriously drunk, and take a full supply of stimulants home with them, to follow it up for several days. The prohibitory laws of Kansas ruined the breweries and wineries in that State, kept immigration from its borders, and because its people became tired of this infringement on their liberties and also on their prosperity and morality, Kansas, the most steadfast Republican State in the Union, polled a Democratic majority at the last election.

Look at the practical workings of total abstinence in our households. I could name a great many of our winemakers who forbid their sons the use of wine while they were under their control. But human nature is so constituted that "forbidden fruit tastes the sweetest," and the result of all this has been invariably that the boys, when they were at liberty to follow their own inclinations, became the worst drunkards. I have brought up a family of two boys and three girls. All of them had free access to wine whenever they felt like drinking. The boys have charge of some of the largest wine-cellars in the State, and none of them have ever been the worse for liquor. I do not wish to be uncharitable. I give my friends of the prohibition movement credit for good intentions; but I think they are on the wrong road. I believe that we both wished to abolish drunkenness, that most fearful bane to all households who are under its influence. But I believe sincerely that this can only be done by making wine, the most harmless of all stimulants, accessible to every one by establishing decent wineroms, not saloons, as they are conducted to-day, where fiery liquors are dealt out at the bar and a small glass of an apology for wine is sold at ten cents per glass; but social-rooms, where good, wholesome wine is sold by the bottle at a fair price, and two or three can sit down to a table and enjoy it together instead of walking up to the bar, as the custom now is, and "treat" each other as they call it, by pouring down a couple of glasses of fire-water. This "treating," which has become the universal custom throughout the country, is one of the first causes of intemperance, as I look at it. Four or five friends enter a saloon to take a "social glass," as they call it. One treats, the next does not wish to be behind, and treats again, and by the time this goes round, they all have more than they can well stand. I believe with all the friends of true temperance in the abolition or restriction of the saloon as it now exists, of the treating custom, and this we can only accomplish by a rational, temperate and liberal course. Let light wines take the place of the fiery whiskey and brandy, the winerom the place of the present saloons, light wine the place of the enervating tea and coffee in our families, and we will have a truly temperate people. To accomplish this object, no one can be more in earnest than your friend and correspondent,

GEORGE HUMANN.

Oak Glen Vineyards, Napa Co.

### A Vine Puller.

EDITORS PRESS:—I have this day seen a grapevine extractor that is so simple, so novel, to me at least, and at the same time now owned by every vineyardist (but he probably does not know it), that it is worth describing. It is nothing more than the back running-gear of a common lumber wagon, including the reach, for a lever, and two short pieces of log-chain, say about two feet in length, with hook in one end and ring in the other. Lightly nail or tie a strip of inch board on top of the bolster, and another on the outside to protect the paint, then loop one piece of the chain about the reach inside the axle-tree, bring the loose end over to hang behind. One man now raises up the front end of the reach, another loops the ring of short chain No. 2 over the stump of the vine to be taken out, and places the hook in the link of the chain on the wagon, high up as possible. Bring down the lever and hook up the chain two or three times and the job is done. I saw vines taken out at the rate of more than one a minute by this simple process.

St Helena.

R. E. WOOD.

### Transplanting Old Vines.

EDITORS PRESS:—Can any of your readers inform me if one-year-old rooted vines—Muscatel, "Gordo Blanco"—planted in nursery rows two years ago, and which fruited well last season, will give good results if now transplanted to the vineyard?—NOVIOE.

SOMEBODY found a piece of gold in the crop of a turkey raised on a ranch a mile from Calistoga, Napa Co., and now prospectors are trying to find the place where the turkey poked it up.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

This seems to be the year for all kinds of farming in California. No doubt the acreage is larger than for many years past. Perhaps it is the largest ever sown in the State. Now why not get at the work of renewing the Grange crop? This is the time. Let each member in the Order bring in one new member and see how the Grange crop will grow! It is easier to get a new member in the Grange than it is to plow and sow an acre of ground; and yet, if we can get one new member for each new acre of land sown, the harvest to the farmers will be much enlarged. Don't you believe it?

Won't the members of the Grange send in more copy to the Grange organ, the RURAL PRESS? It seems the members of the Alliance are outwitting us of the Grange. What's the matter, fellow-Patrons? Clean your pen, or get a new one, and at it again.

The Grange dinners and Harvest Feasts which the Master has been enjoying lately have not brightened the pen with which these words are written. But I tell you they have added lots of joy to the "inner man."

Being frequently asked, "What is the force of a dimit card?" let me here say that a dimit simply disconnects one from a subordinate Grange. While the holder of a dimit is amenable to the rules and laws of the Order, and is under the jurisdiction of the subordinate in whose territorial boundaries he is living, yet he is not a voting member of that subordinate till he affiliates with it. A person holding a dimit may be admitted to any subordinate as a visiting member, provided he is in possession of the Annual Word. Of course the W. M. has no authority to impart the A. W. to any dimitted person. Patrons holding dimitts may be admitted to a subordinate Grange by paying such fee as the subordinate may require, but in all cases for affiliation the application must be referred to a committee and lie over till next meeting. A majority vote will elect. It is not necessary to confer the degrees on a person thus elected. He should, however, sign the Constitution and By-laws. A dimit card, regularly issued, duly signed, and under seal, is good till used. When application for affiliation is made, the dimit card should accompany, be attached to and become a part of the application, and if the applicant is elected, the dimit should be filed away with the application. If the application is rejected, the dimit should be returned to the applicant.

Members of each subordinate Grange in California ought to pass a resolution and send it under seal to Leland Stanford and George Hearst, United States Senators from California, demanding the election of United States Senators by direct vote of the people. Now is the time to act. A new Congress takes hold of affairs the 4th of next March.

It is said that a \$4,000,000 syndicate of foreign capital is "gobbling up" California timber-land. Patrons, keep an eye out for such things!

We hope soon to be able to report much progress in the line of Farmers' Institute work. Where shall the first Institute be held? Let's hear from somebody, everybody!

Report says that negroes are to do the work on many California fruit farms this year, in lieu of Chinese labor.

Brothers, plant some garden seeds about now. Sisters, plant a few choice flower seeds soon. The vegetable garden and the flower garden are two of your best friends. They cost but little, yet they furnish much. The children will enjoy both gardens, and they may be taught lessons of industry and economy in the garden better than anywhere else.

At the next session of the State Grange we may expect something new in the line of public entertainment. Some of the enterprising members of the Order in Sacramento county have promised to give us a novel entertainment. For further particulars, see small bills soon to be issued. In the meantime, let others emulate the good promises made by Sacramento county Patrons and be preparing essays, readings, songs, concert music, etc. Let's make the session of 1891 the best ever held in California.

Three farmers—Messrs. Taubeneok, Cockrell and Moore—hold the balance of power in the Illinois Legislature on the United States senatorial question. Let us keep an eye that way and see if they will select Bro. David Hunter to the senatorship! He is a farmer and is reported to be honest, competent and deserving. May the best man win!

The successful farmer of the future must

know his business; he must cultivate a bright mind; he must have an observing eye, an attentive ear, two industrious hands, plenty of pluck, keen knowledge of men and of ways, and he must be willing to labor long hours and every day. To such men the farm offers rewards not only of wealth, health and influence, but of honor, happiness and comfort. Let young men and young women remember this.

## Worthy Master Hayes' Meetings.

Oregon's "Live Master" Among Us.

Bro. H. E. Hayes telegraphed from Ogden, Jan. 27th, that he would speak at

Auburn, Thursday, Jan. 29.

Deputy Still has made arrangements and advertised for a public meeting of farmers and others to receive and listen to the stirring words of one of Oregon's foremost "true blue" Patrons. Bro. H. will no doubt have much of interest and benefit to tell our people wherever he speaks. He is a good observer, plain, modest and progressive speaker. Our distinguished California visiting Patron is very worthy of, and should be met by, a large audience wherever he speaks. His appointments should be thoroughly and widely advertised through the Granges and local papers, and farmers gathered together for conference in their own interest from neighboring districts.

At Stockton and Waterloo.

He is to speak at an open meeting at Stockton, Jan. 31st, and at Waterloo in the evening—Past Master Overhiser having made arrangements therefor, as will no doubt be announced in the Stockton dailies.

At Pacheco.

Deputy Lecturer Loucks has made arrangements for Patrons, farmers and their friends in Contra Costa county to give Bro. Hayes a hearty reception at a public meeting to be held on Tuesday, Feb. 3d, at 1 o'clock P. M., in Odd Fellows' hall.

At Two Rock.

On Thursday, Feb. 5th, Two Rock Grange, Sonoma county, will hold a public meeting, inviting all farmers and their friends to listen to Bro. Hayes.

At Yuba City.

Bro. Hayes is to be greeted by Veterans Ohleyer, Frisbie, Walton and others, who will make his coming widely known, and gather together many Patrons and other earnest men and women from Butte, Colusa, Sutter, Yuba and adjoining counties, for a grand meeting on Saturday, Jan. 31st.

Oregon and California

Stand shoulder to shoulder in the Grange cause, and should be a unit in all good undertakings. Let us grasp warmly her representatives' hands and cultivate her friendship. Fresh from the National Grange, several State Grange meetings, and journeying from State to State and across the continent, his notes and observations will have extra interest to our usually stay-at-home farm folks.

Before leaving, we hope to announce Bro. Hayes for county or district meetings in Sacramento, Alameda and other counties, trusting his stay may be sufficiently prolonged therefor.

## The Grangers' Bank.

The annual meeting of the stockholders of the Grangers' Bank, which was held on Jan. 13th, shows that the institution has passed another of its long series of prosperous years. A dividend of \$4.20 per share on the capital stock paid in was declared out of the earnings, amounting to \$45,000, the balance being carried to credit of the reserve fund.

The old Board of Directors was unanimously re-elected, viz.: A. D. Logan of Colusa county, I. C. Steele of San Mateo county, C. J. Cressley of Merced county, Thos. McConnell of Sacramento county, Seneca Ewer of Napa county, J. H. Gardner of Solano county; Daniel Meyer of San Francisco, Uriah Wood of Santa Clara county, H. M. La Rue of Yolo county, T. E. Tynan of Stanislaus county, and H. J. Lewelling of Napa county.

The election of officers for the ensuing year next took place, resulting in the re-election of the following officers: A. D. Logan, President; I. C. Steele, Vice-President; A. Montpelier, Cashier and Manager; and F. McMillen, Secretary.

The stockholders evidently believe that the institution is in good hands, and the accomplishments of the officers, as shown in the reports from year to year, evidently sustain their judgment.

## Waterloo Grange.

EDITORS PRESS:—The following resolutions have been adopted by Waterloo Grange:

WHEREAS, We believe the Conger Lard bill to be a necessary measure, highly desirable as a law; therefore be it

Resolved, That we are in favor of said bill and fully alive to its importance.

Resolved, That we urge upon our Senators the necessity of using their influence to secure its passage through the upper house of Congress.

Resolved, That a copy of these resolutions be sent to the RURAL PRESS for publication, and to each one of the Senators from California.

Yours fraternally, C. A. MERRILL, Sec'y.  
Waterloo Grange Hall, Jan. 24.

## Farmers' Institute.

EDITORS PRESS:—An interesting meeting of the Farmers' Institute was held in the Christian church, Hanford, on Thursday afternoon, the 8th inst, after the adjournment of Tulare County Alliance, as arranged by the Committee of Permanent Organization, N. W. Motheral, John Tuohy, J. W. Mackie, I. H. Thomas and A. J. Pillsbury.

N. W. Motheral was called to the chair, and J. W. Mackie was elected Secretary. The subject for discussion was a continuation of that of the meeting held in Tulare Dec. 11th: "What, How and When to Plant."

I. H. Thomas was, as before, placed on the witness-stand and subjected to a severe questioning by the Chairman and others. He was asked how he would advise the owner of a 40-acre field, properly prepared for an orchard, to plant it. He advised ten in peaches of three varieties, in the order of Foster, Susquehanna, or Muir, and Late Crawfords in equal divisions; ten in raisin grapes, either Muscat of Alexandria or Muscatel de Gordo Blanco; and 20 in prunes which he claimed to be the coming fruit in California for profit.

Considerable discussion followed as to the real difference between the two varieties of grapes above mentioned, following nearly in the same path as it did on Dec. 11th and reaching the same conclusion—that practically there was no difference. Opinions also varied as to the proper distance between vines, Mr. Thomas recommending 12x8, as 8x8 was too close. The chairman stated that in Malaga vines were planted in six, seven and eight foot squares and prevented the exhausting of the soil by fertilizing. One gentleman said that his most prolific and best vines were 3x6 apart; 12x6 was also recommended, with the wide rows running east and west.

The question of alkali was next introduced. Black alkali—carbonate of soda—is converted into Glauber salts by the application of gypsum, sulphate of lime, and ceases to be injurious to the growth of plants.

Major McQuiddy said he had discovered gypsum in large quantities in the adjacent western hills, and as soon as certain arrangements could be effected, he would have it placed in the market at purchasable rates.

Mr. Leoni was called on to tell the Institute what he knew about pruning vines. Advised pruning from the middle of January till about the beginning of March; preferred the beginning of February; that black knot was not as likely to follow late pruning as early, and thought bleeding prevented black knot. When bleeding was prevented by early pruning, Nature's recourse to get rid of redundant and refuse matter was through fungoids till leafing gave a natural process.

On healthy vines of average growth of four years he left from 6 to 12 spurs, according to size and other things to be determined by good judgment, and left two buds, as only the two terminal buds would grow. It was stated that that was a seemingly opposite condition of bud growth in Fresno—that there it was the buds nearest the vine which grew. The cause of this was hinted at as coming from the method of pruning, when the slope of the cut was above instead of beneath, and so causing the sap to flow on the spur and destroy the bud. Mr. Leoni answered first when one inch growth had been made and again when the grapes were formed; this was to counteract the evil effects of mildew such as causing bloom to fall. He made the top of the crown about 16 inches from the ground, but on sandy soil lower and closer.

The statements made by Prof. Hilgard at the Dec. 11th meeting were recapitulated regarding alkali, its source, effects and cure. Some attention was paid to the future duty of drainage and the placing more reliance on persistent cultivation and less on irrigation.

On motion, the Secretary was instructed to correspond with the Secretary of the State Alliance, suggesting the idea of requesting the county Alliances to have a Farmers' Institute meeting to follow in the wake of their quarterly meetings, and also with the Secretary of the State Grange, so that the co-operative aid of the Grange may be had with the Alliance in such meetings.

The meeting then adjourned to meet after the Alliance county meeting in Goldman's hall, Tulare, which meets on the first Wednesday in April. Subject for discussion will be made public in due time.

## Bro. Hayes at Auburn.

Deputy Lecturer Still writes from Highland Ranch, Jan. 22:

All are glad to hear that we are to be favored with a visit from Worthy Master Hayes of Oregon. I have made arrangements for a place of meeting in Auburn on Jan. 29th, as you suggested; time, one o'clock sharp. Have put up hills in every direction through the country; will write to W. M., Davis to come if he can. I will try to get a list of names for the PRESS. Magnolia is solid on all legislative questions proposed by the State Grange, and will act accordingly. Petitions and letters will be sent to that body requesting them to legislate in such a manner as to give us an equal chance with other vocations.

Weather is fine, seeding nearly done, and grain that is up looks fine. Fraternally,  
V. W. STILL.

## Alabama State Grange.

We have received, through the courtesy of Sister Florence Gilmer, Secretary of the Alabama State Grange, P. of H., a copy of the Proceedings of the Eighteenth Annual Session of that body, held at Dothan, Henry county, July 29 and 30, 1890. The pamphlet is a neat octavo, well printed, and is from the press of Bro. Thos. J. Key, State Lecturer, and also publisher of the Sheffield *Agriculturist*.

Worthy Master Hawkins, in his annual address, made the following happy allusion to California and the recent session of the National Grange:

I need not tell you, for you have read of the grand success of the last session of the National Grange, nor of the imposing reception by the State and city officials—of the honorable and distinguished recognition of the dignity and importance of the Grange as an organization conferred upon it by the great State of California—supplementing an invitation by an appropriation of \$10,000 out of the State Treasury to be expended in entertaining the delegates during their stay in the State. In this connection, it is proper to remark that California is not only a beautiful State, but a great State—great in the wealth of her mines, far greater in the wealth of her agriculture, but greater still in her strong intellectual men and her beautiful and cultured women. These are they of whom we speak when we say California is a great Grange State.

In the annual address of the State Pomona, Sister L. A. Hawkins, she paid the following glowing tribute to the women of the Pacific Slope and urged her Alabama Grange sisters to emulate their example:

Now for our sisters of the Pacific Slope. You may sing the praises of the brave forty-niners, who went through untold hardships in that barren land of gold and starvation, who finally gave up their frantic search after the precious metal, to irrigate and till the soil, that now blossoms like a second Paradise. But I must believe that the women of California have borne their full share of the burden, when I see them so eager to take hold, and so untiring in their labors to beautify their homes and be an honor to their State. We made the acquaintance of two young ladies on the Committee of Entertainment, who had come to California with their widowed mother ten years ago, and bought 20 acres of grape land, had it planted with vines, and after that did all the work except the plowing. They picked, packed and marketed their own grapes, even to nailing up the boxes; trimmed their own vines in the fall and kept them in good order; and in five years they had paid for their land, and in ten years they had built a beautiful cottage and bought a good horse and wagon. They were nice, quiet-looking girls, with rather brown hands, but were in every way ladylike and well dressed.

Another dear sister, who went from Barbour county, Alabama, saw her husband struggling, first as an itinerant preacher, then as an editor, to maintain a growing family, took boarders, until she saved money enough to buy a few acres, 20 miles away, at the foot of a mountain—planted it in oranges and apricots—took her large family of boys and girls to the country to work, and now owns a large farm and a beautiful city home; has four daughters who married well—one to the son of the present Governor of California. All of these good sisters are enthusiastic Grangers. You will find it the case in every land, where women are not ashamed to work, the Grange is on a boom and the country is flourishing.

## Connecticut State Grange.

This body assembled in seventh annual session at Bristol, Jan. 15th, Past Master J. H. Hale presiding. Delegates from 104 subordinate Granges were present.

A committee of three was appointed to consult with like committees from each of the other New England State Granges, to arrange for an annual interstate picnic similar to that held at Williams' Grove, Pa.

The State Pomona recommended that Sept. 15th be observed as Pomona's Day in each subordinate Grange, and that a fruit convention be held in each town on that day.

A report was adopted declaring it inexpedient to change the experiment station from Middletown to Mansfield.

The afternoon session was well attended, and many excellent speeches were made.

In the evening, the sixth degree was conferred upon a class of 140. The elaborate floral decorations of the hall, the work of the members of Bristol Grange, elicited admiration from all present. Some of the most prominent New England people were in attendance.

At the closing session, on Friday, Richard Davis of Middletown was elected a member of the Executive Committee for three years.

Past State Master Hale was appointed a special committee on legislation regarding the Storrs school.

The Committee on Pure Foods submitted resolutions, which were adopted, indorsing the Conger Lard bill and urging the United States Senate to pass the same; indorsing the Pure Food bill and requesting its passage by the House; and demanding that the State Legislature prohibit the manufacture and sale of oleomargarine.

The Committee on Agriculture presented resolutions, which were adopted, urging Congress to appropriate at least \$5,000,000 to the Department of Agriculture, and calling the attention of the Secretary of Agriculture to the importance of increasing the appropriation for the Division of Pomology.

After considerable routine business, the Grange adjourned.

A banquet was held in the evening, Worthy Master Hale presiding as toast-master, at which some 250 of the Patrons and citizens of Bristol were present.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

### Farmers in Council.

OMAHA, Jan. 27.—The eleventh annual meeting of the Farmers' National Alliance convened here this morning. [This is a separate organization from the National Farmers' Alliance and Industrial Union to which the F. A. & I. U. of California belongs.—EDS.]

President Powers advocated the general organization of trades unions and Knights of Labor with the Alliance. No effective arrangements of a national character for the conduct of the business industries of the country could be made and prove of benefit without being in effect the laws of the organization which adopts them. To prevent general and continual conflict with the laws, the Government itself must be controlled by these societies. For the attainment of this object, Powers opposed the new political party as not practicable for industrial organizations and as the platform on which the party might be formed would soon become obsolete. He favored independent political action and believed in men pledging themselves to vote for good men or good measures. He outlined a plan for action as follows: Let the Alliance discuss and agree upon such measures as it deems expedient to form a basis for political action this year and next. Place this by correspondence before the other great industrial organizations, and, with their concurrence, let a convention be called to compare views and adopt a national platform, a concise set of principles which can be cordially supported by all. Publish them to the world; disseminate them and prepare for the great struggle in 1892.

Powers thought the subjects on which those principles should be founded were included in the following list: Money, land, transportation and ballot reform and suppression of any vice tolerated by law to the peril of our national prosperity. He dwelt at length on the money question and advocated the lending of money by the Government to the working people without interest. If money was thus furnished by the Government, its hoarding would soon be stopped and all the money would soon be in circulation.

He urged the Government to take the railroads into its own hands and furnish the service for the people, which corporations had failed to do. This could be brought about either by purchase or confiscation. Land reform was only lightly touched on. Powers advocated taking the right of franchise from the ignorant and vicious and giving it to women.

"There was a time when corporations and moneyed oligarchies looked upon us with contempt. That condition is changed. The enemy is already marshaled for battle. We must conquer or suffer ignominious defeat."

An effort will be made to form a co-operative union, and a conference will be held at Chicago, Feb. 9th, with the Farmers' Mutual Benefit Association.

### Knights and Farmers Meet.

WASHINGTON, Jan. 22.—Representatives of the Knights of Labor, the Colored Farmers' Alliance, the National Farmers' Alliance, Farmers' Union and Citizens' Alliance began a meeting here to-day in accordance with the instructions of the Ocala Conference. Representatives of three other organizations are expected to-morrow.

The plan of agreement looking to a confederation was drawn up. It provides for a joint committee of five from each organization to represent the confederation. The St. Louis platform shall be the basis. Each shall stand pledged to assist, when possible, in all local efforts to better the condition of the people. The joint committee shall have power to admit other organizations with a similar object. Each organization shall be bound to support the plans agreed upon by the joint committee. Adjourned until to-morrow.

### From Secretary Pedlar.

The following is from a personal letter dated Gilroy, Cal., Jan. 22:

Requesting information in regard to Alliance interests to be sent is an every-day occurrence. Inquiries come up from all parts of the State, and even Oregon, asking for assistance in organizing. Over 75 Alliances have been organized since Nov. 22d, and only a few of the organizers commissioned have been at work. The outlook for a grand uprising and uniting of the toilers and producers could hardly be more promising. Yours, etc., C. W. PEDLAR, Sec'y Cal. S. F. A. & I. U.

Bro. Pedlar enjoys a good reputation for being a very prompt Secretary and correspondent.

BRIGHTON ALLIANCE.—Bro. Geo. Wilson writes from Florin, Jan. 24: Bro. Hines organized an Alliance at Brighton last evening, and will meet with Oak Grove Alliance to-night to complete the organization. He will return on Feb. 14th and form a County Alliance. Many Patrons are joining, and, with the strength of the two organizations, the combined body will soon become a potent factor in the land.

## San Luis Obispo County Alliance.

In our last issue, owing to lack of space, we gave only a bare outline of the recent proceedings of the above body; but we herewith present a fuller account of its doings.

The following delegates were present:

Keyes, E. F. Young; Fairview, C. H. Wood; Estrella, Lorenzo Jared, E. H. Fritzinger and W. N. Sinclair; Branch, Frank Conrad and O. M. Pence; Arroyo Grande, J. V. N. Young, D. F. Newsom, Anna Shinn and Anna Brar; Mammoth Rock, A. T. Foster; Oak Flat, J. Botts, A. Sheldon and J. Tidrow; Las Tablas, R. A. Mayhall, W. H. Morton and Otto Wyss; Ocean View, F. J. Jenks and Thos. Stevenson. Chas. Bowden, Alternate; San Miguel, L. D. Murphy; Maklon Thorn, J. L. P. Smith and Calvin Beaveis; Paso Robles, J. D. Lindner; Union, J. Baies; Bee Rock, Neil Kennedy, Chas. Forbes and Andrew Branch; Huasna, M. D. Price; Dry Creek, R. L. Wilson; Starkey, Chas. Barlow and Chas. Tobey; Summit, R. C. Heaton and Wm. Sinclair; Wheatland, M. V. Whittington, C. F. Bondshu and J. D. Lindner.

The report of the Committee on Order of Business was adopted, after which, resolutions to the following effect were adopted:

Declaring the loaning of Government money to National banks at one per cent a monstrous fraud on the people; indorsing the National Alliance resolutions; favoring the abolishment of the State Board of Railroad Commissioners and the Viticultural Commission as useless and expensive; denouncing the so-called equalizing of assessments; favoring the consolidation of the State Senate and Assembly into one body, by constitutional amendment; recommending the purchase of goods through the Order; discontenancing the support of newspapers hostile to Alliance principles; and fixing representation of sub-Alliances to the county organization at one delegate for each 20 members, and one additional delegate for each fraction of over 20 members.

The Alliance tendered a unanimous vote of thanks to the San Miguel Messenger for many favors extended, and urged all members to subscribe for the paper.

A committee was appointed to confer with the Monterey County Alliance on important business.

After the reading of the report of Business Manager Stevenson, an adjournment was had till 7 P. M., when an open meeting was held and addresses were made by several members, and an amusing poem was recited by T. J. Jenks.

At Wednesday's session, the Secretary was authorized to draw a warrant for \$34.60 in favor of the State Alliance for dues.

THE RAILROAD BILL IN CONGRESS.—The Farmers' Alliance and Industrial Union of California have united in a petition to the Senate and Assembly of this State, now in session at Sacramento, asking those bodies to unite in memorializing Congress, in the name of the State of California, not to pass the bill now before the United States Senate, extending the term for the payment of the Pacific Railroad debts to fifty years, at a rate of interest of 2 per cent per year, or any similar bill. The reasons for this memorial are set forth in the Alliance and Union petition at considerable length. The petition and the accompanying argument sustaining its propriety are worthy of the most careful consideration of the Legislature of this State. We shall make a more full reference to the same at an early date. The able argument and prepared petition by President Cannon, of the Alliance, is signed by himself and the Presidents of County Alliances.

## FRUIT MARKETING.

### Annual Report of the California Fruit Union.

Mr. President and Members of the California Fruit Union: To-day we assemble for the sixth time to review the work of the season but just closed, to select those who shall have charge of the affairs of the organization during the year to come, and, possibly, by a generous expression of our various opinions, to correct any method that may have crept into the manner of conducting the affairs of the Union which may appear to the majority a wrong course to pursue.

The retiring Board of Trustees and executive officers present the following report of the season's work with a degree of pride, as it shows that in their hands the work of the Union has not been allowed to lag, but, on the contrary, the progress made has been very extraordinary. With the books showing a business conducted amounting to nearly a million and three-quarters for the seven active shipping months of the year—a business requiring the handling of nearly 1400 carloads of fruit, together with 600 or so cars forwarded by our various members, who are working in complete harmony with us, yet sending carloads of fruit to quite a number of cities where we have no agencies established, we have a grand total of but a few short of 2000 out of about 3300 cars shipped by the entire State—which can, with no fear of contradiction, lay claim to whatever there may be of distinction in having forwarded, through your co-operation, nearly two-thirds of the entire green deciduous fruit shipments of the State.

How profitably this immense business has

been conducted, you who have furnished the fruit can best answer for yourselves.

As the season was just opening, at a meeting of the Board of Trustees held May 17th, the resignations of President Platt and Trustee Gregory were received and accepted by the Board.

The number of our shippers has steadily increased, so that where we had 173 consignors in 1889, we have 322 in 1890, while the number of cars forwarded has grown from 991 two years ago to 1373 during the season now closing—a gain of 382 carloads. These cars have been furnished at the 31 different shipping-points and dispatched to the various agents, as shown by the following tabulated statement of

Total No. carloads for seasons . 1,373 991 851

Distribution of carloads for season 1890: Chicago, 828; New York, 136; Boston, 116; Minneapolis, 74; Omaha, 73; New Orleans, 58; St. Paul, 39; St. Louis, 32; Louisville, 10; Kansas City, 7; making a total of 1373.

Our shipments for the year have been divided as follows: One hundred and ninety cars forwarded in special trains; 476 by passenger trains; 258 by freight and 449 by refrigerator cars, which mainly received freight service.

Upon entering upon the record-books of the union some 11,000 duplicate accounts of sales, it is found that 578,232 boxes and 234,617 crates have been handled for us by our various agents. The gross sales on these have amounted to \$1,501,023.56, out of which there has been deducted for freight, \$620,688; cartage, commission and cold storage, \$158,438.58—a total of \$779,126.75, leaving \$721,896.81 as net returns from these shipping, while we have still nearly 100 cars of late pears, etc., yet to hear from, which will swell the amount of the gross sales probably \$100,000 more.

You have all become so familiar with the condition of the Eastern market during most of the past season that it is unnecessary to speak of the scarcity, in fact almost complete failure, of all local fruits there—suffice it to say that the market competition of the home-grown product to our California fruit amounted to absolutely nothing until the ripening of their grapes began, which was about the middle of September.

The prices realized in all of the three large cities, Chicago, New York and Boston, have often been remarkable, while the season's averages at all points have been quite satisfactory.

The early shipments of cherries were most discouraging, as the fruit arrived in extremely poor condition and sold very low, in many instances bringing the shipper out in debt. These circumstances served to very materially cut down consignments. We are glad to say, however, that those who continued to send this delicious fruit forward were more fortunate, as all the later shipments arrived in better condition and sold extremely high, thereby causing the prices realized on the total consignment to be, in the main, more satisfactory. The final car of cherries, which was sold in Chicago June 25th, brought the largest returns of any car ever forwarded through the union.

All other fruits carried and sold remarkably well until grape shipments began, when exactly the same state of affairs was experienced as with the cherries, only not to so great an extreme. All the earlier and by far the larger portion of the consignments carried very poorly and sold correspondingly low, while the unfortunate shipper has only the poor satisfaction with which to console himself of knowing that had they carried ever so well and been placed upon the market in perfect condition, prices most surely could not have ruled high, as the Eastern grape crop was an extremely heavy one and all the markets were filled to overflowing with local fruit, great quantities of which were sold at prices less than the cost alone of transportation on our product.

Our shipments have embraced all the varieties of deciduous fruits grown, among which might be mentioned two full carloads of persimmons from Santa Barbara.

The season, although somewhat backward in opening, has been correspondingly late in closing. Where in 1889 we started a car May 18th, this year the first car was loaded about equally

by Vacaville and Newcastle, and left the State May 21st, while on Nov. 30th cars were loaded with grapes at both Wrights and Vacaville. These, being refrigerator cars to insure safety against frost, were forwarded by slow freight, and arrived so that they were sold in Chicago Dec. 19th and 20th, from which it will be seen that we furnish our fruits, grown in the open air and fresh from the trees and vines, to the friends on the less favored side of the continent, from May nearly to January, or about eight out of the 12 months of the year.

Some action should certainly be taken to impress upon the minds of the different railway companies benefited by our shipments, the extremely urgent necessity of building, during the present winter, at least a thousand new fruit cars, that they may be all ready for next season's operations.

To one unacquainted with the facts, it may seem strange that with the number of cars of the various lines equipped for the fruit service, there should be any difficulty in securing proper cars upon very short notice; but such is only too truly the case, as during the past season there were at times absolutely no cars to be had.

In the matter of time required by the various railway companies in which to deliver our cars, this has been by far the worst season we have ever experienced. That a car should arrive on scheduled time has been the exception, so that from July to the end of the shipping season one would scarcely go amiss should they say that every car was from several hours to several days late on arrival.

Cars have been as many as 22 days in transit, causing in many cases heavy losses to the shippers, and had the yield in the East been even an ordinary one, no one can estimate the losses these ever-occurring delays would have caused our consignors.

So common were the late arrivals that it was simply impossible to so time shipments that cars would not reach their destination Sunday mornings, or to so arrange that two trains shipped on different days would not arrive in the East within a few hours of one another. In fact, this was several times the case, so that there entered into the lottery of Eastern shipping another factor with its percentage largely on the reclamation side.

It might not be out of place to state that after a thorough investigation of the causes leading to these vexatious delays and an endeavor to ascertain to which of the trunk lines the responsibility for the same belonged, it has been found that with comparative few exceptions the detentions have occurred east of Ogden, thus relieving, in a great measure, our local lines from the severe criticisms with which we must certainly address the other roads.

The management has taken up the matter of claims for losses caused by such poor delivery, and expects soon to be able to so adjust matters as to make it, in a measure, satisfactory to all concerned.

Some 43 new names have been added during the year to our list of stockholders and the paid-up stock now numbers 14,162 shares.

Financially the union was never so prosperous as now. With all debts paid and nothing outstanding, there still remains in the treasury some \$34,000 as the result of the season's work. The receipts and expenditures can be seen by examining the following

Total.....\$60,737 78

At a meeting of the retiring board, held yesterday, by unanimous vote the reserve fund received \$100 additional. A dividend of six per cent was declared due and payable at once on all fully paid-up stock, and a rebate of 2-10 per cent on the gross sales of all members shipping through the union was made, thereby reducing the commission paid by each consignor to 7-9-10 per cent.

These several disbursements will foot up about \$32,500, thus disposing of all the available funds on hand, as the policy of each successive board has been to allow each year to meet its own expenses, thus enabling them to pay out in the form of dividends and rebates all the funds in the treasury at the time of the recurring annual meetings, retaining only the amounts due members for previous divisions, which they had not as yet seen fit to collect, and the reserve fund.

Finally, bespeaking for the incoming board and the new officers, which may be elected, the same hearty support you have accorded those who are now about to resign their charges, and trusting that we all may be spared to reassemble Jan. 20, 1892, we close our report of the work of the California Fruit Union for the season of 1890.

H. A. FAIRBANK, Secretary.

### The Vacant Farm-House.

It stands alone against the hills, the valley slopes below,  
And in the distance to the east the restless billows flow.  
There is the barn, but cattle-low comes from the stalls no more;  
Long since those hinges, rusted now, swung open that old door.  
And half-way 'twixt the house and barn a leaning wood-pile stands,  
A chopping-block, scarred by the ax, long since untouched by hands.

There are the fields, unplowed, unsown, where yeta child I played  
And watched my uncle drop the corn, in hills so nicely made,  
The orchard's gray and mossy now, the russet tree is old  
Beneath whose limbs we all could pluck the apples good as gold.  
The birds are now sole rulers of the dear old cherry trees,  
The lilacs by the east room still give fragrance to the breeze.

And now the dial-plate of time my thoughts its shades retrace,  
And once more bring that goodly time with each familiar face.  
The old barn door is open now, my uncle's sitting there;  
The sun shines on his checkered frock and on the old red chair.  
To help him shell the beans, I take my seat upon the floor,  
I listen to his stories and beg him tell them o'er.

The pumpkins big were laid in line, and turnips piled near by,  
And waiting for the thrashing flail, there lay a heap of rye.  
And then before the sun went down we drove the cattle home,  
Then carried to the house two pails of milk spread o'er with foam;  
And then the wood-box must be heaped with oak and soft pine wood;  
And in the clean-swept kitchen there, the supper-table stood.

The hasty-pudding, bowls of milk, the tempting pumpkin pie,  
The butter-ball as bright as gold, and plate of bread heaped high,  
And then the long, long winter eves—the dearest time of all—  
When tired-out aunt would often nod and let her needle fall,  
While uncle read the newspaper dated full a week ago,  
Or braided corn husks for the mats, I laughed to see him sew.

The wind came down the chimney-place and shook the old fire-board.  
The pop-corn puffed and snapped out white, the oak knots blazed and roared,  
The cat upon the braided mat is purring soft and low,  
No difference it makes to her how wild the winds may blow.  
But, ah! those happy childhood years have long since sped away,  
The house and barn are empty now, and going to decay.

The latch upon the old porch door has rusted in its place.  
And of the flower-garden plot there is not left a trace.  
With sad, sad thoughts, I turn away, I linger by the gate—  
But oh! how useless 'tis for me to long, and wish, and wait.  
This swelling heart and tearful eyes, and they are all in vain—  
The faces dear and good old time will ne'er come back again.

—L. M. Crosby.

### Rachel's Mother-in-Law.

"I wouldn't have believed it of you, Rachel," said Mrs. Edmonstone plaintively. "No, I wouldn't, not unless Betsy Tacker had told me; and Betsy, she never told a lie no more than George Washington did."

"Why, mother, what are you talking about?" questioned Mrs. Thomas Edmonstone, untwining the elder lady's bonnet-strings and relieving her of a splint basket, a black silk bag, a waterproof cloak, and an umbrella.

"And I've come to see if it's true," added the old lady.

"If what's true, mother?"

"That you said you wish there wasn't no such person as m-me!" faltered Mrs. Edmonstone.

"Mother, you know I never could have said such a thing!" cried out Rachel.

"Well, it wasn't exactly that, but Betsy Tacker heard you say you wished there was no such thing as a mother-in-law."

"Oh!" cried Rachel, with a hysterical little laugh, "I plead guilty. I did say that. But, oh, mother! it was under such strong provocation, and I never meant you. How could I, when you have always been so good to me?"

"I knew it couldn't be true," said Mrs.

Edmonstone, settling herself in the easiest rocking-chair and nodding her cap strings comfortably. "But how came you to make that extra-ordinary speech, Rachel, about mothers-in-law in general?"

"It was Tom," said the young wife. "He was so aggravating!"

"Thomas always was aggravating," said Mrs. Edmonstone, stirring the cup of tea that Rachel had brought her. "And what was it about now? The breakfast cakes?"

"Oh, you remember about the breakfast cakes, don't you?" said Rachel, with merry mischief sparkling in her eyes. "No, it wasn't the breakfast cakes this time; it was the shirts."

"The shirts?"

"Well, you know he said it was such a wasteful, extravagant proceeding to buy shirts ready-made," explained Rachel. "He said the linen was poor, and the work regular slop-shop style, and he declared you always used to make his shirts at home, every stitob, before he was married."

"So I did," acknowledged Mrs. Edmonstone with a groan. "But that was in the old times, before you could buy such a good article as they have now."

"Yes, but Tom doesn't make any allowance for difference in times and customs," sighed Rachel. "He wanted home-made shirts, and home-made shirts he would have!"

"And you made 'em?"

"Yes, I made them."

"You were a great goose," reflectively spoke Mrs. Edmonstone.

"And—and Tom swore dreadfully the first time he put one on."

"I don't in the least doubt it."

"And he said they set like meal-bags, and that they twisted his neck around as if he had just been hanged, and grasped him on the shoulders like a policeman! Oh, I can't tell you what he didn't say!"

"Bless me!" said Mrs. Edmonstone.

"He told me his mother's shirts set like a glove, and fitted him perfectly—and why couldn't I turn out a shirt like those? And it was then, mother dear," suddenly flinging her arms around the old lady's plump, comfortable neck, "that I lost my head and told him I wished there wasn't such a thing as a mother-in-law in the world. And Betsy Tacker sat in the sewing-room altering over my dolman in the spring style, and I suppose she must have heard me."

"Don't mind it, my dear," said Mrs. Edmonstone.

"No, I won't," protested Rachel. "But, oh, those shirts! I've been ripping them apart and sewing them together again, and rounding off a gusset here, and taking in a plait there, until I've got so that I dream of 'em at night; and the more I try them on the worse they fit, and the more unreasonable Tom becomes. 'My mother never made such work of it as this!' says he."

"Thomas forgets," observed Mrs. Edmonstone severely.

"And I'm sure, if things go on like this," added Rachel, pushing her short brown curls off her forehead, "it will end in a separation on account of incompatibility of temper."

"No it won't, my dear," said the mother-in-law. "Here, get me the pattern and some shirting muslin, and a pair of scissors."

"What are you going to do, mother?" eagerly questioned Rachel.

"I'm going to make Tom a shirt. But don't you tell him, Rachel. We'll see whether it is Tom or the pattern that has altered."

Once more the mischievous light came into Rachel's bright blue eyes.

"I wish all the world were mothers-in-law," shrieked gleefully. "Why didn't I think of this before?"

"One can't think of everything, child," said Mrs. Edmonstone consolingly.

Thomas Edmonstone welcomed his mother cordially when he came home from business.

"I'm so glad you've come!" said he. "We can have some of the nice old-fashioned dishes now. Rachel can't seem to get the hang of them, although she has always had your hook of receipts to guide her."

"Rachel's a good deal better cook than ever I pretended to be," said Mrs. Edmonstone. "They have patent egg-beaters and cream-whippers and raisin-seeders, and all that sort of thing now, that they didn't have in my day. I never tasted nicer bread than Rachel makes, and these pop-overs are delicious."

"You're just saying that to encourage Rachel," said Mr. Edmonstone, with an incredulous smile. "Things will run smooth now you've come. That's one comfort."

"Oh, I shouldn't think of interfering in Rachel's kitchen," said the old lady.

"Please do, mother," coaxed the wife, not without a certain quiver in her lip.

"Do let Tom have a reminiscence of the old days while you are here."

"Well, just as you children say," conceded the mother-in-law good-humoredly.

She remained a week at her son's house, during which period of time Tom was all exultant complacency.

"This," said he, "is something like living. I feel myself a boy again when I taste these apple fritters."

"They're not bad," said Rachel, who had made them with her own skillful hands, and she helped herself to a little of the sauce.

"And why don't you learn my mother's knack of making such pie-crust as this?" demanded Tom. "There's no dyspepsia here!"

"I'm glad you're pleased," said Rachel, with a guilty glance at her mother-in-law. "Oh, by the way, Tom, the last of the set of shirts is finished now. Will you put it on to-morrow?"

"I suppose so," ungraciously uttered Tom. "Will set like fury, I dare say, like all the rest of them!"

"You might at least give it a trial."

"Didn't I say I would?" still more ungraciously. "Those shirts will be the death of me yet," he added, turning to his mother with a groan, while Rachel sat steadily observing the pattern of the table-cloth.

The breakfast stood smoking on the table next morning when Mr. Edmonstone came into the room twisting himself as if he were practicing to be a human corkscrew. Mrs. Edmonstone glanced timidly up at him.

"Doesn't it fit, Tom?" she questioned.

"Fit! Just look at it, will you?" he retorted. "Fit! Hangs like a window-curtain around my neck—pinches my wrists like a pair of handcuffs! I feel as if I were in a strait jacket"—writhing impatiently to and fro. "Oh, I might have known it beforehand. You haven't an idea what the word fit means. I wish, mother, you could teach this wife of mine how to make a decent shirt!"

"Thomas," said Mrs. Edmonstone solemnly, transfixing him with the glistening spheres of her spectacle-glasses, "you are not very polite. I made that shirt."

"You, mother!"

"Yes, I myself. Just as I used to make shirts for you in the old times that you're always sighing after. I've been working at it ever since I've been in the house. Throw away the pattern, Rachel, and don't waste any more time trying to make your husband's shirts," she added.

"It's an economy of time and temper, as well as of money, to buy them ready-made; and as for the cooking you have been praising up so eloquently all the time I've been here, Tom, I haven't touched a pot or a pan. It's all your wife's work. So much for imagination! Oh, you needn't hang your head so sheepishly; you're neither better nor worse than most men," went on Mrs. Edmonstone.

"I never saw the man yet that didn't need to hear a little wholesome truth now and then. You've got the best and sweetest little wife in the world."

"Mother!" pleaded Rachel, trying to put her hand over the old lady's mouth, but Mrs. Edmonstone resolutely persisted.

"And it's my advice to you to try to treat her as she deserves."

"I—I don't know but I have been rather cranky of late," said Tom self-consciously, "now that I come to think of it."

"Cranky! I should think so," said the old lady. "I'm sure I don't know what the world's coming to. Here's little Georgie toddling around with his wooden oar. The first thing you know he'll be telling his wife about the wonderful successes his mother used to make in this, and that and the other thing. We've all got to come to it."

"And Georgy'll be right," said Tom, who, after all, had a magnanimous streak through him. "What a crab I've been! Hang the home-made shirts! I'll buy them out of the store next time! Kiss me, Rachel—and you, too, mother; and be sure you let me have a dish of scalloped oysters when I come home to dinner." The oysters Rachel cooked.

He ate his breakfast and departed; and when he was gone, young Mrs. Edmonstone looked with shining eyes at old Mrs. Edmonstone.

"Oh, what a nice thing to have a mother-in-law!" said she fervently.—*Fireside Companion.*

### Thoughts.

[Written for the RURAL PRESS by C. P. NETTLETON.]

The worst hunger is that of the heart, for love; the worst satiety is that of the heart, being obliged, through not finding any one to love, to expend all its love-wealth on itself.

The fear of intruding is often a great discourtesy; friends must not act like acquaintances.

Reason is confined to the earth; spirit, or intuition, is unconfined.

We should prepare for death? Not so; we should prepare for something more solemn—life.

Excess of hope is despair.

The hypocrite is never so near exposure as when his righteousness is called into question.

The worst form of conceit is that springing from humility.

The pain in ecstasy of feeling is caused by the inability of the body to keep pace with the unusual demands of the spirit.

The peace of life is a totally different thing from the peace of death.

Life forms the body—and then is subject to it!

If we were as afraid of being wrong as we are afraid of being serious, we would be so serious that we would not be so often wrong.

Eternity is not prolonged time, but a state.

Paralysis of the soul is the worst disease on earth, and the most common.

Love curves on itself and rewards the lover even more than the beloved.

Despair is the illegitimate child of Misfortune and Weakness.

Knowledge is often more lamentable than ignorance, because used wrongly.

MOST NEWSPAPERS persist in printing marriage notices despite the anti-lottery law.

### Notes on the Bible.

[Written for the RURAL PRESS by MAUDE S. FRASER.]

Some months ago, a short article from my pen on the subject of the old English of the Lord's prayer appeared in the columns of the RURAL PRESS, followed by a longer article by a fellow-worker.

Since then I have gathered considerable interesting information on the subject of the book of books, the Bible.

Viewed from none other than a literary standpoint, the topic is one of much interest.

It is over five hundred years ago since Wycliffe made the first translation of the scriptures into the language of the common people.

The word "Bible," given universally to the Old and the New Testament, is derived from the Greek *Ta Biblia*, the books. This name was first used by Chrysostom in the fourth century.

When the Jews, in about 535 B. C., returned from their captivity, Ezra collected and arranged all the sacred writings then known to him.

He divided these into three parts—The Law, The Prophets and The Hagiographa. Pentateuch, or five books of Moses, constitutes The Law. The writings of the prophets occur under the proper headings. Hagiographa means "sacred writings," and includes The Psalms, The Proverbs, Ecclesiastes and The Song of Solomon.

Between the completion of the Old Testament by Malachi, who was the last of the prophets, and the publication of the new, I find there elapsed nearly five hundred years.

A translation of the Old Testament into the Greek was made in the third century B. C. This is called the *Septuagint*, and is considered very valuable. An Egyptian monarch, Ptolemy, caused this translation to be made for the famous library at Alexandria. There are many conflicting theories as to the origin of this translation.

The most celebrated of the Latin translations was the *Vetus Italia*. The *Vulgate* was translated from the original Hebrew by Jerome, and has been for centuries the standard Bible of the Roman church. It was first printed at Mentz by Gutenberg. It was the first book printed with movable types, and although it came into existence somewhere between 1450 and 1455, is without a date.

During the reign of James I of England, what has since been known as "The Authorized English Version" made its appearance. It was the work of forty-seven learned divines appointed by the King.

The first translation of the entire Bible into English was made in 1380 by Wycliffe. Many other versions followed this before the advent of "The Authorized English Version" in 1611.

It is, without doubt, well known that the whole of the New Testament was not written at one time. Six of the apostles and two disciples who accompanied them worked upon it at different times.

The Gospels of Matthew, Mark, Luke and John were written and circulated among a chosen few shortly after the death of Jesus. All of the rest was written within the next century, and principally during the first half of that period.

In the next century several apocryphal writings were published, but were rejected by even the early Christians.

The first printed New Testament was that of Tyndale, 1525; the first printed Bible was that of Cloverdale, 1535. The former was printed at Cologne, the latter at Antwerp.

During the process of translation, the singular rendering of certain words of the text has caused odd names to be given the Bibles containing these mistakes. These are so curious and of such unmistakable interest that I will quote somewhat at length from my authority:

"In Matthew's Bible, 1551, the word *terror* in Psalm xvi: 5 is rendered *bugges*, making the passage read: 'Thou shalt not be afraid for the bugs by night.' This is called *The Bug Bible*. In the Geneva Bible, 1560, Adam and Eve are said to have made themselves *breaches* of fig leaves instead of *aprons*. This is designated *The Breaches Bible*. In the Bishop Bible, 1568, 'is there no *trayacle* in Gilead,' is found instead of *balm*; hence the name, *The Treacle Bible*. In the Douay version, 1610, this word is rendered *rosin*, from which we have *The Rosin Bible*. There is mention of one more Bible in which Paul is said to be called 'a *knave* of Jesus Christ,' Rom. i: 1, meaning thereby a servant; but this, which is designated *The Knave Bible*, appears to have had no existence."

It may be interesting to mention a few typographical errors that have crept into some of the versions of the Scriptures.

Cotton Mather tells of one in which David is made to say, Psalms CXIX, 161: "Printers have persecuted me without a cause." In a London edition of the Authorized Version, 1653, 1 Cor. VI, 9, reads: "Know ye not that the unrighteous shall inherit the kingdom of God." In an Oxford Bible is found, Heb. IX, 14, "Purge your conscience of good works," instead of dead works. In still another is the following, "Christ condemneth the poor widow," instead of commendeth.

I quote again: "In 1717, J. Basket published in Oxford an edition of the Authorized Version in which 'The parable of the vinegar'

at the head of Luke XX appears, instead of 'The parable of the vineyard.' It is not surprising that this was called "A Basketful of Errors."

The most startling blunder, however, was contained in the so-called *Wicked Bible*, where the word *not* is omitted from the seventh commandment. King Charles I fined the printers three hundred pounds and caused the whole edition to be destroyed.

Much care has been taken to rectify all mistakes, whether grave or trivial, and the *Revised Edition* now in use is believed to be the very best possible rendition of the original text.

It was not undertaken to settle any doctrinal points, but to more carefully render certain words and phrases that, it was thought, had been somewhat slighted at the hands of those first employed on the Authorized Version.

Whether this attempt will be the last made to attain a perfect translation rests in the future. It is certain that no time or money was spared to make the edition a success from a literary point of view.

### Chaff.

MALE BOARDER (giving an account of a banquet): We had a rare entree. You cannot guess what. It was a piece of ground hog.

FEMALE BOARDER: Horrible! Did you really eat it? What did it taste like?

MALE BOARDER: It tasted very much like sausage.

QUOTH TOM: "Though fair her features be, It is her figure pleases me."

"What may her figure be?" I cried.

"One hundred thousand!" he replied.

"I'm beginning to think my wife wants to get rid of me. Yesterday she made me get my life insured."

"That's only a sign of her womanly prudence."

"But at the same time she bought a new cook-book."

THE ROSE and calla side by side

Were in a bouquet pent;

"Ah! the rose exclaimed, 'you're fair to see.'"

And the calla said, "Of course, tee hee!"

But you cannot borrow aught from me,

For I haven't got a scent."

"THE climbing hills give strength unto the calf,"

Said Fitzaugustus Montmorenci Pugh,

And really did not like it—not by half—

When Alice asked "Why don't you climb a few?"

HUSBAND (gloomily): I lost fifty dollars

last night playing poker.

Wife: And yet you cannot afford to buy me

a bonnet.

Husband: Well, I should say not.

AN Exposition of Early American Statesman-

ship.—He: Why should you refuse him on

account of his not being your equal? Your

grandfather signed the Declaration of Inde-

pendence. Don't you believe that all men are

born equal?

She: Oh yes, of course I do; but some men

deteriorate after birth, you know.

ANGELINE: I will not marry him! He is

old and ngly. Mamma: Angeline, did I not

marry your father?—*Harper's Weekly*.

THE LITTLE DIPLOMATIST.—"Carl, it is not

very good of you to say bad things of your

friend behind his back." "Yea, but father,

when I say them to his face he licks me."

### Can Plants See?

The candid observer must admit that many plants act as if they had the faculty of seeing. At any rate, they manage to find food and support by some special sense, which the unscientific mind cannot name any better than to call it sight. Mrs. King describes a very curious instance of this habit of looking out for support on the part of a creeping plant in India.

"My husband has broached a theory that I cannot remember to have met with before, namely, that creeping plants can see, or at any rate have some faculty equaling sight. He was sitting in the veranda with one foot up against a large pillar, near to which grows a kind of convolvulus. Its tendrils were leaning over into the veranda, and to Robert's surprise he presently noticed that they were visibly turning toward his leg. He remained in the same position, and in less than an hour the tendrils had laid themselves over his leg.

"This was in the early morning, and when at breakfast he told me of this discovery, we determined to make further experiments. When we went out into the veranda the tendrils had turned their heads back to the railing in disgust. We got a pole and leaned it up against the pillar, quite 12 inches from the nearest sprays of convolvulus.

"In ten minutes they had begun to curve themselves in that direction, and acted exactly as you might fancy a very slow snake would do if he wished to reach anything. The upper tendrils bent down and the side ones curved themselves until they touched the pole, and in a few hours were twisted quite round it.

"It was on the side away from the light, and excepting the faculty of sight, we can think of no other means by which the tendrils could be aware that the pole had been placed there. They had to turn away from the light to reach it, and they set themselves in motion visibly within a few minutes of the pole's being there."

## YOUNG FOLKS' COLUMN.

### Bessie's Exhibition.

[Written for the RURAL PRESS by ISABELLA G. OAKLEY.]

The children had spent all the morning decorating the tent and reciting their pieces.

"Now, children," said Bessie, "you are all dismissed. Tell all the people they are invited at three o'clock precisely—Striped Tent, B Street, Cypress Beach, Pacific Grove."

But only the two little Brown boys heard her. The rest had heard the luncheon gong and were already half-way to the hotel. But they knew the invitation by heart—better, in fact, than some other things about the performance, which they were expected to know. Bessie stayed to put some finishing touches to the platform, which consisted of two rather unsteady boxes, and to settle upon the important matter of seats. She was alarmed to find so few.

"I wonder what I'm going to do. I didn't tell them to bring chairs, and now I can't go all around to the tents to tell them."

She stood looking rather anxiously toward the sea, and just then she fortunately saw a board half covered with sand. It was dirty and heavy, but she was determined that this should make a settee, so she tugged away, dragging it a little and dropping it a good deal. When Charley Stevenson, who was passing, saw her, he kindly offered to carry it for her, otherwise I think it would have never reached the Striped Tent.

When it was finally settled with its ends upon two boxes, it made a beautiful seat and Bessie regarded it with delight.

"That'll seat six. I guess some of 'em will bring camp-stools."

"Invite me to your show," said Charley, "and I'll bring two."

"Oh yes, certainly," said Bessie, politely; "but it isn't a show, it's an exhibition, and I guess you won't like it very much. But you must promise not to laugh."

She did not at all believe in inviting such a big boy, but then he had been so kind she didn't see how she could refuse him. Still she trembled inwardly for fear the children would be afraid of him.

Thus encouraged, Charley stayed and helped fix up. The "decorations" had tumbled over in most places and looked discouraged and withered.

"Wait till I go and get a hammer and things," said he; "I'll make 'em stay up, and I'll bring some fresh cypress boughs."

So they worked away until things looked quite "ship-shape."

Bessie was very late at luncheon and looked pale and tired. Her mother wanted her to lie down after lunch, but this was declared impossible.

"The children will come back and spoil the tent. I must go early and see to them."

"She takes more care of those babies than all the nurses at Cypress Beach," said Aunt Susie to her mother.

After lunch, Bessie was in a hurry to be dressed, and while her mother was doing her hair she described what was going on.

"You're invited at 3 o'clock, mamma dear, but," she added in a lower tone, "I don't want Aunt Susie, she's so sarcastic you know."

"Well," said her mother, "I don't see how you can invite some of the family and leave others out."

"I know it," said the child, "that's just the trouble, it worries me dreadfully; but I don't see how I can have her."

Her mother did not answer; she was thinking a long way off while she tied the bows upon Bessie's braids. But when she turned the little girl around and saw two long tears sliding down the round pale cheeks, "Why, daughter," she said, "what are you crying about?"

"I'm so troubled about Aunt Susie, and Charley Stevens, and everything!"

"Well, I think I shall undress you and put you right to bed! This will never, never do—you're all worn out with play!"

"Oh, please, mamma, please! The children have all learnt their pieces, and everybody's invited, and the tent's decorated, and everything! I'll stay home all day to-morrow!"

Her mother looked her over. Her eyes looked heavy, but the disappointment she saw gathering there would bring headache sooner than play, so she said: "Well, you promise to stay with me all day to-morrow, do you? I guess Aunt Susie couldn't come very well, anyway; she's going to ride."

"Well mamma, be sure you come," and after several embraces she departed, and was hurrying back to the striped tent. She didn't get there a minute too soon. The little Brown boys and Susie Culver were there, playing seesaw with the settee.

"Oh dear, don't; you mustn't spoil the seats, so. Now Dickey and Guernsey, you each go and get a camp-stool, won't you?"

"Yes," said Dickey. "My gran'ma's coming and she don't want to sit on a board settee!"

"Oh, Susie, how sweet you look," said Bessie, turning Susie around to bring all her flowers and ribbons into full view. "Come now, let me hear you speak your piece once more!"

Susie lisped off her verses at the rate of about fifty words a minute.

"That's nice," said the little teacher, encouraging her with a kiss, "only a little too fast."

Then she drilled her in making her curtesy and gave her a lesson in getting up and down the platform. This was a part they all liked. By this time they had all come, and it was about time for the visitors.

"Now don't run away; come now, all sit down; you'll spoil your dresses; come, I'll read you a story while we're waiting."

The pockets of Bessie's tent were always stuffed with story books and in a few minutes the whole dramatic company were crouching on the tent floor listening to the story of the Gryphon.

"You ought to be rehearsing, I know," said Bessie anxiously, "only you all act so, I guess I'd better read you another story."

But now the visitors began to come. Susie's mother, and the grandfather and grandmother of the little Browns, and Bessie's mother; that was all except Charley, who would not have stayed away for anything.

Bessie received them politely. They all admired the decorations, especially the platform, which was very artistically covered with a gray blanket bordered with sunflowers. The performers occupied the settee, where they sat swinging their little legs and looking hard at Charley; it was generally wished that he would go away, for all were sure that he would laugh.

Then Bessie rose and said, with great dignity: "It's time to begin; the children will sing 'Suppose a little dew-drop.'" But the choir did not so much as stand up, while Bessie, without the least hesitation led off in a clear, sweet voice, and sang the solo all through. The piece was solo and chorine, but no one joined in the chorine. However, by the time she got to the third verse, Dicky Brown, forgetting himself, burst strongly in with his part.

"So many a deed of charity  
A little child may do—o,  
Although it has so little strength,  
And little wisdom too."

This produced great applause, the children clapping loudly, with no seeming shame for their recent conduct.

"The first piece," continued Bessie, "is by Susie Culver—'Do you know what the birds say.'" Then Bessie took her seat, but Susie turned red and looked at Charley Stevens, and then ran and put her head in her grandmother's lap.

The next minute Bessie was on the platform making Susie's curtesy and reciting Susie's piece:

"Do you know what the birds say, the sparrow  
and the dove?

The linnet and lark say, I love and I love;  
In winter they're silent, the wind is so strong.  
What it says I don't know, but it sings a loud song;"

And so on; it wasn't very long, and when she stepped down there was loud applause, chiefly by Charley, who said he would like to "lam" Susie, or to "eat her up."

Then Bessie announced "The Children's Hour," by Guernsey Brown. Again, I blush to record it, there was a dead silence, during which Guernsey ran straight out of the tent, and the other children tittered; I'm not sure but that some of the grown people laughed too. Again, however, Bessie took up the part and never missed a word. When she got to the favorite verse:

"Do you think, O blue-eyed banditti,  
Because you have sealed the wall,  
Such an old mustache as I am  
Is not a match for you all!"

Guernsey was on hand to laugh as loud as any one at this favorite sally. Then the children were asked to sing "The morning bright" and they really did and so did the grown-up people; it really began to seem quite like an exhibition, or—a Sunday School.

"There are two more pieces," said Bessie. "Dickey Brown was going to say 'Twas the night before Christmas,' but I guess he can be excused (Dickey was creeping under his grandfather's chair), and we will hear Pinkey's piece, 'Which way does the wind blow?' by Miss Pinkey Scott."

But Pinkey did not stir; yes, Pinkey, who thought Susie had acted so meanly when it was her turn. She wanted to be good, but she looked at Charley and then at all the rest, and she couldn't, for all the world, get up on the platform. So she pulled her hat over her eyes and began to cry; but she stopped immediately when she heard her darling Bessie calmly reciting:

"Which way does the wind blow and where does he go?

He rides o'er the waters and over the snow,  
O'er wood and o'er valley and over the height,  
Where goats cannot traverse he taketh his flight.  
He rages and tosses, when bare is the tree,  
As when you looked upward, you plainly may see;  
But whither he cometh or whither he goes,  
There's no one can tell you—there's no one that knows."

"This is all," said the brave little conductor after she had made her curtesy.

The visitors all gave a long round of applause, and the other performers crept off in deep shame. In a few minutes they were all shoveling sand on the beach for a Grant monument.

"I wouldn't say my piece," cried Guernsey, "just 'cause Bessie invited Charley Stevens."

"Oh, yes," chimed in Susie, "that's just what I was afraid of, Charley Stevens would laugh at me. He's always calling us shrimps and kids and making fun of us."

Bessie lay with a wet handkerchief over her forehead in her mother's tent, while sarcastic Aunt Susan read to her.

"I suppose you always invite the gentlemen after you ask them to help you, don't you, anny?"

"Oh, certainly, but we have to be very careful how we ask them to help us."

"Well, when you can't lift the heavy things, and so on."

"Oh yes, certainly," said Aunt Susan.

## DOMESTIC ECONOMY.

APPLE CHARLOTTE.—Cut two dozen large cooking apples in thin, small slices, after peeling. Have ready, also, one pound of sugar, a quarter of a pound of sliced preserved citron, half a pound of hot melted butter, and a loaf of stale bread, also sliced very thin. Take a baking dish that will hold one gallon, line it with slices of bread dipped in melted butter, placing the buttered sides against the dish; now make a thick layer of apples, strew plentifully with sugar, and dot with bits of citron; now another layer of buttered bread, then another thick one of apples, sugar, citron, etc., until the dish is packed as full as it will hold. Steam for awhile to extract the juice from the fruit, then place in an oven to bake, applying the heat, however, gradually, so as to run no risk of breaking the dish. Allow the Charlotte to cook slowly for several hours, or until, by inserting a spoon, you find that the apples have become perfectly tender and transparent. When drawn from the oven turn out into a handsome dessert dish and sift over it a frosting of granulated white sugar. Serve with a sauce of simple cream.

FATHER ADAM.—This plain family dish is of English origin; it is one that is generally well relished by children. Probably the above name was given it because it is a very old dish. It is one of the many ways of using meat the second day. Take as much cold roast beef as will half fill a baking-dish suited to the size of your family. Add enough gravy, saved from the day before, or, lacking that, enough butter and water, in which to stew the beef until quite tender. Then having ready enough Irish potatoes, boiled, mashed, and seasoned with butter, pepper and salt, and made smooth with a little cream or rich milk, fill the dish with them to the top, and place in a well-heated oven to bake until nicely browned. It has a very inviting appearance. Tomato catsup or any nice store sauce may be served with it, but should be added at table as individual taste may suggest.

DINNER ROLLS.—Put one-half cake compressed yeast into a pint of warm milk and let it dissolve. Rub one ounce of butter into two pounds of flour, adding a pinch of salt; mix with the milk, cover closely, and stand in a warm place to rise, which it will do in about an hour; make into rolls and bake in a quick oven. Brown: Take one quart of brown meal, stir into it a tablespoonful of salt, dissolve one-half cake of yeast in warm water, make a hole in the flour and stir in; cover closely and stand in a warm place for the night. In the morning, break one ounce of butter into warm milk and dissolve; beat two eggs, stir them into the flour with one-half ounce of sugar; mix with the milk, let it stand 20 minutes, make into rolls and then bake.

SUPERIOR BREAD PUDDING.—Crumble up one pint of loaf bread; pour over the crumbs one quart of sweet milk. Stir in the beaten yolks of five eggs, one cupful of sugar, and one tablespoonful of melted butter. Season delicately with lemon. Bake the pudding until it is of the consistency of baked custard. When moderately cool, spread over a layer of jelly or preserves. Beat up the whites of the five eggs until very light, and add five tablespoonfuls of white sugar. Flavor this meringue with vanilla, put it on the pudding and brown slightly. When sent to table it is thought by some to be a great improvement to pour a little cream in each plate as a sauce. Yet this is just as convenience may dictate. It is good enough without.

BUTTERMILK PUDDING.—Two eggs, two cupfuls of sugar, half a cupful of butter, one teaspoonful of soda, sifted in two cupfuls of flour and three cupfuls of buttermilk. Stir this last into the flour, etc., and mix lightly. Grease a pudding-dish and bake an hour. To be eaten with sauce made of half a pound of butter, yolks of two eggs and nine tablespoonfuls of sugar. Beat the eggs well and cream butter with them. Put it on the fire to stew, having added to it two wine glassfuls of wine and part of a nutmeg grated. If preferred, any flavoring extract may be added and the wine omitted.

GINGERBREAD.—In making gingerbread it is essential to have good molasses; syrup will not give good satisfaction, and coarse black molasses is also objectionable. New Orleans is probably the best. Take one cupful of sugar, one cupful of sour cream, one cupful of molasses, four cupfuls of sifted flour, one tablespoonful of ginger, one teaspoonful of soda, the grated rind of one lemon, three eggs, well beaten. Stir the butter and sugar together, then add the eggs, milk and flour.

JELLY PUDDINGS.—These are to be baked in puff paste. Eight eggs, one cupful and a half of butter, one cupful and a half of pulverized white sugar, one cupful and a half of currant jelly. Season with essence of lemon. Bake the crust nearly done, and then pour in the batter. Bake until the puddings are slightly brown. This quantity will make three deep pudding plates full.

## TABLE OF CONTENTS.

ILLUSTRATIONS.—Views in the Vicinity of Porterville, Tuare County, Cal., 89.  
CORRESPONDENCE.—Napa County Notes—The Farmers' Cause; Semi-Annual Payment of Taxes; From Placer, 90.  
THE APIARY.—Questions Answered, 90.  
HORTICULTURE.—The Prune Industry of France, 90. Wood and Coal Ashes; California Fruits in Guatemala, 91.  
THE VINEYARD.—The Future of the Grape Interest; A Vine Puller; Transplanting Old Vines, 91.  
PATRONS OF HUSBANDRY.—The Master's Deeds; Farmers' Institute; Kibeehah Grange; Bro. Hayes at Auburn; Water o Grange; Connecticut State Grange; Worthy Master Hayes' Meetings; The Grangers' Bank; Alabama State Grange, 92.  
FARMERS' ALLIANCE.—Farmers in Council; Knights and Farmers Meet; From Secretary Pedlar; Brighton Alliance; San Luis Obispo County Alliance, 93.  
THE HOME CIRCLE.—The Vacant Farm-House; Rachel's Mother-in-Law; Thoughts; Notes on the Bible, 94. Chaff; Can Plants See, 95.  
YOUNG FOLKS' COLUMN.—Bessie's Exhibition, 95.  
EDITORIALS.—The Week; A State Weather Service; Small General-Purpose Farms; Honors to an Agricultural Editor, 96.  
QUERIES AND REPLIES.—Free Coinage; Routier's Peach Apricot; To Prevent Wash of Foothill Orchards; Sow 100 pounds or more of barley to the acre (rye is better) early in the fall and harrow it in; then smooth surface with board or roller. Early in spring, after the heavy rains, plow it under, and you have a cheap fertilizer which will add to tree growth.—ISAAC BIRD, Grass Valley.  
A New Butter Law Wanted.  
EDITORS PRESS.—As you are always ready to help all the industries pertaining to the farm through your valuable paper (and it is very valuable to one that has taken it so long as I have), allow me to say how much I would like to see our present Legislature do something for the better regulation of the butter market.  
A law to have the retailer sell by the pound, and not by the roll as now, would be a public advantage, as it is an imposition on the consumer, as now sold, and no benefit to the manufacturer nor to the commission man. The retail man gets all the profit; he will pay more for a third grade of butter that is in rolls weighing 1½ pounds than he would for first-class butter that weighs two pounds. Often the consumer thinks he is getting two pounds in the rolls he buys. Can you, through your valuable paper, call the attention of the dairymen to this thing and have something done? It will be a benefit to all concerned.—JOS. SHEPPARD, Point Arena, Cal.  
Putting Out Poison for Varmints.  
EDITORS PRESS.—We note in your issue of the 24th a receipt to mix phosphorus for squirrel poison. The farmers and stock-raisers of this vicinity claim that no person has any legal right to put out phosphorus without notifying each and every neighbor. Wishing to put out some, before doing so, we write you for information. Kindly inform us the proper and legal manner of putting this kind of squirrel poison out.—A SUBSCRIBER, Fresno County.  
Will some reader informed on law and practice give us a letter on this matter?  
Esparcet.  
EDITORS PRESS.—I sowed esparcet on a deep, gravelly, clay loam; it had formerly been a sheep corral. It made a very poor growth the first year, and the second year it all died out. The land is excellent for grain; grapes and blue-gum trees grow well on it. I think the land was too dry for the plant.—ISAAC LEA, Florin.  
Cabbage Lice.  
EDITORS PRESS.—Can you or any reader of the RURAL give any information regarding what will eradicate cabbage lice?—N. FLANAGAN, Orland, Cal., Dec. 31st.  
Plentiful applications of cold water, forcibly applied from a hydrant or from a force-pump, is as good a treatment as we know of. Who can give a better?  
THE LUMBER CUT of the northern coast for 1890 is set down as follows:

## A State Weather Service.

We believe no subject now before the Legislature will commend itself more forcibly to the agricultural producers of this State than the establishment of a State Weather Service upon the plan embodied in a bill introduced in the Assembly by Mr. Robertson of Siskiyou. We have really made great progress during recent years in an understanding of our peculiar climates, thanks to the Signal Service officers and other earnest students of local meteorology, and it is now feasible to greatly extend such observations and render their results more available at an exceedingly low cost. We believe there is no proposition now before the Legislature by which so much can be realized at so small cost.

The proposition is to organize and equip a State Weather Service, and, as might be expected, Serg't Barwick, of Sacramento, is leading in the effort and ready to assume its extra responsibilities and duties without cost to the State. Secretary Smith, of the State Board of Agriculture, is ready to assume the direction of the service, in addition to duties already covered by his salary. The result is, that the service can be had for the pay of a clerk and the cost of necessary stationery—each of these items being placed at \$100 per month—and the cost of instruments, which are furnished to voluntary observers, taking from them personal bonds therefor. Thus the service can be realized for very small expenditure of public money, and is in fact what is called, a "Voluntary Weather Service." Such a service is rendered practicable, because the United States Signal Service co-operates with the State organizations and furnishes blanks, postage, instruction-books, etc., free of cost to the State.

California is late in organizing such a service, and yet we know that Lieut. Finley is right when he says: "No other State in the Union is more in need of a formal organization for meteorological work than is California. She has immense interests to be benefited by the work of such a service." New York began in April, 1889, and has published a report of 122 pages deeply interesting and important, and the whole cost of the service which is thus epitomized was but \$1737.34. Other States that have established local Weather Bureaus are Alabama, Arkansas, Colorado, Dakota, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, Nevada, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee and Texas. By the bill of Mr. Robertson it is now proposed to extend the roster by adding California. The bill provides that the service shall be supervised by the Director of the State Agricultural Society. The central station to be at Sacramento, with a chief, an assistant and a sub-director, the first to be the secretary of the State Agricultural Society, the second an officer of the National service who may be detailed for that purpose, and the third to be the Superintendent of Public Instruction.

There are to be three volunteer stations in each county, and all teachers in public schools, if required by the county superintendents, who are to be county sub-directors, are to make and note daily observations and forward them. A weekly weather and crop bulletin is to be issued from the State printing office, from April to October, and each month a weather and crop review published, and annually the chief director is to publish, with the report of the State Agricultural Society, a review of the year's work.

This is in outline the proposition which is now before our Legislature, and one the enactment of which we believe our agriculturists should insist upon. Last summer, Serg't Barwick began a voluntary service, securing his local observers in part through invitation published in the RURAL and other journals. He succeeded so well that he received especial commendation from Gen. Greely, Chief of the U. S. Signal Service, who has instructed Serg't Barwick to make requisition for as much extra supplies, such as blank forms, franked envelopes, etc., as may be needed for an increase in the weekly crop service for the coming season. Serg't Barwick is now waiting before making such requisition for supplies until he knows the outcome of the bill, now before our Legislature, for if this bill becomes a law, he

will require much greater supplies than he could possibly use otherwise.

We have, then, the opportunity to enjoy more than ever before the benefits of the U. S. Service; we have a chance to produce a crop of trained weather observers and meteorological students; to bring the subject right into the schools, where it belongs; to inform ourselves upon crop prospects and to be warned of threatening weather conditions; to make better known throughout the world our glorious climate—all for a sum which is merely nominal in comparison with the benefits to be derived.

We can hardly see how a legislator can have a doubt upon the wisdom of the proposed legislation, and we expect to see it speedily realized.

## Small General-Purpose Farms.

We hear so much said, and generally truly said, of what is done on small areas of fruit in this State that it is very desirable to have it known that small farming is profitable in this State on lines in which fruit trees and vines do not enter. We say desirable, because not all localities are well adapted to fruit, nor do all tastes run to pruning or bag-killing. There are people who enjoy the perfumed breath of the cow and the melody of the poultry-yard. Their lives, perchance, have been spent in learning how to succeed with these valuable factors in agricultural production. They do not care always to come to California to take up lines of work of which they know nothing, although it must be acknowledged that some of our best fruit-growers were but recently cow-farmers and hen-farmers, and once little thought that they would take up other lines. Still, let it be known that it is possible to attain comfort and perhaps a competency in other undertakings than fruit-growing if one knows how to go about it properly.

We find in *Hoard's Dairyman*, published in Wisconsin, a little note which A. N. Hunt writes from Humboldt county, California, from which we quote as follows:

I am a small dairyman in Arcata valley. Have but 40 acres. Keep 23 cows. Buy pigs to eat the milk at \$1.50 when old enough to wean. Keep until six or eight months old and sell at 7 cents. Killed 20 in 1890 averaging 160 pounds. Sold 21 tons of hay at \$6.50 in the field; \$350 worth of beef; \$75 worth of eggs; \$20 worth of chickens; \$64 for pasturing horses, and many other small bills too numerous to mention. I am ashamed to put my butter account in beside some that I have heard of; but, to cut the thing short, I will say that my total production for the year of 1890 was \$2515. If any of my neighbors can beat that, I would be pleased to have them come to the front. I am a beginner—have only been here four years. I think that I can beat the above statement in a few years.

We would like to hear more from small farmers who are in other lines than fruit. We would like to compare their experiences and methods, that all of them might be advantaged thereby and that the proper opportunity in California for all kinds of small farming may be more widely known.

## Honors to an Agricultural Editor.

The election of an agricultural editor to a seat among the nabobs and millionaires in the U. S. Senate is startling and significant. The agricultural editor has occasionally risen above the proud eminence of the speaker's stand at the district fairs, which seems commonly to be the acme of the humble individual's aspirations. Such a person has even been Governor of a State, but never before to our knowledge has been like been called to the upper story of the great bonse at Washington. And yet we would not be greatly surprised if Agricultural Editor Pfeffer of Kansas should have others of his class beside him in the U. S. Senate before the close of the century. Agriculturists as a class are true to their friends and can recognize honest devotion to a purpose quite clearly. It is also a fact that agricultural editors, present company excepted, are as a rule most devoted, earnest and intelligent workers for the advancement of agriculture and the true interests of the farming classes. These classes have never been fairly considered in the conduct of public affairs, and it is the most natural thing in the world as they are gradually attaining their public rights they should send to Washington to plead for them in the nation's ear the same men who have been pleading and insisting and declaring for them through the type ever since agriculture began its upward course

among the world's industries. It is a grateful recognition of such service that we perceive in the action of the Kansas Legislature in electing Mr. Pfeffer, editor of the *Kansas Farmer*, to the U. S. Senate, and we sincerely trust that he may have strength and wisdom to honorably discharge the peculiar obligations now laid upon him.

## QUERIES AND REPLIES.

## Free Coinage.

EDITORS PRESS:—What does the phrase "free coinage" mean? What is the U. S. law bearing on the subject?—FRANK P. COOK, Stockton.

Free Coinage is what its name implies. You deposit the bullion and receive the equivalent for it in coin without charge for coinage. This would bring the value of silver bullion up to a gold basis; viz., \$1.29½ per ounce of 1000 fine. Under the present law, the Government buys 4,500,000 ounces of silver a month at its market value, which keeps the metal a commodity with a fluctuating value, but under free coinage no such condition can obtain.

## Routier's Peach Apricot.

EDITORS PRESS:—I am not in the habit of writing articles for publication, but I saw in the RURAL two unanswered questions by P. of Stillwater, and as it is in the line of my business, it may be proper for me to answer, as I have made fruit culture a special study for the last seven years. I have been traveling for W. R. Strong Company in the fruit interest for the last seven years and know that the Peach apricot does well both in the foothills and valleys north of Sacramento to Shasta. It is a good and regular bearer, and the demand this year is greater for that variety of apricots than ever before. Hutchens Bros. of Butte county are planting several thousands of the Peach apricot this season.

## To Prevent Wash of Foothill Orchards.

Sow 100 pounds or more of barley to the acre (rye is better) early in the fall and harrow it in; then smooth surface with board or roller. Early in spring, after the heavy rains, plow it under, and you have a cheap fertilizer which will add to tree growth.—ISAAC BIRD, Grass Valley.

## A New Butter Law Wanted.

EDITORS PRESS:—As you are always ready to help all the industries pertaining to the farm through your valuable paper (and it is very valuable to one that has taken it so long as I have), allow me to say how much I would like to see our present Legislature do something for the better regulation of the butter market.

A law to have the retailer sell by the pound, and not by the roll as now, would be a public advantage, as it is an imposition on the consumer, as now sold, and no benefit to the manufacturer nor to the commission man. The retail man gets all the profit; he will pay more for a third grade of butter that is in rolls weighing 1½ pounds than he would for first-class butter that weighs two pounds. Often the consumer thinks he is getting two pounds in the rolls he buys. Can you, through your valuable paper, call the attention of the dairymen to this thing and have something done? It will be a benefit to all concerned.—JOS. SHEPPARD, Point Arena, Cal.

## Putting Out Poison for Varmints.

EDITORS PRESS:—We note in your issue of the 24th a receipt to mix phosphorus for squirrel poison. The farmers and stock-raisers of this vicinity claim that no person has any legal right to put out phosphorus without notifying each and every neighbor. Wishing to put out some, before doing so, we write you for information. Kindly inform us the proper and legal manner of putting this kind of squirrel poison out.—A SUBSCRIBER, Fresno County.

Will some reader informed on law and practice give us a letter on this matter?

## Esparcet.

EDITORS PRESS:—I sowed esparcet on a deep, gravelly, clay loam; it had formerly been a sheep corral. It made a very poor growth the first year, and the second year it all died out. The land is excellent for grain; grapes and blue-gum trees grow well on it. I think the land was too dry for the plant.—ISAAC LEA, Florin.

## Cabbage Lice.

EDITORS PRESS:—Can you or any reader of the RURAL give any information regarding what will eradicate cabbage lice?—N. FLANAGAN, Orland, Cal., Dec. 31st.

Plentiful applications of cold water, forcibly applied from a hydrant or from a force-pump, is as good a treatment as we know of. Who can give a better?

## The Week.

The open winter continues, and under clear skies and a balmy air the Californian and his tourist visitors are working or idling according to their needs or inclinations. Meantime come reports of the most severe storms and Arctic temperatures over the Atlantic side of this country and the broad continent of Europe. Even in the semi-tropical region of Southern Europe the rivers are running ice-floes, and the orange and olive have suffered severely, while numerous invalids who have flown to the accustomed mildness of the Mediterranean shores, have encountered winter such as recent records speak not of. But one question worries Californians: When will it rain and how much? This question need not be answered immediately, nor too long postponed.

THE Southern Pacific Co., after test trips to see whether wood or coal was cheaper for running their locomotives over the mountain division, find that there is a slight advantage in favor of coal.

## At the Northern Citrus Fair.

Written for the RURAL PRESS by N. E. BOYD.]

(Continued from page 69.)

The northwest corner of the pavilion was well occupied by the

## Chico Board of Trade.

Ninety varieties of grain, duly tagged, made a striking part of this exhibit. Some 30 of the sheaves were fixed to the north wall, with heads divergent, in the shape of an arch whose keystone neared the eaves, while others were massed at one side in a pillar decked with hearing olive-branches and having at its base big beets and squash.

On tables in front of the grain display were English and black walnuts, pecan and hickory nuts, chestnuts and almonds; a collection of elegant dried fruit—W. V. Groves'—including both white and yellow nectarines, apricots, plums, freestone and cling peaches, blue figs, both bleached and unbleached, Brown Turkey figs, apples, pears and raisins; Casaba melons and olive oil from Gen. Bidwell; Japanese persimmons and comb honey.

Cases of cocoons and reeled silk were shown by Mrs. E. Findley; and five or six kinds of winter pear, by John Guill, had kept excellently.

Against the west end of the building, rising to the roof of the wing, and at right angles to the display of grain in sheaf, was a two-storied representation of the front of the Agricultural Department at Washington, with grounds in miniature. In lieu of windows, its purple walls were set with a dozen clear mirrors, framed in wired oranges, and the effect was brilliant.

About six dozen big, fair seedling oranges placed on marble-topped stands completed this Chico exhibit, which was in charge of B. F. Allen; the balustrade in front of it was quaintly ornamented with little gourds and squashes.

Out on the floor embayed by Chico, Thermalito and Oroville, a plot 16 feet square was laid down to a "Winter Garden," with beds, borders and gravel paths, by Francis Gibson, whose object was to show that "Sutter County has flowers and vegetables in midwinter." (He attained that object, and a special award of \$20 into the bargain.) At one corner a tub of earth held a Flat Dutch cabbidge, the head proper being a foot across, which grew on Mr. Gibson's land a mile below Vernon. It was claimed to be a fair specimen of the crop then on the ground, from which potatoes were harvested July 15th, and peas in September.

## The Sutter Fruit-Train.

The Sutter County Fruit Co.'s train, stretching for nigh 50 feet along the Southern wall, consisted of locomotive, tender, and three cars. The locomotive—framed by a master builder in the proportions of a real engine, on a plan suggested by R. C. Kells—was elaborately plated with dried fruits, the boiler appearing in platted plums, the dome and sandbox of peaches and white figs, the smoke-stack of black figs, the pilot of raisins, etc. At night it carries a *bona fide* electric headlight. The cab and tender are finished in similar fashion, and the latter is heaped with French prunes instead of coal. The three cars typify the canning, the drying and the citrus seasons, the first being freighted with cans, the second with dried fruits in great variety and the third with oranges. The train seemed to be issuing from the eastward end of "Truckee Tunnel," the pine-clad mountain-side being piled with snow, which on closer view proved to be cotton grown in Sutter county.

Between the tunnel and Yuba's windmill the Sutter Cannery had reared a pillared temple-porch, the building material being cans labeled with gay chromes of the cherries, peaches, plums, etc., which they presumably contain, with a few glass jars of extra fruit by way of trimming. Near by stood Clara Pratt's nice exhibit of fruits in glass—about 40 jars—each, by aid of an ingenious wired frame, was disposed in the general form of a tall fruit-dish.

Mrs. Robert Keck of Yuba City made a highly creditable display of almonds, walnuts, raisins, figs and other dried fruit, apples and cotton.

Mrs. A. B. Van Arsdale had in a showcase some handsome Washington Navels plucked from three-year-old trees of Florida stock and several plates of dried White Adriatic figs, from trees set out back of the levee near Yuba City two years ago, when they were one year old from the cutting. These figs, merely sundried, so approved themselves to the eye, touch and palate that they were awarded the premium of \$20.

## Potted Plants and Flowers.

Mrs. R. C. Kells, of Yuba City, took the highest honors for potted plants and flowers. (Her exhibit was massed upon a table in the shape of a quadrant with an eight-foot radius.) Grouped around a central tuft of variously-dyed pampas plumes were begonias of half a dozen sorts, camellias white and red, umbrella plant (*cyperus*), kamquod, geraniums in variety, carnations, heliotrope, China primroses (four kinds), maiden hair and asparagus fern, sedum, stevia, tradescantias (two var.), oxtail (three var.), cyclamen, achyranthes, lobelia, diosma, abutilon, mignonette, fuchsias, alter-

nanthera and salvia splendens—all in pots—and cut cactuses.

## Other Yuba City Exhibits.

J. K. P. Elwell showed a lofty cone of oranges, with lower pyramids about the foot. Mrs. W. H. Lee had a handsome shaft of oranges, reared "In honor of N. S. G. W.," twined with smilax, capped with a vase of fruit and having violet horseshoes on the angles. The monument rested upon a turftopped base, adorned with roses and chrysanthemums, and having at its six corners little posts that upheld fence-chains of gilded walnuts.

S. C. Deane laid his seedlings in a bed of spruce-tips on a table seven or eight feet square, rising gently to the center, above which Mrs. Desner set up an easel of oranges wreathed in smilax and crowned with flowers and pampas-plumes.

A heap of very fine, smooth Bonnie Brae lemons was exhibited by James T. Bogue, the wide-awake nurseryman, who carries stock of that famed variety.

S. H. Ranb, of Meridian, showed six or eight boxes of extra nice-looking raisins; and P. V. Veeder, of Grimes, about 70 large Japanese persimmons, in just the right condition for immediate use.

The exhibits hitherto described lay to the left as one entered—that is, in the western half of the pavilion.

## Smartsville's Castle.

Glancing to the right, conspicuous near the stage, was Smartsville's great Moorish castle, mentioned last week as large enough to live in. Its outer walls and ogee roof showed thousands of seedling oranges, but monotony of yellow was relieved by occasional loopholes and frequent bands of glossy green leaves, with clusters of crimson berries at short intervals. High up on sides and gables appeared the names of D. C. McGanney, James O'Brien, Jr., F. D. Congdon and Excelsior W. & M. Co., in letters of citrus fruit on a green ground. There was a doorway in the middle of each of the four sides, and the interior—a tent of yellow cambric—was furnished with chairs and rugs, and afforded a grateful resting-place to the visitor who was weary of standing and walking about among the exhibits.

Beyond this towered the S. F. Chronicle building, all oranges, save the many windows and their leafy frames, until the eye reached the black figs at the eaves and the red apples beneath and around the clock. It looked its best at night, when illuminated from the inside.

## Placer's Pyramid.

Between the Smartsville Castle and the entrance—just at your right hands as you came in, and corresponding to Butte's pyramid on the left—Placer county filled a large three-cornered space with tables encompassing another orange-clad pyramid. The concave inner face was covered with oranges by the county's Board of Trade. Some of the fruit was yet noticeably shaded with green. C. M. Silva & Son, Newcastle, displayed Wolfskill, St. Catherine, Du Roi, St. Michael, Wilson's Best, Mediterranean Sweet, Konah, Florida Gem and other varieties, which took the first premium in Class 4 (best exhibit of budded oranges other than Washington Navels). Beside them lay a few Chinese quinces—long, smooth ovals, looking somewhat like dwarf watermelons, but giving out the quince's delicious fragrance.

On the Placer table F. Gillet, of Nevada City, had sample boxes of French dessert prunes (Mont Barbet and Lot d'Ete), that were uncommonly fine.

Sherman Bros., Newcastle, showed little Picholine olives, dry and pickled; almonds; White Adriatic figs, dried, pickled and preserved; fig marmalade; Zante currants and very nice-looking sun-dried peaches—Bilyen's Late October.

H. E. Parker of Penryn exhibited in a showcase variously packed specimens of the "Bulletin Smyrna" fig—his success with which has become so famous—and outranked all his rivals. C. L. Delamater's White Adriatic figs also appeared to advantage.

On the pyramid, L. H. Cary's choice raisins from Auburn, in beautiful fancy packing, won the first premium of \$100.

Robert Hector of Newcastle arranged his Konah, Wolfskill, Navel and other oranges in neat little stacks, which were kept well together at the base by plush-bound circles.

## Olives and Oil.

Mrs. Emily Robinson of Auburn, with mountain olives and oil from her "Olivins Farm," 1400 feet above sea level, bore away the highest honors in three classes. She had 13 varieties of named olive, displayed in glazed boxes; two varieties of olives, pickled both green and ripe, in glass jars, and oil both of 1890 and '91 from the Mission, the Regalia and the Rabra. She also exhibited fine persimmons and a growing Japanese tea plant, the seed of which is much the shape and size of a small filbert, but a trifle darker.

J. W. Smythe of Newcastle showed some dried Chinese dates. They were smaller than the fruit of the date palm, somewhat shriveled and of a brownish-yellow color. We presume they came from the tree spoken of in our "Agricultural Notes" for Sept. 22, 1888, as growing beside a Chinaman's hut at Horseshoe Bar and supposed to be a chance seedling from imported fruit. (According to Henderson's "Handbook of Plants," the name "Chinese date" is given by foreign residents in the

north of China to the fruit of an improved variety of jujube, *Zizyphus jujuba*.)

Citrus nursery stock and ornamental palms from F. C. Miles' Aloha Nursery, Penryn, added grace to the whole Placer-county output, which was in charge of Robert Jones of Newcastle.

Beyond—eastward—an orange-olad river steamer, "D. E. Knight, No. 2," shown in a tank of water by Mrs. A. F. Meyer, Marysville, drew much notice, and the splash of the revolving stern-wheel had a special fascination for the youngsters.

N. B. Kirtley of the Sutter Independent exhibited a collection of clean, fair-sized oranges, both seedling and budded.

T. B. Hall of Sutter county showed California, Phillips and Eastern black walnuts; paper-shelled, hard-shelled and bitter almonds; pecans, persimmons, alfalfa seed and a variety of grain in jars.

Mrs. Gee of Marysville had quite an extensive and various display of canned and preserved fruits in glass; but however excellent the quality of her preparations may have been, they were put up in vessels of so many diverse patterns that it detracted sadly from their appearance and they were awarded only the third prize in their class.

Wheatland's fantastic shed of evergreens, with a red cabbage at each corner and pillars of maize on the cob, sheltered a bale of the hops that "rivet the world," around which were grouped French prunes, oranges and samples of cotton raised on Bear river bottom.

The next row of exhibits to the eastward (on a line with the Chronicle building) embraced about 500 Sicily lemons, uncured, raised in Marysville by Mrs. Parks and Mrs. Coombs. This fruit was displayed on a level table, and was uniquely arranged in symmetrical figures underlaid by cedar tips and mirror-plate.

## Yolo Raisins.

D. A. Jackson, Woodland, showed a few boxes of fine raisins, very attractively packed, and superb French prunes 20 to the pound, which won prizes amounting to \$100. The copy of his account with Griffith & Skelley, from Oct. 18 to Dec. 4, 1890, footed up \$17,204.55, for which he has received their checks on the Pacific bank—net proceeds of some 70 scores, with the second crop to hear from. Clusters of well-kept Emperor grapes gracefully overhung the prunes and raisins.

Dr. L. B. Holmes, also of Woodland, sent a tall glass jar of pickled olives, both green and ripe, which had met with some accident by the way and so did not appear at their best.

C. B. Kimball, Marysville, had a magnificent exhibit of oranges, admirably arranged. From the center of a table 10 feet square, so dressed with spruce and Christmas berries as to give the effect of a solid base, rose a classic pedestal and obelisk 18 feet high, encased in highly-colored oranges, except where green lemons marked the angles and formed the vertical inscription (on the four sides of the shaft): "State—Citrus—Fair—1891." The table around the base of the monument was filled with fine oranges three layers deep, with openings for three separate exhibits in Classes 4 and 5.

## Siskiyou Apples.

Near by stood Siskiyou's special contribution—apples, green, yellow and crimson, 15 varieties, arranged in pyramids, in charge of James Vance. Mr. Vance, who is president of the 10th District Agricultural Association, said he sent out 25 letters asking for fruit, and the people responded so well that he received much more than he could display.

## Sutter's Fort.

For 30 feet across the eastern end of the hall stretched a mimic "Sutter's Fort," the roof of its block-house rising to the Pavilion's window-caps and surmounted by a huge citrus bear. The whole structure was mailed in oranges, with dividing lines in evergreen. Quaker guns looked at you through the outer walls, and just within the gate stood a real cannon that had actually been in the old historic fastness. (The design was entered by Capt. G. B. Baldwin and Maj. F. H. Greeley, Marysville.) A bust of Gen. Sutter, and two of his portraits—presented by him personally to Mrs. Walters, of Linda, and Chas. Covillaud—were interesting relics of the earlier days of California.

Just outside the fort, southward, J. P. Onstott, of Yuba City, had an ample and taking display of the Thompson's Seedless raisins, which he made his name so favorably familiar to older readers of the RURAL PRESS.

Next came Geo. S. Cooky, Marysville, with a choice little output of olives on the branch and pickled, and olive oil; to which latter the painstaking committee (who not only looked at but tasted) awarded the second premium.

G. W. Hutchins occupied the southeast corner with a singularly neat exhibit of citrus fruits, dried figs and nuts. The oranges—about 1000 of them—were set up against the wall in some 80 diamond compartments of uniform size, but holding each from 9 to 20 oranges, according as the variety was Navel or St. Michael. On the table below there were shaddock and pomelo; the nicely packed figs which took the third prize; black and English walnuts, bleached almonds and peanuts.

Mrs. C. N. Jenkins made a very tasteful display of oranges in Classes 3, 4, 5, 6 and 7.

The little schooner "California," built by Misses Pratt and Fisher, showed a hull (a yard long) of dried prunes, spars coated with raisins, rail of gilded walnuts, and strings of popcorn for rigging. She was laden with min-

iature packages of grain and other local products. Her name was imprinted along her side in letters of red peppers, and she rode in a sea of jelly.

Mrs. Sarah S. Rogers, Marysville, displayed her lemons to great advantage in a sloping row of moss-trimmed boxes. Above them was set up an enormous horseshoe of oranges, with a great background of the same fruit, among which, in letters of deep red apple, appeared the legend "Good Luck," and the luck was with her—those lemons took the first premium.

## Colusa's Table.

Here on the south side, not far from the entrance, was Colusa's table, in care of W. H. Jones. The exhibit from this county, although not large, was comprehensive. There were huge stock beets and pie squashes, red cabbages, raisins, dried fruits and nuts in considerable variety, threshed grain, many showy jars of grapes, pears, apples, plums and peaches in preservative solution, wines and jellies, besides fresh Japanese persimmons and citrus fruits.

## Acme Fruit-Picker.

George Biddall of Woodland showed a model of a clever portable contrivance, to be set either on level ground or hillside, by means of which one may seat himself securely outside a tree, or among its branches, and go to picking or pruning at his ease. Mr. Biddall has applied for a patent on his device. As he has a picture of it preparing to show our readers, we defer a more particular description until the illustration is ready.

Crossing the hall once more, to explore the regions north of Smartsville's castle, we found just east of the speaker's platform a neat little lot of citrus stock entered by Robt. Williamson of the W. R. Strong Nursery Co., Sacramento.

Back of that, a compact show of nice-looking oranges, by several Tehama county growers, among them two Washington Navels by A. A. Bromlee, a box of purple plums that H. Bressler had gathered from the tree Jan. 14th, and samples of handsome olives from Chas. R. Maynew—all of Red Bluff.

## A Superb Combination.

Along the north wall, eastward of the stage, there extended for 40 feet a superb trio of exhibits, by Mrs. M. Wearman, the Colmena colony and Mrs. Mary Karr—forming virtually one continuous display, and one of the handsomest pictures in the pavilion.

First of the three a plane of oranges, ten feet wide, with citrus buttresses at either end and "Wearman" in crimson apples across its face, slanted from the floor back and upward to a shelf, waist high, where a gigantic swan seemed resting on a lake of lemons. The breast of the great bird was of oranges and lemons imbedded in cotton; its wings and back of figs, black and white in alternate bands, and shaded with dried fruit; and the snow-white neck and head of rice and sugar. The whole figure was set off by a green backing of cedar sprigs, in a frame of arching oranges. (This design was arranged by Peter Engel and others.)

Adjoining this was another citrus slope, with "Colmena" written across it in red apples, surmounted by a cottage gable, in which oranges, lemons, apples, "Osage orange" and green mosses were skillfully combined around a gorgeous little colored-glass window, producing an effect that was very pretty.

Then the grand embankment of "Oranges and Lemons from the Grove of Mrs. Mary Karr, Marysville, Cal.," rising into pyramids at either end, with thousands of the large, bright fruit symmetrically placed behind and above, in boxes and heaps and in panels about the windows. A big horseshoe set aloft upon an easel—all citrus fruits—was the central design of her display, and corresponded in a measure with the swan on the other side of the esthetic cottage gable. (It was interesting to walk out one morning to 6th and F streets and view Mrs. Karr's thrifty orchard, with orange trees as large around as a man's thigh, growing on a city lot overlooking the slough. Seeing is believing!)

In the northeast corner Gottlieb Steber of the Marysville Winery had oaks of different sizes built up into conical stands, on which bottled wines and grape brandy were arrayed, and the adjacent walls were ornamented with several fine sets of entlers, from which late white and purple grapes hung in beautiful clusters.

Between this corner and the end of "Sutter's Fort" was a little flat, covered with oranges from the grounds of the Convent of Notre Dame. A large cross of Japanese persimmons stood in the midst, and lemons, olives and green grapes of several kinds completed a very pretty exhibit.

The interest which had its focus at the pavilion in Marysville was plainly seen and felt throughout the city. The air was full of it; the thronged hotels and sidewalks were alive with it; and the abundance of oranges displayed in the windows of shops and other places of business, and wrought into signs, devices and mottoes of welcome along the streets, bore witness to the common glow of enthusiasm over the Citrus Fair.

The influx of visitors from all parts of the State—for not only Central and Northern California, but Los Angeles, San Bernardino and San Diego also, came to see with their own eyes—tried the lodging capacities to their utmost; and when the hotels and usual boarding-

places had been filled to overflowing, the efficient Committee on Accommodations found sleeping-room at private houses for hundreds (literally hundreds) of stranger guests to whom the dwellers opened hospitable doors.

The exhibition, at first announced for Jan. 12th to 17th inclusive, was wisely kept open two days longer and did not close until 12 o'clock Monday night. Taking gate receipts as a basis for calculation, the attendance was estimated as follows: Monday, 1000; Tuesday, 1600; Wednesday, 5000; Thursday, 4500; Friday, 4000; Saturday, 8000; Sunday, 1000; Monday, 1500—Total, 26,600. The surplus receipts, which amounted to \$2000 or \$3000, will probably be used to promote the success of fairs to come.

Careful inquiry among those who had charge of the principal county exhibits led us to conclude that about 180,000 oranges, all told, were in sight at the pavilion. Viewed from the gallery by daylight, when the crowd was absent and the morning sun shone in, the wealth of golden glory was even more impressive than under the glamour of electric light.

Among the notable incidents of the week were the formal opening ceremonies, at which Col. John P. Irish made the chief address with his usual felicity; the oration of Gen. Chipman, reviewing the development of orange culture in the Northern citrus belt; the baby show, where 34 youngsters under three years of age vied in pronouncing distinctly the words, "State Citrus Fair," and the defeated, being solaced with picture-books, went off happier than the five who won the coin; and the reception and happy speech of Gov. Markham, who made the fair a flying visit on Saturday afternoon, when the crush of attendance was heaviest.

The Marysville Independent band received many compliments for the music which it rendered throughout the week.

The many representatives of the press in town Thursday were tendered a complimentary drive among the neighboring orchards and a lunch at the Western Hotel. We wish in this connection not only to testify to the excellent management of the fair in general, but also to acknowledge special courtesies extended by Messrs. O'Brien, White, Harney, Kells, Bogue and Tharing of the Executive Committee.

While a great deal more might be said, we will close our account with these words from the Marysville Appeal respecting the Northern Citrus Fair for 1891: "The good it has done can never be fully estimated, but it is certain that for years nothing has taken place in the northern part of the State which has done so much to advertise and otherwise benefit the country as this has. It has awakened many illurians to the fact that good oranges can be raised here in large quantities and at good profits. It has interested many farmers and horticulturists in the growth of this most important industry. It has directed the attention of many Easterners to this part of the country, and will serve to turn the tide of immigration hither."

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**NORTH POINT FRUIT INDUSTRY.**—Chico Enterprise, Jan. 21: The town of North Point, with its postoffice named Ochasset, is coming into notice as a fruit-growing section. It lies to the extreme northwestern portion of the county, bordering on the Tehama-county line. As yet the orchards there are young, but some of them are repaying years of toil.

**SMARTSVILLE ORANGES.**—Marysville Democrat, Jan. 21: The Committee on Awards in the late fair was composed of men qualified by experience to judge of the quality of oranges, and who, residing at a distance, were entirely free from local prejudice, therefore their special mention of the oranges grown at Smartsville is a compliment to them worthy of more than passing consideration: "Your Mediterranean Sweets and Seedlings are just approaching perfection, and those raised in the Smartsville district are the best we have ever seen."

**SPRAYING FRUIT TREES.**—Chico Chronicle-Record, Jan. 23: In riding through Gen. Bidwell's large fruit orchards, one cannot help but notice the great number of white trees which have been recently sprayed. At present there are five teams—three men to a team—engaged in spreading a solution of sulphur, lime and salt over the trunks and branches of the trees. The men and horses are well covered and clothed to protect their bodies. To those who have orchards and are not posted on this important subject, it would be time well spent to watch the workings. It will require about three months more to complete all the trees on this famous ranch, and spraying will be continued until the blossoms begin to show.

#### Fresno.

**LARGE WATERMELON FARM.**—Selma Irrigator, Jan. 22: W. A. Calhoun has leased 20 acres near J. L. Lake's, on the McCall road, and will plant it to watermelons the coming season.

**WHEAT LOOKING WELL.**—Selma Irrigator, Jan. 24: M. Wasgett returned Thursday evening from the West Side. He reports the wheat looking well in that section, but the late frosts have dried up the stock feed, and unless there is rain in the near future, stock will have a

hard time of it there. In fact, he says, stock is not doing well now.

**TO MAKE THE FAIR ATTRACTIVE.**—Fresno Expositor, Jan. 21: The directors of the Fresno Fair Grounds Association are busy themselves with plans that will result in a more general interest being taken in their work by the people at large and the agriculturists in particular. They have decided, with commendable enterprise, to make the fair and races more attractive than ever, and believe that with the active support of the people of this county they will not fail to accomplish this.

#### Los Angeles.

**LARGE RANCH WITH MANY INDUSTRIES.**—Pomona Progress, Jan. 22: E. J. Baldwin's Santa Anita rancho has 1200 acres in grapes, 16,000 orange and lemon trees, 2000 pomegranates, 3000 English walnut trees, 5000 almond, 2500 peach, 4000 pear, 2000 apricot and 1000 fig trees, and subsistence is furnished for 25,000 head of sheep, 5000 cows and pigs, and several hundred head of horses and mules. There is also 17,000 acres of grain. One hundred acres more of orange trees are being set out.

**THE BEST ORANGE TO GROW.**—L. A. Express, Jan. 22: A member of the Earl Fruit Co., in answer to the question, "Which is the best orange to cultivate?" said: "I would say Mediterranean Sweets and the Late Valencia. This latter variety is new in this country. I know of only a few farms that have it. There are a few trees on Judge Ross' farm, some on Capt. Thom's place, and the Chapmans have some at San Gabriel. This is a seedling year. I mean by that that seedlings have their "off" and "on" years, and this is their "on" year. This fact partly accounts for the large crop this year. The seedling is the most profitable because the trees bear very heavily. The Washington Navel is a fine orange and brings a higher price than the seedling, but the trees are small and they grow few on a tree; you would get one or two boxes off a Washington Navel tree and 10 or 12 off a seedling tree. A great many Washington Navels have been set out recently. They ripen early, and this is another feature against the profit of raising them. I estimate that the present crop is 33 per cent larger than the crop of last year."

#### Mercedino.

**INCREASING ATTENTION TO FRUIT.**—E. W. King in Ukiah Press, Jan. 24: Fruit culture in Mercedino is no longer an experiment. Several enterprising farmers in Anderson Valley are raising very fine fruit. J. D. Ball, near Bonville, recently informed me that he intended putting up a drier the coming summer. All along the Russian river from its headwaters in Potter Valley and in Redwood Valley to Cloverdale in Sonoma county, are small orchards all bearing fine fruit when properly cared for. Probably more prune and pear trees will be set out this winter and spring than ever before. Were it not for the scarcity of prune trees quite a large acreage would be added to what we already have. Many are planting peach and almonds for stock to graze on.

#### Orange.

**LARGE SALE OF ORANGES.**—Anahelm Gazette, Jan. 22: On Tuesday, Col. F. H. Keith purchased the Gilman orange crop for Thacker Bros., the consideration being \$7700. There were several bidders for the crop. Mr. Littlefield, bidding for a San Francisco house, offered \$7600.

#### Placer.

**TREE PLANTING.**—Dutch Flat Cor. Auburn Republican, Jan. 21: Our orchardists are taking advantage of the fine weather to set out plenty of fruit trees. B. Huysiak has a large force of men at work on his orchard near the depot.

**ORANGE CULTURE.**—Marysville Democrat, Jan. 22: There are more orange trees being set out in Placer this year than last in the ratio of nearly five to one. The local nurseries are said to have been long since exhausted, and great difficulty is being experienced by the orange-growers in getting the trees required for planting purposes. The planting will be limited only by the supply, according to the statements of Placer county's representatives at the fair. The original orange plantings in Placer county were chiefly of Florida trees, but now the home grown shrubs are usually given the preference. The high coloring and early ripening of the oranges from that county have secured to the growers exceptionally high prices for their crops.

#### San Benito.

**A BIG PRUNE YIELD.**—Azusa Pomotropical, Jan. 22: One of the heaviest yields of prunes ever reported in this valley is at hand, from an exact account handed us by W. R. Barbour. The prune trees produced an average of 300 pounds to the tree, the fruit selling at 2½ cents per pound, making the cash receipts per tree \$7. The fruit was grown by W. R. Powell, and he is the recipient of \$750 per acre, a result we think almost phenomenal, even in this land of rich horticultural strikes.

**EXTENDING THE DITCH.**—Hollister Free Lance, Jan. 24: The eyes of the farming portion of our community have for several years been turned to the orchards on the west side of Hollister bordering on the San Benito river, and many who have lately devoted their capital to fruit-growing have been induced to do so by the phenomenal success of those who several years ago staked their capital on, at that time in this county, an untried business. The Hollister Irrigation Co. is now constructing

ing a branch of its main ditch through this productive section, and when complete, which will probably be in time for spring irrigation, the whole belt through which it will run will be devoted to fruit and vegetable raising.

#### San Bernardino.

**PRICES FOR SUGAR BEETS.**—Chino Champion, Jan. 23: The lowest price that will be paid is \$3.50, and that for 12 per cent beets; and if the growers do their duty, as the factory people hope they will, \$4 will be the lowest price, with an easy chance to obtain \$4.50 to \$5 and possibly still more. The rate of \$3.50 was fixed to insure compensation to those who from any cause grow beets two per cent below the standard of 14 per cent. This was quite a concession on the part of the manufacturers, who know that higher grade beets can be grown to the great advantage of the farmer as well as that of themselves. It was, however, thought that mistakes of one and another kind would occur the first year, whereby the standard would not be reached, and hence the rate of \$3.50 for beets 2 per cent below standard, with 25 cents a ton for every per cent above 12. Thus for standard beets \$4 is the lowest price; and those that run from 14 to 20 will command correspondingly increased prices. Any one can apply the figures.

#### San Diego.

**PINEAPPLE CULTURE.**—S. D. Union, Jan. 22: The pineapple plants with which Riley R. Morrison began experimenting last April, among the rows of his rose garden, are coming on vigorously. But four apples were produced last fall, and at the expense of these plants full vigor, as they should be a year old before being permitted to bear. Mr. Morrison has found that they can stand a temperature as low as 28 degrees. About a month ago he received 500 more plants gathered from Cuba, Georgia and Southern Florida. They represent 12 of the best-known 20 varieties, including the red Spanish, Sugar Loaf, Abakchi, Prince Albert, Egyptian Queen and Lord Carrington. He says that a year's test will determine which of these is best adapted to the climate and soil. By the 20th a shipment of 1000 more is due him from Tampa, Florida. These will be set out in South San Diego at the head of the bay, near the new Morrison station of the Coronado road. This tract is shell ground and the very best for such growths; it has just been plowed. Then about July a carload of slips, or 40,000, will arrive from Florida. These will be mostly the Red Spanish and Sugar Loaf varieties, and they are also to be set out at the head of the bay on a 10-acre tract about a third of a mile south of the station. It is the intention to plant with them Cocosnut, Chirimolla (custard apple), Star Apple, mango, breadfruit tree, coffee and tea trees. Eight of these latter were secured several weeks ago from Washington, and are already putting out new leaves. The object is to make this sand-dune-protected tract an experimental station.

#### San Joaquin.

**RAIN WANTED.**—Lodi, Jan. 22: Farmers are looking "blue" over the prospect for their grain crops the coming season. Not alone in San Joaquin county is the present dry weather felt, but also generally all over the State. The only thing for the farmers in this vicinity to do is to get in and keep the promoters of the old Mokelumne ditch along by bonding their broad acres and giving rights of way.

#### San Luis Obispo.

**PLOWING AND SEEDING.**—Cor. S. L. O. Tribune, Jan. 23: Seeding is about finished for this section (Creston), especially so for the grain crop. A few, however, of our rancheros are plowing and sowing for the purpose of securing a good crop of grain hay. A very large acreage for grain and hay is being put in this year. Stasuly & McDonald report 500 acres seeded to wheat; Steele & Green, 1100; Richard Barber, 700 to wheat, and about 40 to barley, and Johnson & Lind, about 500.

**ARROYO GRANDE.**—The Grangers and Farmers' Alliance men here had all the rain needed thus far agriculturally. However, a wet shower of say two inches would not come amiss at this time, which would set the wet-weather frogs to croaking, instead of croaks from the dry-season stifflings.

**ADELAIDE.**—Strolling over the country, I noticed every one busy from early morn till late eve rushing along with the plow and harrow. I learned that there are within 10 or 12 miles square on the plains, about 100 men who will sow from 150 to 2000 acres of land each. Joe Moody will sow from 1500 to 2000 acres.

**ESTRELLA.**—Many of the farmers have finished putting in their crops and are now summer-fallowing.

**SIMMLER.**—Mr. Dowling bought 1000 acres of land near here last fall, and is going to put in 150 acres of grain for hay and seed for another year, when he intends putting in the whole tract. Mr. Brumley is driving ahead with two large teams, averaging about 12 acres of ground per day. Shoenfeldt & Lane have put in a large crop and are going to summer-fallow 600 acres for next year for early sowing.

#### San Mateo.

**STOCKYARDS AND PACKING HOUSES AT SAN BRUNO POINT.**—Redwood City Gazette, Jan. 24: P. E. Iler of Omaha, as manager of the South San Francisco Land and Improvement Company and Stock-yards, has purchased 340 acres of land between the Mission road and the San Francisco Bay, extending from Baden Station three miles in a northeasterly direction to San Bruno Point, where will be located the

stock-yards and the abattoirs, packing-houses and other buildings. There will be two brick packing-houses, each seven stories high, and they will be thoroughly equipped with all the latest devices in time and labor saving machinery. The pens will be carefully constructed, some covered and others open. There will be accommodation for 10,000 head of cattle, 10,000 sheep and 8500 hogs. Stables with dimensions of 160x61 feet will be built, and here horses will be boarded, bought and sold. The superintendent has bored an artesian well 1380 feet in depth on the land near the railroad station, with a daily capacity of 400,000 gallons. Four or five other wells will be bored, and a reservoir constructed on a hill overlooking San Bruno Point. A sample of the water is now being analyzed in Chicago for the purpose of ascertaining the curative properties of the water, with a view to its use in curing meat. The contract has been let for dredging the course of a canal which will be 300 feet wide, enabling vessels drawing 22 feet of water to come up to San Bruno Point within a quarter of a mile of the San Bruno road, a distance of one and one-half miles. The canal will be constructed of wood and stone.

#### Santa Cruz.

**UTILIZING THE EUCALYPTUS.**—Santa Cruz Sentinel, Jan. 24: J. E. Armstrong has made good use of a grove of eucalyptus trees on the Sea-Side Home property by cutting them down to a height of 16 feet, then placing a five-foot board walk on the tops. The circle is 110 feet in circumference. A railroad surrounds the whole, and an easy ascent is made by means of steps. From the walk a fine view of the bay and mountains can be obtained.

#### Shasta.

**THE FRUIT INDUSTRY.**—Anderson Enterprise, Jan. 22: In looking through the different localities of this beautiful valley and observing the large number of men that are employed in preparing ground for and planting fruit trees, our anticipations are growing stronger and stronger for the brilliancy of the future that lies before us. Past experience has shown California that in fruit-growing is the future independence of her people, and that from it, with proper industry, care and training, will proceed a commonwealth not equaled on the globe, in like territory, of well-to-do, home-loving and home-living people. We start three miles northwest of town on the river bottom, on the west side, and proceed to four miles east of southeast of town, making seven miles up and down the river, and we find nearly every land owner, large and small, doing a planting of from five to 100 acres of fruit trees. Some are doing their first planting, while others are adding to already large or small, old or young orchards. In looking over this ground we are imbued with a new and much stronger feeling of faith for prosperity. But this is not our only ground that is being improved, for on the hills and slopes to the west of us for miles, and the plains to the north, the spirit of progression is before us.

#### Sonoma.

**LARGE ACREAGE SEEDED.**—Santa Rosa Republican, Jan. 22: The farmers took advantage of the first spell of good weather and sowed a large acreage, and then, when the rains slackened up, they went to sowing again and improved every available piece of ground. The grain that was sowed early is all up and looking fine, and prospects are exceptionally flattering for a good crop. Wheat, oats and barley promise splendid. Nearly all of the farmers will have their late sowing done this week. Last spring the weather was so unfavorable that they could not get their grain in, and the weather has been so fine this winter that they have improved it.

**FRUIT CROP PROSPECTS.**—Santa Rosa, Jan. 20: The fruit outlook is very favorable so far as can be seen. The frosty mornings have kept the buds back, and have been beneficial that way. Nearly all of the orchardists are busy pruning now, and are getting everything ready for a big season's work.

**PROFIT IN POULTRY.**—Santa Rosa Democrat, Jan. 24: J. S. McClemmy, lessee of a small farm on the Buena Vista tract, has raised, the past year, 527 chickens and 217 turkeys. Of the chickens, 317 are laying hens, whole, with eggs at 40 cents per dozen, the present market price, net a nice little sum daily. The chickens and turkeys were raised with very little care and attention. To the question as to whether the raising of poultry will pay in Sonoma valley, Mr. McClemmy's experience answers the question in the affirmative.

#### Sutter.

**GRAIN GROWING RAPIDLY.**—Yuba City Farmer, Jan. 23: The warm days are doing much toward bringing up the newly sown grain and warming the ground, thus allowing that which has been kept back by the cold, foggy weather to make a rapid growth. The fields sown early are now looking fine, with a thick covering of rich, verdant grain.

**A GOOD MOVE BY FRUIT GROWERS.**—Yuba City Independent, Jan. 23: The question of preparing for and arranging a permanent exhibit of Sutter county's products was discussed at the late Horticultural Convention with considerable enthusiasm. The members who spoke concurred in the belief that a start ought now to be made and unless formed around which might be gathered, from time to time, such products of Sutter county as might be deemed worthy of preservation for the purpose of exhibition as occasion might arise. If the people had a place where they could take and deposit

articles of their own production possessing peculiar merit, it was thought we would soon have material for a large exhibit which could be utilized at any time without the trouble and expense of making special collections for every occasion. To make a start in this direction, it was moved by B. F. Walton that the Chair appoint a committee of three to wait on the Board of Supervisors at their next meeting and ask them to set apart space in the Court House where stands and cases could be placed, for the proper collection and preservation of Sutter county products suitable for exhibition. The motion was carried unanimously, and the Chair appointed, as such committee, B. F. Walton, Mrs. H. S. Jones and Mrs. A. B. Van Arsdale. By request, Mrs. R. C. Kells was afterward added to the committee.

## Tulare.

**LARGE TREE PLANTING.**—Visalia Times, Jan. 22: Last Monday the Superintendent of the Visalia Fruit and Land Company, Captain C. J. Barry, took charge of the property recently purchased by the company, and this week the work of planting trees began. The ground had already been prepared and was in fine condition for the work. There will be planted in prunes one hundred and seven acres, 5000 peach trees and 500 pears. There are already twenty-three acres in raisin grapes, and more will be set out. There are forty-five men at work, using thirty-seven horses and ten oxen. The land was formerly cultivated to wheat and barley, and was grazed by hogs.

## ARIZONA.

**CATTLE FOR CALIFORNIA.**—Tucson, Jan. 17: The Bahacomoni Cattle Co. starts 2000 cattle on the trail to-morrow for Salinas, Cal. The trail is via Yuma and Los Angeles, then up the coast. The company's estimated cost of driving is \$2 per head, while the present railroad rate, with cost of feed, would be about \$6 per head. This and several other large drives soon to be made is owing to the inability of the cattlemen there to pay railroad rates. It is understood among cattlemen there that the California trail will be used exclusively in the future for large shipments of cattle.

Eminent physicians everywhere recommend Ayer's Cherry Pectoral as the most reliable remedy that can be had for colds, coughs and all pulmonary disorders. Ask your druggist for Ayer's Almanac; it is the best publication of its kind, and full of information.

## Lovett's Guide to Horticulture.

The improvement in Catalogue making has been so great of late years that sometimes we imagine that we have reached the limits of the possible in this direction. Especially is this the case with Lovett's Guide to Horticulture for Spring of 1891, which now lies before us. It is really a book of some 90 pages, profusely illustrated throughout, finely printed and adorned with several colored lithographs. It is full of practical information concerning Small Fruits, Fruit and Ornamental Trees and Shrubs, Vines, Cespices, Hedge Plants, Roses, Hardy Herbaceous Plants, Nuts and Nut Trees, etc., etc., with careful descriptions and valuable suggestions, making the book of much value to all who possess a foot of land. The illustrations are most elaborate and represent nature, not fancy; the text is truthful and accurate, unobtrusive and pleasing. Here is artistic taste united to practical information—both strikingly original. It is a guide indeed worth having and is mailed free by the J. T. LOVETT CO., LITTLE SILVER, N. J., or with colored plates for ten cents.

## \$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 3, 420 California St., San Francisco.

## WHEN THE HAIR

Shows signs of falling, begin at once the use of Ayer's Hair Vigor. This preparation strengthens the scalp, promotes the growth of new hair, restores the natural color to gray and faded hair, and renders it soft, pliant, and glossy.

"We have no hesitation in pronouncing Ayer's Hair Vigor unequalled for dressing the hair, and we do this after long experience in its use. This preparation preserves the hair, cures dandruff and all diseases of the scalp, makes rough and brittle hair soft and pliant, and prevents baldness. While it is not a dye, those who have used the Vigor say it will stimulate the roots and color-glands of faded, gray, light, and red hair changing the color to

### A Rich Brown

or even black. It will not soil the pillow-case nor a pocket-handkerchief, and is always agreeable. All the dirty, gummy hair preparations should be displaced at once by Ayer's Hair Vigor, and thousands who go around with heads looking like 'the fretful porcupine' should hurry to the nearest drug store and purchase a bottle of the Vigor."—The Sunny South, Atlanta, Ga.

"Ayer's Hair Vigor is excellent for the hair. It stimulates the growth, cures baldness, restores the natural color, cleanses the scalp, prevents dandruff, and is a good dressing. We know that Ayer's Hair Vigor differs from most hair tonics and similar preparations, it being perfectly harmless."—From Economical Housekeeping, by Eliza R. Parker.

## BEET SUGAR FACTORIES

### E. H. DYER & CO.,

Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar.  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufacturers of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

## 'Planet Jr.'

Improved Farm and Garden Tools for 1891.

BETTER, Both Horse & Hand, THAN EVER; better and more money saving. We cannot describe them here, but our new and handsome catalogue is free and interesting. A goodly number of new tools will meet your eye there. Among these, Gardener's Harrow, Cultivator & Pulverizer combined, adjustable teeth; Market Gardener's & Beet Grower's special Horse Hoe with Pulverizer; Special Furrower, Marker and Ridger, adjustable wings; Sweet Potatoe Horse Hoe, four tooth with vine turner; Heavy Grass Edger and Path Cleaner; new Nine Tooth Cultivator and Horse Hoe combined; Special Steel Leveler and Pulverizer combined; all interesting, nothing we have ever made so practical or perfect. Some improved things too are grafted upon our older favorites. A capital LEVER WHEEL, instantly adjustable for depth, is a great feature; put on all '91 goods unless ordered otherwise. Nor have our Hand Seed Drills been forgotten in the march of improvement, nor our Double and Single Wheel Hoes, Garden Plows, Grass Edgers, Etc. Some of them are greatly altered for the better; yet do not forget that no novelties are adopted by us without actual and exhaustive tests in the field. We therefore guarantee everything exactly as represented. Send for Catalogues now. S. L. ALLEN & CO., Philadelphia, Pa.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey &amp; Co., Pioneer Patent Solicitors for Pacific Coast.

The following brief list by telegraph for Jan. 27, will appear more complete on receipt of mail advice:

California—Henry Albert, Crescent City, assignor of two-thirds to T. R. Hayes, of Pasadena, can-labeling machine; George F. Andrews, Riverside, extensible tree prop; Louis E. Baker, San Francisco, type-writing machine; Stephen S. Black, Pasadena, agricultural implement for irrigation; Milton Dehar, San Jose, invalids' bathing appliance; John E. Foster, Ferndale, harness; William S. Gage, San Francisco, coin wrapper; Henry O. Hooper, San Francisco, reverse movement attachment for type-writing machine; Edward M. Knight, San Francisco, filter; Joseph P. Magny, assignor of one-half to H. A. Davis and F. Wilson, Oakland, cash balance; William A. Todd, San Francisco, horsehoe; William B. Wall, M. I. Jones, Tustin, and A. D. Bishop, Orange, fumigating trees and other plants; Ruel W. Whitney, San Francisco, type-writing machine; Fred W. Wood and J. Fowler, Los Angeles, guard for street-railway cars.

Washington—Oleo F. Febrsson, Tacoma, folding paper bath; Nathan A. Wheeler, Alpowa, calendar.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## A Veterinary Feat.

San Francisco will soon be able to brag of a big, strong, healthy draught horse with a glass eye, for yesterday Dr. Creely, the veterinary surgeon, performed an unusual operation on a horse owned by Le Roy Brundage, to make a vacancy for the artificial optical member. The glass eye will not be inserted for three or four weeks yet until the parts are thoroughly healed; but the horse, minus one eye, will be at work in three or four days.

A malignant cancer had grown on the membrana nictitans of the eye and the organ was badly diseased. Several times the knife had been used on the diseased part, but each time the cancer grew out again. Yesterday afternoon the big animal was strapped to the operating table, and after being placed under the influence of anæsthetics the entire eye was cut out and the optic nerve severed. The operation was performed as neatly, expeditiously and with as little inconvenience to the horse as a similar operation would cause a human being. Fifteen minutes after the operation the horse had fully recovered himself and was as lively and chipper as ever.—S. F. Chronicle, Jan. 10.

## Palermo.

During the time of the late Citrus Fair, the writer made a visit to Palermo, the picturesque village in the center of the Queen colony of the northern citrus belt of our State.

It was a very gratifying result to see trees only three years old bearing large Navel oranges and groves of small orange trees in any direction you might look. The feature of this section is that each orange-grower is preparing to enlarge his orchard, and the attraction of peerless Palermo as the home for increased immigration has stimulated a steady increase in building homes. The Palermo Progress, a very attractive journal published at Palermo, has a well-written article on the progress and growth of this colony, and what is most desirable to the promoters is, that the surrounding orange orchards outside of Palermo have made this a prominent point for the shipment of oranges this year.

The question of raising oranges as a crop for commercial purposes has been settled in this section beyond a doubt, and it is confidently expected that "Pretty Palermo" will become a large and populous city dotted with luxurious homes and the center of the most favored citrus belt of Northern California. J. C. H.

## A Healthy Showing.

The Home Mutual Fire Insurance Company of San Francisco was incorporated in 1864, which makes it one of the oldest companies in the State. It has just filed with the Insurance Commissioner its 27th annual exhibit, showing losses paid since organization of over \$3,000,000. Its assets at beginning of current year were but little short of \$900,000, and its surplus to policy-holders about \$850,000. After setting aside a reinsurance reserve of over \$260,000 and its capital of \$300,000, it has a net surplus over everything of \$279,000 which is almost equal to its capital. Its income in 1890 was about \$400,000. Its officers are: President, J. F. Houghton; vice-president, J. L. N. Shepard; secretary, Charles R. Story; general agent, Robert H. Magill.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

From our issue of Jan. 3.]  
Please Remit.

The beginning of a new year is a good time to settle up the debts of the old ones. We are obliged to remind those who owe the PRESS on subscription account, that it will be a great convenience to us if they will soon remit what is due. Those who can also pay in advance will also do us timely and well-appreciated favor. We are doing our best to present a very valuable paper, representing carefully, earnestly and conscientiously the welfare of its intelligent readers and the best interests of the arts, sciences and mining and mechanical industries of the Pacific States.

To do this we deprive ourselves of some of the most lucrative lines of patronage available to the average newspaper.

By paying as promptly as possible, friends, you will greatly encourage us in our sincere efforts to favor you and the best interests of your calling.

## Bogue's Nursery.

Three years ago Mr. J. T. Bogue, an experienced nurseryman, secured 105 acres of land lying 1½ miles west of the Feather river and 3 miles south of Yuba City that had been used only as a grain-field for the last 20 years, and on the 17th day of February, 1888, turned the first furrow with a plow. He had a well-stocked nursery to draw from in Seneca county, New York, his former home, and with large importations from France he has by sagacious and well-directed efforts turned this California grain-field into one of the best plants in this State. Previous to selecting this fertile spot he spent a year in travel, taking in the entire State. Results have proved the wise selection he made, as has been demonstrated by the growth of trees and plants which take in the entire list of deciduous and citrus trees.

A RURAL representative, in company with some distinguished lady visitors from the East, accompanied Mr. Bogue in a family carriage from Marysville during the late Citrus Fair to inspect his nursery. The route from Marysville across the bridge that spans Feather river through Yuba City, is skirted on either side with rows of evergreen and great stately eucalyptus trees, while the spacious yards surrounding the picturesque homes are stocked with orange trees loaded with yellow oranges and with other semi-tropical plants and trees. In one of these yards could be seen the orange and lemon trees, each having their respective fruits in bearing, the orange trees bending with their load of fruit beside the blooming magnolia and rose tree.

There were 25 men working in the nursery, a goodly number of them planting almonds on a 20-acre lot, while two freight cars loaded with fruit trees were standing on the sidetrack of the new railroad, lately opened from Knight's Landing to Marysville, and which runs along by the side of this nursery. One car was destined for Los Angeles and San Diego.

It is marvelous to witness the transformation of this California grain-field under skilled hands to such a wonderful development in the line of fruit trees and plants.

This is a very fertile section and the growth of tree and plant is beyond conception or belief, unless by eye-witness. Our reporter measured trees of two years' growth, four and five inches in diameter, and Bartlett pears from one year's growth, eight and nine feet high, and the Hungarian prune over 10 feet high in one year's growth from the scion.

Mr. Bogue has followed his present occupation continuously from boyhood, and has made the subject of horticulture and fruits an especial study. He has traveled extensively and made a personal inspection of the leading nurseries in the United States. The adaptability of this section in fertility of soil, climate and rainfall has been fully confirmed by his three years' experience in growing trees of unusual size and vigor without irrigation. During this season he will import a large stock of fruit trees from France and Europe with the design of making his, in quality and variety of tree and plant, the model nursery of the Pacific Coast.

## Bean Spray Pump.

During the recent Citrus Fair at Marysville, Mr. Crummy, the manager, had one of the Bean spray pumps at the Pavilion and on several occasions showed its merits in practical operation. Our RURAL representative saw more than a dozen of fruit-growers who had used the Bean spray pump in their orchards for over two years. Among them there was but one expression and that was in the highest commendation, and as one large fruit-grower said: "It is the best and most reliable pump ever used in an orchard." The company builds five sizes adapted to trees, grain-houses, chicken-houses, barns and fences.

Parties interested should send for circular. Address Los Gatos, California.

ASPINWALL POTATO PLANTER.—We have received a neat illustrated catalogue of the Potato Planter manufactured by the Aspinwall Manufacturing Co., Three Rivers, Mich. It gives clear descriptions and diagrams of the machine and its use, and strong testimonials from those who have used it. The catalogue should be read by potato-growers.

## Artesian IRRIGATED FARM TO RENT.

Over 100 acres of improved land, good 7-room farmhouse, barn, etc., plenty of shade trees, 7 acres of bearing orchard, 20 acres of alfalfa, to rent on shares or low for cash. Within 7 miles of Tulare city. A good offering for a dry season. Also 320 acres of volunteer grain or hay adjoining. Address E. M. Dewey, Porterville, or A. T. Dewey, 220 Market St., San Francisco.

## Alhambra Fruit Ranch.

The great fruit ranch one and one-half miles east of Martinez, belonging to the estate of Dr. Strentzel, is now being surveyed and subdivided into lots or parcels suitable for homes and small fruit farms.

This section is well known as one of the most favored portions of this State for raising table grapes, Bartlett pears and peaches for shipping and canning. This immense fruit farm has been the life work of the late lamented Dr. Strentzel, and is stocked with the finest varieties of grapes for table use; and owing to the favored location has produced a grape that was firm-fleshed, so that each year has increased the demand for shipment to all of our northern and eastern cities. The heirs-at-law are Mrs. Strentzel and Mrs. John Muir, his daughter, who wish to retire from the active duties of fruit-raising, reserving only the magnificent dwelling as a home. Prof. John Muir has been appointed administrator, and his field of travel and scientific research makes it an onerous task to carry on this extensive fruit ranch.

As soon as the subdivisions are made and mapped, they will be offered at private sale on terms of one, two and three years. It is stated that the product of this entire vineyard and orchard yielded over \$200 an acre last year.

We shall endeavor to record the progress of this desirable project of dividing this well-known fruit ranch into small parcels, as it seems likely to prove a popular proceeding.

## A Great Agricultural House.

The leading agricultural firm of Northern California, White, Cooly & Cutts, occupy a building 75x155 feet, fronting on First street, two stories high, besides two large storehouses adjacent thereto in the city of Marysville, and carry a complete stock of general hardware and agricultural implements. The individual members of the firm are interested largely in fruit-raising and take a lively interest in assisting in the development of the various enterprises of this section of our State.

Our reporter while in Marysville saw a number of the Wagner Cultivators, manufactured by the Judson Manufacturing Co., in their store, and learned from farmers, horticulturists and fruit-growers that in point of construction and adaptability for thorough and rapid cultivation it is one of the best cultivators they had ever used.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos., \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

JUDGE PHILIP KEYSER died at Marysville last week. He presided in many important cases, but is best known by his anti-debris decisions.

By a very ingenious and original process, Dr. J. C. Ayer & Co., of Lowell, Mass., are enabled to extract the essential properties of the materials used in the preparation of their famous "Ayer's Sarsaparilla," thus securing a purity and strength that can be obtained in no other way.

# WHEN YOU BUY, —BUY— THE BEST! —THE— H. H. H. Horse Liniment

is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 23d, 1889.

A practical treatise by T. A. GARRY giving the results of long experience in Southern California. 196 pages, cloth bound. Sent post-paid at reduced price of 75 cts. per copy by DEWEY & CO., Publishers, S. F.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Jan. 28, 1891.

General trade in farm products shows more life. In cereals, there is more movement, largely due to the near approach of tax assessment day. Continued dry weather has a favorable effect on prices, but it is too soon to cry drouth, for the air is moist and cool, both in favor of the growing plant. The money market is easy, with low ranges for interest looked for after the first Monday in March. Many capitalists, to avoid paying taxes, send money out of the State or else put it away until after tax assessment day. Foreign and Eastern market advices report slightly higher prices for wheat. The following is to-day's cable:

LIVERPOOL, Jan. 28.—Wheat—Easier. California spot lots, 75 6d to 75 11 1/2d; off coast, 39s; just shipped, 38s 3d; nearly due, 38s 6d; cargoes off coast, nothing offering; on passage firm; Mark Lane wheat, firm; French country markets, quiet; wheat in Paris, quiet; flour, steady.

## Foreign Grain Review.

LONDON, Jan. 26.—Cargoes on passage and for shipment, quiet. Cargoes off coast, quiet. California cargoes for prompt shipment, 38s 3d. Cargoes nearly due, 38s 6d. Cargoes off coast, 39s. English country markets, slow. French country markets, steady and firm. Wheat in Paris, quiet. Flour in Paris, steady. Weather in England, mild.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Jan.	Feb.	Mar.	April.	May.	June.
Thursday.....	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16
Friday.....	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16
Saturday.....	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16
Sunday.....	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16
Tuesday.....	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16	78 9/16

The following are the prices for California cargoes off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	38 6d	38 3d	38 6d	Firm.
Friday.....	38 6d	38 3d	38 6d	Quiet.
Saturday.....	38 6d	38 3d	38 6d	Quiet.
Sunday.....	38 6d	38 3d	38 6d	Steady.
Tuesday.....	38 6d	38 3d	38 6d	Steady.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Jan.	Feb.	Mar.	April.	May.	July.
Thursday.....	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Friday.....	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Saturday.....	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Sunday.....	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2
Tuesday.....	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2	104 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Jan.	Feb.	Mar.	April.	May.	July.
Thursday.....	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2
Friday.....	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2
Saturday.....	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2
Sunday.....	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2
Tuesday.....	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2	92 1/2

NEW YORK, Jan. 28.—Wheat—\$1.07 1/2 for February, \$1.07 1/2 for March, \$1.04 1/2 for May, \$1.02 1/2 for June, and 98 1/2c for July.

CHICAGO, Jan. 28.—Wheat—96 1/2c for May and 91 1/2c for July.

## Eastern Wool Markets.

NEW YORK, Jan. 23.—Bradstreet's says: A quieter feeling has prevailed in the wool markets during the week. Prices, although about the same as a month ago, are much firmer. Concessions which were made then are being refused now. Choice lots are expected to show an advance as soon as the London sales open. American dealers will be well represented at the sales, and it is believed that they will buy freely because of the light supply here and the upward tendency of the American market. The movement in all grades has been fair. The demand for Australian and pulled wools has weakened and the aggregate sales of these grades is much below that of the preceding week. A slight improvement has been noted in Ohio and Michigan fleeces. One-quarter and three-eighths blood wool are in good request, and the slight supply has strengthened values. Fine staple Territories continue in strong demand and comprise the major part of sales. Texas wools are quite active, and California wools are gaining in strength. Some grades of carpet wools are more active. High prices and recent decisions of the Treasury Department are the principal causes of the slow movement in these wools.

## Stock of Honey East.

The New York American Bee Journal of Jan. 22: puts the stock in Boston at only 300 crates and in New York at about 600 crates and adds: There is no fancy, desirable stock in our market. The demand has almost ceased, especially for this class of goods. Our market is well stocked with extracted honey, especially with California honey, of which there are about five to six carloads. The stock of basswood, white clover and buckwheat extracted honey is light, and the prices are firm.

## Dried Fruits.

NEW YORK, Jan. 22.—The Commercial Bulletin says: Since the beginning of the year a report has frequently been circulated that Chicago and other Western centers would sooner or later be drawing on New York for supplies of California dried fruits, peaches and apricots in particular. Judging from the reports as to the position of the supplies and their distribution in the West, more goods will be required there should the demand continue relatively as good in the near future as it has been for the past two or three weeks. Up to the present we do not find that the Windy City merchants have made purchases here, except from that or other Western points. It is not that anxious inquiries for goods have been related as a matter of some interest in this connection that Chicago brokers have samples of the goods held in the East, and buyers no sooner express a desire to purchase than the brokers report that they are overwhelmed with offers.

NEW YORK, Jan. 23.—The improvement noted recently in the demand for California dried fruits seems to have rather more headway. There is more

convincing evidence that the Western trade wants peaches and apricots, if not prunes, from this quarter, and the demand from Eastern interior points is also picking up somewhat. On a line of two carloads of peaches offers were made here which came within 1/2c of the holders' figures and an advance of 1/4c has been made on actual sales. In Philadelphia this week apricots are decidedly strong, with a tendency toward 20c for a good average quality. It is doubted that really desirable prunes can be picked up at prices as low as some parcels were offered a short time ago.

NEW YORK, Jan. 24.—The Commercial Bulletin says: The latest reports on California dried peaches may be summed up thus: Chicago is buying in Philadelphia, Philadelphia is buying in Chicago, and both are buyers in New York. The reports may be accurate, but they certainly are peculiar.

## Hops.

NEW YORK, Jan. 22.—Cables report a fair business in hops in London and steady prices, and that 189s. is offered for choice Pacifics. The German market is firm and continues moderate.

LONDON, Jan. 27.—The reports are that English brewers are shy and are using hop substitutes as much as possible. The beer consumption in England thus far this winter is below the average, owing to the cold weather. Stocks of hops, however, are light, and the statistical position is favorable, the importations having been light.

## Miscellaneous.

NEW YORK, Jan. 22.—Choice California Lima beans are selling on the spot at \$3@3.05 per bushel in fair-sized lots.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.
Thursday.....	152 1/2	152 1/2	152 1/2	152 1/2
Friday.....	152 1/2	152 1/2	152 1/2	152 1/2
Saturday.....	152 1/2	152 1/2	152 1/2	152 1/2

Tuesday.....	152 1/2	152 1/2	152 1/2	152 1/2

After August.

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.
Thursday.....	148 1/2	148 1/2	148 1/2	148 1/2
Friday.....	148 1/2	148 1/2	148 1/2	148 1/2
Saturday.....	148 1/2	148 1/2	148 1/2	148 1/2
Sunday.....	148 1/2	148 1/2	148 1/2	148 1/2
Tuesday.....	148 1/2	148 1/2	148 1/2	148 1/2

BAGS—The market is dull at 6 1/2c for May-June delivery.

BARLEY—Receipts are free, but the bulk coming to hand goes into consumption, which tends to keep prices strong. The grade is good to gilt-edged. In futures, dealing on Call has been quite active. The following are to-day's reported sales on Call:

Morning Session: Seller 1891—200 tons, \$1.11 1/2; 100, \$1.11 1/2; 100, \$1.11 1/2; 100, \$1.12. Buyer 1891, after August 1st—200 tons, \$1.17 1/2 per cwt. Afternoon Session: Buyer 1891—100 tons, \$1.51 1/2; 100, \$1.51 per cwt.

BUTTER—The market, which showed considerable strength, is slightly easier, although the cool weather is calculated to check any downward move at present.

CHEESE—Choice mild is hard to get, and consequently high prices rule.

EGGS—The market has advanced under moderate receipts and a good demand. Selected are wanted for which full prices are readily obtained.

FLOUR—The market is quiet but firm.

WHEAT—The sample market is firm, but buyers fight against paying an advance. In futures, trading continues light. The following are to-day's reported sales made on Call:

Morning Session: Buyer 1891—300 tons, \$1.49 1/2; Buyer season—100 tons, \$1.43 1/2; 500, \$1.43 1/2 per cwt. Afternoon Session: Buyer 1891—100 tons, \$1.49 1/2; 200, \$1.49. Buyer season—1200 tons, \$1.43 1/2; 200, \$1.43 per cwt.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending Jan. 27th, were as follows:

## Cereals.

H. Kains Jackson, in London Farmer, Jan. 5th, says: Of late the markets have chiefly had to deal with full barley offers from farmers—double in quantity to that of wheat. This relative proportion usually alters with the New Year, dwindling down through spring until in summer the barley supply dries up and prices cannot be quoted. Considering that the wheat crop of 1890 is reckoned almost the same in quantity as that of 1889, while both harvests were well saved, it seems likely for the next three months farmers will send to markets a similar quantity to last season's current supply, some 60,000 to 80,000 qrs to 196 market towns. It is well to remember what happened. They sold about 3,000,000 qrs of their wheat at 29s to 30s per qr, leaving themselves in the position of having only 1,500,000 qrs for summer sale at 32s to 36s per qr. Much of the present system of crowding forward supplies at one time, and having but small reserves for better markets, is owing to the steam thrashing machine being substi-

tuted for the flail as the latter went on knocking out the grain all through the year, whereas the machine comes upon the homestead and riddles and cleans half the harvest at once, which is sold out at once. For barley the new system is well suited, since the maltsters and brewers like to make themselves safe by buying in autumn and winter all the farmer can sell. Millers are different, and refuse to buy, as a rule, except supplies currently required.

Advices from Oregon and Washington report the weather to be of the most favorable character for growing crops. In this State, although there is a continued absence of rains, yet the crops are not suffering. The fair, cool, moist weather helps to retain the moisture in the land. While crops are not suffering, still well-distributed rains would prove quite acceptable.

Oregon and Washington continue to send to us free supplies of barley, yet the market not only appears to take all coming to hand but cries for more. Gilt-edged grades for milling are not in oversupply, and when maltsters are forced into the market they find themselves compelled to pay full up. Choice feed is not in large supply. The demand continues free.

Oats continue to hold strong, notwithstanding heavy receipts from Oregon. The supply up north is said to be running light. The demand with us is fairly active.

Corn is firmly held. Receipts are light. There will be an increased acreage this year.

Rye is barely steady, while buckwheat is dull and easy.

The local wheat market has held fairly strong considering that receipts from Oregon and Washington are exceptionally large and that spot tonnage is in light supply. The prices ruling for Washington and Eastern Oregon range from \$1.32 1/2@1.35 for good to choice, with some gilt-edged going higher. Valley or Western Oregon wheat ranges from \$1.35@1.40. These are wharf quotations. When obtainable alongside of vessel the price is slightly higher. The tonnage situation as worked by the ring is against wheat sellers, and the higher duties on imported goods are not calculated to cheapen ships for outward cargoes of wheat.

To illustrate how important it is to have cheap tonnage, we cite the following: Red Winter wheat is quotable for prompt shipment in the London market at 35s. per quarter of 500 lbs, and California No. 1 White shipping at 38s. 3d. per quarter of 500 lbs. A difference in favor of California wheat of 39d. per 500 lbs, or 7 1/2-5d. per cental, equivalent to about 15 1/2c per cental or nearly 9 3/4c per bushel. Yet with this difference in favor of California wheat in the English selling market, still the wheat does not command as much at the shipping seaport as does the Red Winter wheat. The New York market was quoted yesterday at \$1.05 per bushel or \$1.75 per cental for Red Winter; the San Francisco market was quoted the same day for California No. 1 White shipping at \$1.37 1/2 per cental or 82 1/2c per bushel. On the Atlantic, vessels are engaged in other traffic, chiefly carrying passengers, and take wheat more for ballast than for profit, and therefore the freight rates are low, making the difference in other carrying lines. On this coast vessels come here chiefly for grain loading, and in doing so they bring inward cargoes more for ballast than for profit, and therefore make the difference in higher charges for wheat charters.

## Feedstuff.

The market for ground feed has held firm under a good demand. The Hawaiian Islands continue to draw freely of rolled barley.

Hay shows remarkable strength for the time of the year. It is generally claimed that pasturage is poor in almost all sections, with a scarcity in many. Rains are wanted. The light natural or green feed causes more general feeding of hay. The supply of hay in the State is light. Considerable is coming forward from Nevada.

## Fruits.

Receipts of apples are very heavy, and under a slightly lessened inquiry the market shows an easier tone, except perhaps for real gilt-edged mountain fruit. Dealers say that apples received this season from Humboldt and Siskiyou are not of as good quality and size as came to hand a year ago, but from Tuolumne they are good. Retail dealers appear to be taking more kindly to apples in barrels, for as a rule the consumers prefer the fruit in these packages to that in boxes. While \$9 a barrel is obtainable for gilt-edged apples, both yellow Newtown and Spitzenberg, yet very few come up to the requirements. The cold weather is in favor of apples, for when cold, consumers prefer them to oranges.

The crop of oranges in this State is larger than heretofore estimated, and as Florida oranges, owing to relative cheapness, have the run of the Eastern markets, our product is forced on the coast markets at low prices. The weather has been and still is in favor of growers, for the fruit is ripening slowly. Had oranges ripened as rapidly as they did last season, forced shipments to all distributive points would have been in order, and with forced sales, much lower ranges in prices would have followed than is now witnessed. The early fruit sent to this market was not ripe and being more or less sour, consumers soon had enough, and it may take a little while yet to convince them that receipts now coming to hand are matured. The cold weather is also against a free consumption.

Raisins have a strong tone, notwithstanding buyers are bearish, or, at least, they talk that way. Dried fruits show a gradually improving tone, under an enlarging demand and limited stocks on this coast.

## Live-stock.

Bullocks have a slightly firmer tone for the more choice conditioned. Mutton sheep are barely steady at higher quotations. Calves are still weak. Hogs have an easier tone. Milch cows are offering fairly free at from \$20 to \$30, with higher prices asked for selected.

Large sized, well-formed work horses can be placed readily, as can medium sized, but small, scrubby animals are hard to sell. General utility and fair to fast driving horses are wanted, but buyers huddle over prices asked. Matched teams, good steppers, easy motion, and kindly disposition find ready buyers.

The market for dressed cattle is quoted as follows: To obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.

HOGS—On foot, light grain fed, 4 1/2@4 3/4c per lb;

dressed, 7@8 1/2c per lb.; heavy, 4@4 1/2c per lb.; dressed, 6 1/2@7 1/2c per lb. Stock hogs, 3 1/2@4c per lb. BEEF—Stall fed, 7@—c per lb.; grass fed, extra, 6 1/2@—c per lb.; first quality, 5 1/2@6c per lb.; second quality 4 1/2@5c per lb.; third quality, 3 1/2@4 1/2c per lb.; bulls and thin cows, 2@3c per lb. VEAL—Small, 6@7c per lb.; large, 5@6c. MUTTON—Wethers, 8@9c per lb.; ewes, 7 1/2@8 1/2c per lb.; spring lamb, 15c per lb.

## Vegetables.

Garden truck is still in light supply, but the gardens are reported to be looking exceedingly well and not suffering from the want of rain. Early vegetables will soon put in an appearance from points around the bay. Los Angeles is still supplying us with tomatoes and peas. Garlic is in oversupply.

Onions are in good supply. The market is barely steady. A very large increased quantity will be grown in this State and Oregon, as the weather has been favorable for planting.

Choice smooth potatoes fetch full prices, with, at times, an advance obtainable on outside quotations. Knotty and otherwise poor potatoes are hard to sell except at concessions. Receipts continue large. Yesterday there was a good demand for River Reds, and as the supply was light a decided advance took place; as high as \$1.25 per cental was paid on the wharf. Very choice smooth Burbanks from Humboldt were sold on the wharf at \$1.25 and from store at \$1.50.

## Miscellaneous.

The poultry market is overstocked, causing low prices to obtain. Heavy overland receipts are the disturbing element.

Wild game fluctuates in price.

Mustard seed is stiff, owing to light stock and continued dry weather. It looks as if the area devoted to its growth is decreasing.

White beans continue to strengthen; other kinds are stronger in sympathy. The stock of all kinds is light.

Hops in first hands are exhausted. The trading now reported is chiefly from second and third hands. There is a disposition to contract for next crop delivery, but the prices are kept quiet.

Wool is still slow; no improvement is looked for soon.

Exports by sea the past week aggregate as follows: Flour, bbls, 10, 645; Panama, 200; Central America, 4264; Guayaquil, 500; China, 16,607; Hong Kong, 11,250; Kahului, 218; Honolulu, 710; Nanaimo, 155; Japan, 1170. Wheat, cts, Liverpool, 73-81s; Dunkirk, 61, 47s; Havre, 109, 134; Cork, 50, 328. Barley, cts, Hilo, 42s; New York, 218s. Bran, sks, Hilo, 1720; Honolulu, 330; Kahului, 1395. Beans, lbs, Hilo, 14,850; New York, 22,345; Panama, 1196; Central America, 14,630; Victoria, 14,418; China, 14,345; Nanaimo, 1050; Honolulu, 696. Dried fruits, lbs, Hilo, 700; China, 647. Hay, bales, Hilo, 825. Brandy, gals, New York, 1597. Wine, gals, New York, 44,446; Central America, 7500; Japan, 578; Victoria, 1665. Hops, lbs, Calcutta, 8918. Corn, cts, Central America, 1264. Raisins, bxs, Calcutta, 100; barley, cts, 1403. Rolled barley, cts, Honolulu, 981; Kahului, 155. Sugar, lbs, Japan, 6750; Hong Kong, 500,000; Victoria, 17,580.

From the Commercial News of Jan. 28th the following summary of tonnage movement is compiled: On the way to 1891. 1890. San Francisco.....282,566 179,159 San Diego.....15,475 11,273 San Pedro.....6,519 1,831 Oregon.....34,832 20,782 Puget Sound.....19,599 19,405

**Price's Field Locomotive.**

The item below from the Haywards Journal relative to steam plowing in Alameda county refers to the Jacob Price Field Locomotive exhibited at the last State Fair. This engine has now been plowing steadily for almost four months without a breakage, and at present is demonstrating that the smaller farms of our valleys can be advantageously cultivated by steam as well as the large ones.

Truman, Hooker & Co. will soon have a supply of these machines.

**STEAM PLOWING AND SEEDING.**—Haywards Journal, Jan. 2: A steam plow is in operation on a number of the fields of Irvington, and is attracting a good deal of attention. It does its work very speedily and effectively; but some of our old-time farmers think it looks rather uncanny walking over the fields.

PACIFIC COAST WEATHER FOR THE WEEK.

**ONGERTH'S GRAFTING COMPOUND.**  
TRADE MARK REGISTERED.

For Protecting Grafting, or Other Wounds or Cuts on Trees and Vines.

This Compound protects all wounds or cuts on trees and vines from the influence of the atmosphere and water. It increases the formation of Cambium, thereby producing a rapid healing of the wound, and is therefore a perfect substitute for the bark. It further keeps all animal and vegetable parasites from the wound and prevents the decay and molding of the wood. Grafting is made absolutely successful by the use of the Ongert's Compound. Special attention is drawn to the fact that it is absolutely necessary to protect the grafting wounds on grape vines. No other substance, known at present, is so effective as the Ongert's Compound. It never fails! A great many trees and vines are killed annually by unskilled cutting and pruning, and by the inadequate protection of the wound. Wounds ought to be allowed to evaporate for 24 hours at least before covering them, with the exception of near trees, where the wounds may be covered as soon as cut. All parties who used this Grafting Compound last year the only successful compound they have ever used. Send for a sample can.

**PRICE.** One pound tin, 75c; two pound tins, \$1.20; in lots of 20 pounds or more, 50c per pound. One pound is sufficient to cover 1000 wounds of one inch diameter each.

**WOODIN & LITTLE, General Agents, 314 Market Street, Junction of Bush, San Francisco, Cal.**

ered as soon as cut. All parties who used this Grafting Compound last year the only successful compound they have ever used. Send for a sample can.

## THE ONLY TRUE FERTILIZER

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR  
COMPANY prepared from GUANO and rendered soluble by the application  
of acids.

This manure is an ENRICHER of the soil and not, like others, a  
STIMULANT only; it will do for the land what no other can in rendering it  
PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for  
results we point with confidence to the ORCHARDS of RIVERSIDE, where  
it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion  
may require. It is rich in PHOSPHORIC ACID, and can be made as rich in  
NITROGEN as the most deficient soil may exact.

WE GUARANTEE ALL WE CLAIM FOR IT,

Viz.: TO BE THE MOST COMPLETE FERTILIZER ON THIS COAST.

#### A Fine Group of Polled Angus Cattle.

We have on this page a very handsome portraiture of very fine cattle, the property of a brother publisher with agricultural tastes and acquisitions, Mr. M. T. Brown of Davenport, Iowa. Mr. Brown's herd is at Gridley, Kansas, and he enjoys the delights of farming at long distances, but the stock shown in the engraving is evidence that he uses good materials. His Angus blood of the Pride of Aberdeen family shows that he has struck high in the breed he has chosen. The *Breeder's Gazette* says that the career of the foundation cow of this branch of the great Queen Mother tribe is without a parallel in the history of the breed, and that her descendants have found places of honor in nearly every prominent herd on either side of the water. As to the popularity of this strain of Aberdeen-Angus blood, sale-ring prices on both continents bear convincing testimony, and no breeder counts his herd complete unless it contains a representative of the famous Prides. The favorite tribe at Tillyfour (and their name is linked with some of the greatest glories of the breed) bid fair to maintain permanently their commanding position among the families of Aberdeen-Angus cattle.

To the left of the group, as it appears on this page, stands Pride of Aberdeen 45th, one of the purest bred of the tribe now living, descending from the famous Pride of Aberdeen 5th. The cow in the illustration is now a four-year-old, bred by R. C. Anld; got by Heir of the Shire (4458) out of Pride of Aberdeen 38th

A GROUP OF THE PURE ABERDEEN FAMILY OF POLLED ANGUS CATTLE.

5282 by Wedgwood (2409). She is the dam of the two-year-old heifer in the center of the group—Pride of Brannbrest 9466, which has for sire Stratbogle 4567. The calf is Pride 2d of Brannbrest 10926. Upon the right is Pride 2d of Big Island 2905, for which Mr. Brown paid \$645 at the dispersion of the Big Island herd of Mossom Boyd & Co. She is a daughter of the famous Erlea sire Ermine Bearer (2082) and her dam is Pride of Findborn 3d (4758) by the Pride bull Black Watch (1242.) She was many times shown when in the Big Island herd and never failed of a first prize. Mr. Brown is to be congratulated on his possession of such a well-bred group of the famous Pride of Aberdeens.

#### A Royal Clydesdale.

We have not recently shown a Clydesdale, but the interests of this draft breed are progressing, and we are pleased again to show a good representative animal. Prince Arthur of Wellesley is an imported stallion, and was foaled in May, 1882, on the farm of D. McKay of Hurlisdale, Scotland. The horse has been described as one of the handsomest horses ever imported to America, of fine quality and style, good disposition and perfect in shape. He won second prize at Annan, Scotland, in 1883. His dam, Jean 610, only twice shown, won first prize both times at Annan, Scotland, and her sire, Young Pop 593, won first prize at the Royal Northern Agricultural Society show, at Aberdeen, 1870; second prize, 1870, and second at the Highland Society show, 1871. Prince Arthur was imported by the Brookside Farm Co. of Fort Wayne, Indiana, an establishment owned by Scotchmen, and operated in connection with a breeding farm owned by the same parties in the old country. Prince Arthur has played an important part in their operations.

A REPRESENTATIVE IMPORTED CLYDESDALE STALLION.

## HORTICULTURE.

## Planting and Pruning Deciduous Fruit Trees.

At the January meeting of the Redlands (San Bernardino county) Horticultural Society, Prof. C. R. Paine, an experienced fruit-grower, read an essay on pruning deciduous fruit trees which is so full of practical suggestions that we publish it entire as follows:

My aim will be to outline the methods of planting and training peach, apricot and prune trees, as ascertained from my own work and the observations and recorded experience of growers generally in the interior valleys of California. Another object is to open a discussion, as you request, which shall result in presenting to the numerous new growers about to begin in this vicinity the planting of orchards of these valuable fruits, plain and definite ways of beginning and carrying on this work, trite enough, doubtless, to the old and observant grower, but of sufficient value to the class named to warrant attention.

I realize that it is of little use to advise the planter to let the subsoil plow follow in the furrow of the surface plow, because it will be rarely done except by those of ample means who know that profit will come from deep and thorough working; every one should plow at least eight inches deep, without balks, and thoroughly fine the soil, usually after each half-day's plowing, that the lumps may not become hardened. Thorough cultivation at any period of the work is not alone for killing weeds and providing a mulch to retain moisture in this dry climate, but unknown and unnamed good results from frequent aeration of the soil, which is found to be worth more than it costs.

It is the experience of every irrigator that perfect grading saves subsequent labor and annoyance, and the novice will do well to heed dear-bought experience in this and other points that pertain to his enterprise.

In laying off a ten-acre block for planting trees, leave a border all around of at least 12 feet for turning teams and cultivation of outside rows; stinginess in this respect is always regretted.

Perfect accuracy of alignment of rows in every direction is so satisfactory, and lessens so much the hard hoeing after the horsework is done, that you must secure it, even if you have to employ an expert. Methods of laying off an orchard have been frequently published and can be readily understood and applied, and I need not, therefore, be explicit.

On upland soils 20 feet apart is a good distance for peaches, wider on lowland, while 25 feet is better for apricots and prunes, which, when fruiting, have a broader spread. However, if I were planting a block of two kinds, 22 feet would answer, if the trees were grown stocky; and the stubby form is the fruitful form.

When the distance between trees is not less than 20 feet, I would always employ the hexagonal or triangular method of arrangement. Cultivation and driving about are not hindered, as I know from my own orchard; every tree is equi-distant from every other, and, better than all in a business point of view, 15 per cent more trees can be planted to the same area. To illustrate: In one ten-acre tract I have, with streets cut off on two sides, as is always done here, and a border left unplanted, as I have described, there are planted 31 rows of 27 trees each, 22 feet apart on the hexagonal plan, in number 537 trees. Had these been planted in squares 22 feet apart, there would have been about 729 trees; the difference is 108 trees in favor of the hexagonal system. Suppose you get 100 pounds of fruit per annum from each tree, these extra 108 trees on the ten-acre tract—so called—will yield five tons of fruit, a difference that will well-nigh pay the cost of cultivation.

Provide a well-made and well-laid flume, with metallic gates; a V flume is best on sloping ground, because in it the outflow of water to each furrow can be regulated most readily.

The use of a planting-board and the process of staking to make ready for digging the tree-holes are doubtless familiar, or can be so. All the holes should be dug before beginning to plant, unless two sets of workmen are employed. If the sides of the holes should become dry before the tree is planted, a cement has formed which should be broken before the hole is filled. Openings two feet across and two feet deep with the bottom loosened shovel deep make a good home for the new tree; in sandy soils, as small a hole as will receive the roots is good enough, and a larger is no better.

In lieu of the top soil which may have been placed on one side in digging, to be replaced about the roots, it may answer to break down the surface earth round about the holes to fill the bottom and supply the first nutriment to the roots. All soil filled back should be free from lumps and put in gradually, one man holding the tree and spreading the roots and two shoveling; the one who holds the tree should cut out the broken roots and trim the ends of all the larger roots unless they have formed a callus. Of course care should be taken, especially late in the season, that the roots are not long exposed during the work. The tree should be planted only as deep as it stood in the nursery, and water should follow in a furrow to settle the earth closely around

the roots and give the needed moisture. If planting is done without water, greater care must be taken to pack the earth in all the spaces between the roots, particularly beneath the center of the tree; soil shoveled into the hole to form a mound on the bottom before placing the tree will serve the purpose. When the work is complete, only dry, loose earth should surround the tree on the surface.

All these and other details of planting needful to insure success may be rapidly done. No necessary care or attention to minutiae in handling or protecting the tree should be omitted. Attention to details is a large element of success in the greatest enterprises. The death of the tree or slowness of development will attest the faults of your work. In buying your stock accept no tree with knotty roots; plenty of good roots is of prime importance.

Yearling buds are better for the inexperienced than dormant, which in the hands of the old grower do well. The method of treating these little trees the first season lays the foundation for their after shape; the first two years is the formative period, and the mistakes of early treatment can never be remedied without serious loss.

When I first planted a little peach orchard of a few acres, I shortened the side branches and let the tree grow with central trunk, just as Eastern growers do, and as others still do here, and as they may do to advantage in the coast counties. In time the lower branches hung down decidedly in the way of horse work, as they became burdened with fruit and had to be cut off; the long exposed stem became seriously affected with sunburn on the southwest side. They stand "monuments of my ignorance." After grafting some undesirable varieties by sawing to a stump about three feet high, I was strongly impressed with the kind of top formed by the four or five branches from the scions inserted. They formed an acute angle with the perpendicular of the tree, making such trees the easiest to work near with a horse, and the tree most symmetrical.

When I planted again, I cut at once the tops of all the young trees knee-high from the ground, growing them without a central stem, forming easily a far better and more useful and healthy tree. I had really made an improvement on my old method, and shaped a tree fitted to stand the burning sun without harm, and allow the horse to approach without damage in making water furrows, and in after cultivation, while I was at the time unaware that extensive growers were using a similar method.

About this time, Mr. Wickson, while preparing his work on "California Fruits," wrote to me, as to others all over the State, requesting me to detail my practice in training deciduous fruit trees, and he has embodied my reply in his volume on page 160. As my practice agrees, in the main, with that recorded in his work of those orchardists who make the raising of this fruit a business, I feel the surer that it is well founded. Wickson's "California Fruits" is indeed, as the title-page declares, "A manual of methods which have yielded the greatest success," and "An index to the horticultural experience of the State," and fruit-growers will be the gainers who consult its pages in any department of their calling.

I quote, with some modifications, the method of training I there described: I train the stem to a single cane in the nursery, and just after planting I cut them all off at a uniform height—I then said two feet, but now I think 12 inches better. When the young growth, which will appear chiefly from latent buds on the remaining lower part of the stem, is a few inches long, I select from three to five shoots—preferably three in the peach—near the top, leaving a space of several inches between them, and pinch back all the others below, forming a tuft or rosette of leaves, whose presence will aid in the development of the young tree and serve to shade the trunk. There is nothing more important in the treatment of the tree in this climate than the last-named point of shade to the trunk. I would rather let the whole stem be enveloped with its unchecked growth than allow it to be scalded by the direct and reflected glare of the heat, and its bark tunneled by the busy borer, for this is sure death to the prospects of future profit from deciduous fruitage. Artificial protection of paper, cloth or thin boards must be used where shade enough is not given.

I repeat this work several times during the season of growth, and it is a very speedy operation. The following spring I cut back these three shoots to stubs, and not all of the same length, but varying from four to eight inches, for the double purpose of making these limbs stocky to bear their future burdens of fruit and of controlling the shape of the tree. Shortly a quantity of young growth will cluster about each of these short stubs, which can be thinned out by thumb prunning to two shoots to each of the three branches, tending obliquely upward from inside buds mostly; these will make lusty growth, which should be cut back to about 12 inches. The next season the branches should be shortened to about 18 inches, and every succeeding winter the wood grown the previous season should be pruned back at least one-half, as well as such branches be removed as impair the symmetry of the tree and threaten to overburden it with fruit, and likewise those that may start to grow in a somewhat horizontal direction outside of the three main branches and their prongs.

In the third year the tree has attained the shape it is ever after to keep—a short trunk less than one foot high, having no central stem

beyond, and from along its summit branches divergent at an angle of about 30 degrees, strong to support their destined weight, not declined so as to interfere with your work of cultivation and not needing to be removed as would be the case when age and length and many annual loads would bear downward branches supported on one long central trunk.

The fruit-producing spurs have ever a tendency to grow up and beyond reach, and for this reason the heavy cutting back of the first two years was done to bring the fruit wood nearer the base of the tree and the aim should be to keep it there, not pruning the prongs of the tree clean, but thinning out so that the branchlets may not die, and shortening the remainder that fruit buds may form. These fruit spurs along the larger branches of the tree should be left on prune and apricot trees especially. The main trunk of the prune and apricot could well be grown four inches longer—that is, 16 inches—to afford room for the attachment of the main forks, for in the prune there should be a greater number of prongs and in the apricot the limbs should grow out so independent of each other that there may be little danger of splitting down as the brittle character of its wood tends to make it.

This system of training is so simple and so easily followed from year to year that an ordinary workman may follow it and uniform effects be produced. The trees escape sunburn and the resulting attacks of borers, the fruit is more accessible, shorter ladders are used, fewer props are needed, teams can work more freely among the trees, and the renewal of the whole top by heavy cutting back of the principal limbs is postponed or rendered needless. After methods of treatment of the full-grown tree are beyond the province of this paper.

On motion of Mr. Love, the plan outlined in Prof. Paine's essay was indorsed by the society.

## ENTOMOLOGICAL.

## Work with the Codlin Moth, Woolly Aphis and Peach Borer, in Oregon.

[Paper by F. L. Washburn read before the Oregon State Horticultural Society at their annual meeting in Portland, Jan. 13 and 14, 1891.]

A matter which should be of importance to all orchardists is the success or non-success following treatment of fruit trees for insect pests, and I beg leave to hereby submit to your society a brief outline of the results of work at the Experiment Station during the past season, in this direction. This brief summary, treating of work with the codlin moth, the woolly aphis and peach borer, will be supplemented later by a complete report.

In the first place, to silence skeptics and to prove the efficacy of spraying for the codlin moth, two experiments in this line were entered upon, directed against the moth as well as against the leaf-eating caterpillars.

Experiment No. 1.—About 36 trees (apple and pear) in the orchard north of the college building were sprayed with a solution of water and Paris green. One lb. of the poison (good quality) to 200 gals. of water for first spraying and one lb. to 300 gals. for all subsequent sprayings. About six lbs. of soap (whale oil or soft soap) were added to every 50 gals. of the liquid with good results, causing an even spreading of the solution over fruit and leaf, and apparently rendering the poison more tenacious.

In every case one tree was left unsprayed of a similar kind as sprayed tree to serve as check on the latter. Six sprayings were given the early varieties. Summer Sweets, for instance, viz: on May 13th and 21st, June 10th, 21st and 28th, July 11th. An interval of seven days elapsed between the first and second sprayings and about 19 days was intended to be the interval between subsequent sprayings. Later apples, like Rambos and Baldwins, received eight and nine sprayings respectively. The last spraying of Baldwins took place on Aug. 19th. The final result shows that, had there been a later spraying of Baldwins, say Sept. 5th, or thereabout, they would have shown a cleaner record. When the first spraying was given, May 13th, the bloom had all fallen and the apples were "standing," and approximately the size of peas, some, of course, being a little larger than others. After the fifth spraying, the wormy apples were all carefully picked from sprayed and unsprayed trees and gathered from beneath the trees, and the number from each tree accurately counted. The tables show a clean record at this date (July 7th) for sprayed trees, hardly a wormy apple or pear being found upon them, while from unsprayed trees very many wormy specimens were taken, ranging in number all the way from 1 to 60, the higher numbers being most frequent. This favorable comparison was fairly well maintained during the season, the wormy apples and pears being recorded at regular intervals (5 days). The total number of wormy and sound apples from each tree was summarized. A glance at this summary convinces one of the advantage of spraying with Paris green. A very few of the results are given here:

No.	Tree	Sound apples.	Wormy.	Per cent wormy.
1	Rambo sprayed.....	3,492	124	25
"	" unsprayed.....	248	195	45
24	Summer Sweet sprayed.....	819	58	7
61	" unsprayed.....	492	189	25
18	Winesap sprayed.....	2,917	274	10
"	" unsprayed.....	340	513	30
17	Baldwin sprayed.....	2,076	1025	33
"	" unsprayed.....	97	199	66

A large Summer Doyenne pear, loaded with

fruit, and receiving five sprayings (the last June 25th), had hardly a wormy specimen upon its branches. A Winter Nelis receiving eight sprayings yielded 1014 good pears, and only 12 wormy pears. Experiment No. 2.

## Fungicide and Insecticide.

A combination to kill scab and at same time to prevent the ravages of the moth, was suggested by Dr. Sharpless of Eugene, but is in use as a combination in the East. The fungicide used was sulphide of soda and whale-oil soap. Recipe:

- a { 10 lbs. whale-oil soap,  
20 gals. water.
- b { 1 lb. Am. concentrated lye,  
2 lbs. sulphur,  
1 gal. water.

When *a* is heated enough to become thoroughly liquid and *b* has been boiled until it is thoroughly mixed and dark-brown, add *b* to *a*. Heat for one-half hour. Add 30 gals. of water and use warm.

Cost of mixture { Whale-oil soap, 30 cts.,  
1 lb. American Con. lye, 15 cts.,  
2 lbs. sulphur, 10 cts.

The cost is 55 cts. for 50 gals., which will afford one spraying for 35 pretty good-sized trees. Paris green was added in the same proportion as in Experiment 1, i. e., 1 lb. to 200 gals. of the mixture for first spraying, and 1 lb. to 300 gals. for subsequent sprayings. When used at a temperature of 125° F., better results were obtained than when used warmer.

A Red Astrachan, a Ballflower, a Spitzenberg and two Baldwins were sprayed five times with this mixture. This number of sprayings was sufficient, for this mixture is more tenacious than the simple solution, and has a strong, obnoxious and enduring odor. No scab was found on any of these trees, though the preceding year both Ballflowers and Spitzenbergs were badly affected.

The apples were all wonderfully free from worms, showing a far better record in comparison than in Experiment No. 1. In Experiment No. 2 the cost of material and labor given to one tree for season's spraying was 45 cents, and the apples from same tree would have brought in home market \$3.60 or \$3.15 net profit on one tree. It should be borne in mind, however, that in the above experiment the cost did not enter into computation. Where spraying is done on a large scale, the cost is greatly reduced. A Nixon machine No. 2 and the Nixon nozzle were used, the latter doing fairly good work, though I regard two Cyclone nozzles and ten feet of bamboo extension, costing (the three pieces) \$5, as better for this work.

The Marsh test for arsenic as applied to some of the sprayed apples by the station chemist, from time to time, gave interesting results as bearing upon the permanency of the poison.

## Summary.

The results of the above work point to the feasibility of spraying as soon as blossoms fall, when fruit is standing, with Paris green, as above outlined, allowing seven days to intervene between first and second spraying, and about 18 days between subsequent sprayings unless rain necessitates more frequent application. Seven sprayings (not counting extra sprayings necessitated by rainfall, should that accident occur) should be enough for all but the very latest varieties, Baldwins, for instance, and they should receive eight. If carefully done, this will save from 70 to 80 per cent of your fruit.

If the sulphide of soda, whale-oil soap and Paris green mixture is used, five sprayings on even late apples are all that is necessary, and hence preference would naturally be given the latter.

Canvas bands about the trunk were examined every five days and larvæ concealed beneath killed were found to be valuable adjuncts in fighting this pest. In this, as in everything else undertaken by an orchardist, "eternal vigilance (and diligence) is the price of success."

## The Woolly Aphis.

This pest, to be dreaded almost, if not quite, as much as the codlin moth, demands constant attention from the fruit-grower. The branch form has been worked upon to some extent during the past season by the Entomologist, but imperative duties in classroom and lack of assistance prevented continuation of work. Briefly, tobacco water, lye, whale-oil soap in solution, carbolic acid, whale-oil soap made by adding one half pint of carbolic acid to one-half pailful of soap, thinned with strong solution of washing soda, and resin wash, were all used as a spray. The last three were fairly effective, but the crusade must be unremitting and the orchardist nursing in his efforts.

One thing is imperative in this work, viz.: the liquid should be sprayed against the insects with great force in order to remove the woolly secretion and reach their bodies, and spraying should be very frequent (or awhile at least) say every few days in a badly infested orchard. One encouraging fact in connection with this insect has come to our attention in the practical work of the season just passed. The trees sprayed five times with the whale-oil soap and sulphide of soda mixture and Paris green in Experiment 2, though infested the year before when not treated and showing some of the pests this year before spraying, were nearly or quite exempt after two or three sprayings, the woolly pest not appearing on these trees until two weeks or later after last spraying. While this may not be conclusive, I regard it as good evi-

dence in favor of mixture used in Experiment 2 above mentioned.

#### The Peach Borer.

In Southern Oregon, Mr. Carson reports no larvae of *Sanina Pacifica* are found, but he says that the larvae of the flat-headed borer (*Laperda candida*) is an enemy to the peach. Here in the valley I find both at work on the peach trees, but the moth larva is more abundant than the larva of the beetle. On the College grounds about 20 three-year-old trees were treated with carbolated whale-oil soap, thinned with solution of washing soda (carbonate of soda, cost about 2½ cents per tree, two, three or four years old, for each application). Five trees treated with resin wash (full strength, as given in report from California). Seven trees wrapped with newspaper, several thicknesses wrapped around trunk from crotch to two or three inches below collar, and earth heaped about bottom of paper. This was all done between July 24th and 29th. The trees treated with the two first mixtures had their trunks from crotch to collar, and a little below, liberally slashed. Every tree was carefully examined before being treated and found exempt from borer.

Dec. 10th and 11th the trees were examined. Those wrapped with newspaper were entirely exempt from attack, and those treated with carbolated whale-oil soap nearly exempt. Those treated with resin wash showed a better record than those treated with carbolated soap. The trunks of all were in a fine condition.

Summarizing: Newspaper wrapping seems to be the most sure though possibly the most difficult to apply. Either of the mixtures referred to does good work in keeping away moths. One point here is extremely important, viz.: the earth should be removed from around the tree for three or more inches below the collar, and a liberal supply of the mixture (supposing a mixture were used) poured or "slushed" with brush around the base of the tree. The necessity for this is shown by the condition of a large number of seedling peaches which were dug up at the college a few days since.

Many large borers (*S. pacifica*) were found way down in the roots, on trees where one would not expect their presence. They had in many instances entered at a Peach plum bud on side of seedling (destroying bud) and then worked down to roots. Our dry season seems to call for but one treatment if trees are examined faithfully at proper intervals. The summer season is so long, however, and in consequence the moth is on the wing so much later than its Eastern cousins, it would seem advisable to make two applications, one after the latter part of May and one about the middle of August. The newspapers, once on, are good for the entire season. F. L. WASHBURN, Corvallis.

## THE FIELD.

### What Secretary Rusk Thinks of California Agriculture.

WASHINGTON, January 22.—The Secretary of Agriculture has issued his report on the crops of the year, in which special reference is made to California. Of the products of last year the secretary says: "The corn crop was good—above the average; the hay crop was also good, but the prices are low. The hop crop has been good in quantity and especially good in quality, and the product is bringing good prices."

"The fruit crop, though not generally so large on account of the wet weather, was perhaps the most profitable ever harvested, on account of the prices realized in the Eastern markets. Large additional plantations will be made during the coming winter. The grape crop has also been unusually good in quality and quantity wherever the vineyards were healthy."

"The raisins and dried grapes were damaged in some sections by early rains, but not to any serious extent. As near as can be ascertained, the wine crop of the State will be about 15,000,000 gallons of more than average quality, and as the old stocks were mostly cleaned out before the vintage, the demands of trade are constantly increasing, and we may hope for a revival of the industry in the next few years."

"The prices of grapes for winemaking have advanced fully one-third, and a hopeful feeling prevails. However, the ravages of the phylloxera and the southern vine disease have been very serious, and the area of productive vineyards will be very much decreased. The planting of American resistant vines offers the only effectual remedy."

The financial condition of California farmers is dealt with at length, and the same compliment is paid to the farmers of no other State, and there are only kind words for the State, though it is really an argument in favor of fruit-growing and against farming for grain.

The Board of Bank Commissioners of California, says the report, undertook an investigation into the financial condition of the farmers of the State, especially as to whether the result of last season had assisted them in freeing themselves from debt. An inquiry was made through the county banks and local financial institutions doing business directly with the farmer, authorities best able to speak accurately and from facts.

Their statements, backed by their business operations, are valuable indications of the general financial position of the agriculture of the coast. A circular from the Board of Bank Commissioners asked in a general way whether

the farmers of the county in which the recipient was located were getting out of debt. The responses which have been submitted to the board almost without exception are in the main gratifying, indicating a decrease of indebtedness, especially during the past year, in almost all lines of rural industry.

Fruit and vine growers have been especially prosperous, canceling rapidly obligations heretofore assumed for the purchase and development of orchards and vineyards, and investing still more extensively in their plants. Quite as marked as the prosperity of these branches of industry is the lack of improvement in the condition of the grain-growers. For several years the margin of profit in wheat-growing has been very small in all parts of the State, while in many districts it is believed that it has been grown at a positive loss.

"In this investigation," continues the report, "the searching and merciless test of the banker's ledger only confirms what this office has long believed and frequently said. Wheat-growing at the prices of recent years, for anything except home consumption, is not a paying occupation for the American farmer. The market of the world is too limited, too easily glutted and too eagerly sought after by the rude and primitive agriculture of other wheat-growing countries, whose laborers are satisfied with a scale of living far beneath that enjoyed by our rural workmen."

The report then gives extracts from responses received from several counties, and continues: "Out of the whole, San Joaquin county alone reports no progress toward settlement. This county, located at the head of a great wheat-growing valley of the same name, is a striking example of the folly of growing grain which can only be sold abroad after long transportation and in keen competition with the product of every wheat-raising country."

"California has all the conditions for an agriculture peculiar to itself. All the products of the temperate zone flourish, and many of those of the tropic habitate at home under its summer sky. There is a possible range and wealth of agricultural production that is hardly equaled by any land. Its possibilities are yet scarcely known. Settled originally by a class of farmers accustomed to the agricultural methods and products of other less favored regions, it is not strange that the first efforts should have been directed to the development of an agriculture in harmony with their previous experience."

"During the past few years the development of special lines of rural industry for which the State is especially adapted has taken place rapidly. Her citrus fruits, with those of Florida, which they so admirably supplement in time of marketing, are beginning to supply the domestic requirement. Her raisins have largely driven the famous Spanish product from our market, and her prunes are supplanting and supplementing the French article."

"Her dried and evaporated small fruits, such as nectarines, apricots, peaches and pears, supply new delicacies to the already broad dietary of our people. The delicacies of today will become the staple necessities of tomorrow. Her farmers now realize the wealth-producing lines of their industry, and it is apparent that hereafter agricultural development will be along those lines peculiar to the Golden State."

"We may expect more of figs and fancy fruits, of almonds, walnuts and other nuts, for which the demand will enlarge with the supply, and less of wheat and other crops grown in competition with the States which are not suited for other products. The growing of crops worth \$10 per acre upon soil capable of producing crops worth hundreds of dollars is a waste of resources that will impoverish any people."

"That the production of wheat in California has reached its limit under the present conditions is shown by the recorded production of the last few years. During five years, 1880 to 1884 inclusive, the average annual product of the State was 36,394,200 bushels of wheat. For five years, 1885 to 1889 inclusive, it averaged but 33,083,600, or an absolute decline of over 3,000,000 bushels in the face of an increase in population between 1880 and 1890 of more than a third of a million."

"These figures show that California farmers are realizing the folly of growing wheat for the glutted foreign market upon a soil better suited for the production of special products steadily demanded at remunerative prices."

THE CALIFORNIA BEE.—The February *Overland Monthly* will contain the first article of its illustrated series upon the industries of the coast. This will be "Bee Culture in California," by Ninetta Eimes. It will be both popular and statistical, giving the figures of this industry, and describing, with illustrations, the bee pastures and ranches, the methods of hiving and handling the honey, the habits and varieties of the bees, etc.

ACCORDING to the *Visalia Delta*, Tulare has within its borders more reserved land (mostly timber land) than any other county in the State. In the Tulare River reservation are 48,666.69 acres; in the Sequoia National Park, 161,596.53 acres; and in the south half of the General Grant Park, which is in this county, 1256.60 acres; the total being 211,515.82 acres.

DURING 1890 the value of buildings erected in Visalia was \$111,200. Among the most important was a \$30,000 schoolhouse.

## POULTRY YARD.

### Poultry at St. Helena.

James Mitchell writes the following interesting letter to the St. Helena *Star* concerning the poultry interests of that region of Napa valley: Of course our poultry interests are small in comparison to the leading industries of the place, yet they are worthy, I think, of notice in your paper; and while there is not as much done as might be, yet there is a sufficiency of encouragement to stimulate an increased interest in the matter, and this should be done in the raising of poultry in general as well as in that of pure-blooded stock.

Our local market as well as in San Francisco shows how there is a demand for both eggs and chickens the whole year. Some of us who confine our attention to the raising of pure stock find a market as far north as British Columbia and south as Arizona and across the Pacific to Japan; and should the attention be given to poultry that might be in this place, we would only be following in with that which is being done on the whole coast, and this is the case, we might say, throughout all the States. Few people imagine the extent of the poultry business in America. The statistical records of our country for 1882 show that the value of ootons raised was \$410,000,000; hay, \$436,000,000; dairy products, \$254,000,000; wheat, \$484,000,000; poultry and poultry products, \$560,000,000. We here see how it surpassed all these others for that year, and we might venture to say that it has increased to a greater extent every year since. Its general nature, being the work of the many, easily accounts for the greatness of the results as seen in the above figures. Of all industries, it is indeed that which has the most people identified with it. It is carried on in town and country, in hill and valley; in cold and hot as well as temperate regions, and by rich and poor; looked after for the most part by the women of our land.

Some make it the special business for their living, but the many have poultry only as something collateral and that which can provide for itself. This is especially the case with the farmer. A mistake is often made in this way. Did farmers give but the one-half of the attention to their chickens that they do to their hogs, cows and other things, they would reap as good, if not better, returns from them as these others. We are as favorably situated in this place for raising poultry as in other parts of our State. The climate is no worse than in other sections and feed can be readily procured; and while we see hens at almost every house, still there might be more. Though we find many of the best breeds in their purity, there is yet room for much improvement in this respect. We are a strong advocate for the pure stock. No matter what breed we fancy, we believe in keeping them pure. Of course a flock of common fowls can be much improved by maturing them with pure stock. Still it is better to have them all pure; both as regards looks and pecuniary results it is better.

I think I may take the credit of doing as much, if not more, in raising fine breeds as any other in this community. When I began some seven years ago, we thought it would take no more to feed a fine thoroughbred than a common dung-hill chicken, and if we could dispose of them we would be more likely to get a better price for both eggs and chickens. To procure our stock, of course it cost more, but in the end it pays best. We keep poultry only to raise fine stock from. Had we an extensive range like a farmer, we would have a large flock for general purposes. I only keep Wyandottes. I fancied them from their beautiful appearance and general usefulness. I began with the silver, and last year I got the golden and white. Of the three varieties I have imported from the East to get my starting stock, I have given every attention in the way of careful mating to produce as fine birds as possible, and to show that my efforts have not been unsuccessful, I have been supplying some of the most noted poultry men on this coast with chickens to fill their orders. Over 20 trios of my silver went to one man last year for his Japan trade. Had my chickens not been A. No. 1, these men in the business would not have patronized me in this way. My silver were also tested at the State Poultry Show held in San Francisco in 1889. This was my first opportunity to exhibit. I secured one first and one second premium on two pair of fowls. The next month I received one first and two seconds on three different birds at the Los Angeles display. I have sent a trio of the silver to the Los Angeles Show held last week and am anxiously awaiting results.

I will have breeding hens of all these varieties this season and am in hopes of having a good market. The Wyandotte chickens have obtained a high position in this and other countries as one of the most useful we have. They make good mothers, are excellent layers, especially in winter, and are much admired on the table.

You will please pardon my dwelling so greatly on my own poultry. My only excuse is I know most about them. Did time and space permit, I might describe other kinds (as fully as I have my own) that we have in this place. There are, for instance, those of Mr. Lewelling's. He has a dozen pens fitted up in the best of style and has them stocked with very choice fowls—White Leghorns, Golden Wy-

and Pekin ducks. He raises by artificial means, having three incubators of the most improved make. This is his second season in raising in this way, and he is much encouraged by his success last year. Mr. Charles Blom, who lives on that gentleman's place, has also a fine yard of Brown Leghorns. Farther down the valley, at Mr. Ink's place, there is to be seen a large flock of the Black Spanish breed. Mrs. Ink is one of our most successful poultry ladies. Mr. Ritchie, on Mr. Norton's place, and Mrs. Hopkins, near Oakville, have fine flocks of Brown Leghorns.

## FRUIT MARKETING.

### That Bogus Fruit at the East.

In our issue of January 3, was an essay by C. H. Allen, read at the State Horticultural Society meeting which gave the writer's observations at the East. Reference was made to a specific instance of fraud in which the name of Porter Bros. Co. was seen on the box. The following, read at the meeting of the State Society January 30, is a further statement on the same subject:

To the State Horticultural Society: I beg leave to transmit to you the correspondence with Porter Brothers, of Chicago, with regard to fraudulent sale of California fruits in the East, in accordance with my last communication, as follows, viz.:

SAN FRANCISCO, Jan. 7, 1891.  
Porter Bros., Chicago, Ill.—GENTLEMEN:—At the State Fruit-Growers' Convention held at Santa Cruz, in this State, Nov. 20, 1890, Prof. Chas. H. Allen, late Superintendent of "California on Wheels," gave his observations as to the methods practiced in the East in putting up what he believed to be Damson plums and marked and sold as "California Spanish prunes." This name is of course entirely unknown in this State and such a fraudulent practice does injury to the fine fruit produced in this State, and which is shipped to the East in very large quantities. Prof. Allen also reported that he saw dried egg plums sold as "Silver prunes," and also marked "egg prunes," and that the brand on the box bore your name. While Prof. Allen said in his remarks that he did not believe that you sold any fruit that was not raised in this State, and palmed it off for California fruit, an explanation is due to the fruit-growers of this State, as such practices are a direct injury to their industry.

In accordance with a resolution adopted at said convention, I have forwarded to the State Horticultural Society the remarks there made by Prof. Allen, and also the report of the committee who had the matter under consideration. I also transmit to you both the remarks of Prof. Allen and the report of the committee as published in this State, which I hope you will consider, and send us an explanation as soon as possible, that it may be laid before the coming meeting, and yourselves righted if you have been wronged.

The fruit-growers request that you send a sample of such fruit as is sold in the East, and as Prof. Allen saw with your stencil, marked "California Spanish prunes."

Hoping to receive from you a reply in order to lay the same before the coming meeting, I remain, etc., etc. B. M. LELONG, Secretary of the State Board of Horticulture and of the State Fruit-Growers' Convention.

The following is the reply received in answer to above communication, from Porter Bros.:

CHICAGO, Jan. 12, 1891.  
B. M. Lelong, Esq., Sec'y State Board of Horticulture, San Francisco.—DEAR SIR:—We are in receipt of your favor bearing date of Jan. 7th, wherein you inclose a copy of the speech made by Prof. Allen at Santa Cruz, Nov. 20, 1890. In reply we beg to state that after an experience of twenty-one years in the California fruit trade, we have no knowledge of ever having sold any egg plums for Silver prunes or egg prunes, neither do we have any recollection of ever having seen any California fruit marked "Spanish prunes."

If Prof. Allen has seen these varieties of fruit in boxes bearing our stencil, it is clearly a forgery so far as we are concerned, for we believe we know the different varieties of fruit grown in California, and we also believe that no gain could ever come out of a misrepresentation of goods of any character, and especially of California products. There is no firm that is more justly proud of California and its products than we are, and there is no firm that would go further and do more to advance the fruit interests of California than we would, as we make almost entirely a specialty of California products, and are known as the leading house in that line throughout the entire United States. We do not think it would be to our advantage to commence at this late day to deceive either the grower or the consumer, and we would be very much obliged to you if you could find out through Prof. Allen, just who the parties were, where he saw this fruit, when they got it and of whom they bought it, as we feel justly indignant at any such practice in marking fruit contrary to its real name, or any reflection upon our house in that direction.

We know Prof. Allen very well, and believe him to be a thoroughly honest and conscientious gentleman. While we do not doubt that he saw what he said he did, yet we think if this matter is probed to the bottom he will find that we were in no way a party to the transaction or in any manner to blame. We have known some unscrupulous retailers in the past to take California boxes and put home-grown products in them, and attempt to palm them off for California fruits, but of late years we have not seen very much of that done.

If there is anything that we can do to ferret this matter out, please give us the exact date, and the firm and place where the Professor saw these goods, and we will do all we can to ferret out the matter.

We trust you will give us the same publicity in the contradiction as you have in the accusation.

PORTER BROS. COMPANY,  
By WASHINGTON PORTER, President.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Appoint your committees for the new year at once, then see they get right down to business. I earnestly hope each Grange will appoint a Committee (of say five) on New Members. At each meeting call on that committee for a report, and if no mistake is made in selecting the members, you will find one or more applications at each meeting of your Grange. Do you think the suggestion worth a trial?

It is said that the oldest field in cultivation on this continent is in the Old Bay State of Massachusetts. Report has it that for 200 long and successive years, old Mother Earth there has responded to the chorus of the plow, spade and hoe.

Won't all the Granges which meet Feb. 21, 1891, have something good to say about George Washington? If the Father of his Country were living, he would certainly be a Patron of Husbandry.

Arrange your plans for some solid Grange work. Get into the campaign for the Grange. Let us double the number of enlistments this summer. The farmers' fight is on. Now don't wait for your neighbor to do all the work. He needs your help. 'Tis your duty to help him. Join the Grange, and thus help your neighbor, yourself, the Order, and your country.

There is no doubt of the organization of two or three Granges in Merced county at an early date.

More than a host of bills has been introduced at this session of the Legislature providing aid for Tom, Dick and Harry. How nice it would be for some Granger to introduce a bill for the relief of the people! Don't you think less appropriations should be made? How about saving some of the hard earnings for the wife and babies, instead of stinting the family in order to meet the tax-gatherer's claim? Watch your representative, and see that he votes to keep within the 50-cent limit!

At a recent Grange meeting three Patrons promised to present three applications for membership at the next meeting. That Grange will report a successful year when we meet at Haywards next October. How many such reports are to be heard? When is the next Grange to report progress?

The many friends of Sister J. Strentzel of Alhambra Grange, at Martinez, will be pained to hear of her sickness. The writer paid a fraternal and social visit to the aged and venerable sister a few days since, and though she was confined to the bed, she was yet as pleasant and instructive as in the days of her youth. Her whole heart, soul and love still cling to the grand old Grange. May God, in His love, restore her to health, so that she may be spared many, many years for the good that she will do to family, to friends, and to humanity.

Let us then be up and doing, with our hearts in the work, for the night will soon be upon us and the toiler must go to his rest.

Corn is selling in the Eastern States at fifty cents per bushel. One year ago it was worth but twenty-eight cents. That is a pretty good gain. Fewer grain trusts and pools, and all farm products will advance in price. Patrons, to the front! Let's down with the combines!

And how the turkeys gobbled (no more) which our commissaries fiddle for the many Harvest Feasts. The Grangers believe in home consumption of turkeys, chickens, rich oaks, crisp pies, hot coffee, and ten hundred other goodies. If you don't believe it, attend a few of the Grangers' "spreads."

The State Grangers' picnic seems to meet with much favor. What county in the State wants the picnic? Let us hear from some of the Pomona Granges. They can handle the picnic in good shape. Seems to me it is just in their line of business. Pomona, don't be afraid to strike your Steele with the Grangers' Flint. Sonoma's Martin may be caught, but no ordinary trap can hold him long at a time. Hurrah for the State picnic!

How to make money, did you say? Save it after you have earned it. Spend only when absolutely necessary. Saving is making, but don't save to be stingy and miserly. Spend money when it will buy better things than money!

The busy season for the majority of California farmers is, for the present, over. Till harvest is ready there is but little for the farmers of San Joaquin, Merced, Fresno, Tulare, Kern, Stanislaus, Colusa, Yolo, Solano and Tehama counties to do. This is just the time for these farmers to put their heads together for their common good. Now is the time to

enjoy what you have acquired and to prepare to protect what you expect to harvest. There is no better place for farmers to meet than at the Grange. There they can reason together, talk together, sing together, eat together, plan together and act together for their social, political, financial and moral welfare. Won't some person, who once belonged to the Grange in each of the counties above named, go to work and reorganize the Granges in his county? There is good pay and pleasant work in store for such a person. Full information and all blanks required can be had of A. T. Dewey, 220 Market St., San Francisco, Cal. Send for full outfit, and send at once.

Don't let your Grange meetings drag! Keep something before the meeting all the time. Patrons do not go to the Grange for a nap. They want some sort of entertainment, and if they have it they will not only attend promptly, regularly and constantly, but they will add to the profit of the meetings by "participating in the proceedings thereof." Try to keep things going at your meetings and note the result!

Arrange for Bro. Hayes! Do all you can to get the farmers to hear him. He will convince them that it is good to belong to the Grange. Send special and personal invitations to your farmer friends to come to the meeting.

The country schools will soon open for the spring and summer terms. Our Order prides itself on education, therefore let every Patron see to it that his district school is as good as the best, and that the teacher of that school is competent in every particular to teach—not alone arithmetic, grammar and history, but to teach manners, morals, politeness, industry and the use of a whole lot of sound common sense. Common sense is an article always in demand. It will sell in any market at a good price, either wholesale or retail. Did you ever try to find somebody who had a big supply on hand? If you found such a person, he was in no hurry to sell his stock. He knew it would keep and would enhance in value with age. See to it that the children have a chance to absorb some common sense. It matters little what source it comes from, so they get the pure article.

Now is the season for work in the flower garden. The department of flowers in our noble Order is under the keeping and control of worthy Flora. In behalf of the thousands of sisters in the Grange, we call on Sister Flora for advice and instruction to aid us in the work of our ornamental gardens. Flowers are ever welcome. Their culture is a pleasing study. Won't Sister Flora give us some information? How would a bouquet look on the Master's Desk, about now? A bouquet of words as well as of flowers, for the good Patrons and Matrons of California, is what this calls for.

When about to confer degree work, be sure to see that the hall, the candidates and all the paraphernalia and regalia are in proper place and in perfect order.

### He Could Not Withdraw.

Past Master John Sites made up his mind to withdraw from Antelope Grange. He attended a recent meeting with that intention. It happens that Antelope Grange has been considerably revived lately through the influence of Bro. Chapin and other good Patrons. Some 20-odd young members have been taken in. A number of them were filling the chairs. Good music was provided and new life and enthusiasm pervaded the Grange circle. Bro. Sites had seen these young people grow up in his neighborhood, and could not otherwise than feel an interest in their company and achievements. Finally, instead of withdrawing from the Grange, he made one of the best and most encouraging speeches he ever delivered in favor of the Grange.

We are glad to hear these good things of Antelope, and print them for the benefit of other Granges that may follow its example. Let them take into consideration the matter; see that a committee is appointed to canvass for young recruits, or make the Grange a Committee of the Whole to revive itself by such a happy process as Antelope is now reaping the benefit from.

We think Bro. A. D. Logan's visits to Antelope Grange lately have not done him or the Grange cause any harm, but really a notable amount of good. We believe both feel younger. May they continue to prosper together.

FARMER'S INSTITUTE.—We have information that the Board of Regents of the State University will most likely grant the petition of the State Grange for the appointment of a Lecturer, with salary and expenses paid, for supporting and encouraging Farmers' Institute meetings which may be called in different parts of the State. When the matter is finally determined, the necessity of a call of the Farmers' Institute Committee will be determined.

PLUMAS GRANGE.—R. A. Heriot, Master of Plumas Grange, writes: Our officers and members are encouraged at the prospect of having a good year in the Grange, as there will be quite a number of applications put in as soon as the weather clears up. Though small in number, our Grange is strong in the cause.

### Master Hayes' Meetings.

Worthy Master Hayes of Oregon arrived at Auburn from the East about 1 o'clock A. M. Thursday, Jan. 29th, and gave a public lecture on Grange, farming and public matters in the afternoon. The meeting, although not largely attended, was an exceedingly earnest one. The speaker was well appreciated and urged to come again before leaving the State.

After a brief call at Sacramento, he was received and entertained by Past Master Overhiser, Bro. Beecher and others, and addressed a good meeting of Patrons at Stockton Saturday afternoon. His speech and the discussions following were animated with good cheer. On the same evening, at Waterloo, a large public gathering was addressed in Bro. Hayes' square and plain manner. Questions were asked and answered, and no doubt a good and beneficial result will follow the farmers' progressive movement at Waterloo.

We had the pleasure of Bro. Hayes' presence in S. F. on Monday. He visited the State Horticultural Commission rooms, the New City Hall and other places of interest, and on Tuesday morning started for Pacheco, where he met a good number of Patrons, including representatives from other Granges of Contra Costa Co. Bros. A. D. Logan and N. Jones were among the P. M.'s met on the way by Bro. Hayes.

Wednesday evening, Santa Rosa no doubt gave Oregon's lively representative a noble, fraternal reception at the residence of Past Master S. T. Coulter. Every old Granger knows that it must have been a splendid time, and unfortunate was the Santa Rosa Patron unable to attend.

Thursday morning, bright and early, Bro. Coulter volunteered to take Bro. Hayes to Two Rock Grange, where, we trust, he met a liberal delegation from Sebastopol Grange and all neighboring farming districts. Two Rock Grange has some of the most active members among the working Patrons of the State.

At Yuba City, Saturday, Feb. 7th, The Oregon Captain will meet many old veterans and friends in the cause, as well as other progressive farmers who are becoming wide-awake to the interests of their calling and the public welfare. We hope to hear of a splendid meeting there.

In Solano Co., Next Week, Special Deputy F. B. Logan, who has successfully accomplished the organization of more Granges in this State during the past many years than any other one individual, has promised to visit Solano county and make appointments for lectures for Bro. Hayes, to be delivered next week, from the 9th to the 13th, speaking, probably, as often as every other day to public gatherings of farmers called for consultation of their material and fraternal interests.

Wherever Bro. Hayes is announced to speak, there should be a good gathering from all the neighborhood around, of both organized and unorganized farmers and their friends.

He will also, by farm visits, become more familiar with our people and farm-doings and wants in California. It is a noble and generous work that Bro. Hayes is doing for the Patrons of his neighboring State. We think he will go home enlivened and encouraged, and, after a little rest, accomplish more work than he might otherwise be able to do for his own people, who are already anxiously looking for his return.

Sacramento, Saturday, Feb. 14th.

Bro. Hayes will visit the California State Capital and Legislature, probably in the A. M., and give the Patrons and farmers a rousing address, at Grange-hall, at one P. M.

### For the Week Following.

The program is not yet definitely laid down for Bro. Hayes, but we hope that Bro. Frisbie will arrange a series of Grange meetings, north of Yuba City, which will accommodate all farmers, together with the following Granges, (two or more uniting, in some instances, in a union meeting, perhaps), viz., South Sutter, March, North Butte, Gridley, Grimes, Orland and Antelope (at Maxwell or Sites). Some of these are new Granges, which should be especially encouraged by the inspiring words of such a good old veteran in the cause as Worthy Master Hayes of Oregon.

### To Oregon.

In this connection we wish to say to the brothers and sisters of Oregon, you may well be proud of the sterling representative work of your Worthy Master in California. He has already won laurels of friendship for you and himself, and California will not be so unappreciative as not to try to return Oregon as great a favor, if possible, in reciprocation of Bro. Hayes' good work.

### Oregon's W. M. at Our State Capital.

Bro. Hayes will address an open meeting at Sacramento Grange-hall, Saturday, Feb. 14th, at one o'clock P. M. Let the Grangers throughout Sacramento Co. visit their State capital and listen to Oregon's foremost Grange worker.

We have received from the Secretary, J. A. Newcomb, a copy of the Annual Proceedings of Colorado State Grange.

GRASS VALLEY GRANGE installed its officers Jan. 24. The Grange has no debt and its prospects are bright.

### Do Not Repeal the Railroad Commission.

EDITORS PRESS:—I am exceedingly sorry to see that there is an effort in our Legislature to disorganize the Railroad Commission; also that some well-minded men are vociferous for such a change on the ground of economy. In my opinion, this process would be "saving at the piggy bank and losing at the bank." Just go back to the time the Railroad Commission was established. See what the railroad rates and fares were then. Can any man believe that they would have been lowered one-half as much, or at all, had there been no Railroad Commission? Certainly when Gov. Stoneman was in the commission it did some good, although nothing to what it ought to have done. The passenger fares to-day are double what they ought to be, over a majority of the lines in this State. In several instances the people have come very near electing men who are out and out in favor of doing them justice. As it is, we have been no doubt some better off than without any commission at all. The cost of the commission so far is but a trifle as to what the saving has been to the public at large. In my opinion, more than half the blame for not correcting the abuses prevailing against the patrons of the roads is due to the sufferers themselves because they do not combine and unitedly help each other to get their wrongs redressed.

They endeavor to go single-handed to grapple with the united enemy. There ought to be a Citizens' Union to employ attorneys to cope with those of the railroad before the Commissioners, it would seem.

I more than half believe it is in the railroad interests that this movement for removing the Commission is made. The signs of the times are in favor of the people soon electing men who will serve them instead of their enemies in public affairs. The rumbling thunder in the East has possibly admonished some folks on this side that the lightning indignation of the people may also strike here.

I would urge the Executive Committees of the State Grange and Alliance, and also the Legislative Committees of those bodies, to lose no time in investigating this matter, by comparing facts and figures and candidly contemplating the future. See if they have not a duty to perform in preventing the doing away of the Railroad Commission.

Put in the right hands, with everything established as at present, it need not be expensive to continue a truly guardian commission in so important an interest. Certainly no honest man who is trying for this repeal is getting much hurt by the Commission, if not being in a measure at least benefited.

Let us hold on to the Commission another term and see if we cannot force it to do its honest duty, and then elect successors who will not need watching. AN OLD GRANGER.

### State Lecturer Steele on Pure Food.

G. W. Steele, Lecturer of the California State Grange, sends the following vigorous denunciation of adulterated food, etc., to the National Grange Legislative Committee:

The adulteration of food and drink, designed for human consumption, is among the villainies practiced for which there is no excuse save the greed of those engaged in the nefarious business of manufacturing or compounding these spurious articles.

There have been mutterings and complaints uttered by people all over the land—and their name is legion—who condemn these counterfeit products, which, perhaps, for the want of organized effort on the part of the complainants, have not reached the ears of our legislators in Washington in an authoritative manner.

Not only have the consumers of the adulterated articles, such as lard, butter, cheese, etc., reason to complain, but the producers of the genuine article feel that they are being defrauded of their just rights and robbed of the fruits of their labor, by being compelled to compete in the markets with these spurious articles labeled and sold as genuine.

It is time that the farmers and dairymen, who are producers of pure lard and butter, should rise as one man and speak in a voice that shall be heard by our legislators in Washington against the adulteration of these articles, and petition Congress for the passage of stringent laws prohibiting the same.

If oleomargarine and spurious lard must be manufactured, at least compel them to be sold on their own merits. We have stringent laws, imposing severe penalties, for counterfeiting the currency of the country. If we protect money, with much more reason should we protect foods and drinks, for the health, as well as the pocket of the user, is affected thereby. The rich and well-to-do can largely protect themselves against the use of these spurious articles, but the poorer classes need the protecting care of the strong hand of the Government, which should not fall them in time of need. Let us have pure butter, pure lard and pure food, in the interest of good health, and the financial advantage of both producers and consumers, is the cry of the people all over the land.

WORTHY MASTER DAVIS is in correspondence with Dixon parties in reference to reviving the Grange at that place. Several prominent farmers favor the project.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## The New U. S. Senator from Kansas.

Following is a brief sketch of William Alfred Pfeffer, recently elected to succeed Senator Ingalls:

William Alfred Pfeffer was born in Cumberland county, Pa., in 1831, and is of Dutch parentage. In 1850 he caught the gold fever and went to California, where he remained two years. He made considerable money and returned to Pennsylvania, soon after removing to Indiana, and later to Missouri. He served during the war in the Eighty-third Illinois Volunteers. At the close of the war he settled at Clarksville, Tenn., practicing law, and in 1870 he moved to Kansas, taking up a claim. At different times he edited various papers, served in the State Senate, and was a delegate to the National Republican Convention in 1890. In that year he moved to Topeka, assumed editorial control of the *Kansas Farmer* and afterward bought the paper. He has been engaged in the publication of that paper ever since. It has a wide circulation among Kansas farmers, and exerts much influence over them. He joined the Farmers' Alliance movement a year ago. Up to that time Pfeffer was a staunch Republican. He continued his policy as Senator to the Associated Press representative, saying that he favored the absolute, unlimited coinage of silver and the conservative expansion of currency along other lines. He was in favor, he said, of protection to home industries, but believed that the best protection did not always result from a high tariff. Protection by tariff, as a general principle, he said, is wrong. A high tariff should be called in to aid only individual struggling industries. He now favored an average ad valorem duty of 20 per cent. He was opposed to the Force bill.

## Seventeen Alliances in San Joaquin County.

In less than a month and a half seventeen subordinate Farmers' Alliances have been organized in San Joaquin county, with a total membership of over 400, and the work of organization is still progressing steadily.

State Deputy Cook begins work next week in Sacramento county, and J. H. Duncan of Linden takes Mr. Cook's place as deputy for San Joaquin county.

Other organizers will begin work soon in Calaveras, Tuolumne and Amador counties. The County Alliance meets at Lodi, February 12th.

The secret work of the Order has been considerably changed, and the new work will soon be exemplified by Colonel J. S. Barbee, who is now on his way north for that purpose.

Wrightman Alliance was organized at Lincoln schoolhouse Tuesday afternoon with a charter membership of eighteen. John A. Swain was elected President; L. D. Wakefield, Vice-President; Robert G. Williams, Secretary; Mrs. M. Hammer, Treasurer; John Garnett, Chaplain; Charles Swain, Lecturer; Miss Jennie Williams, Steward; Charles McMurray, Doorkeeper.—*Stockton Independent, Jan. 29.*

## Elsinore Alliance.

EDITORS PRESS:—As a result of the recent lecture of Mrs. Anna F. Smith, Elsinore Alliance has been formed, with 15 members and 12 applications. The following are the officers:

Geo. S. Irish, President; Lafayette Yates, Vice-President; T. S. Painter, Sec.; Norman L. Dickson, Treas.; James Stewart, Chap.; Mrs. E. Beck, Steward; P. W. Mintorn, Leot.; Geo. W. Haskins, Doorkeeper; Miss Mabel Yates, Ass't D. K.; Mrs. P. W. Mintorn, Ass't Leot. The prospects are that we will go ahead lively now. Our subject for discussion at next meeting is the Australian Ballot system and Sen. Stanford's Farmers' two-per-cent mortgage bill, which I believe would be one of the best things possible for the farmers if other classes could be kept out of it. But there is where the trouble would be—every one would own a little land if it was on the top of some mountain or off in the desert, anywhere so they had the land to mortgage from year to year. There would be so many thousands of these that never were farmers that the matter would be overdone.

L. YATES.

## Hines in Humboldt and Sacramento.

Bro. J. W. Hines, State Organizer, called on us Friday last and informed us that he would start for Humboldt county Jan. 31st, in answer to a call for a Farmers' Alliance there, very encouraging correspondence having been received from Arcata and other points. Bro. Hines is a former resident of that county, and we feel confident that good work will be done there very soon. He had just returned from Sacramento, where the work is prospering, and a County Alliance will be organized in a short time. Sufficient Alliances are now in line to insure a good and speedy organization of the county. We bespeak for Bro. Hines a warm reception and good success among the progressive people of Humboldt county.

## Hayseed Is Risin'.

[Attendants at the Alliance banquet at St. James hotel, San Jose, last October will recognize the following, written by A. T. Worden and recited by Bro. C. W. Pedlar, Secretary of the State Alliance.]

We kin all of us remember how 'long about September

The papers used ter tell about the caucus or the fair,

End them fellers from the city used ter get almighty witty

On the feller with the duster what had hayseed in his hair.

They hed fun in Legislatures with the man what raised petters,

If by any hook or crook or chance elected and sent there,

End the reportorial friskers used ter comment on the whiskers

End the carpetsack of Billson, what had hayseed in his hair.

Yes b'gosh! he rid his pass out end he used ter blow the gas out,

End he used to drink hard cider when he went out on a tear,

End he used ter pinch a dollar till the buzzard used to holler,

End the man cut up roe-e-diklous what had hayseed in his hair.

But, by gum! if you've been readin' you observe a strange proceedin'—

It's the feller with chin whiskers that is slowly gettin' there.

End it won't be too surprisin' ef by slowly organizin' Old parties may wake up tew find the hayseed in their hair.

When the fashions change you fellers will all carry green umbrellas

End trowsers wide across the seat to make the dudelets stare;

In them times of you pass muster you must wear a linen duster,

End ef you want ter throw on style put hayseed in your hair.

FOREST PRESERVATION.—The Santa Barbara County Alliance has adopted strong resolutions condemning the great waste and thefts of California's timber supply; urging upon the Legislature the imperative need of increased protection and control of the forests; demanding the enlargement of the powers of the State Board of Forestry, to include supervision of the State school lands, with authority to sell at auction the timber on said lands when it reaches maturity; and strongly censuring the Legislature for voting over a million dollars toward the erection of public structures of ornate architecture, and refusing an efficient appropriation for the care and preservation of our forests.

THE Farmers' Alliance meeting last Tuesday night was not only well attended but quite a large number was initiated into the Order. T. O. Gallup, the county organizer, was present, and assisted at the initiations. He had just received the new secret work of the Order and imparted it to the members present. Price-lists were received from the Alliance agent at San Francisco, and on application to the Secretary they will be furnished to any member of the Order in good standing. Orders for goods should be made through the Alliance agent at this place, who will probably be appointed at the next regular meeting.—*Williams Farmer*

FARMERS' ALLIANCE OFFICERS.—A Farmers' Alliance was formed Saturday evening at Roberts Island with officers as follows: William Pile, President, Undine; A. C. Fick, Vice-President; Oscar Pile, Secretary, Undine; J. A. Reynolds, Treasurer, Stockton postoffice; A. J. Lund, Chaplain; C. P. Kalning, Lecturer. The Alliance meets at the Garden schoolhouse.—*Stockton Independent, Jan. 20.*

NEW ALLIANCES have been organized at Oak Park, Enterprise and Brighton, Sacramento county, and at Bellota, San Joaquin county. President Cannon has appointed the following deputy organizers: J. H. Duncan for San Joaquin, Edward Davis for Calaveras, and D. M. Towne for Amador county. The San Joaquin county Alliances are receiving large accessions to their membership.

C. W. HATCHER furnishes a well-written contribution to the *Yolo Democrat*, urging the farmers of that county to join the Alliance and rid themselves of the burdens now oppressing them. The condition of affairs is stated so clearly as to be comprehended by all.

H. C. DAUNTLESS, Santa Cruz County Organizer and Lecturer, addresses members of the Order in the Watsonville *Pajaronian*, recommending their personal of the State Constitution, and stating that he will furnish them with copies of Alliance documents.

AN ALLIANCE has been organized at Yuba City, with J. J. Pratt as President and H. D. De Gaa Secretary. The Marysville *Democrat* heartily favors the organization and offers the use of its columns to further the farmers' cause.

HEALDSBURG ALLIANCE has been formed, with D. G. Jewett President and Mrs. Allie Brown Secretary. Mrs. Squire has been actively at work in that vicinity.

CITRUS FAIR ALLIANCE No. 1 has been organized in Sutter county, with F. Hauss as President and Wm. Stewart Secretary. Its location is in Barry school district.

STANISLAUS COUNTY ALLIANCE has adopted strong resolutions denunciatory of the Force bill.

## The Santa Clara County Fruit Buyers.

The Santa Clara valley fruit buyers and fruit driers have pooled their issues and formed the "Association of Fruit Buyers of the Santa Clara Valley."

The two associations thus fused have, according to the *Mercury*, submitted the following contract and system of grades for the consideration of the association, saving that the measurement of grades could be decided upon if those in the contract submitted were found to be faulty:

All fruit delivered ungraded shall be graded by buyer, which grading shall form the basis of settlement. All fruit delivered graded, which on examination shall fall below the grade claimed, may be re-graded by buyer, for which seller agrees to allow buyer ½ cent per pound.

## APRICOTS.

Extra—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish or imperfection, not over-ripe and fully matured.

No. 1—Shall measure not less than two inches in diameter, shall be sound, clean, free from blemish, not over-ripe and fully matured.

No. 2—Shall measure not less than 1½ inches in diameter, shall be sound, clean, free from blemish and not over-ripe.

No. 3—Shall measure not less than 1 inch in diameter and shall be of good merchantable quality.

## CHERRIES.

Extra—Shall measure not less than ¾ inch in diameter, shall be sound, clean, free from blemish or imperfection, not over-ripe and fully matured.

No. 1—Shall measure not less than ½ inch in diameter, shall be sound, clean, free from blemish, not over-ripe and fully matured.

No. 2—Shall be sound, clean and of good merchantable quality.

## PEACHES.

Extra—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish or imperfection, of uniform ripeness, not over-ripe and fully matured.

No. 1—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from blemish, of uniform ripeness, not over-ripe and fully matured.

No. 2—Shall measure not less than 2¼ inches in diameter, shall be sound, clean, free from blemish, not over-ripe.

No. 3—Shall measure not less than 1½ inches in diameter, and be of good, merchantable quality.

## PEARS.

Must be delivered as soon as picked.

Extra—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from scab, scale, blemish or imperfection, not over-ripe and fully matured.

No. 1—Shall measure not less than 2½ inches in diameter, shall be sound, clean, free from scab, scale, blemish or imperfection, not over-ripe and fully matured.

No. 2—Shall measure not less than 2¼ inches in diameter, shall be sound, clean, free from blemish and not over-ripe.

No. 3—Shall measure not less than 2 inches in diameter, and to be of good, merchantable quality.

## PLUMS.

Extra—Shall number not more than — to pound, shall be sound, clean, free from blemish or imperfection, not over-ripe and fully matured.

No. 1—Shall number not more than — to pound, shall be sound, clean, free from blemish, not over-ripe and fully matured.

No. 2—Shall be sound, clean fruit of good, merchantable quality.

## PRUNES.

Extra—Shall number not more than — to pound, shall be sound, clean, free from blemish or imperfection, not over-ripe, and fully matured.

No. 1—Shall number not more than — to pound shall be sound, clean, free from blemish, not over-ripe and fully matured.

No. 2—Shall be sound, clean fruit of good, merchantable quality.

Fruits not enumerated in the above schedule shall be specially graded as per agreement between buyer and seller.

We hereby certify that the terms, conditions, and grades, above named, were adopted by the Santa Clara Valley Fruit Buyers' Association, Jan. 20, 1891, as the standard.

On the back of this are two contracts, known as the seller's contract and the buyer's contract, similar in wording and the same in effect. The seller's contract is as follows:

In consideration of the sum of \$1 to me paid, the receipt of which is hereby acknowledged, I, John Doe, hereby sell and agree to deliver to the Jones Drying and Canning Co., subject to the terms, condition and gradings herein-after stated, the quantities and varieties of fruit named below, at the prices specified for the respective grades. Delivery to be made at the factory of the Jones Drying and Canning Co., in condition suitable for — purposes, unless otherwise specified. Read grades and conditions on back of this contract. Terms, 30 days, or one per cent discount for cash.

Below this contract and above the signatures is a table giving fruit, variety, minimum estimate, maximum estimate, quality, determined as Extra, No. 1, No. 2 or No. 3, according to the grades on the other side.

Mr. Dawson stated that the extra grade had been placed on the contract because there is

such a thing as extra fruit, and the producers of such fruit should be given an opportunity of getting an extra price. For those fruits not enumerated, grades could be established between the buyer and seller.

A Committee on Contract was appointed as follows: E. L. Danson, W. H. Mantz, W. W. Cozzens, W. H. H. Wright, W. E. Ward, Geo. A. Fleming and J. Z. Anderson.

## Premiums at Southern California Citrus Fair.

The next great event in horticultural circles will be the Southern California Citrus Fair, which will be held in Los Angeles, opening March 3 and continuing during the week or longer. The following list of premiums has been arranged:

Exhibit of citrus fruits from any county, first premium, \$400; second, \$200; third, \$100. In order to compete for the county premium, authority must be given some person or persons at a regular called meeting of fruit-growers to enter the exhibit and receive any premium awarded.

Exhibit of citrus fruits from any locality, first premium, \$150; second, \$100; third, \$50. Any city, township, school district or well-known town will be recognized as a locality. Organization to be formed as for county exhibit.

Exhibit of Washington navel oranges by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of budded oranges other than Washington navel, by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of seedling oranges by an individual, first premium, \$75; second, \$50; third, \$25.

Exhibit of budded lemons by an individual, first premium, \$80; second, \$60; third, \$40.

Specimens of Washington navel oranges, not less than one box (quality), first premium, \$20; second, \$10.

Variety of budded oranges, other than navel, not less than one box (quality), first premium, \$20; second, \$10.

Specimens of seedling oranges, not less than one box (quality), first premium, \$20; second, \$10.

Specimens of budded lemons, not less than one box (quality), first premium, \$20; second, \$10.

Variety of late-budded oranges, not less than one box, \$15.

Exhibit of Japanese variety oranges, not less than one box, first premium, \$10; second, \$5.

Exhibit of limes, \$10.

Exhibit of olivons, \$5.

Exhibit of shaddocks and pnmelo, \$5.

Exhibit of raisins from any county, first premium, \$150; second, \$100.

Exhibit of raisins from any locality, first premium, \$75; second, \$50.

Exhibit of raisins by an individual, first premium, \$50; second, \$25.

Exhibit of five-pound box of raisins, first premium, \$10; second, \$5.

Exhibit of two and one-half-pound box of raisins, \$5.

Exhibit of dried figs, first premium, \$25; second, \$10.

Exhibit of pickled olives, first premium, \$20; second, \$10.

Exhibit of olive oil, first premium, \$20; second, \$10.

Exhibit of walnuts, first premium, \$40; second, \$20.

Exhibit of dates, \$5.

Exhibit of pomegranates, \$5.

Most artistic display of plants and flowers, first premium, \$30; second, \$20; third, \$15.

STATE BOARD OF AGRICULTURE.—The State Board of Agriculture met Feb. 3d in annual session. Secretary Edwin F. Smith submitted the annual report. Senator Fred Cox of Sacramento was elected President of the Board for the ensuing year. The dates for the State Fair were set for September 7th to 19th inclusive. The usual two, three and four-year-old trotting stakes were ordered to be given, and two additional pacing stakes for two and three-year-olds. The Board decided to offer a stallion purse of \$2500 and to offer a California State Fair Futurity Trotting Stake, guaranteed to be worth \$7500, for the colts of mares to be named March 15th, to trot at the State Fair of 1893 as two-year-olds, and as three-year-olds the following year.

HISTORY OF COLUSA COUNTY.—From such a cursory examination as we have thus far been able to give to it, we should class the History of Colusa County by Justus H. Rogers as among the best of the county histories produced in California. It is a handsome volume of 475 pages large octavo, fully illustrated with scenery, buildings, portraits, etc. A large part of the engravings are by the Deway Engraving Co. of this city. The text seems to be prepared with care, and many facts are presented which are of far more than local interest.

CALIFORNIA ON WHEELS.—"California on Wheels" will leave Portland, Or., February 8th, and stop at the following places: Oregon City, Salem, Albany, Eugene, Roseburg, Medford, Ashland, Redding, Red Bluff, Chico, Marysville, Woodland, Sacramento, Stockton, Livermore and West Oakland. The cars left San Francisco Dec. 3, 1889, and will be home February 28th.

## Grassvale.

Grassvale lay hidden in the hills in indolent repose, it lay there like a snowflake in the bosom of a rose. Against the mountains on the east, the east winds vainly pressed, and the mountains stopped the fury of the storm-burst from the west.

But the Grassvale people waited for a railroad to come down and tunnel through the mountains and wind grandly into town; through the weed-grown streets of Grassvale, men would saunter to and fro and tell how when the railroad came the little town would grow.

Every night to Durkee's grocery came a crowd of men to talk it, with big empires in their fancy and two nickels in their pocket; but the cows trod down the dahlias in each housewife's small front yard, and whole droves of pigs went rooting down the village boulevard.

Every morn the magic sunrise all the eastern hills would streak, and God flung His sunset banner from the topmost western peak; but moss grew on the houses where no paint had yet appeared, as the face that has no beauty is the first to raise a beard.

The chimney of the old town hall was thrown down by the rain, and they stuck a rusty funnel through the bottom window pane; at the Baptist church the steeple blew off one tempestuous day, and they left it as a rendezvous where hens could go and lay.

The great dream of the railroad banished their uneasy fears, although they had a suit of clothes but once in thirteen years; for they reasoned when the railroad should come winding down their way they should have a pair of trousers almost every other day.

And we all wait for our railroad while our front yards grow with thistle, lay and listen in our valley for the locomotive's whistle; yes, we build up mighty railroads in our super-heated brain, while we ought to climb our mountains and just foot it to the train. —Yankee Blade.

## A Stir in the Henhouse.

[Written for the RURAL PRESS by LCPA.]

There was a nestling, a fluttering, a scramble or two, an emphatic, almost wrathful voice, a protest and a confirmation, but few of the inmates of the henhouse seemed to realize, while they listened for an admonitory "Tut tut tut!" that it was the slow crowding of Sir Chanticleer's fat sides and the spreading of his big feet that had unbalanced his next neighbor and rippled the disturbance from end to end of the roost. But how could he help it if he had become too big for his usual place? It seemed a pity if he must be refused room in which to grow, though, to be sure, his life had been one of such ease and he had been the subject of such tender care from all the barnyard world that had listened to the music of his voice without attempting competition, that it did seem almost unreasonable for him to ask more.

When, less than a week before, brisk, money-making Miss Leghorn heard him express a wish to accomplish something for himself, she had merely told him to "Shut, shut, shut, shut up!" and then gone about her business, thinking she had ended the matter. When he discontentedly lingered near portly Madame Brahma as she fluffed herself over the fence eggs and dreamed of the beauties yet to be, or later, when she strolled about with the dear, "tweeting" midgets, she complacently pitied him a little, but admired herself more; for of course he shouldn't have been a rooster if he didn't think he would like it; but she immediately crossed herself at that thought, for she knew the Lord made him so, and he ought to fulfill his mission and be thankful. It was a beautiful thing to sit on the fence flashing his colors in the sunshine or sending his morning song echoing over the hills.

However, Madame Brahma was a trifle lazy and might have had more reason to sigh if her indolence had not been taken advantage of, because it could be made profitable, and also if Miss Leghorn and Miss Spanish had not furnished the raw material for her to work up. When she produced any young of "her very own," they had too little energy to dress themselves till they were nearly grown, but so long as she was comfortable she did not feel bound to distress herself about her neighbors or the next generation; therefore Chanticleer's un-

easefulness seemed foolish and almost annoyed her.

When Miss Leghorn reached the field she told one of her friends what a good joke she had on Sir Chanticleer, how he wished he was a hen—actually wanted to unsex himself—but the best of it was its impossibility. Who wanted any more hens in the field? All he was good for was to sing and look pretty and see that the race did not die out. "His society!" Oh yes, they presumed that would be pleasant if they had time for its full enjoyment, but there was too much work to do in these days of incubators and cock-fights, so they chattered and stratched.

The days went by and every one except the head of the family seemed busy and happy, but he took to moping in fence-corners and on the south side of the shed, showing little interest in his fast-growing-up descendants. Indeed, he appeared to have had more than he wanted of them and to feel disgusted with the whole plan of creation, at which they greatly wondered and respected him less than ever. Sometimes when he was sulking near where the maids and matrons were having a spirited discussion concerning the properties, hidden and unhidden, of an enormous angle-worm, he would suddenly drop his head lower, snatch the morsel and swallow it before they could say, "Well, I never!" and sometimes in the dark he would slyly push them off the roost, as we mentioned in the beginning, for he had the spurs and he was bigger.

At length these little retaliations forced themselves into serious notice, and so it came about that whenever two or three hens were gathered together the subject of discussion was sure to be the strange, unroosterlike performances of Sir Chanticleer, such as slipping on a nest when the owner was out getting her dinner, though there was not the least need of it, for she knew very well how long it would do to be gone, or trying, in a very odd, improper manner, to call the chickens to the top of the fence with him, or teaching them a more musical style of clucking. It was all nonsense, too, for him to hint that they might keep their combs brighter and their feathers tidier when they were sitting. Didn't they know their own business best and know that the very nature of things made such changes impossible? Why couldn't he be contented to stay in his proper sphere? How ridiculous, too, it was for him to complain that King Man always spoke only of keeping hens, thereby overlooking him! As for following a career and making a record for himself, he was not capable of such exertion. If he wanted to make himself useful he might find worms and grain for them. He really ought to be reminded of this duty of which roosters had grown very neglectful in these degenerate days.

Sir Chanticleer heard many of these remarks, but they made him no happier, and the more he was found fault with the more he moped, till King Man began to talk of capital punishment and the substitution of another, as he feared that the descendants, if there chanced to be any, of one with so little ambition would be worth nothing; then he wondered what was the cause of this condition; if civilization had changed the nature of both sexes, till that of one was left simply progenitive and the other over-devoted to the various occupations of life, almost contemptuous toward its more ideal enjoyments, till, at least during the busy season, the "spheres" of each had grown to be as clearly defined and as separate as the paths of different planets, yet bringing little individuality to the one that lived merely to be attractive. He remembered that wild birds paired; watched the doves as they gracefully bowed themselves in and out of the doorways, continually sharing labors and pleasures; listened to the loud-voiced sociability of the geese and gander all by themselves in the wagon-shed and—wondered.

Just then a long-legged Shanghai mounted the division fence between that and a neighbor's yard and screamed at the top of his voice: "Now you see how it is yourself—l-f."

"And He Spoke unto Them in Parables."

My dear sisters, where were we in our conversation? We have been considering housework, more especially cooking, have we not, and thereby made quite a stir among ourselves? We have expressed some positive opinions and we have characterized the occupation as womanly and unwomanly, manly and unmanly. May it not be that we are separately wrong, combinedly right? Is not a glorious comradeship possible in the work of this world, and if things were rightly understood would one say to the other "that task is yours but this is mine" instead of "Both are ours." Is not this very inclination to keep far apart as to matter and manner of employment at the foundation of many misunderstandings, jealousies and disgraceful schemes that too often involve a tragedy.

As to whether or not a man should stand by the kitchen stove till his wife has baked enough cakes for both, or whether they cook for each other, or he cuts wood instead, let them settle that between themselves. Any division or co-operation may be pleasant or unpleasant, according to the animating spirit, the intention, and no less to the good judgment of the parties, which will decide that the one best qualified by nature and education should, whenever it is possible, take the appropriate part, but be also careful not to keep the attention so exclusively fixed in one direction as to become narrow-minded and bigoted. Man need not learn to consider woman a household scavenger, and woman need not think that marvelous cookery,

any more than marvelous language, is the only attraction she can offer.

I use that expression for the purpose of quarreling with it, for, in my estimation, no work is so degrading and should be considered so thoroughly unwomanly as a persistent effort to attract men merely because they are men, even by learning useful accomplishments. It is waste of time to talk of our fathers and grandfathers, and picture the "good and noble young man" of the present languishing for a fitting helpmeet, when a half-day on the street will convince any one with observing eyes that the lack is quite as often on the other side of the scale; nor is it so much of a lack, comparatively, in either case, as some would have us believe. Two oxen are yoked together; they may keep step, or one may pull while the other drags, but their heads cannot be more than the length of the yoke apart; neither can man and woman, though they strain at their bonds and glare at each other ever so viciously.

Have we reason to fear that a change in the program would "ruin the homes of the middle classes"? Are those homes perfection at the present time? Get yourself appointed Census Marshal, then watch the faces and treasure the words of the women of these middle classes. You may learn more than you expect, for the idea may come into your mind that something besides hatred of cooking is "in the air" of these stopping-places that are often no more truly homes in the country than in the city. There is rebellion against various forms of what was not always felt to be bondage, but because the call to the cook-stove sounds oftenest it is oftenest resisted and with good reason. If we lived simply to eat, could not eat until we cooked, and only women could learn to cook, our duty would be plain; but some of us deny all three of these propositions and defy the opposition to prove them. If there is any design in our existence, that design is not merely the consumption of provisions, although our physical life must be so sustained, and we need no such elaborate process of preparation as it has grown to be.

Our sister asks, "Why does not the mother do the teaching and hire the cooking done?" It seems to me that she does hire the cooking done when she can, sometimes because it is considered degrading, often because that added to other demands on her time and strength is more than she can do, and so she opens Pandora's box anew, and in the servant problem presents a greater puzzle than the famous 13, 14, 15.

Does not the mother teach? From before the first instant of unconscious life she imparts emotion, sentiment, thought, whether she wills it or not, and not alone the mother but the father also; yet she does not do the technical teaching, often because she dislikes that as much as cooking, and even if she tried it her method would be liable to be contradicted, certainly pronounced defective when the child was sent to school. Under our present competitive system, the whole commercial, mechanical, professional, social, even religious world demands a certain routine, uniformity of education in its candidates for positions that bring money, which is life or the means of life, and the one not up to the standard is left behind; so the mothers just going out of date, who have not learned all this, are considered incompetent.

Do you say it makes less difference to farmers? Think a minute; who makes a corner in wheat, perhaps just when seed is scarce? Who sinks the price of corn so low that it is cheaper to burn than send it to market, and who holds the sweetening of life in the hollow of his hand? Is it the honest farmer, the producer? Is he not poor, his farm mortgaged and his wife overburdened because he is helpless, because he does not know the tricks of trade, has outlived his time, you might say, so that his bent shoulders furnish support for the tramp who rides and the tramp who walks, the speculator and the sand-lot operator, both dependent on him but neither acknowledging it? This is a premium on dishonesty, reward for strategem, and on the other hand, fear of destitution for those lacking in the power to rise on another's fall. This greedy scramble can only be checked by change of motive in the aggregate of individuals, which must proceed from a modification of wants and needs.

Here comes the remedy in our sister's call for wiser mothers. It is high time we revised our demands of ourselves, making them no less but partly turning their current. If motherhood is, as so many declare, the natural and highest purpose of our being, the question should be not so often "Am I fit for that noble young man who is now meditating on my perfections and imperfections with a view to matrimony?" as "Am I fit for a mother of noble young men and women, and is that young man fit to be their father?"

Do you say we should spend two or four years in the study of the human organization? I tell you that when a lifetime has been thus spent, the little that is known is to the whole wonderful mystery as a drop to the ocean. We may soon learn to name bones, muscles, veins and nerves, but cannot imagine an eternity long enough for the mastery of the infinite number of complicated problems presented by what we have named the mind, the invisible spirit which makes use of these denser organs. Can we tell why the child of delicate parents may be well and strong while that of the healthy may be weak? Do we know why the conscientious mourn over dissolute sons and wayward daughters, while a divine child may come even

"out of Nazareth"? Are we able to explain the art of fixing a transient thought, an emotion in the constitution of the unborn, or of calling up and presenting to the world the long-forgotten echoes of qualities blessing or cursing past generations?

Yes, the school course includes anatomy, physiology and hygiene. So far, so good; but when and how, unless she enters a medical college and then but partially, can the girl learn what most concerns her—her personal responsibility to the future of our race? Has she not been taught by precept and example that in this matter ignorance is innocence and knowledge guilt; that she is to keep her inquisitive hands off this sacred ark of the Lord under penalty of instant death; that she is not to peer into the Holy of Holies; and has not the repressive power of the law been perverted from its proper use by those who fear that having tasted knowledge she may learn something of the Tree of Life? The fruit of the first was good, but not being followed by the second, has always brought misery. How? By stimulating unsatisfied craving for knowledge that forever stops short of the eternal wisdom which should have been its result, the soul's possession of that which it needs. Beside this awe-inspiring thought, in the dawning light of that day which shall show us our true position in the circle of creation, how small appears the human stomach, temporary its needs and easily learned its demands!

Mrs. Frank Leslie has been considering the qualities of the good wife and has decided that love is what she most needs because then all other things will be added, and there is much truth in the assertion so far as the two are concerned and in regard to the regular business of life. We have often, as she intimates, been astonished at the rapidity with which a girl learns the various arts of housekeeping when the effort is made for love's sake and compared with her slowness when attempting the work because she ought to; but all cannot be equally proficient any more than all men can be good farmers, and when the world knows more, such unreasonable results will not be expected.

Mrs. Leslie says: "No matter what hights the coming woman may attain, or what power she may yield, she will never get beyond that old, old axiom, the true creed of womanhood, 'The greatest thing in the world is love.' " Perhaps, but the quality of love has many divisions, and she seems to look at only one, which is that between man and woman. It is a self-sacrificing love, too, which accounts for the long, sad gaze she gives to womanhood when she says there is none happy, no not one. To be the good wife she describes, a woman must completely quench her individuality, be never imperative in her mood, but always subjunctive, must hold her own plans and wishes in so light a grasp that she can instantly relinquish them and take up another set originating in another will. She must learn to think very lightly of her own ideas and convictions and accept with delight and admiration those she has never dreamed of or has looked upon as quite erroneous, and she must be anxious to gain in sincerity, tact, docility, silence under provocation, patience, sweetness, energy and untiring determination to do and to be whatever will make the beloved one happy, and a holy hypocrisy in disguising all the disappointments, self-sacrifices and changes of purpose involved in giving up one's life to become the counterpart of another life.

I wonder how one is to reconcile sincerity and hypocrisy, even if it is named holy; and more than that, I wonder how many are willing to pay such a price for being called good wives, or if it would be possible to more than one in a million, or any real good accomplished in that one case, for chapters might be written on the effects of such unlimited self-quenching, for all extremes draw the nature out of the roundness of perfection and exaggerate themselves at the expense of other qualities.

Sister Margaret (and Margaret they say means a pearl), truly "the ground whereon thou standest is holy ground," and angels bend above offering the shining crown, the needed blessing of wisdom, but the weary toiler is often too intent on the raking of the earth for her lost treasure to look upward, too busy rattling her pots and pans to hear the heavenly call, and still the angels wait; yet not for always. Some day all will see, hear and perceive and learn to distinguish the means from the object of life.

Long before that, however, when another spare afternoon comes, we will get together again and talk over camping-time with Mrs. Hilton and kitchen conveniences with any one who wishes to pass through this trying transition time in the best, which includes the easiest manner possible to her.

## Hints for Parlor Elocution.

Commence by reading aloud. To do this well is in itself worth a good deal of effort, and you need never be without an audience. Read the paper to father in that half hour just before tea when he has come home "all tired out." Read to mother while she sews; she will be glad to hear anything good, and you will perhaps find in her what every young elocutionist needs—a just but kindly critic. And while you read, think. Be sure you are bringing out the author's thoughts correctly. If not quite satisfied with the way in which you have read a passage, put a mark on the margin, and when you reach the end go back and try it again till you ear

sure of it. In reading, the voice should be pitched moderately low, but every word should be enunciated distinctly. Unless you are on your feet while reading, sit well back in your chair and keep the back straight, which will enable you to breathe slowly and deeply. In reading and elocution, as in singing, it is important to take breath in such places and in such quantities that the voice will remain full and round until the sense is complete. No gasps must occur in the middle of a sentence, and there should be no hurrying toward the end because the breath is nearly out. As to where one should take breaths while reading there is no rule but the infallible rule of common sense; your hearers should never know just when you do it. Choose for public reading or speaking, pieces suited to your voice and ability. Many a young elocutionist has come to grief and failure merely on account of a mistaken ambition. It may be in your power to keep an audience rippling with laughter, when you would be a dismal failure as a portrayer of deep passion and high tragedy. It is far better to do simple things well than to sow disappointment for yourself by attempting selections to which you cannot do justice.—*Ladies' Home Journal*.

### Curiosity Aroused.

"Goin' fur, mister?"  
The question was asked by a long-nosed, thin-lipped man, with pointed chin-whiskers, a slouch hat, and a hungry expression of countenance. He was resting his elbows on the seat in front of him, which seat was occupied by a passenger in a gray check suit.

The passenger addressed turned partly around to look at his questioner, and sized him up at once.

"Yes, I am going to Nashville," he replied, "down in Tennessee. My business there is to sell four shares of bank stock, dispose of my interest in a farm of 80 acres, 10 miles from the city, and invest the proceeds in a clothing establishment on North Cherry street. I am from Beardstown, Ocas Co., Ill. I got on the train there at 9:35 this morning. It was 45 minutes behind time. My ticket cost me \$11.65. I shall take the sleeper when the sun goes down. Had my dinner about an hour ago. Paid 75 cents for it. This cigar cost me 10 cents. I have been a smoker for about 13 years. My name is Chauncey McConnell. I am 39 years old, have a wife and four children, came originally from Harrodsburg, Ky., and am a member of the Congregational church. I was formerly a druggist, but sold out to a man named Treadway, and I am not in any business now. I am worth perhaps \$10,000. My father was a cooper, and my grandfather was a sea captain. My wife's name was Carr before I married her. Her father was a surveyor. That's all I know about her family. We live in a two-story frame house, and the children have all had the mumps, chicken-pox and measles. When I reach Nashville I expect to stop at the Maxwell house."

He stopped. The long-nosed man regarded him a moment with interest, and then asked in a querulous, dissatisfied way:

"What did your great-grandfather do for a livin'?"—*Chicago Tribune*

### The Drunkard's Catechism.

Who is it that loaf at ease while you toil from morning till night?

The saloon-keeper.

Who is it that buys houses and lands and struts in fine clothes with the money which might have kept your family from being turned into the street, and from going in rags?

The saloon-keeper.

Who is it that takes your last cent for his poisonous drinks, and shuts the door in the face of your wife when she asks credit for a five-cent loaf of bread?

The saloon-keeper.

Who is it, when your money and reputation are gone, and you have no friend left to pay for your drink, will take you by the coat collar and kick you into the gutter?

The saloon-keeper.

Who is it that robs you of sense and reason, puts you lower than the beasts, drives you into jails and penitentiaries and sends you to the gallows?

The saloon-keeper.

Is he the man who lives by crushing human hearts? Yes; then throw his chain off your neck and shake his clutch from off your soul.—*Zion's Watchman*.

### Chaff.

If bops are so sedative, why don't frogs sleep better?

A CONUNDRUM—"What strikes a man's eye first when he meets a lady on a rainy day?"

"Her umbrella, of course."

"I kept a diary four years." "Wonderful!"

"And didn't write a line on one of the pages."

STATESMEN are the only people who are permitted to pass bad bills.

"Have you ever heard Fagely tell any of his true bear stories?" "I've heard him tell stories, but I should call them by another name." "What?" "Barely true stories."

SCENE IN AN OMNIBUS—Thin man (vainly endeavoring to wedge his body on to a seat): This 'hns ought to charge by weight. Stout woman (contemptuously): If it did it would never stop to pick you up.

## YOUNG FOLKS' COLUMN.

### Where's My Baby?

"Where's my baby? Where's my baby?"

But a little while ago,  
In my arms I held one fondly.  
And a robe of lengthened flow  
Covered little knees so dimpled,  
And each pink and chubby toe.

"Where's my baby? I remember

Now about the shoes so red,  
Peeping from the shortened dresses,  
And the bright curls on his head;  
Of the little teeth so pearly,  
And the first sweet words he said.

"Where's my baby? Ask that urchin,

Let me hear what he will say;  
'Where's your baby, ma?' he questioned,  
With a roguish look and way;  
'Guess he's grown to be a boy now,  
Big enough to work and play.'

### The Minister That Dolly Liked.

[Written for the RURAL PRESS by MARY E. BARNFORD.]

It was a queer place to stay in over night. There were tall tule reeds and wide lagoons of water, and there was a fire. The tule reeds and the lagoons were usually by the Sacramento, but the fire was not.

Dolly had walked around the fire for awhile, the first of the evening. She wished she had something with her to read, but the books had been packed, and the only thing she could find was a little black book, the cover of which was continually threatening to come off. The book was something about "Moral Evidences." It was in fine print and little Dolly could make nothing of it. She wished she had brought her blue-covered fairy-book about "The Great Rosy Diamond."

The family had been traveling all day. One lagoon had just been crossed. Dolly and little Lida and their mother had been taken across in a rowboat, but the carriage and the two horses had been driven around a side way, and the father had been almost drowned trying to do it, too. The man who had rowed them across the lagoon had said that there was a raft that would bear them over the next one, but when they came to the next and found the raft, they did not believe it would bear up the carriage. The raft began to sink, and Mr. Henderson drove on land again in a hurry.

It was almost night, and not knowing the way out from among these tule reeds and lagoons along the Sacramento, being afraid the whole family would be drowned if he tried any more experiments in the uncertain light, he decided to stay where they were till morning. Dolly always supposed that they had something to eat for supper. She never could remember afterward anything about supper. She only remembered the mosquitoes.

Dolly did not mind being in the tules till the mosquitoes found out that folks were there. One by one the mosquitoes came at first. Then they came by dozens, by hundreds, till there was a loud buzzing noise that filled the air continuously like the sound of the swarming of a hive of bees. Above the two live oaks, between which the fire was built, hummed and buzzed clouds of mosquitoes. There were thousands of them. They blackened the space around the treetops. They filled the air. They bit, they settled in dozens on Dolly and Lida and their father and mother. Mrs. Henderson tied thick blue veils around the children's faces, and wrapping Dolly and Lida in shawls, put one of the little folks on the floor of the carriage and the other on the back seat. But the mosquitoes would bite. They crept under the shawls and the veils till Dolly and Lida groaned and sighed in their sleep.

Through the night the father and mother walked around the fire, fighting mosquitoes. Once Mrs. Henderson climbed on the front seat and tried to sleep, but it was impossible.

"Oh dear me!" sobbed Dolly from her place in the bottom of the carriage. "Oh, o-ooh!"

The mosquitoes were trying to bite through wherever the blue veil touched her nose or cheeks. There were mosquitoes biting through her stockings and mosquitoes bad crept under the shawl and were biting her hands and wrists and neck.

"Oh, o-ooh!" she sobbed.

Morning came at last and the mosquito-bitten family found the way out of the tules and drove toward the southeast. Somewhere in the foothills the four were to find a home.

It was a little mining town where they stopped at last. Dolly's father was a doctor and she used to go riding with him over the hills past the buckeye trees to see a family where there were six boys. One of the boys was near Dolly's age—perhaps a few years older—and he took her out to the front gate and taught her to eat green peas out of their pods. Dolly had never thought of doing such a thing before. She did not exactly know whether she liked eating peas that way or not, but she liked the boy.

All the ministers in town came to see Dolly's folks. One was a very prim, particular minister who wore a stovepipe hat. One day when the minister called at the house, Dolly was commanded to get him some apples.

It was a great trial to Dolly to be always washing apples for visitors, and she unluckily

thought that this time it would not matter if she did not wash the apples and put them on a plate. She would take a number in her apron instead.

She took some from a bin in the cellar and went upstairs. In the sitting-room, with his back toward the two glass doors that opened on the piazza, sat the minister, talking busily with her father and mother. Dolly marched up to the minister.

"Here," she said, holding out her apron.

The prim, particular minister looked at the dirty, streaked apron in the calico apron.

"No, I thank you," he said.

"Why, Dolly, you ought to have washed them!" exclaimed her mother; but Dolly turned and fled weeping from the room.

She rushed across the hall into the dining-room and let all the apples fall. She did not care what became of them. She wept at the top of her voice.

Her mother came hastening out to her and shut the door into the hall.

"I'm ashamed of you," she said. "Why didn't you wash those apples? He's such a particular man."

But Dolly wept on.

There was another minister who came to see the family. He was a black-eyed minister, and one day he brought a young woman with him. He had recently married her and she was very pretty. Dolly thought she was rather silly, though, because of what happened when she and her husband were going away, and he was standing talking with the doctor and his wife. The minister's bride stood on the walk leading to the levee. There were rose bushes beside the walk. They were all in bloom, and the young bride picked a pink rose and held it close to her cheek. She smiled at Dolly who stood earnestly beholding her.

"Isn't my cheek just the color of the rose?" the minister's wife asked.

Dolly looked.

"No it ain't," she said bluntly.

Dolly did not take into consideration the fact that the young bride had been used to pretty speeches from her husband and rather expected the whole world to be of his opinion concerning her. Dolly was only giving her honest conviction. She knew that the rose was pinker than that woman's cheek.

The young bride laughed, and just then her husband finished talking, and together he and she went up the steps of the levee and down the other side and out into the street under the locust trees.

Dolly ran along on top of the levee before the couple till she reached the corner near the black cherry tree where she got the sour cherries for Lida the time she had the fever. There Dolly stopped and waited till the minister and his wife came up below by the irrigation ditch.

The bride looked up and smiled at the light-haired, blue-eyed little girl standing there looking over the fence. The young wife felt very happy with her hand within her husband's arm.

"When are you going to get married?" asked the bride of Dolly.

Dolly gazed from her right on the devoted couple below.

"I ain't ever going to," she said.

She thought that was a silly question. Her mother had always told her that it was silly for little girls to be talking about getting married.

The pretty bride laughed and went on very happily with her husband. Dolly watched them out of sight. She had never seen two people in that frame of mind before.

There was a third minister, the one who preached in the church on the hill over beyond where all the yellow wild pansies with black hearts grew. Dolly and Lida found a whole hillside there covered with those pansies one spring. The minister was an old man with a beard that was almost white. Dolly did not know why she loved him so. He was not as fine as the apple-minister, and he did not have a pretty wife going around calling with him like the other minister; but Dolly worshiped this third minister with all her little heart. She thought, in after years, that it must have been because he was so kind to children, and yet she could not remember ever having had him take notice of her. Most likely he had, however.

She used to plod, Sunday after Sunday, along the streets, past the mill and the house of the girl who ate radishes right out of the ground, past the tinner's house, past the church where the apple-minister preached, stepping over the brook that ran under the live oak tree at the foot of the hill, climbing up and on by the house where the girl lived who ran up the hill into the shoemaker's and hid with her the time a Spaniard rode by on horseback.

There were two rooms that the shoemaker used. Dolly had run alone into the front room and looked out the window at the inoffensive Spaniard as he rode slowly by unaware of the commotion. The girl had told Dolly that they must always run when they saw a Spaniard, because maybe he might kill them.

Dolly waited till the man had disappeared and not a glimpse of him could be seen through the church. Then Dolly, who was given to dramatic expressions at times, picked her way out among the boxes and said, loud enough so that the shoemaker in the next room might have heard, "Thank God the danger is over!"

Then she went into the next room. The shoemaker looked at her but did not say anything. Perhaps he had heard her, perhaps not. Dolly went outdoors.

Beyond the shoemaker's house and all the

houses was the little church where the minister that Dolly liked preached. Dolly did not remember anything he said. She only knew that they all sat there in the pew and listened.

And then there came a time when people said that Dolly's old minister was going away. His folks in the East wanted him to come home. He was feeble and could not preach much more in the little hill town.

Dolly felt very badly. The old minister came to her house one day, and after dinner Dolly followed her father and the minister out to the levee and stood on the top beside the steps.

Her father and the minister were a little distance off, talking in low tones. Pretty soon her father put his hand into his pocket and drew out some money and gave it to the minister. Dolly felt as if she could cry aloud. He was her minister, her minister, and he was going away! But the minister did not know how the child's heart was grieving. He kept on talking very earnestly with her father, and by-and-by went away, down the levee steps.

Next day was Sunday and Dolly and her father went to the church on the hill. Her mother stayed at home with little Lida.

"I won't go," said her mother; "it's his last sermon, and I know Dolly'll cry and everybody'll cry. I don't want to cry, too, and I know I can't help it if I go."

Everybody did cry. Everybody was there, even the woman who lived in the country and had the two long rows of hollyhocks before her house. Everybody was sorry to have the gentle old minister go away. Dolly sobbed out loud, but the minister could not know how she felt. He was too busy saying his last words to his people. He did not know that Dolly would never forget him; never, even though she should live to be an old woman.

He went away from the little foothill town, and after a while Dolly's father had a letter saying that the minister had reached his folks in the East. By-and-by there came more news—the minister that Dolly liked had gone to a better country, even a heavenly.

## DOMESTIC ECONOMY.

FAMILY PLUM PUDDING.—One-half pound beef suet, one-half pound currants, one-half pound raisins, three eggs, half a nutmeg, bread and flour to mix. Boil for the usual time and serve hot.

BEEF TEA.—One pound of lean beef cut into small bits, with every particle of fat removed. Put in a wide-mouthed bottle, cork tightly, and set in a kettle of cold water. Boil three hours. There will be a small cupful of the juice; season with a salt spoonful of salt and give a few spoonfuls at a time.

SPANISH BUNS.—One cup brown sugar, one-half cup molasses, one-half cup sour milk, four tablespoons melted butter, one egg and yolks of two (save the whites of two for frosting), one teaspoon soda, one and one-half cups of flour, one tablespoon cinnamon, the same of cloves if desired. Use brown sugar for the frosting, stirring until quite white.

COCOANUT CAKE.—One pound of sugar, half a pound of butter, three-quarters of a pound of flour, the juice and a little of the grated peel of a lemon, six eggs, one cup of sweet cream in which half a teaspoonful of soda has been dissolved, and one grated cocoanut. Add the lemon juice last of all, except the flour and cocoanut, which must be added alternately till all is mixed in.

NICE CAKE.—Beat one-half pound of butter to a cream, add to it, by degrees, one-half pound of powdered loaf sugar and one pound of flour; when these are well mixed, add four eggs well beaten, yolks and whites separately, and half a pint of sweet milk; beat all well together, flavor with a few drops of essence of ratifia, and bake in a buttered mold in a moderate oven for an hour.

COCOANUT COOKIES.—One cup sugar, one cup butter, one-half cup milk, two eggs, one cup desiccated cocoanut, one teaspoon baking powder sifted in flour enough to roll, not too stiff. No. 2.—One cup of butter, two cups of sugar, one cup of milk, four eggs, one teaspoon soda, six cups of flour; roll out, sprinkle thick with cocoanut, then roll lightly to press the cocoanut into the dough; cut in any shape desired.

PUMPKIN CUSTARD.—Cut a pumpkin into inch square pieces, stew slowly until thoroughly cooked, then press through a colander or sieve. To every pint of pumpkin add a piece of butter about twice the size of a walnut, half a teaspoonful of salt (scant), one pint of good milk, half a teaspoon each of mace and cinnamon, one teaspoon of ginger, one cup of sugar, and four well-beaten eggs. Bake in a pudding-dish, without crust, or in pie-tins with a light crust.

SQUASH PIE.—Whether squash or pumpkin is used, they should be steamed, as this makes them much drier. Strain while hot through a sieve. To a quart of the strained squash, add one quart of hot milk with a spoonful or two of cream, if possible. A heaping cup of sugar, into which has been stirred a teaspoonful of salt, a heaping one of ginger and half a one of cinnamon; mix this with the squash, and add from two to four well-beaten eggs. Bake in deep plates lined with a plain pie crust. They are done when a knife-blade on being run into the middle comes out clean. About 45 minutes will be enough for pumpkin pie; half a cup of molasses may be added.

## The Week.

Local affairs are proceeding quietly. The heavy work of the winter is well along. Owing to the fine weather, seeding, planting, pruning and cultivation of orchard and vineyard are more advanced than they often are by the end of February. The result is that farmers are reducing their extra forces of hands, and many laborers are no doubt obliged to seek new fields. The host of winter visitors and residents is large, but not excessive, and all are easily accommodated.

There are several excursions still to arrive, including a special group of Boston fruit merchants, which will arrive about the middle of the month. The Legislature is busy talking, and judging by recent debates, a considerable appropriation for the World's Fair seems likely to be made, though fortunately not the extravagant amount which was first talked of.

ORANGE STOCK FROM THE PACIFIC ISLANDS. The latest novelty in the orange business is the charter of the schooner Lena Sweasy, 244

tons, by a Pasadena horticulturist to bring a cargo of orange trees from Tahiti. This is a new source of supply and the experiment will be watched with interest.

## The Weather.

The weather still rules as the absorbing topic, and it is, in fact, dry enough to absorb anything so fluid as the popular mind. There have been rains over quite wide areas, which have answered for surface wetting and to maintain public confidence; and, if one can forget the dairy and stockmen who are forced to proceed with their production on the scantiest pastures, it may be said that nothing is suffering yet. The ground is in the finest working condition, the grain is growing slowly and presumably rooting well, the trees are not troubled, unless it be that the olives on old trees have shown a disposition to shrivel. All are building on the fact that we have sometimes had a dozen inches in February and March, and therefore there is plenty of time yet for plenty of rain. We enjoy this comfort, too, and expect some such thing; but still it is well enough not to lose sight of the fact that we have had the driest January since the very earliest days. Lieut. Finley of the Signal Service, in his monthly memorandum for the press, gives this interesting review:

The rainfall has been deficient in all districts, especially in Northern California, Western Oregon and Western Washington. The deficiency ranges from 0.25 inches at Keeler to 7.78 inches at Eureka, 4.57 inches at Red Bluff, and 4.08 inches at San Francisco. The rainfall at San Francisco has not been so small since 1852, when the amount reported was 0.58 inches. In 1851 the amount was 0.72 inches. The rainfall for January, 1891, is 0.98 inches. In January, 1862, there was recorded 24.36 inches—the heaviest rainfall ever reported for San Francisco.

It is consoling to turn from this and January to thoughts of what often happens even with such a month behind us. Mr. J. W. Potts, who has the best kind of indorsement for a prophet in that he enjoys the exceptional distinction of being honored in his own country, writes, to the Los Angeles Times as follows:

I find an article in my scrap-book, written for one of our daily papers by me, dated Jan. 24, 1884, in which I tried to show by statistics that we had no reason to fear a dry season, even when but little rain had fallen before the 1st of February, by giving the rainfall before and after the 1st of February for 13 out of 39 years as follows:

Year.	Before Feb. 1.	After Feb. 1.
1850-1851.....	.650	4.050
1853-1854.....	5.295	14.710
1854-1855.....	5.411	13.121
1856-1857.....	4.617	5.382
1859-1860.....	10.654	11.972
1862-1863.....	4.420	7.159
1868-1869.....	8.176	8.478
1869-1870.....	6.303	7.292
1870-1871.....	3.650	4.820
1877-1878.....	12.712	13.737
1878-1879.....	5.335	10.937
1879-1880.....	7.202	19.478
1881-1882.....	7.603	8.617

I find also, by my diary, that up to the 27th of January, 1884, it had only rained about four inches, but on that day, the 27th, it commenced to rain and rained during the month of February 13.37 inches, and up to March 30th it had rained 38.59 inches for the season, making over 34 inches after the 27th of January. So it will be seen by these figures that it is no use to croak about a dry season until after February has passed.

Thus it appears that we have nearly a whole month left in which to hope, if we don't have to climb up on high ground before that time to get out of the wet.

It is also well to keep in mind the fact so clearly shown in the RURAL last summer by figures furnished by Mr. Montpellier, that it is the late spring rains which insure a good wheat crop, providing that the winter dispensation is enough to keep the plant growing along well until—say, the end of March. It is much better to have slow growth and a yellowing now than to have the pinch come after the plant has made a strong growth and has not water enough to fill out the head plumply. There is a vast area of grain sown—perhaps never more than this year. It has been well put in and it is doing well. It needs much less water this year to reach down to damp soil below than it does after a series of dry years. Consequently, if there is the amount of rain which we may fairly expect during the next two months, we shall come out all right with as large a crop as the world has any use for. Therefore, do not repine. Enjoy the fine weather; slick up the place; plant trees, and keep up courage.

## Fruit Trade Organizations.

There is usually during the winter a disposition among those enlisted on the commercial side of the fruit interest to come together to resolve and to combine for mutual advantage. Very often the articles of agreement most carefully drawn in the winter are melted down by the hot sun when the buyers are rushing about the orchards in the early summer, trying to secure for their employers the fruit which they stand most in need of. It is right enough for buyers to associate and to advance their business by the teachings of their experience, but they are disposed while so doing to draw the lines too tightly on their side of the business and thus visit hardship to the grower. This is not really to the interest of anybody, and, as we have said, such agreements are usually short-lived.

This winter brings out rather more than the usual disposition to coalesce. We have the orange-buyers adopting agreements and rules for grading, which the growers repudiate with feeling, and the result to be expected is a meling down of buyers' requirements or else a large volume of the business will be transacted by the growers on their own account.

Another act toward combination is the union of the San Jose fruit-shippers and purchasing fruit-driers in adopting grades and forms of contract, which we publish on another page of this issue. These matters pertain to the summer fruits, and there is plenty of time to study out the probable effect of the propositions and for the growers to act in their own interest concerning them.

The greatest of all the combines which has been much talked of but which is not yet accomplished, is the combination and capitalization of all the canneries under a single name and management. Judging by the past, there is little need to expect much endurance to such an arrangement, if indeed it secures an adequate basis for beginning. It will be hard to get thirty or more establishments to merge their identity and interests and be content to lose the individual advantages they have been years working for. Even if this is done, it may be harder still to operate a machine composed of such factors to the satisfaction of all. At present we do not anticipate much good or evil from the proposition. It may be necessary to give it more attention later.

## The State Board of Horticulture.

The fruit-growers of the State, so far as we have seen expressions of their view, are desirous that the Legislature, in its alleged disposition to unseat the various State Commissioners, shall not do anything to curtail the operations of the State Board of Horticulture. The following action was taken at the meeting of the State Horticultural Society last week:

WHEREAS, The State Horticultural Society is a private association of California fruit-growers which has been in continuous existence since its organization in 1879, and is therefore the oldest society of its kind in the State, and in its membership is representative of the fruit interest of the whole State; and

Whereas, The State Horticultural Society does not receive and has never received any aid from the treasury of the State, and is therefore wholly disinterested in its sentiments and actions; therefore be it

Resolved, That the State Horticultural Society does hereby formally declare its appreciation of the public service rendered by the California State Board of Horticulture and its officers, in its valuable reports and other publications and in the large public assemblages of fruit-growers held under its auspices in different parts of the State, and in its energetic work in dissemination of knowledge concerning the pests and diseases of fruit trees, and untiring efforts to carry into execution existing laws for the suppression of such evils which threaten the vast fruit interests of the State.

Resolved, That the State Horticultural Society most respectfully petitions the Honorable, the Legislature of the State of California, that the appropriation for the work of the State Board of Horticulture be continued during the next two years and that amendments to existing laws for the suppression of insects and pests be enacted to the end that such laws may be rendered still more useful and effective.

Resolved, That copies of these resolutions be transmitted to members of the State Horticultural Society now in the Senate and Assembly for submission by them to the honorable bodies of which they form a part.

This action serves another purpose than that primarily intended, in that it states clearly that the State Horticultural Society is not the State Board of Horticulture. There seems to be some confusion in the public mind on this point.

## QUERIES AND REPLIES.

## A Pest in the Hopyard.

EDITORS PRESS:—I believe California is the only State in the Union, or country, so far as known, that is comparatively free from the destructive enemies to the hopvine when in a growing condition.

In two cases I have seen a slight attack of the red spider, and in both cases the yards were located or surrounded by cottonwood trees, which I believe to be a protector and propagator of the spider.

Whenever the spider appears before the hops are ready to gather, the hopvine should be cut down and burned at once. If any appear during picking, all such vines should be burned immediately.

We have a worm that seriously affects the growth and quantity of hops per acre. This worm is on the grub order, white, and about three inches long, from three to five-eighths of an inch in diameter, red head and powerful hook like horizontal jaws.

It moves by the contraction and expansion of a series of rings resembling the rattles of a rattlesnake 10 or 12 years old.

It never is seen on the surface except it is brought up on a hop-pole or hoproot, where it has been playing destruction to the owner.

It can turn around in the hole it bores; but that seems but little use to it, as it fills the hole in the rear with its borings.

It will not bore a dry, hard or a green pole, but waits until the pole is a little old or begins to decay.

At picking-time a large per cent of the poles are broken off instead of pulled up, and the stump left in the ground makes a fine field for the worm to propagate for another year.

At pruning-time all of these stumps should be pulled up and destroyed by burning to kill the worms. When a supply of stumps in the ground seems to be short, the worm forages on the hop root and strikes the most vital part—the heart—and eats away until it is killed or bears a very indifferent crop of hops.

The only way that I know of killing these worms is by pulling up the broken poles and by plowing out the roots every five or six years.

If any hop-grower in the State has these worms, and has a better way of getting rid of them, I would like to hear from him.

As it is about planting-time, and to those contemplating planting hops, would it not be well to not plant any roots unless you know positively that they came from a section that had no disease among their roots or hops?

Hops were badly affected in Oregon and Washington this last year, and it stands us well in hand to take every precaution to keep these intruders from our midst.

Sacramento.

DANIEL FLINT.

Mr. Flint has probably found the boring larva of a large beetle, most likely *Prionus Californicus*, which is very abundant and generally found in such situations as he describes, and in old logs, decaying tree stumps, etc. Occasionally they are found in trunks of fruit trees and in vine stumps. The larvae require two or more years to complete their growth. The perfect form is a large, dark-red or reddish-brown beetle, sometimes an inch and a half long, and bearing long horns or antennae deeply serrated, and are found crawling over the ground at dusk or later. The eggs are laid by this beetle upon the decaying wood which forms the home of the larva.

A SPEECH FOR FREE BAGS.—It is telegraphed from Washington that Representative Biggs appeared before the Committee on Ways and Means in advocacy of his bill to place on the free list bags for grain made of burlaps. There was a good attendance of the committee. Biggs took great pains to convey to the committee an adequate idea of the needs of California farmers and the great benefit that would accrue to them by having the duty removed upon their burlap grain-bags. Biggs delivered a strong argument, and the committee seemed to be impressed with its logic, but it is doubtful whether they can be induced to report the bill favorably, although Mr. Biggs feels hopeful that this will be the result.

HOP-GROWERS.—At a meeting of the State Hop-Growers' Association last week in Sacramento, a bill now before the Legislature providing that the legal rate of fare on hops should be two per cent for each 100 pounds received the sanction of the association after quite a protracted discussion. The convention also agreed to labor for the passage of a law already introduced relating to the adulteration of malt liquors. Messrs. Flint, Camp and Lovell were appointed a committee to take charge of the bills for legislative action. A resolution asking the Legislature to pass an Act to prevent the importation into California of diseased hop roots from other States was carried.

## The Bear Valley Arch Dam.

In 1883 work was commenced on the Bear Valley arch dam, in San Bernardino county, and the reservoir formed by the completed structure was filled in April, 1886. The profile adopted is so thin that the dam cannot resist the thrust of the water by its weight, and it owes, therefore, its stability solely to the curved form of its base, which enables the wall to act as an arch. The dam was founded entirely on rock, and was built of cut granite laid in Portland cement mortar. Its plan is curved, the radius of the down-stream face being 300 feet. The length of the dam on top is about 450 feet. The front face of the wall is vertical and the back face battered.

There is only one other dam of this character in the world, and that is the Zola dam, built to form a reservoir for supplying the city of Aix, France, with water. The dam is built of rubble masonry and circular in plan, the radius at the crown being 158 feet. This dam is unable to resist the thrust of water by its weight alone, and owes its stability solely to its acting as a horizontal arch abutting against the sides of the valley. The Zola dam was built in 1843 and is still standing.

The Bear valley arch dam was designed by Frank E. Brown, C. E., and has attracted great attention from engineers by reason of its peculiar shape and the lightness of construction. It was at first generally condemned as being too light for the purpose, but is now recognized as a piece of bold but successful engineering.

The granite from which the dam was built was quarried near by and roughly squared by a hammer. For the most part these blocks weigh less than one ton each, there being a few larger ones near the base. The blocks were laid in a bed of mortar composed of one part Portland cement to three parts of sharp sand. Their ends were placed from one to three inches apart, and the space was filled with broken stone and mortar thoroughly rammed.

The courses are very irregular, or rather there are no courses, the design being to have the works thoroughly bonded in all directions with no continuous seams.

There is but one outlet, which is located near the bottom of the dam, and it consists of an arched opening passing through and closed on the inside by a single cast-iron slide working in brass ways.

The waste weir is located at one side of the solid rock. For allaying the fears of the people in the valley below, a recommendation was made by Prof. Geo. Davidson of this city, to cut the waste weir down at least ten feet below its original level, which was done.

The engravings given herewith (for the use of which we are indebted to Mr. L. M. Holt of the Orange Belt) show the general features of the Bear valley dam, with many of its details. Mr. J. S. Black, the assistant to Mr. Brown, writes thus concerning the strength of the dam:

"As there is no known instance in which a similar structure has ever been constructed, or even attempted, in which the strains approach to one-half this amount (referring to the 'strain-

sheet' submitted by him), the question arises, Is the dam safe? To engineers this is an important question, apart from any consideration of damage that might result from a rupture, because of the effect an affirmative answer would have on all future practice in the construction of great dams. Probably many engineers will answer in the negative; it is easy and safe to do so, and the person so answering has the cheap satisfaction of knowing he can always insist that he is right until some one builds a dam in which the strains are greater.

"While I would hesitate to recommend the construction of its counterpart under anything less than the pressing necessity under which this was built (when there was only so much money to be had, and it was a question of dam or no dam), yet I share the opinion of Mr. Brown, the designing engineer, in believing it to be safe under all normal conditions, and in case of an earthquake, somewhat safer than a straight gravity dam with a factor of two against overturning.

"In support of this opinion I submit the following facts:

"First—and above all—the dam is there, and has stood there for seven years under every conceivable natural strain except earthquake, and as yet a close inspection shows no sign of weakness in any part. The waste weir has been dammed up and the water has been raised to a depth of 44 feet above the top of the foundation. During storms, large waves have washed over the top and fallen 60 feet to the rocks below. Ice has been formed every winter to a thickness of over three feet, with a conformation of channel above the dam that would seem designed to make the ice pressure peculiarly trying; and lastly, 14 feet of snow has lain upon the ice at one time, and yet, as far as can be judged by appearances, the dam is in as good a condition as when it was first built.

"Second—The strains are all comprehensive, and, by reason of the very 'unknown internal strains,' which the engineers of the Quaker Bridge dam feared to induce by throwing their dam into the curved form, every particular cubic foot of the mass, except one immediately on the convex face, will be found to be pressed

on all six faces instead of two, a condition which will greatly add to its strength. If pressed equally on all six faces, such a cube would be in the condition of rocks under great mountains, and would practically be indestructible by any pressure however great."

Such in brief is the history and features of the Bear Valley dam as now existing. It is now proposed to build a new dam capable of retaining a much greater volume of water, and in this is involved an important movement in developing the lands to be irrigated. But of this undertaking we will have more to say at another time.

THE SEALSKIN BUFFALO, made by crossing polled Aberdeen cattle on the wild stock, is said to have a fine, glossy fur, as beautiful as that of the seal, and much thicker. The hump on the buffalo almost entirely disappears on this cross, and with it the shaggy mane for which buffaloes have always been noted. There are now twelve of these seal buffaloes, and the cross promises to become a successful and valuable breed. They lose their wild traits and become as easily domesticated as are our common cattle under like circumstances. The Hudson's Bay Fur Company is giving up business because furs are no longer to be had, and the sealskin buffalo, many of which show fur marked like a tiger, will doubtless become a valuable product in northern climes, where the winters are too cold for the common breeds of cattle to succeed. The above crossing will no doubt yield a greatly improved fur—if fur it can be called—but it will probably be a long time before it is recognized as a "sealskin."

ONE-CENT POSTAGE.—A contemporary says: A good deal is said of the advantages that would result to poor people by reducing letter postage to one cent. It appears to us that the advantage is more apparent than it would be real. The great bulk of letters that go through the mails are from business houses. While plain John Smith would perhaps save 50 cents a year, his employers might save \$200. It appears to us that, if the Government gets too much revenue from its postal service, it would be better to improve that service, charging two cents for carrying a letter, at least for some years to come.

EXPENSIVE DOG FLESH.—A Pittsburg dispatch of Jan. 221 says that Count Noble, the famous English setter, by Nora and Count Windom, is dead. His owner, B. F. Wilson, had several times been offered \$10,000 for him. The next most precious bit of dog flesh, which has recently been announced, is about leaving England for America. The noble animal is the St. Bernard, Sir Belvidere, sold by T. H. Green to E. B. Sears of Boston for \$6500. This dog has not as yet left a prize untaken.

THE LARGE FISHING BANK recently discovered in the Pacific ocean, a short distance off shore from Point Loma, San Diego, is proving of great value. Some fine catches of whitefish and rock ood have recently been made here.

IT REQUIRES about three seconds to transmit an electrical signal through the Atlantic cable.

SWEDEN has a machine that makes 1,000,000 boxes of matches daily.

THE BEAR VALLEY DAM FROM ABOVE.

THE BEAR VALLEY DAM FROM BELOW.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**THE COMING INDUSTRY.**—*Chico Chronicle-Record*, Jan. 30: Ex-Assessor Wilson, who made a trip to Gridley a short time ago, said he was thoroughly surprised. Orchards are being planted there that are larger than Gen. Bidwell's. Besides these, numerous other smaller orchards are being set out, while there are many which will bear a good crop the coming season. The country around Biggs is also being rapidly changed, and hundreds and even thousands of acres are being devoted to fruit trees of various kinds. That section surrounding Oroville has been written about more than the two places just named, but nevertheless it will do no harm to state that thousands of acres are being transformed into fruit land, and citrus and deciduous fruit trees will occupy it in future. Residents around Chico, as well as various other sections of the county, have made long strides in this direction. When this large acreage is added to that already planted, it will be seen that the coming industry will be fruit-raising. It is rapidly displacing wheat, and that important cereal will not figure so prominently in Butte county in the future as it has in the past.

**MORE OLIVES.**—*Palermo Progress*, Jan. 30: The lands west of Palermo are fast becoming a center of olive plantations. Mr. Gillett has this week commenced staking preparatory to planting 100 acres with this noble tree. Mr. Unl of Oakland, who owns 50 odd acres north and south of the county road, has made a purchase of a fine lot of Navadillo, and intends to plant the same. Mr. Franke has made an additional planting, and also replaced the ones injured last season by the "boppers." He has now on his place six varieties, viz.: Redding Picholine, the Mission, the Navadillo Blanco, the Columella, the Rubra and the Manzanillo. The last variety he thinks will be the favorite. Jasper Brown has decided to plant 20 acres in Mission olives and 10 acres in budded oranges.

**MONEY IN SHEEP.**—*Oroville Register*: There is nothing raised upon a farm at the present time that will command a better price than mutton sheep. A few years ago sheep were a drug in the market and now they are at the top notch. The ranges have been cut up, the vast fields have been converted into farms and orchards, and now that sheep are at a high figure, men cannot rush into the business as they did on several occasions in the past, and overstock the State with sheep. There is money in sheep for the careful farmer, but he must buy good stock in the summer season, when they are lower than at present, must feed them well, not overstock his pasture, and only keep what he can handle to advantage.

### Colusa.

**FRUIT PLANTING.**—*Colusa Sun*, Jan. 30: Hon. John Boggs has laid out 400 acres near his residence to be planted to fruit, 100 acres of which is now being planted.

**FLOATING IRRIGATION.**—*Colusa Sun*: J. R. Farls will soon commence the erection of a large scow, upon which he will place a 12-inch rotary pump which he can move up and down the river and irrigate near-by lands. This, we believe, is a good scheme. We want the people to learn the value of irrigation on the river lands.

**RAIN AND CROPS.**—*Maxwell Mercury*, Jan. 31: In 1889 there was a good crop of cereals in this section and the amount of rain that produced it was 16.72 inches, according to J. F. Durban & Co.'s gauge. In December, 1888, the rainfall was 3.74 inches, January, 1889, .51 inches, February, .55, March, 5.04, April, .22 and May, 1.44, making 7.25 inches after the first of February. The previous year, 1887-8, only 9.06 inches of rain fell. From the above record we still have hope of getting seven inches of rain this spring; but as 30.24 inches fell last season, the soil will not require so much rain now, especially those lands that have been well cultivated. It is safe to predict a good harvest.

### Fresno.

**WEST SIDE WHEAT CROP PROSPECTS.**—*Fresno Expositor*: W. T. Motley, near Elkhorn, says: Our wheat crop last year compared favorably, and in many instances turned out a better yield per acre than land on this side. We have got land over there which produced last year 25 sacks to the acre. How's that? All signs fail in dry weather, but if I am not badly mistaken, we'll outdo our former efforts. You never saw such a pretty prospect for grain in your life. A large increased acreage has been sown, and it is already about two feet high, while the volunteer wheat is ready to head out. You see the abundant harvest last year was an incentive to increase the acreage of the cereal crop this season. Now there is another thing. We don't need rain specially over our way. We can get along very well for six weeks yet, and nothing will suffer. Our irrigated soil will produce a fair crop without rain at all.

### Humboldt.

**HILL LANDS FOR PROFITABLE DAIRYING.**—*Eureka Times*, Jan. 29: The owners of hill lands have confined themselves to wool-growing because it has been supposed that the weather in that section is not suitable, and the season too short for dairying. The milk would sour before the cream would raise, and the cream spoil before it was churned. Then, on the best ranges, fresh feed is obtainable only four

months in the year, and that is insufficient for profitable dairying. But later methods and improvements have shown that these difficulties can be overcome. The creamery plan of butter-making obviates the necessity of storing milk and cream. The separator makes the butter direct from the milk and can be operated in the hills as well as elsewhere. Again, the season of fresh feed may be artificially lengthened by storing feed. Corn, barley, oats and wheat may be grown on any plowable hill lands. They produce exceptionally well, and corn especially is always a good crop in the hills. These products may be stored so as to furnish fresh feed by means of silos. It is well known that the storing of green feed or ensilage is no experiment. It has been practiced for years. The air is what produces the mischief with feed just as it does with fruit or any other perishable product. If green feed is excluded from the air, as fruit is in cans or jars, it will keep. This object is attained by means of air-tight silos which can be constructed in the hills as well as in New England. By means of this process the four months' milking season may be lengthened out to six months or more.

### Kern.

**DESERT LAND ENTRIES.**—*Fresno Republican*, Jan. 30: The recent decision of the Interior Department in the case of the Carr & Haggin land entries in Kern county has been looked upon with great interest by about 200 Fresnoites who went south and filed claims upon lands. Many of these claims stand in the same position as did the Carr & Haggin entries. The following letter received by one of the interested claimants from a leading attorney of Visalia is of interest: "Yours of the 19th to hand and is only one of over a hundred to answer. The decision of the secretary touches all of the suspended entries and cancels but one, the one tried Dec. 30, 1877, United States against J. B. Haggin. The others stand each on its own merits. The entrymen get the balance of three years after the order of suspension to reclaim and make proof; hence they can only be assailed for fraud in making the entry or non-desert character of the land, and not for non-reclamation in the three years from date of entry. As to who shall have the preference, right of contest among the numerous contestants for each piece will be determined by the Commissioner of the Government Land Office and will be the subject of a letter of instructions from that office, which may come in one or two months. Nothing further is known by any one."

**A BIG WHEAT-FIELD.**—*Bakersfield Echo*, Jan. 29: Kern has never out-much of a figure as a wheat-producing county, but each year sees a material increase in the acreage, and if the farmers do not stop seedling her "desert lands" she may yet rank among the big ones of the State. Aus. Stoner has just finished seeding 3000 acres for J. M. and O. B. Kimberlin in the Poso creek country. He has been running three 5-gaug plows and each setting of the sun has seen about 30 acres more seeded, plowed and harrowed. These three features of the work are performed at the same time, the seeder being attached to the front of the plow and the harrow at the sides. Just after harvest last year, Aus put in 1200 acres for these gentlemen at a cost of 30 cents per acre. But the Messrs. Kimberlin have not stopped at the seeding done by Mr. Stoner. Their own teams and other hired ones have been at work until now their grain-field covers fully 10,000 acres. This is all on unirrigated land—such as Mr. Carr loves to call "desert land." Its surface is quite even and level and all kinds of farm machinery can be operated at the minimum of cost. It is estimated that two sacks of grain will pay every item of expense from the seeding to the threshing, both inclusive. Thus it will be seen that a very small crop will yield some net profit. The dry-land farmers are feeling very hopeful this spring. The late rains are the ones that benefit their crops most, and as the fall so far has been very light—less than two inches—they feel sure of enough to insure them some crop unless the season shall turn out to be one of the driest on record.

**PLANTING APPLE TREES.**—*Bakersfield*, Jan. 29: "There has never been so much apple talk as this spring," said a well-known tree-man a few days ago. "It is generally admitted that the cool mountain valleys can raise the best apples, but they do not raise enough. The people in the valley are becoming weary of paying at the rate of \$60 to \$100 per ton, or \$1.50 to \$2.50 per bushel, for their winter supply of this great family fruit. Many who are just out from the East, where apples are plentiful and cheap every year, find it pretty hard to go through the winter without a few barrels of apples in the cellar. But current prices are almost prohibitory." "To raise first-class, crisp, juicy, winter apples in our hot valley," said W. A. Sanders, the well-known botanist, "you must obtain such varieties as have the above qualities in other regions equally warm. The best that I have found is an Alabama seedling of the 'Romanite,' known in Alabama as 'Red Warrior.' These are juicy, fine flavored and keep crisp and firm throughout the entire winter. I obtained grafts from Mobile some ten years ago, from which I now have a half-dozen bearing trees. I have kept the apples till June, perfectly crisp and hard. The same characteristics of juicy crispness and freedom from any tendency to wilt are found in the 'Golden Wilding,' a North Carolina seedling of the Newtown Pippin, and in the Arkansas Black, a seedling of the old Winesap. All of

these are practically exempt from the codlin moth."

### Los Angeles.

**LARGE ORCHARD.**—*L. A. Herald*, Jan. 24: In the L. J. Rose company's plantation there are 20,000 acres and 20 artesian wells. Mr. E. C. Bichowsky, the manager, says there are about 10,000 boxes of oranges on the trees and 2500 boxes of lemons; against this very fair crop of 12,500 boxes there was a total last year of just 700 boxes. If things go on as they are doing now, in two years the crop will reach the great figures of six or eight years ago, when L. J. Rose used to sell 20,000 to 30,000 boxes a year. There are about 700,000 good vines left on the place that have survived the ravages of disease. From these, 1300 tons of grapes were crushed last year, and if they could have been all picked in time there would have been 200 tons more. These worked up into about 180,000 or 200,000 gallons of wine, a good deal of which was distilled into brandy. A new distillery will be built this summer, a brick building, at a cost of \$5000. Preparations are making on the ranch to plant 100 acres of new vines this spring. Mission, blanc elben, herger, malvoise and zinfandel will be set out. There are 7000 citrus trees in the place, and 15,000 deciduous trees, including pear, nectarine, prune, fig, olive and apricot. A large orchard of White Smyrna and Adriatic figs has been planted. To irrigate the new vineyard a great deal of concrete pipe will be laid to carry water. It will be 8-inch pipe.

### Nevada.

**A GOOD CITRUS FRUIT SECTION.**—*Grass Valley Tidings*, Jan. 30: What is true of Smartsville for orange-growing is true of Mooney Flat and all along the ridge of the South Yuba river as far up as French Corral. At the latter place, which is at an altitude of about 2000 feet, oranges are grown in the open air and very little snow falls during the winter. The whole section of country extending from Smartsville to French Corral is adapted to fruit raising, the soil being as good as in any part of the county. The big ditches, formerly used to convey water to the miners, are now used to advantage in irrigating, and this alone is only one of the many advantages offered to those who purchase land in that section of Nevada county.

### Orange.

**A FRUIT DRIER ASSURED.**—*Anaheim Gazette*, Jan. 29: Messrs. Van Valin and Godfrey have entered into a contract with our citizens to have a fruit-drier in running operation by the middle of June. Two acres of land have been donated opposite the Southern California depot, and the required subsidy has been subscribed. This is news of importance to our people, as a fruit-drier is just what we want. The drier will be in operation in time to handle the season's fruit crop.

### Placer.

**LARGE DEMAND FOR FRUIT TREES.**—*Auburn Republican*, Jan. 28: The nurserymen report business very active in their line at present. They are selling large numbers of young trees to farmers and orchardists in Auburn and vicinity. Bartlett pears, prunes, peaches and the hardier sort of fruits are most in demand. A. F. Boardman is sending a great many Picholine and Mission olive trees to Oroville, where the olive has not been cultivated to any great extent heretofore.

**OLIVES IN PLACER COUNTY.**—*W. O. Lofland in Auburn Herald*: I believe Auburn is situated in the best olive-growing belt in the State, and I am glad to learn that this tree is being extensively planted in the vicinity. I am informed that within a radius of two or three miles of Auburn the following mentioned parties have backed their judgment on this being the olive region of the State: Mrs. Agard, 2000 trees; Mr. Hughes, 1500; Mr. Birdsell, 3000, and immediate arrangements to plant 2000 additional; Mr. Closs, 2500; Olivina farm, 1500; Mr. Harry Bowman, 400; Mr. Gibson, Mr. F. L. Smith and others have planted a few hundred trees each. A little farther off, in the direction of Clipper Gap, Hon. C. F. Reed has an olive orchard of 3000 trees, while down in Long Valley the Sherman Bros. have 30 acres on their two places planted to olives, and in the neighborhood of Newcastle Mrs. Anna Smith has about eight acres, Mr. Ammon about 100 trees, and Mr. John Lewis 500 trees. All or nearly all of the trees in the above-mentioned orchards are of the Redding Picholine variety. There are, of course, in this county, many other orchards, both large and small, that just now I cannot call to mind.

### San Bernardino.

**BETTER-GROWING.**—*Chico Champion*, Jan. 30: The officials of the Ontario Land Co. have announced their purpose to grow about 150 acres of sugar beets for the China factory.

### San Benito.

**MUTTON SHEEP SCARCER AND HIGH.**—*Watsonville Pajaronian*, Jan. 29: Mutton is worth 20 cents per pound in Hollister, and the butchers get their dressed mutton in San Jose. The sight of a band of sheep in that town is considered a novel event, and yet it is not many years since the Hollister valley was one of the great sheep-producing districts of the State. In the agricultural development of California nothing has been so much contracted by that growth as the sheep interest, and yet there are many districts in this State where sheep could be profitably raised with other stock on the farm, and at present, nothing in the stock line would bring as big profits. All along the coast, sheep are scarce and mutton is

big. Local meat dealers state that they are selling mutton at a loss because of the high price asked for sheep.

### San Diego.

**HIS OWN WATER SYSTEM.**—*S. D. Union*, Jan. 29: Another important land sale is announced from the farther edge of the great mesa extending from Mission valley to the mountains on the north. It lies about halfway on mesa and slope and is divided from the Gay place by a quarter-section on the east. The land sold includes 400 acres. The purchaser has just let a contract to build a 300-foot dam, by 20 feet high, on the highest point of the land where it is feasible to impound water. Three-fourths of the land will lie below this dam, and it is intended to put the rest under water by using a windmill and tank. A second dam is contemplated to provide an ample water supply, as the drainage area is considerable.

**FARMING ON A LARGE SCALE.**—*San Jacinto*, Jan. 28: William Newport of Merilee is one of those model farmers that you read about. This year he is seeding to grain 2000 acres, while 500 acres will be sown to alfalfa. He has also just completed a reservoir with a capacity of 60,000 gallons. Altogether Mr. Newport has one of the finest ranches in the State.

### San Luis Obispo.

**THE OLIVE INDUSTRY.**—*San Miguel Courier*, Jan. 29: Extensive arrangements have been completed for the erection of what will be the largest olive-oil factory in the world. W. Griswold of the Los Guillicos Olive Co. says: We propose to spend \$250,000 in the building and equipment of an olive-oil factory. Work will be begun almost immediately, as we have 60 acres of six-year-old olive trees bearing splendidly. We have a large force of men at work laying out the ground and planting trees, and by spring we expect to have over 700 acres planted with olives. The severe winters in Southern Italy and Southern France have totally destroyed the crops, and the oil made in Spain reaches this country in such an adulterated and inferior condition that importers are now looking for a home product. Already large orders have been placed with us for oil, and we hope before long to supply the whole Eastern market.

**LARGE SEEDING.**—*Adelaide Cor. S. L. O. Tribune*, Jan. 30: The opening for the new year continues to look exceedingly hopeful for the farmers in this end of the county. There has never been, according to my notion, a more favorable season for seeding than this, and every one is putting in all the land tillable.

### Santa Barbara.

**BEAUTIFYING THE FARM.**—*Santa Maria Times*, Jan. 24: The gum and pepper trees planted out in our valley two or three years since, for windbreaks, have made a wondrous growth, and greatly added to the beauty of our valley. This has encouraged others to plant out trees for protection from the wind, and the lines of many sections and quarter-sections are being single and double rowed with these fast-growing trees this winter. Year by year the farms and country residences, dooryards, gardens, etc., are becoming more attractive by adding miscellaneous improvements.

**WILD SORREL.**—*S. B. Press*: We are informed that wild sorrel, perhaps the most dangerous weed to stockmen and farmers of this county, has gained a foothold in a gulch at the summit of the mountains, near the San Marcos pass, and unless prompt measures are taken for its eradication, it will threaten the land on both sides of the mountain. This weed, which has totally ruined thousands of acres of the best land in the prairie States, spreads rapidly, and when once fairly seated is almost impossible to eradicate.

### Santa Clara.

**SUMMER-FOLLOWING.**—*Los Banos Cor. Gilroy Gazette*, Jan. 30: Grain looks well considering the cold, foggy weather of the West Side this winter. Farmers are summer-following this season. This ground will be ready for sowing to grain when desired in the fall. It would be better to plow again in the fall and then seed it. Farming has been on a free and easy plan for so long here that it is quite a change to see land in summer-fallow, but it is the proper way here.

**HOW TO MAKE A TREE FOUNTAIN.**—*San Jose Herald*, Jan. 30: A fountain, with water spouting from the center of a willow tree, will shortly be a curiosity at the Wilcox farm. Several years ago Mr. Wilcox tied a piece of well pipe about six feet in length to a willow tree. During the growth of the tree this pipe has been gradually inclosed so that it is now almost in the center of the trunk, with one end sticking out. Where two branches separate, about eight feet from the ground, water will be forced up through the tube in the center of the tree from an artesian well.

### Siskiyou.

**A PROMISING APPLE-GROWING SECTION.**—*Sacramento Union*, Jan. 21: Col. Jackson (who is one of the supervisors of Siskiyou county) says that his apples are grown at an elevation of from 2700 to 3000 feet. He has but a small orchard of ten acres as yet, but has this season shipped therefrom some 3000 boxes, besides having great quantities that were allowed to go to waste. He has with him samples of Golden pippins, Typoboon, White Pearmain, Lady apple, Euseobus Spitzbergen, Wine Sap, Smith's Cider, Romanite and other varieties. The apples are all of fine size and superb flavor, and clearly demonstrate the fact that Siskiyou county is capable of supplying not only the

home market, but other portions of the Union with this desirable fruit. Aside from their size, beauty and fine flavor, these Siskiyou apples possess the valuable quality of keeping well. Col. Jackson says that some varieties of these apples have been known to keep in good condition for a year and a half. Indeed, they will, it is claimed, preserve their good qualities for even a longer period. Col. Jackson has now some American pippins that were picked a year ago last fall, and he does not know how much longer they may keep. The apple-growing section is now chiefly confined to Big Shasta, Little Shasta and Scott valleys and along the Klamath river. Land suitable for the cultivation of this fruit can now be had at from \$5 to \$20 per acre, although wild land—much of which is quite as good for the purpose—has practically no present value; it can be had at anywhere from \$1.50 per acre. There is any quantity of both Government and railroad land in that section that can be had at a low figure. The growing of apples should become a profitable industry there in the near future. Sacramento fruit-dealers assure Col. Jackson that they can find a market, at good prices, for all the apples they can get from there. Those brought here by Col. Jackson retailed readily at \$2.50 per box of 60 pounds. "Up to a few years ago," remarked Mr. Robertson, "fruit-growing was profitless in our part of the State, but now that the California & Oregon railroad has penetrated the mountains and valleys of that section, horticulture has become not only possible, but profitable, by having a market opened up for the products thereof. By hauling their fruit a few miles to the railroad stations, the orchardists can readily market their fruits at a good profit."

**Santa Cruz.**

**SMALL FRUITS.**—Watsonville *Rustler*, Jan. 30: The Pajaro valley has long been known as the natural home of the small fruits, and its berries of every variety have an enviable reputation for size and flavor all over the State. One of the most noted strawberry grounds in the valley is the Lake farm a considerable portion of which will be put in blackberries this season. John Grimmer, who owns a fine farm near town, will set out an extensive strawberry-bed, and reports from other points indicate that the farmers have an abiding faith in the near future of the berry and small-fruit industry.

**Sonoma.**

**GOPHER PLANT.**—Petaluma *Argus*: Mrs. Gregory informs us that they had been greatly harassed by gophers which gridironed their lawn and flower borders with their tunneling, until they planted in their grounds gopher plants, which caused the gophers to disappear entirely. We were informed that John Gregory, near Lakeville, had freed his place entirely from gophers by means of this plant. Upon this authority, we secured a gopher plant which soon began to grow thriftily, and in a few months there was not a gopher around, and there has not one shown up in two years. We noticed some of the plants growing on the grounds of Prof. E. S. Lippitt, and on inquiry we learned that the gophers had been a perfect torment to him, but that they had disappeared entirely and he knew of no reason therefor, unless they had been exorcised by the gopher plants. From other sources this testimony is of like character. We do not know the botanical name of this plant. It is rather ornamental in appearance—deep green, variegated with white along the stamens of the leaves, which are long and narrow and grow in four straight rows up the stem of the plant. These plants at the present time are green and thrifty, our recent cold, frosty weather seeming not to retard their growth. The plant grows from seed which is about the size of the seed found in the pods of the black locust. If it is an established fact that gophers will not stay in the vicinity of this plant, it is a matter worth knowing, and of vast importance not only to gardeners and orchardists, but of incalculable value to those growing alfalfa.

**BEATING THE GOPHER.**—Santa Rosa, Jan. 22: J. P. Stanley has just completed a gopher fence around his place in this city. Mr. Stanley has had a good deal of experience in gardening and fruit-raising and has had to contend with the usual pests. The gopher is one of the most persistent foes he has had to deal with, but he has finally beaten him. To keep him out he has a close fence and then digs down nearly two feet, in front of the fence and alongside of it, and places a wide board on edge. The gopher, he says, cannot work his way through a board thicker than a shingle, and never goes more than two feet under the surface when he tunnels into a field. He has tried the gopher fence and found it to be a complete success. Referring to the statement made by Jonathan Roberts a few days ago in regard to the damage done by the gopher in girdling trees, Mr. Stanley says that if, when trees are set out, the earth around the roots and the collar of the tree be liberally sprinkled with broken glass, pieces of old bottles, etc., Mr. Gopher will avoid the tree altogether. He has tried the plan thoroughly and recommends it to the fruit-growers of the county.

**Stanislaus.**

**A LARGE VINEYARD.**—Modesto *Herald*, Jan. 30: L. M. Hickman is engaged in leveling a tract of 360 acres, which he will plant to grapevines this year. Mr. Hickman's farm is in the Turlock Irrigation District, and he proposes to have his land in condition to receive the benefits of water when the canal is completed. Two

years ago he planted 20 acres to vines, and they are thriving finely even without water. He finds that cultivation is almost as good as irrigation, and he says no one is justified in holding back from planting orchards and vineyards because the water is not yet here. In addition to his vineyard, Mr. Hickman has an orchard of 600 orange trees and 1000 each of olives and figs. They are growing wonderfully, and it is a question whether they would do much better with water.

**Yuba**

**UTILIZING AN ORCHARD.**—Marysville *Appeal*, Jan. 28: N. Robinson has six acres of land, about half of which is planted to fruit trees. He will put out the rest this winter, principally to pear trees. He intends to plant the ground between the trees to blackberries, strawberries, carrots, beets and other vegetables. He has 1800 blackberry vines, and will plant the strawberries as soon as the north wind goes down. The acre of carrots he has growing will be used as horse fodder, for which purpose carrots are excellent. The beets will be used to feed cows. He is a strong believer in the production of such articles both for sale and home use.

**THE LARGEST HOP CROP PER ACRE.**—Wheatland *Four Corners*, Jan. 31: We have always held that the Bear River soil was the best in the world, and if the hopvine is a judge of soil we have positive proof. From the statistics of the crops of '89 and '90, Yuba county gives a larger yield per acre than any of the counties of California, Oregon or Washington. Yuba county leads all the California counties by an excess of from 500 to 1200 pounds per acre. King county, Wash., is the only close competitor, which county averaged 2140 pounds per acre to Yuba's 2340 pounds. Besides producing the largest acreage, Bear River hops are ready for eastern shipment before all other sections, and as to quality, Bear River hops rank at the head.

**ARIZONA.**

**PLANTING VINES AND TREES.**—Phoenix *Star*: The Mohawk Ranch Co., in this county, is doing some excellent work. It is making a most thorough and practical experiment of agriculture in general and fruit-growing in particular. The company has secured the services of an experienced and thorough vineyardist and orchardist, Thos. J. Reese, late of Riverside, Cal., who has put a large number of men, under Superintendent E. B. Waggy, at work setting out 80 acres in vines and fruit trees, which will consist of 10 acres of White Adriatic figs, 10 of the Golden Pringle apricot, 10 of the Bartlett and Columbia pears, 10 of Bidwell's Early and Orange Cling peaches, and 40 acres of Black Hamburg, Flaming Tokay, Mission and Muscat grapes. Ground is being prepared to put out 200 acres more of vines and fruit as soon as it can be done. At present much time and labor is being devoted to the 160 acres of alfalfa, which produces from five to seven crops annually where it is not fed down by cattle or hogs, of the latter of which there are nearly 200 of the very best Poland China and Berkshire breeds now on the ranch, most of which are breeding sows. It takes several acres of alfalfa to feed this fine stock of hogs.

**MESQUITE HONEY.**—Phoenix *Herald*, Jan. 22: In a recent report to the Department of Agriculture, Statistical Agent C. D. Poston has some interesting remarks about the mesquite tree, its uses and possibilities. It grows in the most desert places of Arizona, Texas, California and Northern Mexico. Its principal yield is a nutritious bean containing a large proportion of saccharine, which has been used for food by the aborigines, for forage by the Mexicans and for the distillation of whisky by more civilized races. A mesquite tree at maturity will yield 10 or 12 bushels of beans annually. It flowers with the coming of the rains in June, about the 24th. Mr. Poston has seen the same tree growing in the East Indies and flowering with the monsoons. Assuming that saccharine productions mature more abundantly with a generous sun, it may be that the intense heat characterizing parts of Arizona will prove an inexhaustible fund for the stimulation of saccharine products, such as honey, sugar cane, sorghum, the sugar beet, etc. The mesquite tree will thrive upon land otherwise absolutely worthless. By planting the beans on the deserts, millions of acres of bee orchards can be maintained without the slightest cultivation. The bees will do the rest of the work. This tree exudes a gum which resembles gum arabic, and is used by the Indians and Mexicans for medicinal purposes. Upon chemical analysis it may be found really valuable pharmaceutically. Thus this acacia produces flowers for making honey, beans for sustenance and a gum for medicine. Besides, the timber is almost as indestructible as iron, and is used for railroad ties and building purposes. The bee-keeping industry here is in its infancy, and yet over 100 tons of honey were shipped to Eastern markets last season. In quality Salt River Valley honey is unsurpassed even by the white sage honey of California. Arizona's climatic conditions are most favorable, not only for the secretion of bee material in the mesquite flowers, but also saccharine deposits in beets and cane.

Shakespeare will please excuse us if we modify him thus: Thrice is he clad who hath his system strengthened with Ayer's Sarsaparilla, and he but naked, though arrayed in furs, whose blood is poor or with disease corrupted. An incomparable medicine!

# THE NEW CLIMAX PULVERIZING DISC HARROW.

IMPROVED FOR 1891.

Numbers.	Width of cut. Feet.	Number of Discs.	Price.	Numbers.	Width of cut. Feet.	Number of Discs.	Price.
3.....	4	8	\$37 50	13.....	4	8	\$45 00

The above prices include Whiffletrees and Neck Yokes. Two, three or four horses required, according to size. Nos. 3 to 10 have 16-inch and Nos. 13 to 23 have 20-inch Discs.

THE BEST ORCHARD & GENERAL PURPOSE DISC HARROW NOW MANUFACTURED. SEND FOR CIRCULARS.

BAKER & HAMILTON, SAN FRANCISCO & SACRAMENTO.

EXCELLENT BOARD,  
\$10 per Month.

FURNISHED ROOM,  
\$3 per Month.

Occupies two elegant buildings, containing over 70 rooms. Employs the ablest teachers, has the largest attendance and is the most highly recommended of any private school on the Pacific Coast. Board, Room and Tuition for six months, \$128. Board, Room and Tuition for fifty-two weeks, \$244.

Circulars containing Rules, Rates of Tuition and Board, and Courses of Study sent free to any address; also, beautiful specimens of Penmanship. Address,

TRASK & RAMSEY, Stockton, Cal.

IT STANDS AT THE HEAD!

**"DOMESTIC"**  
THE LIGHT RUNNING

DO NOT FAIL TO SEE THE "DOMESTIC" Before Buying a Sewing Machine. It is the lead in practical progress. Send for price list W. EVANS, 29 Post St., S. F.

**BLISTER FOR HORSES.**  
WHAT TO USE.

For a blister to use on live-stock,

**COMBAULT'S CAUSTIC BALSAM**  
Has NO EQUAL. Why?

Because it is a perfectly safe remedy for any one to use. After applying as directed it needs no attention, acts quickly and is effective. Removes all bunions or enlargements and guaranteed not to leave scar or blemish. Supercedes all cautery or firing. Every bottle sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by all druggists, or sent by express, charges paid, with full directions for its use. Send for descriptive circulars. Address LAWRENCE, WILLIAMS & CO., Cleveland, O.

**SORGHUM**

A little book that every farmer ought to have is the "Sorghum Hand Book" which may be had free, by addressing The Blymyer Iron Works Co., of Cincinnati, O. Sorghum is a very valuable crop for syrup-making, feed, and fodder, and this pamphlet gives full information about the different species, best modes of cultivation, etc. Send and get it and read it.

**RANCH IN LAKE COUNTY.**

MUST BE SOLD SOON.

THREE HUNDRED AND TWENTY ACRES, ABOUT 60 acres improved; two dwellings, orchard, good fences, well timbered and watered. On public road, good location. Will sell on easy terms or exchange for City or Oakland property. Price \$7000. O. C. LOGAN & CO., 451 Ninth St., Oakland, Cal.

## THE DAIRY.

## The Cow in Oregon.

[A paper read by M. COLLINS before the Farmers' Institute at McMinnville, Oregon.]

The cow is one of the most useful animals that we have, and as a rule the most abused. How often do we see the cow that is giving milk for the family have to stay outdoors in the storms, and with very little to eat. And then if she gets in the way, the dog is called and she is dogged and chased. Now this is the way a great many cows are treated. And the owner often wonders why that old cow doesn't give more milk. There is just as much sense in thinking that a horse will do his work and have nothing to eat as to expect a cow to give milk without having what she wants to eat. A cow is just what her owner makes her. If, when she first becomes a cow, she is treated gently and fed and milked regularly, she will in most cases be a good cow, and she will always give you value received for what you feed her. But if her calf is allowed to run with her, and she is milked just as it happens, why, she will be just that kind of a cow. If she thinks her calf ought to have her milk, the calf will get it and you can't help yourself. At any rate, this has been my experience with cows. I found that the more attention I paid to my cows the more I made out of them. It is a business that must be learned. A man must watch his cows and see what kind of food they require in order to give the best results. Great care should be taken not to overfeed as well as not to feed enough. In order to have good milk that will make a first-class article of butter and cheese, the cows must be fed on the best of food and have the best of water to drink. Now the question that has been asked and answered a great many times is, will or can dairying be made to pay in Oregon? I think that question can be answered by yes or no. It depends altogether on how we go at it. If we start in the spring with all kinds of cows and depend altogether on our pasture we will not do much at it, because we will not be able to get a very big figure for our product. When we commence to feed in the fall our cows are about dry, and it doesn't pay to feed them through the winter, for what milk they will give. But if we have our cows fresh in October and November, and we have prepared feed and lots of it, have a good, dry and warm stable for them, and make it a business to attend to them, we will have lots of milk and butter, and if we make a number one article we will get a fancy price for it. And then we will have our customers, and we will have no trouble in getting a fair price for it. Our cows if well cared for, when the green feed comes in the spring will keep up their flow of milk as long as the green feed lasts. When it is gone in July our cows will begin to fall in their milk, and then it is about time for them to have a rest, and that will be in August and September, the two hardest months that we have on the cows, for it is dry and the flies are generally bad at that time. So that then with a very little care our cows will be in good order when they give milk again. While I have laid some stress on giving so much time and attention to the cows, some one will say that if so much time is required to take care of cows they don't want to have anything to do with it. All I have to say is this: In this progressive age if we make a success of anything we have to be up and doing. There is no business nowadays but what has got to be studied and all of the points watched closely in order to be successful. So it is with dairying. A man must watch his cows and find out the poor ones and dispose of them and replace them with good ones, for it takes just as much to feed a poor cow as it does a good one.

If he makes his own butter and cheese he should make a good article so that it will bring him a good price. If he furnishes milk or cream to a factory, he should take the same pains with it so that the factory can make a number one article. But if we all say that it is not worth while to be so particular about this thing, why, the result will be a failure.

We have got the country and the market for dairy products and if we don't make a success of it, it will be our own fault, for they have made this thing pay in the East where they have long, cold winters, and their prices are way below ours, and they are shipping butter and cheese here and selling below Oregon butter. It was the cow that has lifted the mortgage off from many farms in that country, and she will do it here if given a chance. There is another thing about it that I like. It is cash, and if every farmer in this valley kept cows enough to pay his running expenses, why, don't you know that it would put everything on a cash basis, and he will be independent and can buy where he can do the best. Now in my mind this is quite an item. And to show you what they are doing in some of the Eastern States I will read an article from Hoad's Dairyman, showing what they have done in the last year.

According to the latest data, the Advertiser has seen the present annual make of butter and cheese in Wisconsin amount respectively to \$7,500,000 and \$4,000,000 or a total of \$11,500,000. Add to this the value of the vast quantities of milk and cream supplied to cities and towns and consumed at home, the value of

calves and by-products, such as skim milk, and the produce of the 700,000 cows of the State will run over \$20,000,000. Twenty years ago it was probably less than \$1,000,000. This remarkable progress indicates the application of intelligence and characteristic new world enterprise to the wheels of plodding industry lifted out of old-time ruts. They have had organizations, too, like Canada, the State Dairymen's Association being instituted in 1872, at the instance of W. D. Hoard, ("The Governor,") and five other men. To the present secretary, Mr. D. W. Curtis, of Fort Atkinson, Wisconsin, we are indebted for a copy of the eighteenth annual report, a well-bound, a well-printed and well-filled volume of 170 pages, ably compiled and properly indexed.

In his introductory address to the annual convention, W. H. Morrison, superintendent of the Farmers' Institutes, remarked that "when ever you find a dairy section of this State, you will find thrift and prosperity." Referring to the time when the association was instituted, he went on to say: "Through all these intervening years thousands of mortgages have been swept from the farms, and the sunshine of prosperity has shone upon the dairymen of our State."

I think that this is proof enough to us that what they have done in other places we can do here, if we only try. I am sure that if the farmers of this valley would take the interest and stay with the dairy business through thick and thin like they have with the wheat business, they would make a grand success of it. Why, just think of the amount of money that goes out of Oregon every year for butter and cheese. Why, we ought to have butter and cheese both to ship to other places instead of having to depend upon other States to supply us. We would see easier times. Now for instance suppose that the creamery here at this place was running to its full capacity. See the amount of money it would pay out to the farmers here every month. Or we will say that it was making five hundred pounds of butter a day. The creamery company could easily pay thirty cents a gauge for it at the farmer's door. Now five hundred pounds at thirty cents is \$150 per day, and thirty days in a month would make \$4500 a month. Now you put that much money in circulation among the farmers and we will see a great difference in the times. I don't want to be understood that the creamery could pay thirty cents all the year around, but if the creamery was doing the business that it ought to do it would pay a good price for cream all the time. I will say this to the farmers of any community, that if you are fortunate enough to get a creamery in your neighborhood, patronize it and all take hold as if you meant business, and pull together, and you will see the benefit of it in a short time, and the more that will take hold of it the quicker you will get on a paying basis. But where there are only a few that will try to do anything, it works a hardship on those few as well as the company. A great many claim that this is not a dairy country because our summers are dry. It is very true our summers are dry, but there is one thing that we can do. We can grow more feed on less rain than any country that I know anything about. I can remember since I have been here that it was generally thought clover would not grow here to amount to anything. I have seen the best clover here in Oregon that I ever saw anywhere, and I have raised good corn, and I found that it was excellent feed for cows, and comes in just the right time to feed, just about the time that the grass begins to dry up, and by raising a field of corn for the cows we have a nice summer-fallow to sow wheat on in the fall. By so doing we get the benefit of our summer-fallows, and so it is, if we only try, we can raise plenty of feed. Beets and carrots do well also. While we have some drawbacks here for the dairy, we have a good many advantages over our Eastern dairymen. Our climate is more favorable. It is not too hot in summer or cold in winter. The dairy business is like almost any kind of business; while some men will make a success of it, others will make a failure. When you see a man that can go into his cowyard and handle any of his cows and can sit down and milk them anywhere, and milk with both hands, you will see a man that will make a success of it. Sometimes you see a man, when he goes out to milk, call all of the dogs and all of the boys and each boy have a club and chase the cow up in some corner, and boys and dogs all stand guard in order to keep the cow there, while the man, with a bucket in one hand and a little tin cup in the other, begins to approach the terrible thing scared almost to death. But finally he makes out to get up so that by standing and reaching as far as he can, he begins to milk with one hand into the little cup he has with him, emptying it into his bucket. He does this because he is afraid that he will get kicked and spill his milk. If he doesn't get kicked he knows that he ought to be. Now this kind of a man will make a failure of it every time, because a cow that is ill treated will not give very much milk and what she does give will not be worth much. So it is all-important that we should treat our cows with all kindness. They will soon learn that man is their friend and they will be kind and gentle too.

"Ayer's Cherry Pectoral has given me great relief in bronchitis. Within a month I have sent some of this preparation to a friend suffering from bronchitis and asthma. It has done him so much good that he writes for more."—Charles F. Dumterville, Plymouth, England.

## Good News!

No one, who is willing to adopt the right course, need be long afflicted with boils, carbuncles, pimples, or other cutaneous eruptions. These are the results of Nature's efforts to expel poisonous and effete matter from the blood, and show plainly that the system is ridding itself through the skin of impurities which it was the legitimate work of the liver and kidneys to remove. To restore these organs to their proper functions, Ayer's Sarsaparilla is the medicine required. That no other blood-purifier can compare with it, thousands testify who have gained

## Freedom

from the tyranny of depraved blood by the use of this medicine.

"For nine years I was afflicted with a skin disease that did not yield to any remedy until a friend advised me to try Ayer's Sarsaparilla. With the use of this medicine the complaint disappeared. It is my belief that no other blood medicine could have effected so rapid and complete a cure."—Andres D. Garcia, C. Victoria, Tamaulipas, Mexico.

"My face, for years, was covered with pimples and humors, for which I could find no remedy till I began to take Ayer's Sarsaparilla. Three bottles of this great blood medicine effected a thorough cure. I confidently recommend it to all suffering from similar troubles."—M. Parker, Concord, Vt.

# THE "TRIUMPH."

## THE BEST PULVERIZER IN THE WORLD.

JUST THE THING  
— FOR WORKING —  
Summer Fallow Land.

ALL METAL  
SPADING HARROW

Horticulturists  
—AND—  
FARMERS,  
Try It.

Specially Adapted  
— FOR —  
ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRAND-EST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. IT LEAVES NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. Send for circular.

### TESTIMONIALS.

HAYWARDS, CAL., Jan. 15, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearying or exhausting on the team. Yours truly,  
WILLIAM C. BLACKWOOD.

SAN FRANCISCO, CAL., Jan. 16, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The gentleman using the Triumph Spading Harrow we bought from you for him writes us as follows:  
"That the Triumph Spading Harrow is in fact a triumph over all the harrows I have ever used. The first trial I made was on a 30-acre field sowed with barley. 15 acres were harrowed with the Triumph in one day as perfect as it is possible to be. The other 15 acres I harrowed with a common harrow and it took me three days, and then it was not in as good condition as that harrowed with the Triumph. The Triumph does splendid work and as a harrow I consider it worth three times as much as the ordinary harrow, as well in the field as in the orchard and vineyard. It is a perfect pulverizer and weeder.—C. STROBEL, Eagle Home Farm, Searsville, Cal." Yours Truly,  
CALIFORNIA WIRE WORKS.

LODI, CAL., Jan. 13, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The Triumph Spading Harrow which I purchased from you for use in my orchard has proved itself to be a very useful implement for that kind of work. One span of mules handles it easily, and it stirs up the soil and pulverizes it thoroughly. I am well pleased with it. Yours truly,  
E. F. GRANT.

PIXLEY, CAL., Jan. 12, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Regarding the Triumph Spading Harrow would state that we are satisfied it is as light draft as any, and lighter than the average cultivator of its kind, and, as to its work, we think it cannot be beat. Yours truly,  
PIXLEY COMMERCIAL CO.,  
By L. E. SMITH, Secretary.

MADERA, FRESNO CO., Jan. 10, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: The Spading Harrow received all right. I gave it a trial this evening and I am well pleased with it. I think it will sell like hot cakes, and would like to be sole agent for this county. If you don't give me the agency for this county, give me Madera anyway. Yours respectfully,  
W. C. HARRIS.

CHAMBERS OF THE JUDGE OF THE SUPERIOR COURT, JOHN C. GRAY, JUDGE.  
OROVILLE, BUTTE CO., CAL., Jan. 27, 1891.  
H. C. SHAW, Esq., Stockton, Cal.—DEAR SIR: I purchased from your Agent, Mr. Hill, one six-foot Triumph Spading Harrow, and sent the same out to my olive farm to try. My foreman declares that it will do the work of four plow teams, and requests me to get another to put into the field by the first of March. He is highly delighted with it and calls it the greatest improvement in farm machinery he has yet seen. Instead of putting a number of teams into the field to plow and then harrow the ground, I shall go over it with the Spading Harrow twice and the work will be more thoroughly done, and at one-third of the expense. This is one of the most complete pieces of farming machinery that I have yet seen, and I cheerfully recommend it to those, who, like me, want the most and best work done for the money. It gives entire satisfaction. Yours truly,  
JOHN C. GRAY.

BAKERSFIELD, CAL., Jan. 26, 1891.  
H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: After using your Spading Harrow in all kinds of work, I will say it is the best pulverizer that I have ever seen. I used it to cultivate my orchard and vineyard, and it does not only cut up all weeds, but leaves the roots up to the sun, which is sure death to them. You may praise it as high as you like, as you cannot say anything it does not deserve. Yours respectfully,  
C. A. HAUL.

## ONGERTH'S GRAFTING COMPOUND.

TRADE MARK REGISTERED.

For Protecting Grafting,  
Other Wounds or Cuts on  
Trees and Vines.

This Compound protects all wounds or cuts on trees and vines from the influence of the atmosphere and water: it increases the formation of Cambium, thereby producing a rapid healing of the wound, and is therefore a perfect substitute for the bark. It further keeps all animal and vegetable parasites from the wound and prevents the decay and molding of the wood. Grafting is made absolutely successful by the use of the Ongert's Compound. Special attention is drawn to the fact that it is absolutely necessary to protect the grafting wounds on grape vines. No other substance, known at present, is so effective as the Ongert's Compound. It never fails! A great many trees and vines are killed annually by unskilled cutting and pruning, and by the inadequate protection of the wound. Wounds ought to be allowed to evaporate for 24 hours at least before covering them, with the exception of pear trees, where the wounds may be covered as soon as cut. All parties who used this Grafting Compound last year praised it as the only successful compound they have ever used. Send for a sample can.

PRICE—One pound tins, 75c; two pound tins, \$1.20; in lots of 20 pounds or more, 50c per pound. One pound is sufficient to cover 1000 wounds of one inch diameter each.  
WOODIN & LITTLE, General Agents, 314 Market Street, Junction of Bush, San Francisco, Cal.

**POISON-PROOF ANIMALS.**—Neither difference of organization in animals nor in the constitution of the poisonous substance generally afford any clue for interpreting an exceptional want of effect, writes W. Bernhardt in *Popular Science Monthly*. Unaccountable is the immunity of rabbits against belladonna leaves (*Atropa belladonna*, deadly nightshade). You may feed them with belladonna for weeks without observing the least toxic symptoms. The meat of such animals, however, proves poisonous to any one who eats it, producing the same symptoms as the plant. Pigeons and various other herbivora are also to some degree safe from the effects of this poison, while in warm-blooded carnivora it causes paralysis and asphyxia. In frogs the effect is a different one, consisting of spasms. The meat of goats which had fed on hemlock has sometimes occasioned poisonous effects. Chickens are nearly hardy against aux vomica and the extremely dangerous alkaloid, strychnine, contained in it, while in the smallest amount it is a fatal poison to rodents. More remarkable yet in this respect is the immunity of *Choleopus Hoffmanni*, a kind of eloth, living on the island of Ceylon, which, when given ten grains of strychnine, was not much affected. Pigeons are possessed of high immunity from morphine, the chief alkaloid of opium, as well as from belladonna. Eight grains were required to kill a pigeon, not much less than the mortal dose for a man. Cate are extremely sensitive to fox-glove (*Digitalis purpurea*), which on the contrary may be given to rabbits and various birds in large doses.

JAMES HUTCHISON,  
Oakland, Cal.

WHY ARE SOME PEOPLE ALWAYS LATE?—They never look ahead nor think. People have been known to wait till planting season, run to the grocery for their seeds, and then repent over it for 12 months, rather than stop and think what they will want for the garden. If it is Flower or Vegetable Seeds, Plants, Bulbs, or anything in this line, MAKE NO MISTAKE this year, but send 10 cents for VICK'S FLORAL GUIDE, deduct the 10 cents from first order, it costs nothing. This pioneer catalogue contains 3 colored plates. \$200 in cash premiums to those sending club orders. \$1000 cash prizes at one of the State Fairs. Grand offer, chance for all. Made in different shape from ever before; 100 pages 8½x10½ inches. JAMES VICK, SEEDSMAN, Rochester, N. Y.

#### VAUGHAN'S Seeds & Plants

SEEDS for your Garden, and how to plant them.

PLANTS for your Lawn and Window.

Where to get the BEST SEEDS and fresh ones?

Where to get the NEW PLANTS and good ones?

These questions must be decided. Which of the new and famous are worthy, and which of the old are better, you should know. We print an *Atlas Catalogue* with Photo-Engravings, Colored Plates, and reasonable descriptions. As to its completeness, we say *It tells the whole story* for the Garden, Lawn and Farm. FREE. Before you buy, please write for this book. VAUGHAN'S SEED STORE  
P. O. Box 688, State Street,  
CHICAGO.

P. S.—We make our Catalogue on the theory that the public does not want to be humbugged.

#### FIELD AND GARDEN SEEDS

OUR ILLUSTRATED CATALOGUE SENT FREE.

Send 4c. in stamps and we will send a packet of the great novelty, THE PERSIAN MONARCH MUSKMELON, the finest flavored melon grown.

Box B.

BOUK & HUPERT, Greenwood, Neb.

(Direction this paper.)

#### KANSAS SEEDS

Our Specialties: Alfalfa, Espesette, Kafir Corn, Cane, Millet, Seed Corn, Tree Seeds for timber plantations and nurseries. Everything in the seed line. Catalogues mailed FREE on application. KANSAS SEED HOUSE, P. Barteldes & Co., Lawrence, Kan.

Seeds, Plants, Etc., Continued on Pages 130-131.

# STEAM VERSUS MULES---MAMMOTH AND PRACTICAL HAULING.

THE ACCOMPANYING CUT  
Is from a photograph taken while at  
work.

It is Cheaper and More  
Expeditions.

One Traction Engine will do the  
work of 60 mules.

Best's Traction Engine have been  
in practical use for over two years,  
hauling coal, lumber, gravel and  
grain, one of which is now hauling  
cane in the Sandwich Islands.

It will do the work of  
100 Horses,

Plowing reduced to a minimum  
cost, and from 35 to 45 acres plowed  
each day at an expense of 50 cents  
to 60 cents an acre.

Three sizes built, 30, 40 and 50-  
horse power, and

24 Best Traction Engines  
at Work Now.

It hauls the Gang Plow and Har-  
row, propels the Best Combined  
Steam Harvester and moves along  
majestically with a train of wagons  
loaded with grain for the warehouse.

N. B.—SHIPMENTS MADE DIRECT FROM FACTORIES WHEN TO THE ADVANTAGE OF PURCHASERS.

Is the GENUINE Compound of the MEXICAN PHOSPHATE & SULPHUR COMPANY prepared from GUANO and rendered soluble by the application of acids.

This manure is an ENRICHER of the soil and not, like others, a STIMULANT only; it will do for the land what no other can in rendering it PRODUCTIVE without IMPOVERISHMENT.

Its analysis is reliable; its work is immediate and effective, and for results we point with confidence to the ORCHARDS of RIVERSIDE, where it has been liberally used for the past three years.

It can be prepared to suit any land, with or without potash, as occasion may require. It is rich in PHOSPHORIC ACID, and can be made as rich in NITROGEN as the most deficient soil may exact.

## WE GUARANTEE ALL WE CLAIM FOR IT,

## BEET SUGAR FACTORIES

### E. H. DYER & CO.,

Sugar Chemists, Enigneers and Draughtsmen, and Practical Manufacturers of Beet Sugar.  
ALVARADO, CAL.

The members of this firm have spent many months in the largest beet sugar factories of Europe, studying the details of German and French methods of manufacturing sugar from beets, and also at works of the leading manufacturers of beet sugar machinery. Having had many years' experience in manufacturing sugar from beets in California, and having fully demonstrated the feasibility of producing sugar from beets in this country in almost unlimited quantities, and in successful competition with cane sugar imported from foreign countries, we are prepared to furnish designs for factories, plans and drawings of the latest improved machinery now in use in Europe and this country. Can also furnish skilled engineers to superintend the construction of factories, and the necessary technical skill to operate the works successfully when completed. Will make personal examination of localities with regard to their fitness for the production of beet sugar, free of expense, except traveling expenses. Successful results guaranteed when the conditions are considered favorable.

California.—Charles W. Babcock, Crescent City, shingle or shake machine; George B. Baer, Cloverdale, separating cross head tie wires; Hiram B. Cook, San Francisco, striking bag; Lewis A. Gates, San Francisco, assignor of one-half to H. J. Postel, Sacramento, adjustable letter device; Peter Hearst, San Francisco, stove top; John H. Holloway, Santa Barbara, water closet; James T. Fish, San Francisco, fruit-pitting machine; George F. Kinkead, San Francisco, pneumatic bells; Emil Sundberg, assignor to Sundberg Brothers, San Francisco, clothes hanger; William Teneyck, Oakland, self-closing gas burner; William Weldon, San Francisco, vaginal atomizer.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## An Important Sale of Horses.

We have had occasion from time to time to call attention to horse sales, and now we again call particular attention to one of vast importance, being the genuine closing-out sale of Irvin Ayres of the San Miguel Stock Farm. This offering will consist of stallions, colts, fillies and brood mares.

Col. Irvin Ayres has been gradually disposing of colts, as other business compels him to give up his breeding farm. Messrs. Killip & Co. are preparing the catalogue which will soon be issued. Mr. Ayres has been for some time weeding out all undesirable and unproductive animals, and in this sale nothing that is not highly bred and of individual merit will be offered. There are two gentlemen on this coast at present who are desirous of purchasing Mambrino Wilkes, and it would not surprise us to learn almost any day that he has been sold to Eastern parties. With the opportunities that have presented themselves, Mambrino Wilkes has stamped himself as a great producer of speed; in fact, it is simply remarkable what success he has had in that respect, and we feel assured that no matter where he may be taken, if given good mares, the result will stamp him as being one of the greatest sons of George Wilkes.

An advertisement elsewhere gives the particulars about the sale.

HUTCHISON'S NURSERIES.—We have received a copy of the 1891 catalogue of James Hutchison who is now in his 39th year as a California florist and nurseryman. The city of Oakland has grown until it has completely surrounded the land which was far on the outskirts of Oakland village when Mr. Hutchison established himself upon it, and in obedience to the march of progress and to secure additional room, Mr. Hutchison has established a branch at Piedmont. Recently Mr. Hutchison has sold the prominent lots which he has used for a number of years for nursery depot and floral establishment opposite the new city hall, corner of Fourteenth and Washington streets, Oakland. This sale will necessitate removal, and Mr. Hutchison has an advertisement in this issue offering his entire stock at his old stand for sale at greatly reduced rates. Our readers who visit Oakland should inspect this offering. Parties at a distance can learn of it by sending for catalogues.

A FINE FRUIT FARM FOR SALE.—Those looking for improved fruit property should note the advertisement in this issue offering for sale the Pinolito Olive Farm near Auburn, Placer county. The advertisement is so full and explicit that little more need be said except that the property is in one of our best fruit counties, where thousands of acres are already planted, markets and shipping routes established, etc. The owner is one of the leading physicians of Oakland and the property has been built up with great care and free expenditure.

## H. C. Shaw's Spading Harrow.

The necessity for thorough pulverization of the soil for growing crops of cereals or fruit trees has stimulated inventors and manufacturers to bring out a large number of implements whose especial feature is to cultivate the soil expeditiously and at the least expense. The latest implement in this line has been brought out by the H. C. Shaw Plow Works of Stockton, Cal., and is known as the "spading harrow." The wings or shares are set diagonally in the center-bar and are four in number. The peculiar feature of this harrow is that it sinks into the soil and raises the ground similar to the action of the common hand spade, leaving it in a fine state of pulverization, and, as a noted horticulturist has said, "it tickles the ground and leaves it like a garden-bed."

The large rancher has found it just the thing for working summer-fallow land; the horticulturist has found it just the thing for orchards and vineyards. It is easily handled and made of all metal. It needs no scrapers to clean it and leaves no ridges. The draft is very light and several sizes are suited to all conditions of cultivation. By reference to testimonials before us, we have the evidence of the shrewdest and most experienced farmers and orchardists in the country as to the merits of this spading harrow. It is a triumph and will be welcomed by thousands of our industrial men who expect to be compelled to do a great deal of cultivation this year in their orchards and vineyards to bring on the evaporation necessary to the growing of fruits and vines.

Parties interested would do well to send for circulars having a full description of this spading harrow, to the H. C. Shaw Plow Works, Stockton, Cal.

## O'Reily's Stables.

About a year ago we gave a short description of Mr. O'Reily's stables at Petaluma. Our reporter looked in upon them one day last week and found a fine string of the fashionably bred horses. At the head was the stallion, Alto, six years old, 15 hands high, by Anteo, dam Emma Taylor, by Alexander. This horse has improved very much during the last year, and is considered one of the best stallions in Sonoma Co. In his stud is a very fine Dawn colt, three years old, and Emma Valo, a three-year-old mare of the Hambletonian stock that gives great promise. A yearling colt by Alto Mr. O'Reily believes to be one of the best in his string. Mr. O'Reily is a leading merchant in Petaluma, and has concluded that merchandise and horse-raising do not fit well together, and will soon offer his entire stock for sale.

## Gill's Nurseries.

This well-known and old-established firm offers for the spring of 1891 an extra large and fine assortment of fruit, shade and ornamental trees and flowering shrubbery, consisting in part of camellias, azaleas, palms, magnolias, bamboos, holly, pines, cypresses, laurustinus, and in fact everything suitable for garden, orchard, hedge or sidewalk planting. Their stock of roses is larger and better than ever before offered, and their new seedling rose, "Mrs. Cleveland," of which a description and engraving appeared some time ago in the PACIFIC RURAL PRESS, has proven more than satisfactory.

Mr. Gill has long been known as having the finest selection of roses in California, and parties who wish anything in this line, or anything pertaining to the nursery business, should not fail to address E. Gill, nurseryman, Oakland, Cal. His advertisement appears in another column.

## P. J. Keller &amp; Co.

This old and well known firm have just opened an attractive floral depot at 510 and 512 Seventh St., Oakland. From their extensive nursery on Piedmont avenue, the new place will be kept well stocked with a choice selection of roses, plants, fruit and ornamental shade trees, bulbs, seeds, etc., while a specialty will be made of floral decorations and designs of all kinds. The long experience of this firm enables them to meet the wants of distant patrons with promptness guaranteeing satisfaction. A catalogue and descriptive price will be sent free to all addressing P. J. Keller & Co., P. O. Box 73, Oakland, Cal.

## ENLARGED PICTURES.

Mr. E. W. Melvin of Sacramento has built up an extensive business in portraying life-sized portraits copied from photographs and tints. He has a selected corps of artists and has produced some of the best work in the State. While he has aimed to produce the highest class of work, he has not fallen into the usual groove of charging exorbitant prices, and, as a result, he is, perhaps, doing the largest business in this line of any one in Northern California. Framing pictures and drawing from any kind of crayon, ink, water color or pastel, can be relied upon at Melvin's Studio, 713 K street, Sacramento, as the highest type of art and at the lowest price for first-class work.

## Little's Anti-pest.

THE GREATEST DISCOVERY OF THE NINETEENTH CENTURY.

Silver Medal Awarded by the State Fair of 1890.

This preparation is a Sure Destroyer of the SCALE, WOOLY APHIS and INSECT PESTS of any and all descriptions. It may be as freely used in the conservatory, garden or greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportions. It is SAFE, SURE and CHEAP. No Fruit grower or Florist should be without it. Send for Circulars and Price List.

## CATTON, BELL &amp; CO.,

406 CALIFORNIA ST., SAN FRANCISCO. Sole Agents for the Pacific Coast.

COX & CO.'S CATALOGUE.—Cox & Co., seedmen, 411 to 415 Sansome St., send us a copy of their splendid Seed Annual of 1891. It is the most striking and artistic in its design and execution of any California work of the kind which we remember. In the place of honor on the cover is a bloom of the *Romneya Coulteri*, a fitting tribute to California's finest wild flower. Associated with it are portrayals of the newest poppies, sweet peas and pansies. On the last page are good colored portraits of the Barbanks and Satsuma Japan plums. Interiorly we find the catalogue replete with desirable things and the descriptions very full and satisfactory. Cox & Co. have done credit to the local seed trade by their publication.

THOMAS MEHERIN.—Mr. Meherin's old stand opposite the postoffice on Battery St., is full of life and activity and good horticultural stock these days. We happened along there the other day and concluded the city would have to be enlarged to accommodate his business in horticultural store goods and in the nursery stock produced by the California Nursery Co., in which Mr. Meherin is part owner, and local agent. Mr. Meherin's new catalogue is a large one, as required by the enumeration of his plant and tree stock. It will be found to contain all the popular sorts.

BARTELDES & CO.—Readers have noticed the name of this firm among the many seed announcements which are made from week to week in our columns. Their offering of their catalogue should be heeded. We have read the publication and find it very interesting and containing much important information.

WE CALL attention to the advertisement of C. H. Dana, West Lebanon, N. H., who offers a free sample of his excellent Stock Label, something of interest to every owner of live stock.

## FOR SALE!

## PINOLITO OLIVE RANCH!!

## FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profit, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

A. H. AGARD,

No. 1259 Alice Street, - - Oakland, Cal.

## C. L. HASKELL,

SEEDS

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet in a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address BIRD-TURNBULL MFG. CO., 195 La Salle St., Chicago.

## AMERICAN RIVER BREEDING FARM.

Importer and Breeder of ABERDEEN ANGUS CATTLE. Proprietor, J. E. CAMP, Sacramento, Cal.

## THEO. SKILLMAN

Has just arrived in Petaluma with a new importation of

## CHOICE YOUNG STALLIONS

Consisting of  
PERCHERONS, SUFFOLKS, SHIRES AND  
FRENCH COACHERS.

Prices moderate and terms liberal to suit the times. Catalogues for 1891 on application. THEO. SKILLMAN.

J. C. SMITH, IMPORTER.

### NINE

Imported, Registered Percheron Stallions  
FROM TWO TO FOUR YEARS OLD.

ALSO,

FIVE SELECT MARES.

Having spent over one year in France selecting above stock, think I have a better grade than has ever before been offered for sale in this State. Having been here one year, they are thoroughly acclimated. For further particulars, address

J. C. SMITH,  
1422 Eighth St., Oakland, or  
No. 1 Howard St., S. F., Cal.

## MECHAM & FRITSCH,

—IMPORTERS AND BREEDERS OF—

## Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

### H. MECHAM,

Importer and Breeder of Shropshire Sheep. They were all imported from England in '83, or bred direct from imported stock, and all registered.

### H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 25 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs., have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address, **Stony Point, Sonoma Co., Cal.** R. R. Station, Petaluma.

## NOTICE!

ALWAYS ON HAND AND FOR SALE, IMPORTED home-bred registered Clydesdale Stallions and Mares, weighing from 1600 to 2000 lbs. each, from the most noted families. Largest and finest Stud of Clydesdales west of the Rocky Mountains. Also Holstein Friesian Cattle and Dish-faced Berkshire Pigs, all registered, at figures 50 per cent lower than any other in the State for the same quality. All open to Veterinary's examination. Stock all acclimated.

Call on or address H. P. MOHR, MOUNT EDEN, Alameda Co., Cal., 20 miles southeast from San Francisco. Take train for Haywards Station on broad gauge or Mount Eden on narrow gauge railroad. Gentlemen met by appointment at either station. Telegrams, "Mohr, Mount Eden."

## BADEN FARM HERD.

Short Horn Cattle and Draft Horses.

Catalogues and Prices on application to

ROBERT ASHBURNER,

Baden Station. San Mateo Co., Cal.

FOR SALE.

## One Percheron Mare

COLOR, BLACK; WEIGHT, 1650. IMPORTED BY Levi Dillon, Normal, Ill. Due to foal March 1, 1891. Address W. B. ELLENWOOD, Atlanta, San Joaquin County, Cal.

### G. W. DIMICK,

BREEDER OF REGISTERED Shorthorn, Aberdeen-Angus and Jersey Cattle. Young Stock for Sale. Correspondence Solicited. G. W. DIMICK, Hubbard, Oregon.

# WHEN YOU BUY, —BUY— THE BEST! —THE— H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (104 gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
FRANK H. BURKE,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

MANUFACTURED BY

## S. E. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 4, 1891.

Trade in farm products is more or less restricted, owing largely to reduced supplies and uncertain weather. Rains on last Sunday did a large amount of good, which is supplemented by moist, cool weather. Growing crops never looked better. The grain plants have rooted well, which encourages all in the belief of a large yield, even with light rains in the spring. The money market continues to grow easier, although no great pressure to place funds will be made until after assessment tax day. The European wheat markets shaded off slightly. At the East futures have been higher, while in this market they ruled lower. The following is to-day's cablegram:

LIVERPOOL, Feb. 4.—Wheat—Downward tendency. California spot lots, 75 6d to 75 10 1/2d; off coast, 38s 3d; just shipped, 38s; nearly due, 38s 3d; cargoes off coast and on passage, steady; Mark Lane wheat, quiet; French country markets, firm; wheat and flour in Paris, quiet.

## Foreign Grain Review.

LONDON, Feb. 2.—The *Mark Lane Express*, in its review of the British grain trade, says: English wheats declined 6d; foreign are steady. English oats advanced 6d. American corn is firmer. At today's market prices were firmer, owing to symptoms of renewed frost. Flat corn is scarce and is higher. Round corn advanced 6d.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Feb.	Mar.	Apr.	May.	June.	July.
Thursday.....	75 10 1/2d	76 10 1/2d	77 10 1/2d	78 10 1/2d	79 10 1/2d	77 10 1/2d
Friday.....	75 10 1/2d	76 10 1/2d	77 10 1/2d	78 10 1/2d	79 10 1/2d	77 10 1/2d
Saturday.....	75 10 1/2d	76 10 1/2d	77 10 1/2d	78 10 1/2d	79 10 1/2d	77 10 1/2d
Sunday.....	75 10 1/2d	76 10 1/2d	77 10 1/2d	78 10 1/2d	79 10 1/2d	77 10 1/2d

Tuesday.....	39 00d	38 30d	38 80d	Firm.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Feb.	Mar.	Apr.	May.	June.	July.
Thursday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Friday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Saturday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Sunday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Monday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2
Tuesday.....	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2	109 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	May.	June.	July.	Aug.
Thursday.....	93 1/2	93 1/2	93 1/2	93 1/2
Friday.....	93 1/2	93 1/2	93 1/2	93 1/2
Saturday.....	93 1/2	93 1/2	93 1/2	93 1/2
Sunday.....	93 1/2	93 1/2	93 1/2	93 1/2
Monday.....	93 1/2	93 1/2	93 1/2	93 1/2
Tuesday.....	93 1/2	93 1/2	93 1/2	93 1/2

NEW YORK, Feb. 4.—Wheat—\$1.10 1/2 for March, \$1.08 1/2 for May, \$1.06 1/2 for June, \$1.02 1/2 for July, and 99 1/2 for December.

CHICAGO, Feb. 4.—Wheat—96c for May and \$1.00 1/2 for July.

## The Dried Fruit Trade.

NEW YORK, Jan. 29.—A carload of California dried peaches and prunes was shipped from this market to Chicago yesterday, and a carload of peaches went to Philadelphia.

California fruit sales are reported at the following prices: Hops—Horsehoe layer raisins, \$2.25 per box, spot; prime quality 3-crown raisins, 6 1/2c, spot; 2-crown, 5 1/2c, spot; choice evaporated peaches, 16c and upward; the same goods were 15 1/2c recently.

NEW YORK, Jan. 30.—California prunes have been selling in moderate quantities to a fair extent the past few days.

There is some evidence that the condition of the market for competing foreign goods is causing more interest to center in the California product, and prices for the latter, as compared with those current for French and Turkish fruit, are comparatively low. Still, no signs are visible of anything in the nature of speculative lines, and there were hardly sufficient sales to reveal the strength of the statistical position. Sales are noted of prime goods at 11 1/2c for 60s to 80s, equal parts, in boxes; also 90s at 10 1/2c, 70s at 11c, and 40s at 11 1/2c, from first hands. At present California 60s and 90s are quoted at only 1/2c per pound above the same sizes of French prunes.

NEW YORK, Feb. 1.—Raisins are dull, weak and irregular, with merely enough grocery demand to show low prices for heavy storings of common to good. Strictly choice named with some confidential outlook; best 3-crown boxes, faced, \$1.65@1.75. Recent sale—1600 of best sound quality, \$1.40; plain, \$1.60, faced London, \$1.85@2.25. Dealers aim to raise the cooking demand with free offerings. A good stock of 5 1/2c@6 1/2c prunes going out favorably, but not in a large volume. The market seems to be recovering from the stagnation which has more or less prevailed through the extravagant views of shippers early in the season. Rates are now only 1 1/2c@1 1/2c above French, a condition that should stiffen the situation. Prices run close together; four sizes prime goods 11 1/2c, while forties are only 12 1/2c. Unpeeled peaches are going out freely, spot and for other cities tending higher; fair to prime, 13 1/2c@15c; peeled, 30c; moderate way. Apricots are firm; 17c@20c for boxes; 16c@19c for bags. Eureka canned plums sold at 2c.

NEW YORK, Feb. 2.—The situation of the market in California raisins is without the slightest sign of improvement. London Layers, the well-known brand, have been sold as low as \$1.80, and some of the finest in the market at \$2.25, while stock considered a trifle off is offered at \$1.75. Correspondingly low figures are named on loose raisins in boxes. The bag stock has also depreciated. From the line out of which sales were made at 6 1/2c for Three-Crown

and 5 1/2c for Two-Crown early in the week, transactions were recorded Saturday at 6c and 5c respectively. The goods are not claimed to be first-class in every particular, but a slight inferiority is no offset to the reduction in price. In some quarters it is intimated that the stock of California goods in this market is nearer 100 than 75 carloads.

California prunes moved off in a quiet way to a very fair extent the past week. Stocks here are comparatively light at present. In most quarters a confident feeling as to the future of the market for peaches is manifested.

## Eastern Wool Markets.

NEW YORK, Jan. 30.—*Bradstreet's* says: The market this week shows considerable improvement in point of activity, though it cannot be said that it has ceased to be almost entirely professional in character. Apprehensions that were caused by attempted legislation of a disturbing nature have been allayed, and at the same time the prospects of action on the Silver Bill at the present session of Congress have decreased day by day. These developments have measurably removed the uncertainty as to the future to which the dullness which overspread the market last week was mainly due. Leading operators and the street have therefore once more shown a willingness to take action, and have consequently contributed a fair volume of speculative trading.

NEW YORK, Feb. 1.—New York wool sales for the fortnight were 781,000 lbs domestic, 1,455,000 lbs foreign and 7000 lbs of camel's hair Noils. The best run of trade for desirable Territorial at 18 1/2c. Taking tone from New England, the buyers will not listen to a fractional advance while long lines of goods are yet unmarketed. The London market opened firm. Boston's fortnight's sales show an unabated demand on all grades and moving marked activity in Territorial and California. Sales are 5,770,000 lbs domestic and 1,000,000 lbs foreign. Manufacturers pay only full at late ranges, and sellers cannot well expect more, as many woolen fabrics have not more than responded to the current cost of raw. Philadelphia reports the stock quite low, and all the recent business at full rates and no advance.

## Fruit Freight Eastward.

The Sacramento *Bea* says:—"So far as deciduous fruits are concerned no change from last year's tariff has been made, nor will be until the time for the movement of that crop approaches. A new tariff on citrus fruits went into effect on the 22d of the present month. Last year the rate by freight train in refrigerator cars to the Missouri river was \$1.12 1/2 per hundred in car-load lots, and to Chicago and Mississippi points, \$1.25. By passenger train the rate to the Missouri river was \$2.25, and \$2.50 to Chicago and Mississippi points. The new tariff to the Missouri river is \$1.25 per hundred per freight train in refrigerator car, and by passenger train to Missouri river and Chicago and Mississippi river points, \$2.50 and \$2.75 per hundred respectively."

## Miscellaneous.

NEW YORK, Feb. 1.—Few spot hops are moving. Holders are not pressing any grades. Brewers pay 32c@33c. It is rumored that interior sales have been made for export account. The London market is strong. The California Hop Exchange is located on Pearl street. One hundred bales of the '91 crop were offered at 25c; new State Range, 30c@35c; Pacific, 30c@35c.

California jellies are seeking a market, with favorable prospects, assisted by the scarce and high canned fruits.

Honey is more freely offered; 7c for light amber. Mustard seed quotable at 3 1/2c.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.
Thursday.....	151 1/2	112 1/2	151 1/2	112 1/2

Monday.....	148 1/2	148 1/2	148 1/2	148 1/2
Tuesday.....	148 1/2	148 1/2	148 1/2	148 1/2

BAGS—The market is quiet, but with a strong undertone. For May-June delivery standard-sized hand-sewed are quoted at 6 1/2c@6 3/4c.

BARLEY—The sample market has held strong under light supplies and a good demand. In futures, a fair amount of business has been done. Considerable cross-ordering is being done on Call to break prices. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1891—100 tons, \$1.49 1/2; 100, \$1.49 1/2. Buyer Season—100 tons, \$1.49 1/2; 600, \$1.49. Seller 1891—100 tons, \$1.10 1/2; 600, \$1.10 1/2. Afternoon Session: Buyer 1891—100 tons, \$1.49 1/2. Buyer Season—100 tons, \$1.49 1/2. Seller 1891—100 tons, \$1.11 1/2; 600, \$1.11 1/2.

BUTTER—The market is barely steady. Receipts are freer, while the demand is not enlarging. Pickled is about out of market.

CHEESE—Receipts continue light, while the demand is free. Choice new mild is wanted and commands high figures.

EGGS—The market is weaker under increasing receipts. A larger consumption is looked for during the Lenten season, but then receipts are expected also to be large.

FLOUR—The market is essentially unchanged.

WHEAT—There has been a continued free movement, with slightly higher prices obtainable. In futures, trading on Call has been light. The little business done was chiefly cross-orders, so as to keep prices down. The way in which the Call Board transactions is said to be worked, is against farmers. Until this system of gambling was inaugurated, grain always brought more money. The following are the reported sales made on Call:

Morning Session: Buyer 1891—100 tons, \$1.47 1/2; 100, \$1.47 1/2; 1100, \$1.47 1/2. Buyer Season—600 tons, \$1.41 1/2; 900, \$1.41 1/2; 700, \$1.41 1/2. Afternoon Session: Buyer 1891—100 tons, \$1.47 1/2; 100, \$1.47 1/2; 200, \$1.47 1/2. Buyer Season—200 tons, \$1.41 1/2; 300, \$1.41 1/2.

## Cereals.

The local wheat market has held strong throughout the week. Contrary to general belief, the rains last Sunday did not set values off. The bears were out in full force on Monday, but being unable to break prices, they retired in good order. The price of wheat is very low—too low for the interest of farmers, and any material decline below present ranges invariably brings in a class of investment buyers. The latter have made money by bringing around \$1.30 for No. 1 White shipping and holding for an advance. The English markets shaded off, but toward the close have a stronger tone. The strength of the market is largely due to the smaller stocks held Jan. 1st in the 12 leading ports. At the above date the quantity was 1,930,080 qrs, against 1,877,126 qrs at the same date in 1890. Silver legislation is being watched closely by large operators; indeed there has been and still is quiet buying of wheat in expectation that the metal will be remonetized, in which event the higher cost of Russian and Indian wheat delivered in England and other importing countries will enhance the value of American wheat. Vessels on berth continue to receive quick dispatch. Receipts of Oregon and Washington wheat are large. Advices from up north report the bulk already marketed. The following estimates, in quarters of 8 bushels (60 lbs.) each, may be accepted as embodying eventual conclusions as to the yields of wheat in 1890. The Canadian harvest, which is not given in these estimates, is currently believed to have been between 4,000,000 and 5,000,000; the United States, 50,000,000; France, 39,000,000; Russia, 28,000,000; India, 27,000,000; Austria-Hungary, 26,000,000; Italy and Sicily, 16,830,000; Spain and Portugal, 16,000,000; Germany, 13,000,000; the Ottoman Empire, 10,000,000; Roumania, Serbia, etc., 8,000,000; Australasia, 5,000,000; Belgium and Holland, 4,000,000; and La Plata, 2,500,000 qrs.

Crop advices in this State continue to be uniformly good. All sections report the plant doing remarkably well. Many places reporting grass short and cattle suffering for food, report the fields of grain looking fine. Owing to the scarcity of natural feed and the high price of hay, there will unquestionably be a larger acreage of seeded land cut for hay than for several years past.

Barley met with a slight shading in prices, owing to rains, but the decline has been recovered. The consumption for feed is exceedingly large. More rolled or ground barley is being fed than before known. This is due to poor pasture for stock. The stock in this State is light, but the acreage seeded is large. Up north the supply is far from large, and under continued free shipments to this port, prices show more strength in Oregon and Washington.

Oats are in liberal supply. The very heavy receipts from up north, and fears that the supply to draw from is larger than claimed, are creating a weak market with us. Buyers are disposed to bid lower, and even at concessions do not appear inclined to anticipate their wants.

Corn is steady, with a firm tone. Continued dry weather is in favor of holders.

Rye and buckwheat are unchanged.

## Feedstuff.

Ground feed continues in good demand with rolled barley the favorite with feeders. Bran, middlings and rolled barley are selling at higher figures, while feed-meal shows more strength. The scarcity of natural feed causes ground feed to be more sought after by dairy and stock men.

Hay is very strong. The Southern Pacific railroad is following its usual tactics of regulating the freight tariff so as to take the cream. From all points in California the freight on hay is raised, while from the State of Nevada, which has a large surplus, the tariff is lower. Higher freights in this State and lower from Nevada, admit of farmers in the latter State marketing their crops in California. The supply in this State is very light, and as grass is short, there is freer feeding of hay and straw. A large acreage has been seeded to grain which will be cut for hay. This is necessitated owing to the large increased quantity required for feed and the demand steadily enlarging.

## Live-stock.

Scant feed in this State is causing freer marketing of cattle than otherwise would obtain, while Arizona is a liberal seller. Prices have shaded off, owing to large slaughterers not caring to be over-supplied during Lent and also on tax-assessment day. Mutton sheep are scarce and high. More farmers than ever before have bought a few head to have on their farms, which not only speaks well in favor of diversified farming, but which will also give us a new source of supply to draw from in coming seasons. The sheep wanted by farmers are more for carcass than for wool. Hogs are wanted at a slight advance. Milch cows are slow of sale. Advices from many localities report stock cattle poor.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 4 1/2c@5c lb.;

dressed, 7 1/2c@8 1/2c lb.; heavy, 4 1/2c@4 3/4c lb.; dressed, 6 1/2c@7 1/2c lb. Stock hogs, 3 1/2c@4c lb. BEEF—Stall fed, 6 1/2c@7c lb.; grass fed, extra, 6c@7c lb.; first quality, 5 1/2c@6c lb.; second quality 4 1/2c@5c lb.; third quality, 3 1/2c@4 1/2c lb.; bulls and thin cows, 2c@3c lb.

VEAL—Small, 6c@7c lb.; large, 5c@6c. MUTTON—Wethers, 8c@9c lb.; ewes, 7 1/2c@8 1/2c lb.; spring lamb, 15c lb.

## Fruits.

The market is weak for poor to fair apples, firm for good to choice and strong for a real gilt-edge article. The latter must be firm, good in color and flavor and all else which go to constitute a first-class fruit. There is a fair shipping demand.

Oranges continue to come in freely. The demand is enlarging at the lower prices. Retail dealers are buying more freely owing to the better consumptive demand. The fruit this year, taken as a whole, is better than last year, both in color and flavor. Much of this is due to the better facilities and more general attention given to caring for the trees. Shipments eastward are being made with more regularity. The weather continues in growers' favor.

Dried fruits are becoming scarcer, which will make itself felt when the regular spring call sets in. Quotations are unchanged.

Raisins are in liberal supply. The market does not show any changes worthy of note. A freer call is expected in the near future.

## Vegetables.

Spring garden truck fluctuates, and will as long as the market is fed by supplies from the southern counties. When the bay counties begin to send in supplies, then prices will become more regular, admitting of quotations. Gardening is reported to be on an enlarged scale, and as the weather is favorable, large supplies will be in order.

Onions are barely steady. The receipts are free while the demand is of a hand-to-mouth character. A larger planting is reported in this State and also in Oregon.

Potatoes continue to ease off. There is a fair demand for seed, which keeps the market from breaking to pieces. Large dealers do not appear to anticipate their wants, except when offered inducements through concessions by consignees. The bulk of the stock in this city is worked off, but large supplies are reported at convenient shipping points in the interior. The acreage that is being devoted to potatoes this year is the largest ever before known. The weather is favorable to the growing crop.

## Miscellaneous.

Poultry held barely steady up to yesterday, when a stronger tone set in for the better conditioned. Scrubby stock is still hard to sell.

Beans, white kinds, are a shade higher under a good demand and light stocks. Other kinds show a hardening tendency.

Nuts outside of almonds are dull and heavy. Even almonds are slow of sale at slightly lower prices for soft-shell and paper-shell. Hard-shell have been cleaned up by nurserymen, causing better prices.

Hops are dull but strong under light obtainable supplies.

In wool there is nothing doing; assortments in this city are broken and are taken chiefly by scourers.

Honey continues scarce and high.

Exports by sea the past week aggregate as follows: Flour, bbls, Honolulu, 1089; Tahiti, 703; Central America, 140. Wheat, ctls, Liverpool, 69,639; Havre, 118,799. Barley, ctls, Honolulu, 1348; Tahiti, 383. Rolled barley, ctls, Honolulu, 3272. Dried fruits, lbs, Honolulu, 711. Hay bbls, Honolulu, 9616. Beans, lbs, Honolulu, 26,794; Victoria, 3503. Wool, lbs, Boston, 165,320. Corn ctls, Central America, 1370. Bran, sks, Honolulu, 4000. Middlings, sks, 510.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

The Celebrated Chapman-Climax Spray Pump

Is still ahead of all competitors, and is the most popular spraying machine in the market. THE CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation. IMPROVED CLIMAX NO. 2 is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

CATALOGUE**

1891.

I offer you my Vegetable and Flower Seed Catalogue for  
1891 FREE. Note the immense variety of seed it con-  
tains, and that all the best novelties are there. Not  
much more show about it (you don't plant pictures)  
but fine engravings from photographs of scores of the  
choice vegetables I have introduced. Would it not  
be well to get the seed of these from first hands? To be the  
oldest firm in the United States making mail and express  
business a specialty proves reliability. Honest and hon-  
orable dealing is the only foundation this can rest on. My Cata-  
logue is FREE as usual. A matter on second page of cover will  
interest my customers. J. J. H. GREGORY & SON, Marblehead, Mass.

# THE DEERE IMPLEMENT COMPANY'S LINE OF ORCHARD AND VINEYARD TOOLS

WITHOUT EXCEPTION, <sup>Cal State Library 80407 81 '90</sup> BEST IN THE WORLD.

Manufactured by DEERE & COMPANY, Moline, Illinois, who never made a failure, or PUT UPON THE MARKET AN UNTRIED IMPLEMENT.

**STEEL BEAM VINEYARD AND ORCHARD PLOW.**

STEEL OR CHILLED BOTTOMS.

Adjustable Handles and Clevis. Sizes, 8 and 9-inch, with Steel Bottoms and 9-inch Chilled Iron Bottoms. A favorite with Vine Growers and Orchardists. A full supply of Wood Beam Vineyard Plows on hand.

**WOOD BEAM VINEYARD AND ORCHARD PLOW.**

CHILLED BOTTOMS.

Beam Can be Set to or from land. Handles are straight and easily replaced in case of breakage, are readily set either right or left to avoid contact with vines or trees.

**DEERE PONY GANG PLOW.**

STEEL STANDARDS AND MOLDBOARDS.

Steel or Chilled Shares. Chilled Landsides. Built especially for Vineyard work. Cuts 24 inches. It is so arranged that the third plow can be taken off by removing three bolts, thus making it a two-gang, cutting 16 inches. Light, strong and serviceable.

**COMBINED HARROW AND CULTIVATOR.**

With Steel Teeth, Diamond Shape, with small Cultivator Tooth forged on one end. Movable Teeth, to permit of working close to plants without injury.

USED AS A CULTIVATOR OR HARROW.

**CALIFORNIA ZIG ZAG CULTIVATOR.**

With or without Weed Cutter. For Orchards and Vineyards. Something New and Superior. Fully Warranted.

**THE DEERE DISK HARROW.**

Made in the following sizes: 4, 5, 6, 8, 10, and 12 foot, with 16 or 20-inch Disks. The 4, 5 and 6-foot are especially adapted for Orchard and Vineyard Work.

### Alameda County Rural Homes.

We have given home and farm scenes in many counties of the State with an idea of reflecting the progress of California and to show distant readers how delightful in character and environment are California rural homes. We have had more about the counties showing newer development than we have of the older settled regions about the bay, because the bay settlements may be conceived to be better known; but there is a danger of injustice in this because the distant RURAL reader may infer therefrom that progressive and desirable neighborhoods all lie far removed from the metropolis. To guard against this and to reflect the advance of the bay region, we propose to illustrate a few rural homes in Alameda county.

We notice in the *Illustrated Pacific States*, an entertaining monthly journal published in this city, a very interesting sketch of the Alameda valley, involving both the commercial and agricultural features thereof. The valley portion of Alameda county includes the stretch of land comprised in Eden and Washington townships, and lying, roughly speaking, between Oakland at the north and the county limits at the south, the west and east boundaries being respectively the bay of San Francisco and the crest of the Contra Costa mountains. It is one of the richest tracts of unbroken agricultural land in the State. Its length is some 25 miles, by a breadth of three or four, while on the eastern edge the adjoining foothills add a further width of nearly as much again. This region was famous in early days for the exuberant growth and luxuriance of its grasses and native grains, and was a hunter's paradise for game of all descriptions. Later it was noted as a prodigious producer of wheat and hay and vegetables. It is now renowned for its or-

ORCHARD VIEW—RESIDENCE OF E. O. WEBB.

chards and small fruit gardens, as well as for the more strictly agricultural uses of the general farmer and the raiser of vegetables. Probably one-half the whole region is fruit land, and its soil is a sandy alluvium or loam of astonishing depth, 20 and oftentimes 50 or even 90 feet being necessary to find the underlying adobe—

entirely inexhaustible. The other half is splendid grain and farming land. Along the creeks toward the bay are grown the finest potatoes, while the valley is the center of production in the State of tomatoes, cucumbers, peas, corn and other vegetables. Three-fourths of San Francisco's supply of the first-mentioned vegetables

are drawn from this source, being many thousand tons. As a rule, no irrigation is used in the region, although in the southern portion of the valley irrigation water is sometimes used, to a limited extent, in dry years.

To show the character of the homes of Alameda valley, we select two for illustration. They are not of the most pretentious, but of a class of lovely home-like establishments of which the valley contains hundreds. The upper engraving shows "Orchard View," the property of Edw. O. Webb, son of Capt. Otis Webb, the well-known pioneer of 1849. This delightful residence, located on the southeastern slope of the low hills which skirt the eastern boundary of the San Jose valley, has the advantage of an elevation which makes it both sightly and picturesque. The view from the house is realistic of the name—Orchard View, commanding as it does the wide expanse of fertile valley lands, of orchards, far reaching to the long line of the blue waters of the San Francisco bay, beyond which the ever-changing heights of Tamalpais gradually lengthen out toward the west into the low hills and lofty peaks of the Coast Range, in San Mateo county.

The place is situated 1½ miles from San Lorenzo, on the line of the C. P. R. R., and two miles from Haywards, and on the direct line of the Oakland and Haywards road. It consists of 100 acres, one-third of which is devoted to orchard, balance of place divided into smaller fields for the purpose of raising hay and pasturing horses and cattle. The house is solid and complete in every appointment for the comforts of a home, while the laundry, stables and barns, fruit-houses and corrals bespeak an orderly and systematic oversight.

Mr. Webb commenced improvements in 1873, at which time there was not a tree upon the place, it being at the time a portion of an immense grain-field.

The macadamized driveway leading from the Haywards and Oakland road passes through about 35 acres of well-kept and finely laid out orchard, of large and thrifty bearing trees, consisting of apricot, cherry,

LAUREL HILL FARM—RESIDENCE OF J. H. STROBRIDGE.

## THE FIELD.

## The Future of Our Agricultural Lands.

My reasons for believing that good lands anywhere in the United States will be worth \$100 an acre within five years, are as follows:

No matter how much or how little land there may be under wheat, we must have a given quantity under each of the other staples, and I am, so far as I am able to ascertain, the only one who has determined such quantities. This is succinctly set forth in the following exhibit, as is the manner in which I arrive at such quantities:

EXHIBIT showing acreage required per capita to furnish staples consumed in the United States, and cotton exported, as computed from (last) ten years' acreage and production, as set forth in the reports of the Department of Agriculture, first deducting the proportion of tobacco and grain—including the secondary form of animals and animal products—exported.

	Acres.
Wheat	0.48
Corn	1.19
Oats	0.39
Hay	0.64
Barley, rye,	
Buckwheat,	0.15
Potatoes & tobacco	
Cotton	0.31
Total	3.16

Just as soon as we lessen the quantity of hay or any other staple (needed for domestic consumption) below the current requirements, the price of that product will advance out of all proportion to the price of the other staples, and land will at once revert to the growth of the high-priced product, and there will be a lessened product of one or more of the other staples, the price for which will rise if the quantity produced is less than the current needs.

There is an exact and ascertainable ratio or relationship between population and the production of all the farm staples entering into general consumption, and my investigations have been directed to an effort to determine the proportions of this relationship. With a surplus of land in cultivation, it has not been as easy to determine this matter as it will be when this surplus has been eliminated, as the elimination of such surplus will enable us to see the inexorable character of this law of demand and supply, and when our own people shall require all our products he who runs may read the proportions of this relationship. That we have not seen it before is due to the fact that we have had too much land in cultivation, and could increase any one product at will without diminishing the domestic supply of any other. This is, however, about to change forever—and by "about" I mean within five years—and when this change comes the short seller on the board of trade and in the bucket shop will be shorn of much of his hateful power over prices.

We cannot, as you suggest, take the pasture lands to grow wheat and other cereals. The moment we reduce the number of cattle—other than milch cows—below 530 to 1000 people, just that moment beef will become the most profitable product of the farm, and every one will rush into the cattle business as they did in the earlier part of the ninth decade when the immense amount of unoccupied land enabled them to swamp the cattle business and bury its devotees under an avalanche of low-priced animals. This can never occur again, as the unoccupied area does not exist permitting any such increase in the number of cattle. Indeed from this day onward there is abundant reason to believe that the ratio of cattle to people will constantly lessen, and the cattle business shortly become profitable to the farmer.

Nor can you take the dairy pastures and convert them into grain-fields. The moment you do, and reduce the number of milch cows to less than 230 to 1000 people, that moment the price of milk, butter and cheese will mount skyward, and grain-fields will be converted into meadows and dairy farms.

For each 1000 units added to the population we must add 230 to 235 milch cows and a given number of horses, and but for the surplus of beeves now existing we should have to add 50 to 53 cattle other than milch cows. For every cow, steer or horse added, we must add about six to seven acres to our farms, and of this 2½ to 3 acres must be in pasture.

Instead of converting pastures into grain-fields, as population augments, we must add to such pastures in a definite ratio (which the census schedules will probably enable us to determine with tolerable accuracy), and having now more wheat land than is required to meet the demands of our own people, we shall take these surplus wheat-fields and grow thereon the corn, hay, oats, rye, barley, buckwheat and potatoes required at home, as well as the cotton we consume and export, and when all the land that is now in cultivation and that can be brought into cultivation is employed (as it will be by 1895) in producing the food, pro-vender and materials of manufacture which our people require, we must either cease to export cotton and grow grain on the cotton lands, lower the standard of living, or import food.

The relationship between population and the production of staples is such that there is but one crop we can reduce the area of, and that is wheat.

It is true we now have about 4,000,000 acres

more of corn land than is required by the present population, but population will certainly overtake the corn-lands not later than 1893, and probably in 1892, and then we must either reduce the per capita consumption of corn or convert wheat lands into corn-fields.

When I say there is now 4,000,000 acres surplus corn acreage, I mean that the product of this 4,000,000 acres now goes abroad in the form of grain, meat and dairy products, and that in 1893 or 1894 we shall consume at home every pound of such products made from an average crop of corn from the area which will then be in corn, unless we shall then have converted a part of the wheat-fields into corn lands.

There exists an exact relationship between population and all the staple products of the farm, such ratio varying only as varies the standard of living, and when we can determine the proportions of this relationship we can estimate the acreage and product required with just as much certainty as a finance minister can estimate the amount of revenue to be derived from specific taxes.

Having ascertained that the average yield of wheat per acre for a period of ten years is 12.1 bushels per acre, and that the annual consumption is 5.82 bushels per capita, we are able to say that (with average crops) each unit of the population requires 0.48 of an acre in wheat, and knowing the population and the rate at which it is increasing, we are able to say that there will be over 70,000,000 people inhabiting the United States in 1895, and that they will—with an average yield—require the product of 33,600,000 acres in wheat, and applying the same process to each of the other farm staples, we are able to say they will require 83,300,000 acres in corn; 27,300,000 acres in oats; 44,800,000 acres in hay; 10,500,000 acres in barley, rye, buckwheat, tobacco, potatoes, and—including that exported—21,700,000 acres in cotton, making a total of 221,200,000.

If we can determine, approximately, the area which will then be in cultivation—and I hold we can—we can say how much in excess or how much short of current domestic needs our products will be with average yields, and this is what I have attempted to do in the epitome sent you, and this with the well-ascertained short wheat acreage—taking the world as a whole—but the impracticability (not to say impossibility) of making such acreage keep pace with population, causes me to believe that not later than 1895 every acre of good farm land in the United States will sell readily for one hundred golden dollars.—C. Wood Davis in Country Gentleman.

## HORTICULTURE.

## Apples in California Foothills.

Amid the multiplicity of fruits in our State, the apple still holds preference with those inhabitants of Placer county (Auburn being the county seat) who have come from apple-producing States, and they are a majority. New-comers are inclined to plant apple orchards for local markets or Eastern shipping, and it is proper to state that apples do not succeed well till elevations considerably higher than Auburn are reached. Here and south and southwest of us, they are generally a failure, and hundreds of old apple trees have been grubbed out as worthless. Four trees of Yellow Bellflower and two of Newtown Pippin, on land I purchased two years ago, produced only small and inferior fruit, the Pippins being blotched and small, the Bellflowers small, spongy in flesh and tough in rind. This is at an elevation 130 feet higher than Auburn, the latter, 1360 feet above sea-level at San Francisco. The Red Astrachan, however, succeeds well at Auburn, and in higher elevations as far up the Southern Pacific railroad as Alta or Towles, which is 3607 feet above sea-level. Another Russian apple, the Duchesse of Oldenburg, succeeds well at Colfax—elevation 2422 feet—and at the several stations on the railroad up to Cisco, which is 5934 feet above sea-level, and by reason of its hardy character, will undoubtedly bear any degree of cold or exposure that any known apple can succeed in.

It being well settled that both amateur and professional fruit-growers are most likely to succeed when they limit themselves to a few well-tested kinds, I name a few which have been bought and sold by an experienced fruit-dealer who is also raising several of them, as kinds that may be relied upon to do well, with proper care, at any elevation between Clipper Gap, 1760 feet, and Cisco, 5934 feet elevation: Gravenstein—large, striped and beautiful; first quality; tree vigorous and productive, ripening in foothills first of August. King of Tompkins County—large, yellowish, striped with red; flesh, juicy, tender, vinous flavor; very good; keeps till February at and above Auburn; for apple-sauce it is not excelled. White Winter Pearmain—large, pale-yellow, very fine flavor; flesh, pale yellow, crisp and juicy; quality, very good; ripens late in October and keeps well; an excellent apple in the middle foothills, at and above 1700 feet elevation. Winesap—small to medium size; dark-red; high flavored; tree hardy; a mellow, good winter apple, north of Auburn, and when raised in elevated positions northward. Smith's Cider is a safe apple to plant in the foothills for production and profit, as it is in Central Wisconsin. The popular Wealthy—originating in Hennepin county, Minn., I believe—

does well in foothill localities; light-red, very productive, heat quality, and a very desirable apple; early winter in North California foothills. Of the same iron-clad class is the Walbridge—good quality, handsomely striped red, early and abundant bearer; a few days later in ripening than the Wealthy. The Walbridge originated in Sauk county, Wis., I believe, and I should try it if setting out an apple orchard above 1700 feet elevation.

Haas and Rhode Island Greening are popular apples, and do fairly well at elevations of 3000 feet or over. Fine specimens were shown at the Auburn fruit exhibition, September, 1890, and I have tested several boxes of Greenings grown at Dutch Flat, elevation 3395 feet, near Southern Pacific railroad.

This short list may be concluded with brief remarks on the Lawver, a most promising late-keeping winter apple. The Lawver is here called a "four-tier" apple—that is, four tiers packed in the usual manner fill a box, which is 11 inches deep. The Lawver is large, roundish, flat, mild sub-acid, fine-grained, firm and heavy; color dark red—the handsomest of all extra-large keepers; a valuable late market sort; tree a vigorous grower, very hardy and bears well. "The Lawver apple," says John Bidwell, an experienced fruit-shipper, "is the most promising late-market apple now before the California public, and being very good quality as well as hardy and productive, may supersede the poor-quality Ben Davis, which, though very showy, has neither good flavor nor high quality." It is more uniform in size than either the Greening or Baldwin, and as fine-grained as the Swaar, its firmness being a protection against bruising. It is a little larger than the Greening, while its long-keeping qualities are undoubted. Considering its excellent qualities, the Lawver is probably the coming red long-keeping winter apple that has been desired for several decades, being adapted for shipping in late spring and early summer when really good apples readily command good prices.

Many other varieties are grown at elevations above 1500 feet, in the contiguous counties, El Dorado and Nevada, and sold here, thus giving our fruit shippers opportunity for comparison, and selection of those varieties that are best adapted to the producing conditions of the foothills, and for shipping as well as for supplying the local demand, which is considerable, where there are usually several hundred visitors seeking health, or on county-seat business. It may be added that apples of good quality may be grown at or near the elevations stated, in scores and hundreds of foothill localities on the west side of the Sierra Nevada mountains, which extend, with gaps at irregular intervals, from Modoc county adjoining the Oregon State line, fully 500 miles to the southern side of Kern county, where the mountains curve and form the Coast Range, which extends back again to the Oregon boundary in Del Norte county, with a break of about 100 miles wide, which forms the valley through which the waters of the Sacramento and San Joaquin rivers reach the bay of San Francisco. The only reason why the localities first named are now producing good apples is that railroads and other opened highways have made them accessible. The slopes of any of the wooded foothills on the western side of the Sierras are naturally as well adapted to apple-growing at corresponding elevations as the localities named.—J. W. Clarke of Placer county in Country Gentleman.

## Fruit Varieties in Arizona.

A series of very instructive meetings has been held by the Fruit-Growers' Association in Phoenix this winter. Many instructive papers were then read. The following conclusions from such exchange of views are presented by the board of directors of the association:

The experience of the last few years has demonstrated what may be done in our valley whenever a systematic effort is made in fruit production. With some varieties, which we may produce in almost unlimited quantities, there seems to be some question as to an available market at paying prices. These questions only time and experience can definitely settle. For the present we deem it best to advise the planting of those kinds of fruits which experience has shown we can produce in abundance, at a reasonable cost, and for which the market is available and already established.

We have tried in this report to recommend varieties of fruit for commercial purposes rather than for home use. In some cases the two objects are somewhat combined.

THE APRICOT.—No doubt one of our most successful fruits is the apricot. It comes into bearing early, is hardy and prolific and long-lived. For canning or drying it must be profitable. The market is seldom overstocked with really choice goods, such as may be sun-dried in our valley. The Pringle is our first variety to ripen, is not of value except for home use. As an early variety, the Newcastle seems to be taking the lead. It has not been thoroughly tested in our valley, but is well recommended. The Large Early Montgamet is well placed next by some experienced growers. As an all-around apricot in our valley, perhaps the Royal stands at the head, and no one will miss it by planting largely of this grand variety. No doubt other varieties will do well. The above will ripen in the order named and yield a succession of fine fruit. Some fault has been found with the size of our apricots, but we

feel that the remedy is thinning and more thorough cultivation.

THE PEACH.—Our next fruit to ripen is the peach, and no one will miss it who plants entirely of the peach. For early peaches we recommend Briggs Red May, Early Alexander and Parsons' Early, followed by Thissell White free and Stump the World. As a midsummer canning or drying peach, the Muir takes the lead. The Salway comes next and is a grand peach. Next we would place Bilyeu's Late October. The above are all freestones. For a clingstone, plant Orange Cling. The latest of all is the Bagleys December cling. There are many other good varieties, but the above will give a succession of fine fruit, and have been well tested in our valley.

The Salway is a large, prolific bearer and has given thorough satisfaction where planted in our valley. We do not think it can be too highly commended.

THE FIG.—Our valley seems to be the natural home of the fig. There is no doubt that the fig may be grown in any quantity. The market at present does not seem to be fully established. Should there be no lack of a profitable market then the fig is certainly destined to be one of the most valuable fruits.

At present the White Adriatic is the variety most planted, and there does not seem to be any available variety which at all rivals it. The California black or blue is very productive, and by some highly esteemed for home use. The coming fig may be the Smyrna or fig of commerce, but at present this is not available.

THE ORANGE.—For an orange we would place at the head of the list the Washington Navel, followed by the Mediterranean Sweet, Maltese Blood and Azoreon St. Michael. Hart's Tardiff, a late orange that seems to be hardy, is apparently coming into favor. We would recommend the Tangerine as a very hardy orange which will stand much exposure.

The Villa Franca is recommended as a hardy lemon, and will no doubt succeed in our valley.

THE OLIVE.—The olive tree thrives well in all parts of our valley. The oldest trees are just coming into bearing and would seem to promise well. The Rubra and the Manzanillo are the two varieties most highly commended as being prolific and hardy, and coming into bearing young.

THE APPLE.—The very earliest and the very latest varieties will do well. Let the summer apples alone. For early, such as the Early Harvest; for late, such as White Winter Pearmain and Ben Davis.

THE PEAR.—The pear tree grows well in all parts of the valley, and pear-men claim there is money in this fruit here and that there are many varieties which will succeed. So far as we can say from actual experience of the growers, the Bartlett and Winter Nellis should head the list. The Le Conte is being extensively planted, but so far none have come into bearing. It is very hardy and makes a fine growth.

THE GRAPE.—Our climate and valley seem to be especially adapted to the culture of the grape, and no line of fruit-culture promises to be more profitable. As our climate is especially adapted to raisin-culture, no doubt the raisin grape should head the list. We strongly recommend the Muscat of Alexandria and the Gordo Blanco. On poor or sandy soil we recommend the Malaga, as it will produce a good crop when the Muscat and Gordo Blanco will not. In the light of present experience, we do not recommend the Seedless Sultan.

For a shipping grape, we recommend the Flame Tokay as a grape prolific, hardy, and a grape which sells better than any other in New York and other Eastern markets. The Emperor, Cornichon, Muscat, Gordo Blanco and Malaga are all good grapes for Eastern shipment.

THE POMEGRANATE.—The pomegranate succeeds well in our valley and there seems to be a growing demand for it in the East. It is cheaply and easily propagated. The Japanese paper-shell seems to be the variety most in favor.

A. J. CHANDLER, Pres.  
E. KAYS, S. C., H. W. ADAMS, R. E. FARRINGTON, T. W. PEMBERTON, Board of Directors.

## METEOROLOGICALS.

## Forms of Atmospheric Disturbance.

NUMBER 1.

EDITORS PRESS:—In view of the many inquiries received at this office relative to the use and significance of technical meteorological terms, and for information as to the character of the various forms of atmospheric disturbances recognized by the science of meteorology, it has been deemed advisable to prepare for publication, through the PRESS, a series of circulars or bulletins which will briefly but yet comprehensively furnish the desired data. It is believed that this plan will serve to instruct the public on an important subject and assist in making the daily weather forecast of more practical value. The first circular will treat of

## The Cyclone.

About 50 years ago Piddington of Calcutta, East India, first applied the term cyclone to all circular storms of whatever area. The earliest published account of storms where the curving of the winds is recognized was by Captain Longford in 1698, in a paper on the West India hurricanes, which he called "whirlwinds." The term cyclone comes from the Greek cyclos,

which signifies, among other things, the coil of a snake. Its application to the most important of all meteorological disturbances is not intended to affirm that the area described by the storm is a true circle, but rather expressing sufficiently the tendency of the air to a circular motion. The word is now accepted by the leading meteorologists of the world as properly distinguishing a certain class of storms. The cyclone is a broad disturbance having a diameter of from 300 to 500 miles, and sometimes 1000 miles. It is a vast eddy in the atmosphere and moves along in that medium very much as the eddies in a stream of water. The air does not have an actual circular motion at any place within the storm area, but only a tendency to spiral movement.

But even this tendency is not revealed by reports from a single station. It is necessary to obtain observations from the entire area of disturbance, which, when plotted on a chart, discloses the general movement of the air gradually inward toward the center, where it rises to the upper cloud region and flows outward on all sides. This motion of the air gives rise to westerly winds south of the cyclonic center, southerly winds on the east, easterly winds on the north, and northerly winds on the west. At the center of the area there is a calm space 10 or 15 miles in diameter, known as the "eye of the storm." This is a very dangerous part of the cyclone for vessels to encounter, as they become motionless and are then suddenly caught at a disadvantage by the rear of the storm. The barometer is lowest at the center and increases outward to the circumference. The form of the cyclonic area is either circular or elliptical, generally the latter. The direction of progressive movement is from west to east under the influence of the rotation of the earth, and while not directly visible is apparent in the passing changes of the weather. The rate of movement is on the average about 30 miles per hour, being most rapid in winter, with a maximum of 50 miles, and least rapid in summer, with a minimum of about ten miles. The four quadrants of a cyclone have distinct and invariable characteristics as follows: In the northeast quadrant, great humidity, high winds, precipitation, and heavy clouds, especially in the southern portion. In the southeast quadrant, the maximum of heat and moisture, the region of all classes of local storms, especially the tornado. In the southwest quadrant, clearing weather, with dashes of rain in the eastern portion, falling temperature and diminishing humidity. In the northwest quadrant, the minimum of heat and moisture, general absence of clouds and brisk, cold winds. Some cyclones may preserve their identity in passing entirely around the earth, but the generality only make about one-third of that distance and then disappear in the general circulation of the atmosphere.

JOHN P. FINLEY,  
Lieutenant U. S. Signal Corps, in charge.

## THE STABLE.

### Buena Vista Stock Farm.

EDITORS PRESS:—The writer made a flying trip to Salinas City one day last week to see Buena Vista Stock Farm, owned by Mr. Hiram Corey. It contains about 2000 acres and is situated 2½ miles south of Salinas City, on the opposite side of the Salinas river. Since Mr. Corey's return from Europe some time in October, 1890 (where he had spent a year in travel with his family), he has laid the foundation of one of the prominent breeding farms of the Pacific Coast. He has selected a most advantageous place for his buildings and paddocks, surrounded as it is by high rolling hills with a gradual slope to the county road that leads to Monterey.

The main building, 42 by 126 feet, with a carriage-house 22x50 feet, is completed, as also the paddocks and two rows of low buildings containing box stalls 24 in number. Two artesian wells had been sunk. One had to be abandoned at a depth of 140 feet, and one that had been bored to a depth of 240 feet had choked with quicksand.

Mr. Corey's trip to Europe gave him a good opportunity to investigate the merits of pure-bred stock, and he was most favorably impressed with the value of the Shire and Suffolk Punch stock as the best class for draft horses.

At a horse show in Suffolk county, England, he saw over 600 Suffolk Punch show horses at one time and was convinced that a century of judicious breeding in this class had developed an animal that in points of excellence for the farm and team for hauling heavy loads was not excelled by any other breed.

He has recently purchased from the importation of Theodore Skillman the stallion Winston 1907, bred at Woodbridge, England, who took all first prizes and was never beaten in the show ring; also Gypsy Girl 2473, a two-year-old mare, and said to be one of the most perfect types of the Suffolk Punch.

He also purchased of Mr. Skillman the Shire stallion Good Enough, a fine specimen of a draft horse. At the head of roadsters and trotting stock is Trave, two years old, 15½ hands high, sire Alban 2:24 by General B. Norton, dam Alice out of the dam of Norval 2:17½, sire of Noraline.

He has also Prince of Oaks, sire Seven Oaks,

by Nutwood, dam Mallie by son of Whipple's Hambletonian. We expect to be able to give photo-engravings of these grand draft stallions and of Trave, one of the most promising animals of the Palo Alto stock, together with a full description of Mr. Corey's stud and of the Buena Vista Stock Farm.

H.

## THE STOCK YARD.

### The Smithfield Show and Its Lessons.

EDITORS PRESS:—I am rather long in coming forward with my notes on the greatest fat-stock show of the year, viz., that held at Smithfield, London, where, as before stated, there were on exhibition a total of 284 head of cattle, besides representatives of an even dozen different breeds of sheep and an exact half-dozen breeds of pigs.

The *Mark Lane Express*, in its opening remarks, says: "The Smithfield Club Cattle Show of 1890 was perhaps the best ever held. The entries were numerous and the quality of the animals was superb. We may add that the sheep and pig entries are larger than those of any previous year, and the total number of entries has only been exceeded on one occasion, viz., in 1883."

#### The Devons.

The Devons are first on the list in the catalogue. There were 31 animals exhibited in the eight classes for premiums. There were eight yearlings, and all of them that did not receive premiums were commended by the judges, so that they must have been a very superior lot of animals, for it is considered quite an honor at the best English shows to receive either an b. c. (highly commended) or a commendation (c.).

The *Agricultural Gazette* says: "The class for steers not exceeding three years old contains the breed champion, and the one selected for that honor is Her Majesty's first-prize winner in the same class at Birmingham, which was bred by Mr. G. Risdon and sired by Champion 1921 of Mr. John Risdon's breeding and fowl of Quartley blood. This well-fed steer is good in rump and round, while he is even and well-covered along the back with a lot of prime-handling meat, and can boast of excellent quarters."

The name of Quartley strongly reminds me of the fact that it is now within a few days of 30 years since I landed in California with a bull and two heifers of this same old blood. They were bred by the late James Quartley of South Molton, Devonshire, England, and were good animals imported for a wealthy San Francisco gentleman, along with five head of Shorthorns, from which latter there are a few pure-bred descendants, but from the Devons none have survived till this day pure. The importation proved to be nothing more than the gratification of a passing fancy, as many others have been, but more particularly with Shorthorns, because there have been more herds of the latter breed started, in name at least, many of which never got beyond the starting-point, however.

#### The Herefords.

There were 38 head of Herefords on exhibition. The *Farmer and Stock Breeder* says:

This popular breed has seldom been better represented. \* \* \* Yearling steers were the strongest class we have ever seen at Smithfield. The Birmingham competitors, numerous and good as they were, received a considerable accession here, and we are pleased to be able to add had better justice done them in the ring.

In a large class of two-year-old steers, Mr. Turner's steer, which was second to the Queen's at Birmingham, came to the front here. He is a remarkably good bullock, thickly fleshed and full of substance, wonderfully ripe for his age. He should unquestionably have received the breed cup. Lord Coventry's second steer, which was reserved at Birmingham, is second here. He is a massive steer, sired by Adelbert 8185, but not so well finished nor heavy as several others in the classes. Mr. Cook's reserve at Birmingham is third here, a useful, well-bred steer by Grove Wilton 3d 11295. It will thus be seen that Birmingham decisions have been freely disturbed.

The most glaring error of judgment was perpetrated in the class of three-year-old steers. The Queen's Birmingham winner, not by any means the best animal of his breed ever seen in point of character, should have had no difficulty in maintaining his position. He had, however, through no fault of his, to give way to Mr. Platt's upstanding bullock, which was not even commended at Birmingham. Mr. Platt's steer has a good middle-piece and handles a little better perhaps than the Queen's, but he is conspicuously deficient in his forequarters and very uneven in his flesh. Rather more than two cwt. lighter than the Queen's, which scaled over a ton in weight, he had no legitimate claim to the prominence conferred upon him.

#### Shorthorns.

The *Agricultural Gazette* confirms the general opinion of the wide-spread utility of this breed by saying:

It is customary to recognize the share that this breed contributes to an exhibition of fat stock by stating the number of entries in the Shorthorn classes. In real fairness to the number of these entries should always be added those made in the section for cross-breeds, for it will be a wonderful cross which has not Shorthorn blood on at least one side.

It cannot be said that the first class for Shorthorns in the Islington Hall (i. e., that for steers

under two years old) either gets (or deserves to get) the attention which is paid to at least three other breeds. In these the youngest (the most important) male class is commended in its entirety. But the Shorthorn yearlings are not. They are fairly heavy, as they average above 12 cwt. 3 qrs., when under 20 months, but they are of widely different types. H. M. the Queen takes first prize with a white, which is by a Scotch Shorthorn bull from a cow of that Cawlina family so long associated with the Shaw Farm.

In the class for steers two years old and under three, Mr. Cridlaw's roan, first at Norwich and Birmingham, also winner of breed cup at the latter place, is first in his class here and reserve as best Shorthorn.

Steers or oxen, three and under four years, are described as a good class, the Birmingham winner heading the list, and the Queen's very good bullock is here beaten by a white steer.

The class for heifers was certainly the best class of Shorthorns. The three, put atop, curiously fulfilled the limits of the breed; they were a red, a white and a roan, and the judge preferred the mixed to either of the whole colors. Of the Queen's champion heifer so much has been written that it seems best to write no more. Mr. Dunthie bred it; but it was removed to Windsor when only a calf, and the credit of bringing it out fairly belongs there. It does not show quite the rate of increase of Mr. C. Stephenson's Aberdeen-Angus-Retlence heifer, which was *rm*, but we think it was properly preferred even to that excellent butcher's beast. If the judges preferred Mr. R. Wright's white Oarew Pansy to Mr. C. Colard's Red Amy for the greater compactness of the former, we think they decided rightly; for it is undoubtedly a thing to aim at just now to get Shorthorns closer to the ground. The class for cows—as did that of the heifers—supplied three really first-class specimens of a class of cow always in great demand, i. e., those which will breed regularly and yet carry flesh.

The young classes of the Sussex breed are well thought of by the last-named paper, which says the class for steers, under two years old, contained twelve entries, and formed one of the best yearling classes of any breed in the show, being commended in its entirety.

#### Polled Aberdeen-Angus.

The entries of these cattle were not so large as last year. Some of the classes those for aged and youngsteers, were rather weak, but the high quality of the middle class of steers and among the heifers, made the collection of "doddies" an interesting section of the show.

#### Cross-Bred Cattle.

"Forty-four entries of cross-breeds comprised some of the best beef cattle in the hall, the display being equal to anything that has ever been seen at Smithfield."

The winners were nearly all a cross between a Shorthorn and some other pure breed, a Shorthorn Highland cross being the winner in a "formidable class of two-year-old steers."

For convenience, I have put the age, weight, and gain per day of the animals that made the best growth in each of the principal breeds, so that a comparison can be easily made.

DEVONS.			
Age in Days.	Weight in pounds.	Average gain per day.	
638.....	1229.....	1.93	
988.....	1549.....	1.57	
1292.....	1877.....	1.45	
Heifer under four years.			
1265.....	1630.....	1.37	
HEREFORDS.			
Steers.			
682.....	1603.....	2.35	
947.....	1826.....	1.93	
1406.....	2320.....	1.65	
Heifer under four years.			
1046.....	1816.....	1.76	
SHORTHORNS.			
Steers.			
562.....	1406.....	2.50	
988.....	2104.....	2.13	
1248.....	2303.....	1.85	
Heifer under four years, Champion of the Show.			
1015.....	1847.....	1.82	
SUSSEX.			
Steers.			
549.....	1314.....	2.45	
1040.....	1963.....	1.90	
1210.....	2004.....	1.74	
POLLED ANGUS AND GALLOWAY.			
Steers.			
722.....	1436.....	1.99	
1039.....	2072.....	2.10	
1416.....	1968.....	1.39	
Heifer under four years.			
1025.....	1900.....	1.90	
WELSH CATTLE.			
Steers.			
761.....	1692.....	2.22	
1217.....	2402.....	1.97	
Heifer.			
456.....	1352.....	2.96	
CROSSBREDS.			
Steers.			
594.....	1421.....	2.56	
1019.....	2192.....	2.15	
1328.....	2261.....	1.70	
Heifer under four years.			
1054.....	2063.....	1.96	

By the above it will be seen that the greatest gain per day had been made by a heifer of the Welsh breed ("very ripe and well-grown for her age") also that the steer of 1217 days had a gain of a fraction more than the Shorthorn steer of 1248 days; but it must be remembered that the Welsh heifer had the advantage of being nearly 100 days younger than any other animal in the table.

The following is from the *Mark Lane Express*

and shows how much can be gained by one animal at two exhibitions, the sum being equal to about \$1850.

#### "EXTRA" CLASSES.

The other classes did not present anything worthy of notice beyond the Queen's Devon.

Princess Josephine II, the Queen's champion Shorthorn heifer, was sold to Mr. John Jones, of Llandudno, for the unprecedented sum of £160. As she turns the scale at 16 cwt. 2 qrs., this price represents 1s. 9d. per lb. live weight, or, sinking the offal, by assuming one stone live weight equivalent to one Smithfield stone dead weight, it means beef at 3s. per lb. During the last ten days she has brought to her Royal owner the large sum of £535, and her performances deserve to be placed on record.

At Birmingham—

First class prize.....	£15
Best Shorthorn.....	50
Elkington cup.....	105
	—£170

At Islington—

First class prize.....	£20
Best Shorthorn.....	25
Best cow or heifer.....	50
Thorley's prize.....	5
Champion plate.....	105
	—£205

Won in prizes.....

Sold for.....	£375
	160

Total.....

£535  
The above is a large sum of money to be gained by one animal in so short a time, or in her lifetime for that matter, for it will be seen that she was not yet three years old—and she died. She was ailing at the close of the Smithfield show and did not live long enough to be killed for that "Christmas beef" into which her late purchaser contemplated turning her.

To show the way in which prize-money is distributed, some one has made the following calculation, viz., that in 11 years, 1878-88 inclusive, the money distributed at one of the principal English shows amounted to £17,216, awarded in 212 prizes to cattle, 121 prizes to sheep and 85 prizes to pigs, a total of 418 prizes. Of this sum, £9391 went to 62 of the winners—32 cattle, 18 sheep and 12 pigs.

Those interested in the color of winning Shorthorn cattle will observe that nearly all the prize animals of that breed at the English shows were either roan or white; not only that, but both the English and American champion Shorthorn bulls for the year 1890 were roan, as well as the English champion ox and champion cow, the latter winning over all other premium animals as best beast of any age or breed at the English fat-stock shows.

A correspondent in the *Breeders' Gazette* (Chicago) recommends the use of roan bulls for breeding beef cattle on account of their more generally thrifty character. Mr. Wm. Warfield, one of the highest authorities on Shorthorn cattle we have on this continent, in a recent issue of the same paper, writing on "Early Maturity—How Can It Be Attained?" after discussing the pros and cons of the matter, ends thus: "Where does the difficulty lie? In two places, I am afraid. The breeders of store cattle will not use good Shorthorn bulls of roan color as much as they should, and the shippers and butchers will not learn the wisdom that comes by observation; they prefer tradition. Cannot we join hands all around and make an effort to help on this good cause?"

There can be no doubt but there are many breeders with good herds of their own, who have observed the bad results from the folly of some other breeders, confining themselves entirely to the use of red bulls. That there are more roan bulls used by the best breeders now than there was a few years ago, I have no doubt, but still have my doubts about the "color craze" (for it is nothing else), being on the wane in this State, if I may be allowed to take my standard of judgment from the miserable fiasco witnessed at our late State Fair, when four of the best young bulls on the grounds, if not the best, (under three years old) were sent out of the ring unnoticed if not ignored by the judges because of their roan color. For my part, I have always been able to sell my best bulls at the highest prices, regardless of color, and I never had a white one left on my hands to a greater age than I have had red ones, and it has happened with me more than once that a white bull has been chosen in preference to a red one, simply because of his better quality, without any regard to difference in breeding or pedigree.

Another thing worthy of note from which a lesson may be taken is that some of the cross-bred or grade beasts ran the pure breeds a close race for the premiums, where the competition was open to all, and in more than one instance, the cross-breeds came out atop.

What I wish to call attention to is the fact that all the grade or cross-bred premium animals had either both sire and dam of two distinct breeds, or got by a pure-bred bull and out of a grade cow.

In no case was a prize animal in the four fat-stock shows named in these articles, got by a grade bull.

ROBT ASHBURNER.  
Baden Station. San Mateo Co.

ANOTHER HONOR FOR CALIFORNIA.—We noted last week the election of Ex Mayor Alvord to the presidency of the National Forestry Association. We now notice that Abbot Kinney of Los Angeles county was elected a vice president of the same association. The National meeting was held in Washington and much important business was transacted. A National forest system may reasonably be expected from the next Congress.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

If every farmer had read and studied the Patrons of Husbandry's "Declaration of Purposes," there would be many more Grangers in California. Farmers should post themselves about the Grange. It is an Order with a history—with a history noted for its conservative requests—and much of that history for the past 25 years has been ingrafted into the live, fresh, earnest thought of the day. Stand by the Grange, for it is safe, conservative, progressive and sincere; not trimming sails to popular breezes, but educating, elevating and assisting farmers everywhere. You owe the Grange many words and acts of kindness. It has helped you many times while you were sound in sleep; for just then somebody was running a pen, which via the newspaper brought you words of cheer, or perhaps aided in defeating some bad legislation, or possibly assisted in passing some good law. Kindly remember the Grange, and as kindly work for it.

The *National Farm and Fireside* of Jan. 24, conducted at Washington, D. C., by Bro. Alex Wedderburn, published a splendid likeness of Bro. X. N. Chartiers, the Worthy Master of Virginia State Grange and one of the members of the efficient Executive Committee of the National Grange. We all say, when looking at the likeness, "How are you, Virginia?"

The Grange wants the farmers to think; to be thoroughly posted; to act intelligently and together; to expose and denounce wrongs in all places and in all persons; to distinguish between a patriot and a partisan, between a demagogue and an honest man; to ally, and not excite, passion; to relieve distress; to educate the orphan; to avoid litigation; to increase happiness; to diminish crime; to encourage public and private economy; to reward its friends and to watch, with sleepless eye, its foes; to love country; to practice what it preaches, and to hurry the time when "the greatest good to the greatest number" shall be more universal than it now is. Do you want to be a member of such a fraternity? Then send your name to the nearest subordinate Grange of the Patrons of Husbandry.

The Grange presents a great, big platform to those who fully comprehend it. There are thousands of the brightest men in America who stand upon it, and there are thousands of the purest and best women in the world who endorse every word of that platform. Read the Patrons' Declaration! It is a public document and can be had of any subordinate Grange. Take one hour to read the document that has forever immortalized a former son of California.

Plant a seed of thought in good soil!

Do something for Washington's Birthday this year. Your Grange may meet on the third Saturday (Feb. 21st), so prepare something for the memory of the man who pruned the cherry tree with his little hatchet. Let us keep fresh in our minds the memory of "one who could not tell a lie."

"Strike while the iron is hot" is a trite saying. But who is to heat the iron? Who build the fire? Who find the fuel? Now to apply the thought to the Grange, who is to hunt up the charter list for a new Grange? Which Deputy will institute the first Grange? Whose names will be on the first charter list? Let him or her who will, answer.

How much did you assist the Grange last year? How many Harvest Feasts did you attend? Would you miss one feast for the dues you pay during the entire year? Honest now! Then try to do a little more for the Grange! Get just one application for membership.

Plant a forget-me-not in your garden and forget-me-not in your kindest recollections.

Send a valentine to your Grange. Let it be an application for membership of a worthy person!

Being frequently asked why the subordinate Grange cannot initiate a brother for one dollar and a sister for fifty cents, let me say the reason is, because the State Grange of California has never yet said so. When the State Grange says so, the fee can be reduced, not before; and thirty days' notice, prior to the meeting of the State Grange, must be given, else the State Grange cannot act.

"Children's Day" will be observed by the Granges of Sonoma county on the last Saturday of June. The exercises will be held at Bennett Valley Grange hall. Already the committees are at work. Who comes next with the celebration of this day?

Attend your Grange meetings and you will soon find something to do; something to get in-

terested in; something to work for, and some way to do that work. Try the Grange!

Bro. H. E. Hayes, the efficient, progressive, aggressive and successful Master of the Oregon State Grange, is doing some valuable work in California. His voice is strong; his convictions are sincere; his observations run over many years; his opportunities have been great, and his zeal and interest know no bounds. He is an interesting speaker with the courage of his convictions at his perfect command, and he hews to the line let the chips fall where they may. The membership of this State ought to be very anxious to hear Oregon's silver-tongued Master. Hear him, if possible, and then go tell the story to all the farmers in your neighborhood.

Masters of subordinates, get your officers often together. See they have their work. Get them interested. Make your Grange the best in California, and do so at once!

How many unaffiliated Patrons in your jurisdiction? Hunt them up and get them to affiliate with your Grange.

Obey the Constitution and Laws of the Order. Nothing is gained by "a free-and-easy" time. Be prompt; be courteous; be strict; be right; and your Grange will increase in usefulness and in numbers.

Who is going to take the lead in California in collecting donations for the Temple to Ceres? The Committee on Woman's Work?

## "Axioms From Webster."

EDITORS PRESS:—Judge W. O. Blackwood in his address published in the PRESS of the 17th inst., writes: "No legislative body can have any moral right to enact laws whereby one class in the commonwealth may grow rich at the expense of other classes," quotes from one of Webster's early speeches, as given by Messrs. Carlisle and Mills in their minority report on the McKinley bill in support of his "axiom."

I, with many of the readers of the PRESS who have personally listened to his eloquent periods and unanswerable logic, reverse his teachings and his memory, but who, unlike Messrs. Blackwood, Carlisle and Mills, have read his later as well as his earlier speeches.

In a spirit of candor, of fidelity to his memory, of historic accuracy, permit me to quote from the "Great Webster's" later utterances, soon after the teachings of his college professors had been dispelled by a study "of figures and markets."

In a speech at Niblo's saloon, N. Y., he said: "I am in favor of protecting American industry and labor, not only as employed in large manufacturing, but also as employed in the various mechanic arts, carried on by persons of small capital, and living by the earnings of their own personal industry."

"If duties were to be abolished on hats, boots, shoes and other articles of leather, and on the articles fabricated of brass, tin and iron, and on ready-made clothes, carriages, furniture, and many similar articles, thousands of persons would be immediately thrown out of employment in this city and in other parts of the Union. Protection, in this respect, of our own labor against the cheaper, ill-paid, half-fed and pauper labor of Europe, is, in my opinion, a duty which the country owes to its own citizens. I am, therefore, decidedly, for protecting our own industry and our own labor."

In the last and perhaps the greatest tariff speech he ever made, he says of these utterances which Judge Blackwood quotes ingenuously: "But sir, before I proceed further, I will take notice of what appears to be some attempt, latterly, by the republication of expressions and speeches of mine at an earlier and later period of my life to place me in a position of inconsistencies on this subject of the protective policy of this country. Mr. President, if it be an inconsistency to hold an opinion upon a subject of public policy to-day in one state of circumstances and to hold a different opinion upon the same subject of public policy to-morrow in a different state of circumstances, if that be an inconsistency, I admit its applicability to myself."

In this speech he eloquently says: "The interest of every laboring community requires diversity of occupations, pursuits and objects of industry. The more that diversity is multiplied and extended the better. To diversify employment is to increase employment and to enhance wages. And, sir, take this great truth; place it on the title-page of every book of political economy intended for the use of the Government; put it in every farmer's almanac; let it be the heading of the column in every mechanic's magazine; proclaim it everywhere and make it a proverb, that where there is work for the hands of men there will be work for their teeth. Where there is employment there will be bread. It is a great blessing to the poor to have cheap food, but greater than that, prior to that, and of still higher value is the blessing of being able to buy food by honest and respectable employment."

"Employment feeds, clothes, and instructs. Employment gives health, sobriety and morals. Constant employment and well-paid labor produce in a country like ours, general prosperity, content and cheerfulness. Thus happy have we seen the country. Thus happy may we

long continue to see it." And thus happy have we long seen the country under protection.

And he continues, to which I particularly call Judge Blackwood's attention: "I hope I know more of the Constitution of my country than I did when I was 20 years old. I hope I have contemplated its great objects more broadly. I hope I have studied with more care the condition of country when the convention assembled to form it. And now, sir, allow me to say that I am quite indifferent, or rather thankful, to those conductors of the public press who think they cannot do better than now and then to spread my poor opinions before the public." H. W. A.

Point Arena, Jan. 29, 1891.

## Meetings of W. M. Hayes.

Hayes at Yuba City.

EDITORS PRESS:—It is with more than ordinary pleasure that I undertake to record the visit of Worthy Master H. E. Hayes of Oregon State Grange to Yuba City Grange on Saturday, Feb. 7th. In contemplating the grand treat of so distinguished a visitor, we have lost sight of the slight misunderstanding as to the appointments provided for Bro. Hayes. It was the regular meeting of the Grange; that, and the desire to see and hear the noted Oregon orator, brought out a large attendance, together with numbers of neighboring Patrons. Bro. A. D. Logan, an original Sutterite I might say, was also with us and enjoyed the shake accorded him by his old neighbors and friends. Our young and talented Master, W. D. Woodworth, called the meeting to order, and after the usual routine labor was performed a recess was declared and the doors were thrown open to the public. After the rendition of some excellent music, Bro. Hayes was introduced to the large audience (every seat being occupied and still they came), when he spoke for nearly an hour and a half, delivering one of the most interesting addresses ever listened to in these parts. No report of mine can do the speaker justice as he rapidly and lucidly sketched the rise and progress of the Grange and the farmers' organizations. He gave us a glimpse at the raw agricultural material of the anti Grange era when not a farmer in a hundred could preside at any sort of a meeting, while now almost any young lady Patron could manage a gathering in the most approved style.

Since the organization of this Order, others had taken place and all were subserving a useful purpose. Just as all the people could not join one church or party, so all could not belong to one Order, but in the variety all could be accommodated, and all should identify themselves with some organization, since it is the age of organization and combination without which the agricultural classes could not wield the influence due their members. He gave a gratifying account of the influence now wielded at the seat of Government by the Patrons of Husbandry, as he himself had witnessed during his recent visit to Washington and the Eastern cities. One of the grandest steps in the march of progress of the Order was the admission of woman on a perfect equality with men, the Grange being the pioneer in this direction of all former organizations.

The speaker paid a glowing tribute to the educational features of the Order and commended it to the young, who, with these advantages over those of their parents, could take these graduating lessons after retiring from their schools and colleges. As showing the work of the Order, Bro. Hayes cited many reforms that were due to the efforts of the Grange. Among these were the Granger railroad cases, the making of the Commissioner of Agriculture a Cabinet officer, the Interstate Commerce law, although this had been switched off somewhat from its original purpose.

He dwelt on the silver question and couldn't see how free coinage could injure any one, especially the producers and wage-workers. He spoke of the adulterations of food, and how it injured our markets, and said its consideration in Congress was due to Grange influence. He discussed the loan system as proposed in certain quarters, and failed to see why the Government could not loan the farmers money on credit as well as to the banks.

The speaker illustrated the value of co-operation, and thought if entered into as we might and should, all grievances could be rectified with ease.

Bro. Hayes was listened to with profound attention, and was loudly cheered as he took his seat. His closing remarks, concerning his long trip and his fraternal receptions, were feelingly expressed, and he extended a general invitation to all to come and visit his State. In conclusion, a short literary program was rendered and the audience departed, feeling grateful for the enjoyment of the day. Fraternally,

Yuba City, Feb. 9, 1891.

## Cordial Reception of W. M. Hayes.

EDITORS PRESS:—Yesterday the Patrons of Magnolia and Eureka Granges were entertained with a very instructive talk by W. M. Hayes of the State Grange of Oregon, who will speak at different points in California before going home. It did our hearts good to hear Bro. Hayes, and we most regret that he cannot stay right with us and teach us lessons of political economy every day. We could not get tired of him. We are glad, though, to

know that he will speak to other Patrons and stir them up also. None can afford to miss hearing him. We know him now and would go many miles to hear him again. Come again, Bro. Hayes. We shall be glad to welcome you here again before you leave the State.

Last Saturday, Eureka Grange installed its officers for the ensuing year. We are few in number, yet we are still alive and able to work. Eureka Grange has started out resolved to have an exhibit at the next State Fair. A committee was appointed to confer with the other Granges of the county and have a union exhibit. Yours in F., H. and O,

B. A. GIANTVALLEY.

Auburn, Cal., Jan. 30.

Bro. Hayes at Elmira.

EDITORS PRESS:—H. E. Hayes, Master of the Oregon State Grange, arrived here from Sacramento on the 4 P. M. train and was escorted to the Stanger House by the writer. At the appointed hour we repaired to the Christian Church, which had been kindly proffered for the occasion, and were greeted by a few earnest men and women who had come out to hear Oregon's live Master Patron. For one hour and a half Bro. Hayes held the audience spellbound; every eye was riveted upon the speaker throughout his discourse. He began by a review of the history of the Grange from its earliest inception, expounding the righteous principles upon which it was founded, the absolute necessity of becoming organized if this community as well as every other agricultural section would hold an even hand with other industries of the land. He thoroughly surveyed the whole field of grievances of which the farmer complains and clearly pointed out the best remedy devised from a Grange standpoint.

At the close of Bro. Hayes' address, brief remarks were made by the writer and others, and I believe that the Grange can be revived here, though it is the opinion of some of the best farmers here that if the Grange is re-established at Dixon and Vacaville, between the two the needs of the community will be fully met.

We go to Dixon to-morrow and expect to meet a large audience there to-morrow night. Will give you a report of the meeting in time for Saturday's issue of the PRESS. F. B. L.

Elmira, Feb. 10.

W. M. Hayes at Santa Rosa.

EDITORS PRESS:—Santa Rosa Grange extended an informal reception to W. M. Hayes of Oregon, on the evening of Feb. 4, at the home of Past Master Coulter in the suburbs of Santa Rosa. The evening was pleasantly passed in interchange of greetings and a good talk from Bro. Hayes.

The next morning, a dozen Santa Rosa Grangers escorted Bro. Hayes to Two Rock Grange hall, it being their regular meeting day, and saw the third and fourth degrees conferred on a class of ten. The officers of this Grange, with the exception of Master and Secretary, are newly elected, and deserve much praise for the creditable manner in which the work was rendered. Only three rituals were seen, two of those being used by minor officers. The hall is new and one of the pleasantest I ever visited. I think our W. M. of State Grange would hardly criticize their work if he should visit them. A bountiful feast was spread at noon in their banquet-room by the Two Rock Matrons, in a manner never excelled by any other Grange. At an open meeting in the afternoon, we listened to a twenty-minute prelude by Bro. Coulter, followed by Bro. Hayes. Both addresses received the closest attention and were frequently applauded. I was told that another class was being started, one name having been sent in. Wonder if Two Rock Grange will be the banner Grange this year? I think it begins to look like it.

Bro. Hayes left early this morning for Yuba City. ONE WHO WAS THERE.

Bro. Hayes at Two Rock.

EDITORS PRESS:—Two Rock Grange entertained Bro. Hayes on Feb. 5th. The day opened with rain, but clear weather prevailed after sunrise.

At 10 A. M. the members of the Grange began to assemble. The decorations of the hall and preparations for conferring the degrees were soon finished, when Grange was called to order and the regular business transacted until conferring degrees was reached, when the W. S. announced that Bro. Hayes, P. M., S. T. Coulter and a large delegation of Santa Rosa Patrons were in waiting in the ante-room. He was directed to admit them, and after introductions and hand-shaking, work was taken up in the third degree and a class of ten initiated into its mysteries.

After recess, Grange was opened in the fourth degree and the same class was again brought in and made Patrons of Husbandry—Bro. Hayes officiating and exemplifying the unwritten work.

The ceremonies were rounded out with the Harvest Feast. After all had partaken, Grange was called to order in open meeting, when Bro. Coulter was introduced and made one of his usual practical speeches.

At the close of his remarks, Bro. Hayes was called up and delivered an address replete with good sense, wit, and earnest, thoughtful advice and counsel, when the audience dispersed. I wish to commend the interest taken by our members. Out of a total membership of 60, 54 were present.

Bro. Coulter took Bro. Hayes home with him, and by this time I hope he is sowing the

good seed among the farmers of the Sacramento valley.

Bennett Valley Grange was represented at our meeting by Bro. A. P. Crane, but to our regret none of the Sebastopol brethren were present. I presume that our invitation was not received in time. We only knew a short time before that we could secure Bro. Hayes in this county, and then we had to rush things to get ready; called two special meetings in less than a week.

We received two applications for membership at this meeting, and I think the results of the day's work will add many more to our numbers. It is true that our growth may be retarded by the Alliance boom. We have Alliances to the right of us, Alliances to the left of us, and Alliances in front of us, volleying and thundering; but conscious of the rectitude and the noble purposes of our Order, we will ever cherish and hold fast to the grand old Grange and will aid in promoting the welfare of the Order according to our ability—knowing full well that while other farmers' associations may equal it, none can surpass it in usefulness and the inculcation of the higher principles of manhood and womanhood among its members.

Two Rock, Feb. 9.

A. P. M.

Meeting at Dixon.

EDITORS PRESS:—There was a very fair attendance at the meeting at Dixon hall to-night appointed for Bro. Hayes' lecture. Just before the opening of the meeting, E. W. Davis, W. M. State Grange of California, entered the hall, lending cheer and encouragement to the assemblage.

Mr. McCune, a prominent farmer, was chosen Chairman of the meeting and Mr. McMahon Sec'y. W. M., Hayes was introduced and entertained the audience for 1½ hours, eliciting profound attention, followed by California's Worthy Master in his usual able and instructive style. Considerable interest was awakened, and after brief remarks by a number of citizens commendatory of the objects of the Order of P. of H., it was moved and carried that a meeting be announced for Saturday, 1 P. M., 21st inst., for the purpose of reorganization of Dixon Grange—a number of persons desirous of entering the organization being either temporarily absent or living at some distance away. A sufficient number has signed petition to organize.

Dixon, Feb. 10.

#### Capt. Hayes in Colusa.

It is hoped that some appointments will be announced in local papers for meetings for Worthy Master Hayes of Oregon next week in Colusa and adjoining counties. As the period of notice must be short, extra pains should be taken by Patrons and farmers to extend information of so important farmers' meetings.

#### California Farmers' Institutes.

##### Action of the University Regents on Grange Petition.

Reports of the regular meeting of the Regents of the University, on Tuesday of this week, state that a special committee reported on the request of the State Grange that Prof. E. J. Wickson be authorized to travel throughout the State to lecture and instruct farmers and others in the agricultural districts as to the best crops to plant in their sections and how to raise them, and to carry into effect a system of farmers' meetings, similar to those in operation in Wisconsin; that his present title be changed to "Assistant Professor of Agriculture, Horticulture and Entomology;" that an assistant in entomology, at a salary not to exceed \$1800 per annum, and a veterinarian, at a salary not to exceed \$1500, be appointed; that Dr. R. H. Loughridge be appointed assistant in agricultural geology and agricultural chemistry, at a salary of \$2000 per annum. The full report of the committee will be printed and a copy sent to each Regent. It will be acted on at the next meeting.

#### Celebrate Washington's Birthday.

We hope that every Grange will have patriotic exercises commemorative of the birthday of the Father of our Country. It is one of the best occasions of the year to bring out the patriotic spirit and talent of our young folks. Let the Lecturer, with the Committee on Woman's Work, in each Grange, take this matter up and give the young folks a benefit and the old folks the pleasure of a well-spent day in the encouragement of the rising generation. As a rule, we should say, invite all the children of the neighborhood and make an object-lesson of one of the benefits of the Grange.

THE annual meeting of the State Grange will be held at Haywards in October, 1891, and this town will have for nearly one week 600 to 1000 visitors to feed and entertain. We understand the Native Sons' hall has been secured in which to hold the sessions of the Grange, and although the time of meeting is some time ahead, we speak of it now so that the citizens may have ample time to discuss the importance of a visitation of this kind. It will be to our interest to make the visit of the representatives of this Order pleasant while with us, that their recollection of our little town may be most agreeable.

—Haywards Journal.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

### The Kansas Senatorial Contest.

We have read with a great degree of interest and some small degree of amusement, the very varied comments of the press on the result of the recent Senatorial contest in the Kansas Legislature.

While some of the more liberal are inclined to be generous, and allow the industrial classes to organize on the same basis, and to the same ends that other professions have for many years been organized, it is quite noticeable that large numbers of the so-called corporation and political boss press are making faces, and throwing out such epithets as "fool," "knave," etc., and are employing the usual tactics to browbeat, and failing in that, to scatter the influence of the Alliance; but it will be found later that the Alliance has come to stay, not necessarily as a political organization, but for more practical purposes, and that for the next quarter of a century or more it will, in some way or other, out something of a figure in politics—just how, will depend largely on the action of the old political parties.

If the Democratic and Republican representatives shall meet in our legislative halls and rectify the mistakes (?) of their predecessors by passing laws in the interest of the general community, well and good; the Alliance will feel no need of a political organization. If, on the other hand, they continue the practices of their predecessors; if they introduce bills that if enacted into laws would be for the public good, but with the understanding that they are to die in the committee-room, and substitute in their stead laws for the upbuilding of the few at the expense of the many; if the old parties shall continue to elect men to make our laws who through ignorance or design will clothe the law in language that the most intelligent of earth do not and cannot understand alike; if they shall continue to nominate and elect Judges for our courts whose decisions shall be a direct contradiction of the law itself; if the one party shall oppose a good law purely because it was introduced by the other, and thus flit away their allotted time with great expense and no profit to their constituents, while the business, social and moral interests of the State are suffering for wholesome laws—then what? As an Irish friend once eloquently remarked, "God only knows, and He won't tell."

It seems that in Kansas the capitalists and political bosses had hoped, by combination or otherwise, to defeat the wishes of the masses or divide the votes of their representatives and thereby re-elect Mr. Ingalls. Failing in this, their hope now is that the man who was chosen in his stead will be recreant to his trust and untrue to his constituents, or perhaps still better, incompetent for the responsibilities that await him. In this it is hoped they will be disappointed. Efforts will doubtless be made to corrupt or weaken him and his coopers in our State and National Legislatures. If those efforts should be successfully made, then the industrial classes (should they conclude to go into politics to stay) will have to turn to the practice we have always advocated, to wit: to elect no one to serve them in public office unless he is true and tried and except his interests are their interests.

The idea of electing a man to make laws for the people to live under, whose livelihood depends on keeping the laws badly confounded, has always seemed ridiculous.

It appears that two or three of our State Legislatures are under the control of the Alliance members, but the victory is not yet. We conjecture that every effort will be made to impede their progress and that many stumbling-blocks will be thrown in their way. Should they surmount the difficulties before them as lawmakers, they may find themselves confronted by executive and judicial officers, bent on destroying the fruits of their labor. In this event, brethren, the remedy is simple and easy of access: Change your constitutions so as to enable you to elect men from the various walks of life, men who are interested in good government and fair play, to occupy the bench.

But it is to be hoped that the leaders of the two old parties will profit by the lessons they have learned, that wholesome laws will be made, and that they will be honestly and intelligently administered. To this end let us hope and pray.

AN IMPERATIVE DUTY.—Every Alliance, State, County and sub, should demand emphatically, repeatedly, vociferously, that the Government foreclose upon the Union and Central Pacific roads and seize upon the numerous branch lines constructed from money due it by them; when so taken possession of to operate directly for the people. These roads owe \$70,000,000 compounded at six per cent since '65—enough to pay for half the actual cost of every railroad west of the Mississippi. The Government operation of railroads is bound to come, sooner or later, and the Alliance should make every effort to have this opportunity taken advantage of, both for the living and generations yet to come.—Farm View.

## San Joaquin, Stanislaus, Etc.

EDITORS PRESS:—There are now in San Joaquin county 17 Farmers' Alliances with a total of nearly 500 members. As the work in Stanislaus county has been in the hands of Bro. J. S. Witherell of Ceres for a month past, I do not know the exact number of Alliances in that county, but there are at least eight, with a total of say 300 members. I have found brothers in this county to assist in Calaveras, Amador and Sacramento counties—at least they have promised to do so and have been commissioned: Bros. Edward Davis and J. H. Duncan of Linden for Calaveras county, Bro. D. M. Town of Elliott for Amador, and Bro. J. M. Benson of Elliott for Sacramento. Bro. J. D. Huffman of Lodi is also commissioned for Sacramento county, but is at present hindered from work there by jury duty. Bro. Duncan is County Deputy for San Joaquin.

If I should begin to enumerate the kindnesses and assistance I have received in this work, I would scarce know where to stop; but I will say that I am particularly indebted to Bros. F. L. Bourland, Woodbridge; E. G. Williams, Stockton; and E. L. Moore, Atlanta, for unusual favors.

I send you a copy of the Constitution adopted by the San Joaquin County Alliance and also the General County Regulations approved by that body and submitted to vote of the entire membership for adoption. I call attention to the provision regarding "Expression of Opinion" and Section 3, Article I, Constitution. The provision regarding expression of opinion has also been adopted by Stanislaus county in a somewhat different form.

County Organizer J. H. Duncan of Linden will no doubt keep you posted regarding this county from now on, and Sec'y J. O. Davis or Lecturer J. S. Witherell regarding Stanislaus county.

In addition to regular work of organizing sub-Alliances, I have spoken, in the last three weeks, at Waterloo, Farmington, Linden, Ballota and Macville for the benefit of sub-Alliances already formed, taking in 55 candidates at those places.

F. P. Cook,  
Deputy State Organizer.

Stockton, Cal. Feb. 3 1891.

### For Industrial Reforms.

At a recent session at Washington, D. C., of the Council of the F. A. and I. U., a resolution was adopted petitioning Congress to enact a law providing that all U. S. vessels carrying full outgoing cargoes, two-thirds of which shall consist of home agricultural products, shall be allowed to enter and discharge, free of duty at any U. S. port, all returning cargoes consisting of manufactured products.

The Committee on Plans recommended the formation of Congressional District Alliances in each State and Territory, with a Lecturer in each district.

Several measures recommended by the Omaha convention were adopted—among others, the sub-treasury and free-coinage bills and anti-lottery law.

L. L. Polk, President of the Council, A. E. Cole of Michigan and U. S. Hall of Missouri were appointed a Standing National Legislative Committee.

A resolution was adopted providing for the formation of an Alliance Press Bureau of Information at Washington to collect and disseminate authorized Alliance literature for the use of the press.

### A Candid Opinion.

A vigorous but conservative member of the Farmers' Alliance writes as follows:

I have been opposed to extreme ideas, and have only come to believe in Government ownership of railroads to save the Government from being cheated out of the whole amount due. I feel sure the railroads of the United States are rushing headlong toward the absolute Government ownership of the roads. The popular clamor has now reached such proportions that all that seems wanting to cause conservative men to join the cry is for the railroads to keep crowding the producers a little harder and doing in fact just as they are doing; but I want the action of the Government to be deliberate and not hasty. We don't want any such mistakes as negro suffrage has proven to be, perpetrated again.

CO-OPERATIVE STORES.—At a recent meeting of the San Jose Alliance, C. H. Dawson read an interesting paper on the above subject, stating that the Leeds (Eng.) Co-operative Society was established in 1847 and has been a great success. Its profits for the last fiscal year were \$416,890. Several members discussed the feasibility of establishing a co-operative store, and the matter was referred to a committee of five. The question of securing co-operation of other Alliances to obtain needed reforms was referred to the Legislative Committee. County Lecturer Rigdon was commended to the attention of sub-Alliances. Two applications for membership were received and two new members initiated.

CALAVERAS ALLIANCE, No. 1, has been organized at Stone Corral, with 18 members. President, J. M. Sinclair; Sec'y, Froane Gregory. The credit for the organization is due to Deputy State Organizer Frank P. Cook, whose labors were unremitting and who secured the good-will of all.

## Alameda County Rural Homes.

(Continued from Page 133.)

pear, peach, apple, prune, fig and persimmon trees into beautiful grounds skillfully laid out about the house; here lawns, flowers, hedges, palms and pampas intermingling with ivy, oranges and acacia with a luxuriance truly Californian. From the thrifty orchard on the west, outlined by a row of tall poplars, to the broad eucalyptus groves extending back to the extreme eastern boundary, this farm is a practical and exquisite piece of landscape farming.

The lower engraving shows the house, but only a very limited portion of the grounds, of "Lanrel Farm," the property of J. H. Strobbridge, best known to RURAL readers during the last decade as a leading importer and breeder of Spanish merino sheep, but Mr. Strobbridge's chief public work has been as superintendent of construction during the difficult building of the Central Pacific across the Sierra. The engraving presented herewith gives but a faint idea of the place; to appreciate it fully one should see the admirable surroundings, the hills, the river, the groves, the orchards, the whole joining together to form a picture of rare beauty and variety—a pleasant retreat indeed for one who has led a laborious and busy life, such as that of Mr. Strobbridge in his responsible position. Here he is enjoying the comforts of life surrounded by his estimable family. In his stables he has a number of fine horses, foremost among which is Centello, a handsome three-year-old stallion by Antevolo, out of Electioneer, whose dam was sired by Geo. M. Patchen, Jr., from a thoroughbred mare. Every arrangement of the place seems perfect and appropriate, comfort and beauty being equally consulted. It is with pleasure that we present this illustration of one among the many of California's choicest country homes.

### A New Rule for Importing Animals.

Collector of the Port Phelps has received the following circular from Acting Secretary Nettleton of the Treasury Department, Washington, D. C., relating to the importation of animals for breeding purposes only:

Upon the recommendation of the Secretary of Agriculture, who states that the production of the certificate of registry with the affidavit of identification is considered sufficient to indicate the purity of breeds of imported animals, Department Circular of October 30th last (Synopsis 10,305), is hereby amended so that upon the entry of animals claimed to be specially imported for breeding purposes, under Paragraph 482, free list of the Act of October 1, 1890, the "certificate of purity of breed given by the breeder of the animals" will not be required.

The other proofs, however, provided by said circular, including the duly authenticated Consular invoice, certificate of identification, signed and sworn to by the importer, and the certificate of the pedigree of the animals, must, in all cases, be produced.

### Reduced Letter Postage.

At the annual meeting of the Eastern Nurserymen's Association, held in Rochester, January 28, 1891, it was unanimously resolved that it would be for the general interest, and that nurserymen are in favor of a reduction of letter postage to one cent. A special committee was appointed to invite the co-operation of other business societies and the support of the press. Their circular adds: "Will you lend your assistance to the measure? We learn that the Postmaster-General has recently asked for suggestions from many postmasters on this matter. Please see your postmaster and give him your ideas favorable to such a change at once; also call it to the attention of organized societies and Boards of Trade, etc." The secretary to whom communications may be addressed is Geo. G. Atwood, Geneva, N. Y.

CONCERNING SPECIMENS FOR EXAMINATION TO THE EXPERIMENT STATION.—Prof. Hilgard informs us that great inconvenience frequently arises from the omission to place the sender's name and address on sample packages sent separately from letters concerning the same. Those desiring replies to their questions should remember that others besides themselves are sending specimens, and that the trouble arising from the omission mentioned is not only a gratuitous and vexatious addition to the labor of examination, but must frequently result in a failure of identification and a consequent omission of the sample from consideration. Then the Station is blamed, when in reality the fault lay in the neglect of the sender to take the slight trouble of putting at least his name on the sample package. The station would be entirely justified in refusing to consider any specimen arriving without such mark.

DEATH OF COL. PATTERSON.—The older readers of the RURAL will hear with regret of the death of Col. J. M. Patterson of Alameda county. He had passed his eightieth birthday. Twenty years ago he was associated with his brother John D. Patterson, who was one of the earliest and most extensive importers and breeders of fine wool sheep in this State. He retained his mental and physical vigor and activity remarkably to his latest years.

### Longing.

Of all the myriad moods of mind  
That through the mind come thronging,  
Which one was ere so dear, so kind,  
So beautiful as longing;  
The thing we long for, that we are  
For one transcendent moment  
Before the present poor and bare  
Can make its sneering comment.

Still, through our paltry stir and strife,  
Glow down the wished ideal,  
And longing molds in clay what life  
Carves in the marble real.  
To let the new life in you know  
Desire must open the portal;  
Perhaps the longing to be so  
Helps make the soul immortal.

Longing is God's fresh heavenward will;  
With our poor earthward striving,  
We quench it that we may be still  
Content with merely living.  
But would we learn that heart's full scope  
Which we are hourly wronging,  
Our lives must climb from hope to hope  
And realize our longing.

Oh let us hope that to our praise  
Good God not only reckons  
The moments when we tread His ways,  
But when the spirit beckons;  
That some slight good is also wrought  
Beyond self-satisfaction,  
When we are simply good in thought,  
Howe'er we feel in action.

—James Russell Lowell.

### Ben's Old Hat.

An auction was going on at the old yellow farmhouse on the hill. Bachelor Barker was dead, and his heir, a young nephew he had never seen since the boy was four years old, had come down to sell things off. Rumor said that he intended to tear down the old house afterward, and take money from the bank and build a fine new residence with a mansard roof.

"It is a shame," said one or two. "Such a pity Barker did not make a will. He must have had some intentions about such a property. He never could have intended all that wealth to go to a boy he did not like enough to ask him over for the summer."

The doctor felt sure he would have founded a hospital and placed him in it as resident physician for life, if the will had been made.

The clergyman knew he meant to do something for the church. The professor had heard him speak of a free library and reading-room. Every one knew something, and all the far-away cousins had expected legacies.

Every one thought the arrangements all wrong but the heir and the auctioneer, who had made an inventory of the old furniture—the tall clock, the andirons, the solid table with leaves, the spinning-wheels, big and little; the fiddle-back chairs, and all those other possessions adored by the fashionable to-day, but utterly despised twenty years ago as "old things not worth keeping."

The young heir would, if he built his villa, furnish it with "eets" of the latest style, with Brussels carpets with white grounds and bright wreaths of roses scattered over them.

"Can't get much for the old stick," he said; "but I'd like to clear up and be done with it."

Miss Camiola Brown, sitting at the front up-chamber window, cutting out calico short-waists for Mrs. Black's five little boys, laid down her shears for once in her life, and, with her elbows on the sill, watched the people as they walked or drove past and entered in at the gates of the late Mr. Barker's premises.

"Poor Benjamin!" she sighed; "I wonder whether up in heaven he remembers the day when he took me in and walked me all over the house?"

"The things are old-fashioned, Camiola," he said to me; "but they were mother's—and before that they were grandmother's. I like them, but say the word and I'll new furnish." "No, Ben," says I; "what your ma liked to have I don't want to alter. I like it all; it's good stuff; and then he kissed me."

Miss Camiola felt for her handkerchief as she said this to herself. "And we stood at the grand widow and looked off toward the mountains. 'We're going to be happy as ever folks were,' said he; here the tears began to fall. 'O Ben!' she sobbed; 'to think we quarreled after that and didn't speak when we met. But you never married, and I refused two offers—good ones. Ben, I guess we'll meet up there some time and make up.'"

Poor old Camiola put her head down on her arms and cried softly among the purple blossoms of the wisteria that veiled the window. No one could see her from the road. But her tears dried soon, and she came back to the present.

They were selling the old furniture at auction. The claw-footed sideboard, the settle, the big mahogany cradle in which four genera-

tions of babies had been rocked—all these dear old things that once were to have been here as Benjamin Barker's wife; and she was a poor seamstress, an old maid going from house to house for her board and fifty cents a day; looking forward to feeble old age, and with an awful dread in her soul of becoming "town poor" at last.

If she had married Ben, how different it would have been.

"Why, Miss Camiola! you've been a cryin'," said Mrs. Black's loud voice, just then, in her ear. Camiola started guiltily, but she was too candid to complain of a cold or the sun in her eyes.

"Well, I have cried a little, Mrs. Black," said she. "You see we used to be friends, Mr. Barker and I, and I knew his ma, and I remember all that furniture, and it seems a sin to sell it and tear down the old house, and maybe root up the lilacs and strawberry shrubs and perhaps out down the trees. It was almost like home to me in Mrs. Barker's day."

"Well, it must seem a sin to any one, and more so to you, Miss Camiola," said Mrs. Black. "But don't you want to go over and see the place and what is going on? You might just as well take a day or the rest of it. I'm in no hurry, and you look tuckered out."

Mrs. Black was kind in her way, and felt a certain pity for Camiola. She had heard that Camiola was once engaged to Mr. Barker and might to-day have been a rich and important widow, instead of a poor, lonely seamstress.

"Go along, Miss Camiola," she added; "I know you want to."

"Did she want to?" Camiola asked herself, and her heart answered "Yes."

She would see the old home once more, see the old furniture, and when she could get a chance she would go up garret and stand where she stood with Ben that day. Her old elbows would lean where her young ones had pressed; she would look over the mountains and fancy herself a girl again, with Ben beside her and his engagement ring on her finger.

And Miss Camiola thanked Mrs. Black, put on her show bonnet with the washed ribbons, and the shawl that had been so good once, but was faded, and even mended now, and walked up the road and turned into the lane and entered the Barker garden.

The smell of the shrub came to her; the lilac flowers were gone, but the willow branches kissed her bonnet as she passed under them.

The neighbors who saw her nodded or spoke, but they were selling the tall clock, and there was some excitement. Camiola stood at the door awhile and listened to the bidding. Deacon Hickory got the clock; Mrs. Amos Mole the clawfoot sideboard. A Jewish lady from the village bought the trunks of women's clothing sold unopened, for next to nothing. Ann Barnaby, the washerwoman, got the tubs and irons cheap in a lot, and so on and so forth.

To Camiola it all seemed tragical. She went upstairs where people were poking the bed and pillows, and examining the toilet sets and curtains, and she began to mount the garret stairs.

"Nothin' up there," said a well-meaning person who was descending. "Tain't worth while to lose breath a climbin'."

Camiola did not answer.

Nothing up there! How little people knew. There was the window at which two lovers had plighted their vows. There, perhaps, lingered some ghost of her dead past, and his who had died elderly and a bachelor.

As her head rose above the floor she gazed eagerly about her. From the rafters hung some branches of withered herbs and some ropes of onions. The trunks had been carried down and an old bureau. A coat hung upon a peg; over it a hat. Camiola went to the window. She would not cry, for she must face those people downstairs again; but she uttered little moans of anguish as she stood there. She realized what life actually is at that moment, and it seemed very cruel to her—once young, beloved, pretty and hopeful; now old, unloved, wrinkled, and with nothing to wish for. No wonder that she suffered.

At last she turned her back on the eternal mountains—unchanged while lives were lived, and while youth fled and love departed and graves were dug—and saw Ben's coat upon the wall; Ben's coat—an old man's coat worn long and carelessly; a big, broad-brimmed, soft hat. The woman went closer. She nestled up against the coat, and caressed it, and talked to it, and she took the hat in her hands and kissed it. It was worth nothing. It had rain stains on it. Its shape was odd. Nobody wanted it. But what a relic it would be of Ben! Only she could not ask for it.

She could take it—hide it under her shawl—all folded flat as it would be—and keep it forever. Ben's hat—her Ben's hat! Why, she had a right to it.

And Miss Camiola obeyed the impulse, took the hat and hid it neatly away. It seemed almost as though it were a theft; still it would not be wrong to take it.

When she came home Mrs. Black told Miss Camiola the walk had done her good; her cheeks were quite red; but she went early to bed that evening. She bolted her door and undressed in a hurry. She put out the light. Then she felt for her shawl in which the hat lay folded, and took it in her arms. A certain perfume that was always connected with Ben's hair was faintly noticeable—an odor of hergamot. It brought the past back vividly. It almost seemed as though Ben's head rested on her heart. She clasped the old hat close and kissed it.

"Oh, Ben," she whispered. "I was always ready to make up; but you were rich and I was poor; and I was proud. Oh Ben! oh, Ben, Ben, my darling!"

And for hours she lay awake—the Camiola of the past—in the darkness, which blotted out the changes in her face, and fell asleep at last, and dreamed of young Ben and his perfumed hair, and heard him once more say that they would be happy together.

She awakened suddenly, in the early dawn, and came back to herself. She dressed herself; smoothed her prim bands of hair; tied on her black apron with pockets; pinned the cushion and the sheaths of scissors at her side, and then looked at the hat. Of course it must be hidden away, and she spread a newspaper on the bed in which to wrap it, and paused to look at it again.

The inside of the hat presented itself. The piece of leather which lined the crown looked ominously thick. She touched it with her hand. Under it was a long paper folded into a narrow slip. She drew it out and saw that something was written on the outside. Taking the paper to the window, she saw that the words were these: "The Last Will and Testament of Benjamin Barker."

At this Miss Camiola began to tremble from head to foot, but she was a daughter of Eve. Softly and reverently indeed she opened the will; but she did not open it and read it through, and when she had finished she crept into bed again and lay there sobbing for a long while; for in it she had found strange things. Some of Benjamin Barker's money had been left to the hospital, some of his land to the church and there were legacies for many people; but the homestead with all its furniture, garden and farm land, and an income on which she could live luxuriously, were bequeathed to "Miss Camiola Brown, spinster, in memory of the love I bore her all my lonely life."

No wonder poor Camiola wept.

But Mr. Black soon found out the cause of Camiola's agitation, and Mr. Black was a lawyer. The will was correctly made; the witnesses were found.

Why Benjamin Barker had put it in his hat lining no one knew. He often carried papers there. Perhaps he meant to leave it in safe keeping, but he died very suddenly with hat and coat on, as he was about to drive out. But the will was found and was all right. Nothing had yet been taken away. The money was refunded to the purchasers of the old furniture.

The young nephew had a tolerable legacy, and made no fuss whatever; and one day Camiola entered the homestead as its mistress. It was a strange ending to her love story, she thought. She was here at last—but how? It almost seemed to her as though some spiritual union had taken place between her soul and Ben's; and in the keeping-room, on a peg near the door, she hung his coat and hat. There they hung always, and to the stranger who sees them, and looks at the mild old lady rocking in the great chair as she sews or knits, it seems as though the master of the house were within—upstairs somewhere, perhaps. It even seems so, too, to Camiola.—Mary Kyle Dallas.

### Abstract and Common Nouns.

During an etymology lesson a mistress obtained an answer from a girl which may be characterized both as ingenious and ingenious. The lady was dealing with the common nouns and their cognate abstract forms. In order to insure that the class should thoroughly apprehend the subject of her discourse, she took care to put before them the very plainest examples, such as (common noun) judge; (abstract noun) justice; (common) coward; (abstract) cowardice, etc.

She then surmised that she might safely venture to elicit from the girls themselves a few examples of such cognate forms. Accordingly, toward the close of the lesson, she made the request.

After some time, one child timidly raised her hand.

"There's a good girl," said the teacher; "now, what is your example of these common and abstract forms?"

"Please, ma'am," answered the girl, "(common) body; (abstract) bodiloe!"

I need scarcely remark that the governess decided that her class required at least one additional lesson before being subjected to a searching examination.—Chambers' Journal.

FAINT hearts seldom win. It is the man of intelligent faith who commands respect. When great things are to be done for Christ the Holy Spirit inspires men of courage to do them. The timid Melancthon would have failed as a reformer but for the bold Luther. Cowardly Peter alone would have failed to plant churches everywhere. It took that brave Christian soldier, Paul, to travel over sea and land, founding churches among the Gentiles. We need men of such spirit. There seems little now of the stuff that they used to make martyrs of. There is more of the trulent spirit that hews to the spirit of the world, which unfailingly brings reproach and defeat to the cause of Christ.—Christian Instructor.

DE MASCUS—I hear poor White is lying at the point of death. St. Agedore—Lying, eh? Well, well; the ruling passion strong in death, you know.—St. Joseph News.

THE faster a man runs in debt the less he is apt to get ahead.—Elmira Gazette.

### Winter Pictures in a Mountain Valley.

[Written for the RURAL PRESS by MARY P. ARMS.]

There are pictures everywhere if we will but see them. If only tangled lines and unmeaning stretches of earth and air meet our eyes, it is because we are mostly busied to get over the ground, to pass to and fro, because we are too intent on our own personal interests to see the wonderful pictures placed for us on all sides, in common places and on commonplace days, everywhere and in all times and seasons. The autumn days were full of these pictures. There were leaves dyed red as if to recompense us for the departure of the flowers. The stacks of grain or straw with their promises of winter cheer for our dumb friends stood golden in the sunlight. The many-hued undergrowth upon the mountains smiled up at the somber pines above them. In our doorways too, where man modifies the landscape, where his needs, his tastes, his temperament gives a local coloring to the things about his dwelling-place, nature lends a kindly hand to help us. The leaves began to drift leisurely earthward in mid-autumn, but some of the larger ones well upon the trees clung tenaciously to the branches, and the early frosts and the sunshine turned them into shining gold, and they played and shimmered and danced hither and thither in the sunshine, gladdening the world around them, lifting somewhat of the weight of care from the busy autumn days.

The memory of the fullness of care of those closing days of the always busy autumn season grows indistinct; but the beauty of the landscape picturing still remains with us. The snowstorm which came in the early days of winter caused us to look "upon a world unknown, on nothing we could call our own." New shapes, new forms were everywhere; hard outlines were softened. Familiar objects with new white garments lost their old looks and assumed other proportions and forms. The evergreen trees upon the mountains were tipped daintily with ermine.

But the pictures have changed somewhat; winter pictures we are still having, for the cold and the frost are wonderful sculptors and modelers and painters.

Some warm days have come, and the snow has settled and melted away until it is but a filmy covering over the meadows, which would lie an unbroken stretch of snowy white but for the streams with ice-fringed borders wandering ribbon-like over them. The sagebrush stands a gray brown over the plains, where the thin snow covering is wrapping the grass roots during their winter sleep. This part of our mountain world is rich in pictures; the landscape stretches far to the east and south and west of us; while on the north the mountains form a panorama of rare shifting pictures, the clouds stooping low over them. The mists hovering over their tops, or wrapping them like a loose-flung mantle where their bases hedge the valley in, their peaks reaching high above the mists standing out brightly, the trees on their tops etched against the sky. Close about our dwellings the winter pictures are wonderfully fine. The dooryard trees and shrubs and vines are bare of leaves, and their interlaced filagree of slender twigs are each dressed morning after morning in garments of frostwork delicate, filmy, fine, "like a story that cannot be written or told—all beautiful." A field deep overlaid with sand almost useless through the summer, save to those whose inborn sense of woodcraft sends them thither in search of the *Romneya Coulteri*, great tufts of it in its creamy beauty, gladdening the worthless soil, the greatest growth on which is huge clumps of greasewood which forms no appetizing morsel for the hungry herds in summer, but this winter season the delicate frost pencil has wrought wonderfully with them, the slender twigs laced and interlaced with their delicate tracery so fine, so fair, so white.

It is well for us that between the inevitable duties falling so full on our lives in this secluded land, for the gratifying the artistic side of our nature these pictures are hung above, around, about, on every side, in unlooked-for places, pleasing, resting, quieting us, making us in touch with the best things. In the barnyard are horses and cattle neighborly and kind-eyed, eating leisurely from their racks, or nibbling daintily from the salt-troughs or grouped in sunny corners. The dooryard fowls, too, seek warm places and spots of bare ground, and huddle together and sing or talk in their own way, which the housewife, well used to their mode of speech, translates into rejoicing over their generous contribution to the larder.

I will close as I began by saying there are pictures everywhere, and in this winter season there are more of them than ever. The sun rises and glints the hilltops, and stretches a shifting panorama over our mountain world, shimmering, kindling, changing all day long until the sky is aflame with the sunset glow, and the purple haze rests like a benediction over the valley.

Beckwith, Plumas Co. Cal.

A PROTECTION TO GIRLS.—If the postmasters throughout the country should enforce the law in regard to the delivery of letters to parties through the postoffice, all girls under 18 and boys under 21 years of age couldn't get letters from the postoffice unless by order of the parents or guardians. Here is the law as it reads: "All letters addressed to girls under eighteen or boys under twenty-one years of age shall be placed in the care of the parents or guardians."

## Evening on Olympus.

To Adolph Sutro

[Written for the RURAL PRESS by ALICE KINGSBURY COOLET.]

Nay, come up higher still, here on this peak.  
Is it too steep? Nay, fear not, little one—  
Reach forth thy hand—there—stand up by my side.  
How the wind blows! 'Tis fresh from off the sea,  
Keen and salty, and makes one think of ships—  
That was nigh a gale—hold fast to my arm.

Now look ye there, a little to the right—  
That's the old "Mission," "Our lady of tears,"  
Built by pious hands more than a hundred  
Years ago. 'Tis there next to that tall church,  
That is the graveyard where lie buried dons  
And donnas fair from far-off sunny Spain.  
I'll take thee there some day to see the quaint  
Old tombs and vaults. It is a ghostly place.  
Wouldst hear a story of it? I'll tell thee one.  
Not many years ago, a lady young  
And fair did enter through the moss-grown gates  
And wandered up and down the leafy aisles.  
Her heart was sore and torn with grief. So quick  
To end it all, a deadly poison she  
Took from out its dainty hiding-place—  
Her bosom fair—and drank and died.

Nay, start  
Not, little one, and tremble so. Her ghost?  
I do not think it haunts the place and walks  
At night, for many die for lack of love.

Look now straight before you; that is the "Bay."  
The island? The "Goat," named from one poor  
beast

Found solitary and alone by those  
Whose boats first touched there. That is "Alca-  
traz"

A fort, child, and bristles o'er with naughty  
Guns and grim soldiers with their sabers keen;  
And there are dungeons cut into the rock,  
And prisoners—What? do I frighten you?

Look this way then! Is it not glorious?  
Hark! How it roars dashing against those rocks!  
Blue and emerald green, flashing in the sun,  
The beautiful Pacific! You cannot  
See the seals or hear them bark at this great  
Distance, but we will go there, too, some day.  
Look to your left—that is the "Golden Gate."  
There, where the frowning rocks abruptly end  
And the grim old fort, hid behind you hill,  
Narrows the waters to a passageway.  
You see no gate? Ah, 'tis but a name, child,  
For the entrance to this, our Paradise;  
But visionaries come with outstretched hands  
The gold to grasp, and, failing, quick court death.

Now look down in that valley "Dolores"—  
A name soft but sad. See how the houses  
Nestle close to each other by thousands  
And thousands; yet again there's flow'rs at each  
Door, growing winter and summer—Joseph's  
Fair lilies and roses and violets.  
Soon the grass at our feet will be covered  
With gorgeous-colored blossoms free to all.

Now the wind dies down, and see! the fog  
Rolls in. Those are "Twin Peaks" rising above  
The mists and that the statue "Liberty."  
How grand she is, guarding the fair city  
Lying at her feet! Now the smoke ascends  
From lowly cottage and from palace home,  
And tells of homely fare or dainty feast,  
And makes one hungry. You would go, child?

Come,  
Then, soft—give me your hand and we will run.  
What! Still afraid? Am I an ogre, then?  
Nay, I love thee, little one, and would not  
Harm thee for a mine of gold. Some day you  
Shall be my little wife, and we will have  
A cottage on these hills, and with the views  
So glorious, we'll envy neither rich  
Nor great of all the dwellers in the valley.  
Come, let us away!

## Chaff.

"HYPNOTISM is a great thing. I can hypno-  
tize any one, and what I desire the subject to  
do he does." "See here, professor," said the  
little tailor, "I'll give you ten per cent on all  
the collections you can hypnotize out of my cus-  
tomers."—*Harper's Bazar.*

supposed that they did, for they never come  
back again.—*N. Y. Herald.*

## YOUNG FOLKS' COLUMN.

## Grandma's Valentine.

[Written for the RURAL PRESS by FANNIE ISABEL SHERRICK.]

"It's just like her! She never could do things  
like other people. The idea of her running off  
with Jim Hawkins—as good-for-nothing a fel-  
low as ever lived—can't do nothing to save  
his life but play the fiddle."

Grandma Ames looked every bit of the indig-  
nation and disgust she felt, while Aunt Martha  
sat quite still, looking subdued and sorrow-  
stricken, as though the very heart had been  
torn out of her.

Bessie was her pet and idol, the baby she had  
raised from a wee thing when her mother died.  
Baby Bessie! She could hardly realize the  
child was old enough to be married. And to  
think she had run away, that hurt her worse  
than everything else. She had not approved  
of the match. Bessie knew that, but she need  
not have carried matters with such a high  
hand, running off in the night, as if Aunt  
Martha had been a dragon instead of a kind,  
loving auntie as kind and indulgent as any  
mother ever could be.

It made Aunt Martha choke up with tears to  
think of it. Her eyes were red with weeping  
now. For a moment she gave way to her grief,  
sobbing quietly over the garment she was mend-  
ing.

Grandma Ames straightened up in her chair  
and said with determination:

"Well, it's no use crying over spilled milk.  
We'll have to take it the best we know how.  
Now stop your sniffing, Martha; it's time to see  
about dinner. Bless me, folks can get hungry  
if they do have trouble. And just remember  
this, Martha, Bessie Ames, or Hawkins I sup-  
pose we'll have to call her now, will never set  
foot in this house again—as long as I live any-  
how."

This seemed rather hard to the meek and  
gentle-hearted Martha, but she had never re-  
helled against the decree of this iron-clad  
mother, though she knew as well as some  
others "that Grandma Ames' hark was worse  
than her bite."

However, the next morning at milking-time  
Aunt Martha might be seen holding a hurried  
interview with some one over the fence. This  
somebody was a wee body with very pink  
cheeks and a babyish face and big brown eyes  
that had a way of filling up with tears and  
looking so pathetic that nobody could resist  
them. Once this wee body threw her arms  
around Aunt Martha's neck and laid her soft  
cheek against the one above her.

Aunt Martha seemed to yield to these en-  
tretries, and she kissed the uplifted face ten-  
derly. But she shook her head gravely as she  
whispered:

"It's no use—she never will give in. She  
feels very bitter about it."

Then the wee body hurried away across the  
fields with a flushed face and tear-filled eyes,  
while Aunt Martha stood looking after her with  
a wistful longing. She gave a long-drawn sigh,  
and she went back to her milking, patting old  
Brindle on the neck with more tenderness than  
usual, and giving Speckled Foot an extra allow-  
ance of breakfast. Her heart was always over-  
flowing with love for somebody or something,  
and now that baby Bessie was gone, this love  
was bestowed most lavishly upon everything  
about the old place. There was not an animal,  
or a tree, or a nook about the ranch that did  
not remind her of Bessie.

It did not seem but yesterday that Bessie  
had been a wee tottler following her about  
from one spot to the other.

"It just reminded me of the way she used to  
kiss me when she was a baby, this morning,"  
Aunt Martha said softly to herself, drying her  
eyes upon her apron before she took up her  
pails to return to the house. She hardly heard  
what Jake was saying to her, their man of all  
work, who had come to finish the milking. But  
at last she caught the drift of his remarks. He  
was offering some consolation about Bessie.

"Yes," she said, "Bessie did do wrong, but  
she is as dear to me as ever, and I pray God to  
bless her wherever she goes."

Jake looked after her with a kind of wonder-  
ment upon his rough face. It was a love he  
could hardly understand. But he thought of it  
many times that day as he saw the neighbors  
coming and going, all of them expressing con-  
demnatory views upon Bessie's conduct, and  
Aunt Martha receiving them so serenely, her  
voice never raised once in condemnation of the  
child she loved.

"It beats all," he said, "how these women  
folks can love."

After this it was noticed that Aunt Martha  
went very often to a small white cottage on the  
outskirts of the little village. Such a mite of  
a house it might well be called a dove-cot, and  
yet it seemed large enough for the little maiden  
who reigned there—wife she was now, with a  
great tall husband who could carry her around  
in his arms like a baby.

"Grandma didn't say you couldn't come  
here, you know," Bessie would say when her  
aunt had twinges of conscience about these  
stolen visits. "You know you have two  
children now, for Jim loves you just as much  
as I do—I ran away from grandma anyway, not  
you, my darling auntie!"

Then she would love her so hard that Aunt

Martha hadn't the heart to say another  
word.

After awhile they moved away. "James  
wanted to seek his fortune," Bessie said.

"A rolling stone gathers no moss" was all  
the comment Grandma Ames made when she  
heard they had gone.

Aunt Martha seemed a little lonely and sad  
for awhile, but she brightened up when the  
long letter came, written in such a fine school-  
girl hand, with many rhapsodies about James.

Once Martha attempted to read one of these  
epistles to her mother, but there was such a  
bridling up and such an intimation of intense  
anger that she put the letter hastily aside, be-  
ing really afraid that the irate dame would  
bring on a stroke of apoplexy.

"I don't want to hear nothing about fiddlers,"  
cried Grandma Ames, who was apt to grow  
quite ungrammatical when excited. "If Bessie  
Ames wants to starve in a garret while that  
great overgrown husband of hers is running  
twice a day to a conservatory of music to learn  
more fiddling, then let her do it. He'd better  
be cleaning the streets and earning her a decent  
living—and what's more, she needn't come back  
here when she gets tired of living on love and  
wants a bite to eat."

Having thus unburdened her mind, Grandma  
Ames settled herself once more firmly in her  
rocking-chair, while Martha, who, like the  
Martha of old, was cumbered with much care,  
went silently about her household duties,  
happily hiding the blinding tears.

One day there came a letter which made  
Martha feel more sad than ever.

Bessie and her husband were going still  
farther away, across the great ocean to Paris,  
where James was to pursue his studies.

This made Aunt Martha feel particularly sor-  
rowful, because she knew that Bessie was very  
frail, and that they were in straitened cir-  
cumstances—James having nearly exhausted the  
small fortune left him by his father.

When Aunt Martha received this letter she  
went to a secret drawer in her writing-desk  
and took from it a small leather bag. This con-  
tained the savings of years.

"What good will it do me?" she sighed. "I  
intended it for Bessie, anyway, when I died."

Bessie had hardly reached her new home ere  
the check came from her aunt. She was ready  
to cry for joy, for she had feared that they  
would have to face starvation ere long, al-  
though she had never once lost faith in the  
genius of her husband, whom she almost wor-  
shipped. She wrote a letter of thanks to her  
aunt, which made that dear woman feel amply  
repaid for her good deed.

A year or two passed by bringing few  
changes to the two lonely women, although  
Grandma Ames began to show signs of failing.
